fifty years is added to its present size. This expansion is provided for in more than one way. First and most commonly, by a provision for the enlargement of the building of which we can all recall instances. This is a difficult thing to do without lessening the beauty of the building, although it has been accomplished with success. Another method is by a temporary combination with some institution, which combination may be terminated after a definite period, the entire use and control of the building reverting to the library. An instance of this may be recalled in the greatest public library of the middle West in whose building another institution has rights which will expire by limitation. In another building now proposed a combination with the board of education is suggested by which a fair contribution to the cost of the building will be made, and a portion will be used as a school headquarters for a term of years, reverting after expiration of that time to the library board. This permits the erection of a larger building without leaving any appearance of incompleteness. The need of providing for expansion does not of course apply to the branch library buildings of a city system. These may be well kept within convenient size for neighborhood use, and expansion provided for by additional branches as the need occurs.

Another thing which has always seemed desirable to me is the maintenance of a certain mobility in the interior arrangements of a library. The relative importance of various departments, the amount of space required for the minor functions of the library may change as the years pass, for instance it would have been possible to foresee the wonderful development in the work for children which has taken place within the past few years. Other subjects of interest are pressing for attention. We cannot be sure that other important departments of work may not be developed in the years immediately before us. For these reasons the ability to change the interior arrangement of libraries is exceedingly desirable. I recall a library in the middle West in which the floors are fireproof and in which the vestibule containing the stairway was surrounded by a solid wall. The divisions of the various departments

upon the first and second floors were formed by light, movable partitions answering the purpose perfectly, and still permitting changes to suit changing conditions. The only exception was in the case of one room surrounded by a fireproof partition in which was stored a valuable collection of coins. In smaller libraries these demarcations between departments may be made by book cases or even by railings.

Permit me to express in a word before concluding, my own opinion as to one or two practical questions drawn from experience.

First, as to lighting, daylight should be provided in great abundance, more than is needed ordinarily, much more than is needed when the sun shines, enough for dark days, with the deliberate intention of shading the windows on ordinary days, the effect of the subdued light being grateful to the eye, much more pleasant than that of the direct strong light. The ideal in artificial lighting provides an abundance of light so shaded that the direct light does not strike the eye at any point, the effect being that of abundance of diffused light with direct lighting upon the face of the cases and the reading tables. Unfortunately this ideal is expensive.

One little point about the warming of buildings without attempting to go into this large question: steam or hot water radiators standing about in various places on the floors are objectionable. They are not beautiful and take valuable room. In one library an

experiment of placing the radiators behind the book cases against the outside walls of the room, providing for the circulation of air entering below the case and coming out above seems to be successful.

Another question is that of decoration. It has been said many times that the library should preach in its very presence the gospel of fitness and beauty. I believe this is best effected not by making a picture gallery of it, but by that amount of pictorial and other decorations which relieves the bareness of the walls and gives it the sense of homeliness. I recall one library which has upon its walls the fine large colored view of St. Marks from Ongania, and a collection of colored lithographs of Venice, a section of the Parthenon frieze in plaster, a large view in the Canadian Rockies painted in monochrome upon a photographic enlargement, numerous carbon photographs and colored etchings, a set of tile about the mantel painted to order to illustrate some of the Greek myths, a photograph of the Sistine ceiling mounted in a table top. The effect is pleasant, home-like, attractive, interesting. The cost of all was less than one per cent, of the cost of the building and equipment. There seems to be no room to doubt that the success and influence of the library is greatly increased by its attractiveness and that the relatively small additional expenditure is justified by the results.

LIBRARY BUILDINGS AND BOOK STACKS

By BERNARD R. GREEN, *Superintendent Library of Congress*

ALL buildings should be designed and equipped with the utmost regard for their objects and purposes—the service they are to render practically—while in their artistic or architectural treatment so-called they should be plainly expressive of those objects and purposes. Library buildings are especially capable of this, but quite too frequently they are not so designed. Otherwise it would be much less difficult than it now is to recognize the library building in an unfamiliar town unless appropriately labelled.

This fault, however, is not a monopoly of

the libraries, for all classes of buildings are in the same category, although churches, dwellings, and a few other buildings are more readily recognized by their architecture. It is to be hoped that the advancing practice of architecture—and it is now really advancing in this new country of ours—may soon become rational enough to enable the purposes of all buildings, especially the libraries, to be read in their forms and lines. Every building should architecturally announce to all intelligent beholders its reason for being.

The purpose and uses of the library itself

are so distinctive that its several features may be made evident in the architecture of the building. Offices for the administrative work, rooms for cataloging and card writing, reading, comparing and examining printed and manuscript matter of every degree of illegibility and indistinctness, requiring much constant and exacting use of the eyes, call for ingenious provisions for lighting—especially by daylight.

Quiet is also an essential to be carefully reckoned with, and, of course, also finely adjusted ventilation and temperature of the several spaces. There must be proper correlation between the various apartments. All-important also is the relative location and arrangement of the several departments and collections of material comprising the library itself.

The architect is an indispensable factor in the combination of talent, wide knowledge and experience that should guide the design, equipment and construction of a modern library building, and no such building should be undertaken without him. But he must be well acquainted with actual library work and administration to be of much service. This applies as well to all classes of buildings. The best of architects, those standing even at the head of the profession, have failed in practical library designing, some of them to a ridiculous degree; but it has not always, perhaps never, been altogether their fault. They have failed either to realize their own deficiencies or to learn from the librarian all the practical essentials of the building.

Architects and librarians should consult and give and take with each other from the beginning. Nor should it be the individual librarian of the particular library alone under consideration, if the object be public or general and not private. The building is, to be far more permanent than human life or human opinion, and the more important and permanent the building the more essential a broad consideration of its plan and architectural design. It is really a far more serious question than is generally realized, the planning of a library building to cost several hundred thousands of dollars at the present stage of library science and development. Witness the queer examples about the

country, sprouted in the recent epidemic of library extension. Most of the unsuitable buildings are due to unstated problems. Too many different ideas, good and bad, and too much of the lay trustee, as well as of the librarian himself sometimes, who thought he knew but didn't, have been the causes. The architects have not been to blame except so far as they have assumed to know and failed to find out—an exception that has occurred, however, rather too often.

When planning that largest of all the library buildings for the Library of Congress, eighteen years ago, librarians of broad experience and view, to tell what should be provided for the coming century of library development, were few—may it not now be said there were none? At least, they agreed on few or no essential points, and the builders were compelled to generalize and draw conclusions from a variety of views, most of which were naturally unqualified by knowledge of the then state of the building art and mechanical resources. Up to that time the housing of libraries had not become very pressing and so the mother of invention had hardly appeared in that field.

Some of the positive statements of some of the librarians of the day would be interesting reading now. Perhaps those of Dr. Poole were the most conspicuous and aggressive in this way. His list of imagined mechanical and structural impossibilities on which he based his scheme for an ideal library building was amusing to any one acquainted with the possibilities, even of his own time. Some of the latter were incorporated in the plans of the Library of Congress. Instead of making out a list of the wants of the librarians of the day, for there was no consensus about it, one was made of their woes in building and mechanical arrangements and then it was undertaken to so design as to eliminate them all. This, I understand, was rather successful, and the outcome might have been much worse under all the difficult circumstances. This was accomplished in the main by doing in detail the parts that seemed unquestionable, and leaving undone, in large undivided halls, the undefined and speculative future subdivisions of the great national library then believed to be assured.

Librarians will never entirely agree as to the design and equipment of any one building, but they will in time unite on all fundamental principles. Architects may then generally please them, and be properly held to account if they do not.

But the general subject of library design and construction, on which I was asked to speak to-day, is quite too comprehensive for the few minutes available, and I will confine myself to a reconsideration of one of the divisions of the subject, namely, the book stack or the shelving for the library collections.

Modern collections are large and fast growing larger. In these days it is superfluous to state that the shelving should be close at hand, easily accessible throughout, conveniently adapted to the accommodation of its contents and for their economical rearrangement, reclassification and reception of accessories; clean and free from dust, well ventilated with a uniform and constant temperature of about 68°, well and even brilliantly lighted whenever and wherever required in the stack at all times, day or night, conveniently provided with stairs and elevators and, for the larger stacks at least, suitable mechanical apparatus for quick transmission of books to and fro between the shelving and the delivery point or points. These are all important requisites of the modern stack and quite attainable.

The stature of men and women governs and limits the interspaces of the stack, while the dimensions of the items of the collection, such as the books, determine the dimensions and intervals of the shelving itself. Economy of construction, both in space and cost, fixes the lengths of the shelves within the limits of convenient handling. Thus, for ordinary sized books, the height of stories should be seven feet, the space between ranges or shelf fronts from two and one-half to three feet, and the main aisles four to five feet. Narrower spaces are tolerable when unavoidable, and wider ones more comfortable but correspondingly expensive in both prime cost and administration.

Observing these elements, the book stack may be of any dimensions lateral and vertical, covering acres of ground one tier in height,

or a very small ground area and towering to many stories in height, or it may be indefinitely broad and high, all as questions of ground rent and other circumstances may dictate. Present resources and ingenuity are equal to the problem of rendering any such stack thoroughly convenient and practicable at very moderate expense.

The acre stack of one tier height may be beautifully skylighted for day service. One of two tiers with a glass deck may be similarly well lighted, but not beyond this.

Although one of the essentials of a good stack is close proximity to the points of use, such as the reading and delivery rooms, the word may be taken in a figurative sense and the object well secured, should conditions make it advisable to locate the stack at some distance and even quite outside and away from the library building proper, as, for instance, on the other side of the street or in the middle of the next square, or even at a considerably greater distance. A tunnel not unlike that in successful operation between the Library of Congress and the Capitol, a quarter of a mile in length, equipped with entirely practicable rapid transit machinery, operated in conjunction with telephones and pneumatic tubes, would very satisfactorily accomplish the purpose.

I am not forgetting the indispensable matter of light within the stack. It is really the main point I have to present.

Until very recently, in fact down to the time of the incandescent lamp a few years ago, daylight was almost wholly depended on for finding books on the shelves. Consequently the prime effort in design and arrangement was to get daylight into the shelf spaces through windows and skylights, using the ground space and special locations on the lot indispensable to that purpose. This was done with special pains in building the Library of Congress. It has been anxiously provided also, but less effectively, in the New York Public Library now under construction.

In both cases valuable space and much money have been expended in efforts to secure daylighted stacks, but with very limited success.

Hitherto, book stacks have generally been

placed at the outer wall lines of the buildings and wide open spaces left around them to admit as much daylight as possible. Sky-lights have been provided in the roofs and clear light wells within the shelf rooms for the penetration of the light down and between the shelf ranges. As much or more space on the lot was given up to the admission of daylight as to the shelving and its communicating spaces combined.

Daylight, however, is the most unequal and unsteady of all human dependencies, under the ever-changing position of the sun and condition of the weather. Using our libraries as we now do, almost as much by night as by day, we are without daylight altogether about one-half of the time. During the other half it comes to us on a varying scale from direct sunshine, which is the double of what we need or can endure, to something less than twilight or the reflection from a thunder cloud, which is less than half of what we actually need.

At the first extreme we must draw the always vexatious window shade, and at the second turn on the artificial light, which, however, thus mixed with weak daylight, is unpleasant and unsatisfying to the eyes.

At the Library of Congress it became necessary some time since to devise and install window shades on both sides of the two principal book stacks, because the occupation of the shelves near the windows by the increasing collections exposed the books to the damaging effect of the direct rays of the sun. The great number of the windows, some 600, required special mechanical control of the shades, and they are now operated conveniently and in a moment in separate sets of about 150 windows each by any attendant in the stack. So it is with sunlight; when we make anxious provision to let it in, we must make similar expensive provision for keeping it out.

Under present circumstances we are obliged to thoroughly equip book stacks with artificial illumination and to use it frequently during almost every day—more or less continuously on some days and always, of course, at night.

Why not, therefore, disregard the daylight altogether wherever the expense of ob-

taining it in any useful quantity is too great? In its place we may secure absolute uniformity and any desired brilliancy at every point of every possible stack with the incandescent electric light.

The conditions described have been due to the fact that libraries heretofore were generally small and used chiefly in the day time, and especially to the want of an effective, safe, and convenient artificial light for the peculiar requirements of a mass of closely packed book shelving and of the reading room. Then the light was furnished by some kind of fire, evolving great heat and more or less smoke, limited in its application by the danger of communicating fire, and always difficult and inconvenient of control. Its brilliance was limited and its color dull—in every respect greatly inferior to sunlight.

Now a quite opposite condition prevails in the availability of the incandescent electric light. It is far more nearly white, radiates but moderate heat in proportion to candle power, may be placed with safety anywhere, even in one's pocket or mouth, or amongst combustible materials and in any position. It is easily, perfectly, and instantaneously controllable in both quantity and intensity, and it is also not only of low cost but need not be used a moment longer at any point than actually required.

It is further to be said that daylight is injurious to the bindings and paper of books and that all such material is preserved from bleaching if kept in the dark, not to mention some books that should never see the light on other accounts.

For the reasons thus outlined the book stack, although the heart of the library itself, may well be located in the least expensive and darkest, if not remotest, part of the library lot, quite regardless also of neighboring danger of fire. The walls being windowless and without necessary perforations, may be made quite fireproof. All openings may be confined to the bottom and top of the stack. They may be few and small and under easy control.

All book stacks should, of course, be kept perfectly dry, and this would practically prevent the propagation of injurious insects, especially if proper care be taken in the con-

struction of the shelving to leave no hiding places whatever for them. This is already the practice in the best stack construction.

By placing the stack in an unimportant position architecturally, no expense will be incurred for its architectural treatment. If it be located within and surrounded by the library building it will be kept warm in winter and cool in summer at very little expense. Such an enclosed stack may be more easily and inexpensively ventilated, and maintained at a uniform temperature because not exposed to the ever changeable temperature of the exterior air.

At the Library of Congress a stack of this character is proposed to accommodate the growing collections, in one of the four court yards, the plan being to fill the yard solidly full of shelving and roof it over. In this way the present court walls will enclose the stack and their present windows will open into it to any extent that may prove desirable. The expense of the construction will be only that of the shelving and decks, the ventilating apparatus and elevators and a simple flat roof resting directly on the numerous slender stack columns.

The best modern book stack structure is a very simple, light, self-contained framework of steel and iron with three decks, preferably of white marble or translucent glass, the shelving itself and supports being of steel open work. The separate pieces of material comprising the structure are very few in variety, small and light of weight and easily handled and put together. White marble decks are not only durable and clean but valuable as reflectors of light from below and above. The ends or heads of the shelf ranges and all other surfaces having any extent, should be white for the same reason.

The stack needs for its support and stability only a firm foundation or floor to stand on, depending on its height or number of decks, because its internal construction, including the multitude of slender columns extending from foundation to top—one at every shelf interval—may be such as to bind it together into one coherent mass like a hay stack. Surrounding walls may be utilized somewhat for its stability, but they are not indispensable and generally serve only as a protection to the contents. The stack

proper, therefore, is not a building but a piece of furniture which may be set up and stand alone in any room adapted for its reception. When built for permanence, the surfaces should have the most durable finish, or such as may be conveniently and effectively renewed when worn off.

The shelves should be uniform and interchangeable, and adjustable from top to bottom of the range. The decks should have wide openings along the fronts of the shelf ranges for better ventilation and diffusion of light and for communication between attendants on different decks, not to mention the saving of material in the decks.

Stack construction should be of the simplest possible form and detail, with nothing movable but the shelves themselves, and, like a spider's web, such as to occupy the least possible space and leave the room for the books. Some stacks are quite too self-evident and occupy space that would much better be filled with books if left available. That scheme of shelving which, other things equal, accommodates the greatest number of volumes in a given space is the thing. It requires, however, ingenuity and a full appreciation of the problem to properly work it out.

The stack should be so enclosed and ventilated as to practically exclude all outside dust and confine the accumulation of it to the inevitable internal causes of handling the books, their attrition on each other and the movements of the attendants and users of the books.

In using a stack, loose paper or similar inflammable stuff should be excluded from the lower tiers at least as a precaution against fire or smoke passing up through the deck openings. Danger from serious fire may thus be quite avoided, for shelved books of themselves are not liable to take fire and are still less capable of burning and transmitting fire.

Other details of stack construction, equipment, use and administration, may be mentioned, many of which will occur to those who think of the subject, but the generalizations I have given are sufficient for the present brief occasion. None of the suggestions are impossible or even impracticable. On the contrary, nearly every one has been proved feasible.

THE VIEWS OF A CONSULTING ARCHITECT

BY A. D. F. HAMLIN, *Columbia University*

THE consulting architect is a product of the increasing complexity of modern architectural practice, and the consequent necessity for specialized service. Not alone in architecture and in library design—in every department of modern life the principle of the division of labor prevails, and every operation and transaction is as far as possible assigned to experts. So in important architectural undertakings it has become evident that it is good policy, and in accordance with scientific principles, to reserve for specialists certain questions and certain aspects of the problems of design and execution which, under simpler conditions, the client and architect were accustomed and were competent to settle between themselves.

The first question which suggests itself to the librarian with reference to the consulting architect is likely to be "What is he for?"—a question perhaps merely academic for such as never expect to face the problem of erecting a library building, but wholly practical the moment that problem presents itself. And this is the answer: The consulting architect *serves as an intermediary between the trustees, the librarian and the architect, and as an adviser on all matters of doubt and controversy which may arise between or among them.* He provides a clearing-house for multitudinous questions and problems of detail; he is at the beck and call of all three parties to the triangular partnership, to help them in doubt and difficulty, and to suggest new solutions to vexing problems. He acts as a cushion or buffer between contending views or interests, and can often avert an impending controversy and smooth the track or oil the wheels of an interrupted or hesitant transaction.

Such service is, of course, not always required. It is unnecessary when the building to be erected is small and simple, or when the trustees, librarian and architect are all in perfect agreement in their understanding of the

problem before them, and fully satisfied that they have adopted the right solution of that problem. With a thoroughly competent and experienced and yet reasonably tractable architect, and a docile board contented to leave much to their librarian, the librarian is master of the situation, and may feel that he cares for no man's advice and wants no outsider, expert or not, to "butt in" with his counsels and his criticisms.

But when the problem is new and complex; when differences of opinion and of fundamental conception exist between any two of the three parties to the triangular enterprise—trustees, librarians, and architect—when, as is so often the case, even the selection of an architect is a problem bristling with difficulties and embarrassments; when the kind of building wanted and the kind of building possible with the funds in hand are two unknown quantities and unrelated problems, then recourse to a consulting architect becomes desirable, and is often the only way of escape from difficulty or failure. He is an arbitrator and a counsellor by turns; he brings to the discussion and settlement of vexing questions an experience which enables him to look at the question from the outside, with impartial and disinterested view.

The questions which a consulting expert may be called upon to decide are many and various. Among those in which his services are most often likely to be of value are these four:

1. *The selection of a site.* This is often predetermined and fixed by conditions or circumstances not to be evaded; but wherever there is a choice between sites, or opportunity to select at will, there is possibility of serious mistakes, as well as of wirepulling and interference by all sorts of interests. An adviser in such cases, if he be a man who commands general confidence and has no possible private interest in the matter, is a strong bulwark for a board of trustees to lean on.

2. *The selection of an architect.* This is also sometimes a foregone conclusion. The board are quite united in favoring some one architect or firm because of his commanding eminence or his special experience, or for other reasons. In such cases no help or advice is needed. But such cases are not, after all, very common. Some members of the board are likely to have pronounced ideas, each in favor of a particular architect, while others have no opinion on the subject, and no information on which to base an opinion. Strong pressure, moreover, is liable to be exerted from the outside by influences favoring this or that firm, and applications pour in with every mail. If the library is in a small town, in place of local pressure there is the difficulty of deciding which way to turn in looking for an architect from some other city, particularly if there are two or three large architectural centers about equally available for the supply. Then there is the difficulty of deciding whether artistic skill, or practical experience, or a reputation for excellent business management, shall be the controlling qualification, and there is the ever-recurring question whether the talented young practitioner, with his spurs still—in a measure—to be won, may not be after all a wiser choice than the famous and long-established firm with so much to do that none but its underlings ever see the building or the trustees after the first interview with the heads of the firm in the luxurious inner office. The librarian is concerned to get a serviceable, a *librarian's* library; the trustees want a building in which they get dollar's worth for dollar; each thinks he knows the architect who will do it. Again and again the only way out of the slough of divergent and contrary views, doubts and uncertainties has been found to be by a competition, and a competition is, in nine cases out of ten, a competition for the selection of an architect rather than of a design; and in the tenth case it is likely to be so also. For, given your architect, you can, if you want, start all anew with your design after the close of the competition. It is, however, sometimes possible to avoid the delay and expense incident to a competition by sim-

ply consulting an expert whose impartiality can be depended upon, laying before him the names of a number of architects most favored by the board and their librarian, explaining their own respective views, and either calling for a detailed report on these firms to guide them in the final selection, or requesting an absolute selection by the adviser. He can look up their records and inform himself as to their standing and achievements, their character and artistic ability, as no trustee or layman in architecture could ever hope to do.

3. *The program of the building.* One of the most important of the adviser's functions is to ascertain all the factors which are to determine the problem of the design of the proposed library, and co-ordinate them into a definite, concise, precise, technical statement. First of all, the general scope and character of the library, its purpose, size and system are to be considered; then the desires and ideas of the librarian and the results of the experience of the working staff; and finally the site and the limit of cost—the final, inflexible known quantities to which the whole problem must be adjusted. A building program thus prepared—the sizes, locations, relations, and conditions of all parts carefully studied and co-ordinated for the guidance of the architect, whether already selected or to be chosen by competition—is a first step of the greatest possible value towards the realization of the ideal building and a mighty bulwark against future blunders and mishaps.

4. *Arbitration.* Architects are no doubt, in general, a very superior order of beings, second only to librarians (if to any one) in character, education, and manners; but even between these two grains of the salt of the earth, a librarian and an architect, there may be friction, misunderstanding, or at least divergence of view. So also may there be between the librarian and his board, upon matters fundamentally architectural; while we all know that contractors are a species of monster, born in that original state of sin from which we librarians and architects feel ourselves to have been wholly exempt; and contractors are born to trouble (us) as the sparks fly upward. No building enterprise was ever carried through

without controversies and bickerings, divergences of view, clashes of authority, and more or less heart burnings and bitterness. An adviser is, or may be, and always should be, a wonderful smoother of these asperities; an allayer of strife, a judge between factions, having no inherent prejudices, but a large experience both of human nature and of architectural theory, ethics and practice. Questions of relative authority, of fees, of extras, of work rejected by the architect against the contractor's protest, of adequacy of the drawings, of apparently conflicting requirements, of unexpected contingencies; questions of pure design, questions of details, questions of color and ornament, of fixtures and furniture; changes suggested after the work is contracted for, or structural difficulties over which architect, contractor, librarian and board are at loggerheads—to all these disputes a competent adviser brings an answer which is decisive and final, and which springs from no prejudice because it is not a party to any of the disputes, but fundamentally the friend of all parties.

Permit me to illustrate some of these points by spreading before you a few leaves out of my own experience. I shall for this purpose select three cases: the Newark Free Public Library, the Carnegie free libraries in Brooklyn, and the proposed Central Library in the same borough.

In 1897 the trustees of the Free Public Library of Newark, N. J., decided to invite competitive designs for their proposed new building. Upon the suggestion of the librarian, who is now your distinguished president, I was invited to advise them in the conduct of the competition. A competition was necessary, because not otherwise could the board breast the tide of applications from Newark architects and their backers and friends for appointment to design the new building, while to appoint outright an out of town architect would have brought upon their heads a storm of criticism from those who insisted on Newark jobs for Newark architects. Some of you, in large or small degree, have no doubt experienced the same embarrassment, the same unreasoning public or political pressure. It is in such cases that a competition, if

rightly conducted, provides a means of deliverance both from unseemly pressure and from charges of favoritism and pull, while it provides for the board a reasonable assurance that the design finally adopted will be the best that they can secure under the circumstances and conditions of the case.

In this instance there were five invited and paid competitors, while a large number of others, unpaid, were permitted to submit drawings, and the award went to one of these "rank outsiders." This proves that while a limited paid competition has many advantages, it is not always sure to produce the best results. The adviser's duties in this competition consisted, first, in drawing up the program for the competition, that is to say, the regulations to be observed by the competitors, and the technical statement of the requirements of the building; secondly, in answering the numerous questions raised by various competitors during the progress of the competition as to sundry details of these requirements; and thirdly, in taking part in the final award. A full hour might be easily filled in recounting the details of this triple service, so multifarious and often perplexing were its details; but I will spare you. Let me simply emphasize a few points that may be helpful some time to some of you. First, in the preparation of the program, the librarian and the adviser each have points to contribute on which one is an expert and the other a layman. It is the adviser's duty to draw from the librarian the fullest statement of his ideas and dreams for the new building, and to embody in the program every one of these that is architecturally and structurally practicable. To the adviser alone belongs the duty of drawing up the technical rules of the competition. No layman realizes how technical and delicate are the questions involved in the conduct of an architectural competition until he has once been "up against it himself," to use the expressive slang of the day. Let no librarian or board ever cherish the delusion that they can save \$500 to \$1500 by conducting a competition themselves without expert advice. It is in its way as disastrous a delusion as home doctoring in a serious illness or amateur legal

work in a complicated case, sure to land its victims in trouble and often in scandal, litigation and loss.

Let me also call attention to this fact, which the experience of this Newark competition confirmed and which I am sure President Hill will endorse: that the careful, precise, detailed study of the requirements of the building by the librarian and adviser, and indirectly by the board, before they even know who is to be their architect gives them a mastery, an inside knowledge of their problem which they could never get in any other way. The study of areas and dimensions, of relations of parts, of the function and arrangement of each room, of lighting and communications and equipment, the determination in advance, after careful study, of many points that otherwise would be overlooked or left to be decided in a hurry when they came up in the actual work of the building; all this under the guidance of an expert architect who has no private "axe to grind" — this is of the greatest possible value to those (chiefly the librarian) who are to oversee the realization of the projected building and to use it afterwards.

In the case of the Newark library, the librarian and the adviser came to a perfect understanding, each having gained a full appreciation of the other's point of view; so that when it came to the final award they reached by independent paths the same conclusion, selecting the same design, which the trustees had no hesitation in accepting as the best one of all. Its architects, who proved to be Messrs. Rankin & Kellogg, of Philadelphia, were at that time wholly unknown to any of those concerned in the final decision. How successfully they carried out their design is known to many of you; but perhaps few are aware that this achievement really laid the foundation for the remarkably successful career of this firm since that time in large and notable public buildings.

After this award, the adviser continued to serve the board during the erection of the building. Important questions of design were submitted to his decision; the entrances were, as first designed, inadequate; the decoration of the medallions on the front, the lettering of the inscriptions, the scheme of color for

the interior, and many other like questions, were referred to him, and he was asked to arbitrate more than one question over which the architect and trustees were divided. In this way friction, misunderstanding and possible litigation were entirely avoided.

The services rendered to the Carnegie fund committee of Brooklyn were of a somewhat different character. The problem was almost unique. The erection of twenty branch libraries as a single enterprise in one city is not an every-year affair. Here again your president, transferred the previous year from Newark, was the initiator of the large-minded way in which his committee, a choice body of men of business, who were also men of culture and experienced in public affairs, handled their task. A believer in expert advice, Mr. Hill persuaded them to seek such advice at the very threshold of their enterprise. The first task of the adviser was to frame the procedure which should govern the whole undertaking. The scheme which was then worked out has been followed ever since and with rather remarkably successful results, for which the credit belongs, not to the scheme alone, but quite as much to the loyal spirit in which all participated in its operation. It was, briefly, as follows: To select five architects, giving each a single library to design, but organizing the five into an "advisory commission," whose joint approval should be required upon each separate design before its presentation to the board or fund committee; and to require, further, that each of the five designs should also receive the adviser's criticism and approval before adoption. The architects of the later libraries were to be selected and assigned upon the basis, and in the light of the experience gained in the first five libraries, and were to be likewise organized into an advisory commission; the presumption being, however, that the first five architects would be reappointed unless any or all of them proved incompetent for their task. Thus collaboration was substituted for competition and reappointment held out as an incentive to efficient service. Each architect was directly responsible for particular buildings, but was obliged to undergo the criticism and privileged to benefit by the suggestions of all the rest. A remarkable relation of commun-

ity of interest, a loyal and unselfish devotion to the work in hand, and a most friendly and efficient pulling together of all concerned have marked the progress of this interesting experiment. The librarian has, of course, been the pilot, and he has also been the link between the five architects and the Carnegie committee; and it need not be said—nor is it flattery to say it—that with a librarian so genial and yet so strong in his convictions and so widely experienced the relations between the committee and the commission were pretty sure to be of the pleasantest sort. And yet, when one reflects on the annoyances, the frictions, the mishaps, misunderstandings and perplexities likely to arise in building *one* building with one architect, and much more in building twenty buildings and dealing with five architects, it is, I am sure, a most creditable record that *not one* serious difference has arisen between the two bodies during the entire five years since the adviser's report was adopted in 1901. It is, I believe, a quite unexampled experience.

During these five years the adviser has been called upon, first, for the report or scheme of procedure just outlined; secondly, to report on the various architects whose names were presented (or who presented themselves) for appointment, the reports being based on their professional history, training and achievement; thirdly, to prepare in conjunction with the committee's counsel, a form of contract between the committee and the architects; and fourthly, to pass on all designs submitted. In addition, he has examined, criticised and approved designs for a trust company's building erected by agreement with the committee on property adjoining one of the libraries; prepared an elaborate report on the difficult question of extras—the first formal treatise on the subject with which I am acquainted; advised on a number of the sites selected, attending public hearings in two cases and speaking at one of these before the controller of the city; visited and reported upon a bad case of leakage and dampness in an unfinished library—the subject of a bitter controversy between the architect and the contractor; and prepared a detailed report on branch libraries in several cities of the nearer

West. This last report was one of the fruits of a trip made last February with the librarian and four architects of the commission. We cherish the hope, and indeed the belief, that the Brooklyn branch libraries, as the result of this mutually helpful collaboration, are among the very best examples to be found anywhere of their kind, all things considered. The whole experience simply illustrates the value of the sort of emulation which comes with collaboration as compared with divisive competition or sheer independent effort.

The third experience to be cited is that with the Central Library of Brooklyn. The Carnegie fund committee being members of the board of the Brooklyn Public Library, and Mr. Hill at its head, it is perhaps not surprising that expert opinion was again invoked to assist in determining the site of a proposed Central Library for that borough, or rather to report upon a particular site, of irregular form, near the reservoir and entrance to Prospect Park. Public opinion was much divided; the opposition to the site was bitter and insistent and led by men of influence and high standing. The adviser was fully convinced of the suitability of this site, and prepared an elaborate report in its favor, in which he dealt at length with both the practical and artistic aspects of the question, and submitted sketch plans of notable European public buildings on similar irregular plots of ground. The probable requirements, areas, height and cubic contents of the proposed building were studied and comparisons made with other central libraries and with the conditions of the given site. A supplementary report was later filed in answer to published criticisms. Another architect was later employed as expert by the mayor; his conclusions confirmed those of the first expert; the site was adopted, and the necessary legislation was passed to make its adoption final and authoritative.

The value of this experience is in its proof of the desirability and sometimes the necessity, first, of making sure you are right before you go ahead on a question of public importance; and secondly, of having some one whose experience and reputation command

general respect and confidence to fortify your own official action and to take all the kicks that may be directed at that action or those responsible for it. From this point of view, as well as from that of the direct assessable value of the expert knowledge and counsel which the adviser brings to the service of the library, his fee is a wise and economical investment of money, and is pretty sure to be well earned.

From the consulting architect's point of view, the designing of a library is a particular case of the general architectural problem of adapting means to ends and of the human problem of adapting men's views and ideas to each other and to the exigencies of the situation. One of the most difficult features of this part of the problem is that of adapting the views of librarian and board alike to the exigencies of the cost limit. It is the old story of the champagne thirst and the lager beer purse. Give a library board \$100,000 to spend and they forthwith lay down a program for a \$250,000 building. The soaring imagination has to clip its wings and

flap along the low level of so many thousand cubic feet at so many cents a foot. Then there is the old controversy between the librarian's ideal and the architect's ideal which, years ago, were wide apart, but which are to-day coming far closer together, thanks to the double process of education through which both parties have passed and in which the consultants and advisers have tried to do their part. Finally, there are three—or rather four—parties to the collaborative work of erecting a library: the board, the librarian, the architect, and that Ishmael against whom every hand and foot seems to be raised, the poor contractor, who is very often a very decent, honest fellow with troubles of his own. Each of these four must be made to pull with the other three, and a four-in-hand is not always an easy team either to drive or lead. It is a wonder they get along so well. And in all sincerity, so far as my own experience as an adviser is concerned, I can truly say that it is in library enterprises that I have generally found the greatest satisfaction and the greatest pleasure.

THE NEW LIBRARY BUILDING OF MOUNT HOLYOKE COLLEGE

BY BERTHA E. BLAKELY, *Librarian.*

MOUNT HOLYOKE COLLEGE is in a New England village (South Hadley) in the Connecticut valley in a landscape which makes a charming setting for a college. There is plenty of space, so that each building has the dignity of broad lawns and no lack of sunlight and air.

The library is the central one of a group of three academic buildings facing the west on elm shaded College street. They are of reddish brown Longmeadow sandstone, and the exterior of the library, the latest of the three, was planned with especial reference to the architectural composition of the group. The building is Tudor Gothic in style. Its long line of 148 feet on the front is broken by a central gable in which is a large tracery

window above the main entrance, on each side of which is a bay window with battlemented top. At the rear, the campus side, are three wings, the central one, the stack, being 54 feet long, while those on either side are but 22 feet.

The stone is rough except across the front entrance between the bay windows, where it is dressed. Broad granite steps lead to the recessed doorway, and within the vestibule are a few tiled steps leading to the main floor of the building.

This is a lofty hall extending from end to end and finished into the roof, the twelve wood trusses spanning the entire forty-four feet of the width and resting on carved gray stone corbels. There is a large tracery win-

dow of leaded glass at each end besides that in the center of the front, and on the sides are high mullioned windows also of leaded glass. The central portion of the great hall is divided by screens of oak and leaded glass nine feet high into a main corridor and a series of small rooms without destroying the architectural unity of the whole. The architecture was adapted from that of Westminster Hall, in London, and there is the same impression of spaciousness and of aspiration and of individuality in the designing of details. The angel figures on the ends of the hammer beams, every alternate one holding a book open to the spectator below, each other one a scroll, are copied, I think, from those in Westminster Hall.

The furniture was designed by the architect to harmonize with the style of the building, and the rather massive and entirely suitable tables and chairs add greatly to the effectiveness of the whole. In coloring there is the greatest possible harmony. The rich, dark brown of the woodwork is matched by the burlap on lower walls which are not covered by bookcases, and is relieved by the lighter brown of plastered walls above. The windows, while entirely of leaded glass, contain no color except in medallions near the tops. The designs in these are, in the end windows, seals of women's colleges, and in the others printers' marks of the fifteenth and sixteenth centuries—of Aldus, Elzevir, Plantin, Froben, Caxton and their contemporaries, with a few modern marks and famous book plates. As one gazes up at these bookish reminders of other days and at the somewhat elaborate fretwork below the ceiling, including quatrefoil and trefoil designs, and sees the shadows cast by all on walls and ceiling, he might easily imagine himself in an old world Gothic structure except for the abundant sunlight and fresh air so prized by the modern student.

The entire north end of the building, including the wing separated from the rest of the room by arches and pillars, is the general reading room. The walls up to the height of seven feet are covered with bookcases which are joined by others at right angles, forming nine alcoves six feet deep. The windows are above the cases except in the wing, where

window seats are placed below the four low windows. The tables in this room will accommodate 130 readers, allowing to each a space of two and a half feet. Those in the center are arranged for ten, those at the sides for six readers. For economy of space we planned the wall cases on two sides of the room for the deep shelves for oversize books, instead of having a ledge all around above lower wide shelves. Very deep ones for folios placed on their sides are arranged between the pillars and side walls at the entrance to the wing. The seven or eight thousand volumes shelved in this room are those in all classes most needed by the majority of the students. Free access is allowed in the stack also.

The opposite, that is, the south end of the library, contains the periodical room, with extensive racks for current numbers; cupboards, which are standard bookcases with wooden doors, for back unbound numbers; and tables and chairs of the same pattern as those in the general reading room. The wing off this room, architecturally as much a part of it as the other wing is a part of the general reading room, is differentiated by special furnishings suitable for a private library—round tables, silk curtains, leather window cushions, easy chairs and foot-rests—and is our Library of the Masters. The idea of this was borrowed directly from Mr. Foster's Standard Library at Providence. Besides the special duplicate collection of world authors which gives the room its character, we have placed here a case with leaded glass doors in which are locked our rare book treasures.

The stack is in three stories, the middle one on a level with the main floor. It is the Art Metal Construction Co. bracket stack, entirely of steel, with glass floors. Ten small tables at the ends of alternate stacks on the main floor allow space for students which is much appreciated. The estimated capacity is 87,000 volumes, which, supplemented by the shelving of the reading rooms, makes the total capacity of the present book rooms 100,000 volumes. Below the stack is the unpacking room, whence books are brought by the metal lift to the main floor.

Off the central corridor are four special study rooms, and on the floor above the

stack, reached by a stairway from the main corridor and by the book lift in the stack, are ten more, which are assigned to different departments of instruction for the use of members of the faculty and students doing research work, but not for classes except in rare cases.

The card catalog, the logical center of a library, is in the main corridor between the general reading room and the delivery desk—which is in the center of the building between the main entrance and the stack—against the partition of the catalogers' room and across the corridor from the librarian's room. The latter is the room with the bay window at the left of the front entrance, opening into the general reading room, the corridor and a private office which, with the exception of the coat room off the vestibule, is the only one of the small rooms on this floor which has a ceiling.

There is a store room under the main corridor and catalogers' room, adjoining the stack, which can be used as a work room whenever it is needed. There is also a small newspaper room on this floor, and the four large corner rooms, on a level with the ground at the rear, a little below in front, are used at present as recitation rooms, but make provision for future growth of the library. The stack can also be extended if it becomes necessary.

One person at the delivery desk or in the catalogers' room furnishes sufficient attendance, except during crowded hours. The desk of the assistant librarian, who does a large part of the reference work, stands in the corner of the general reading room near the catalogers' room.

The floors deserve special mention, as they are somewhat unusual for this country. The material is asbestolith, a fireproof composition laid over concrete five or six inches thick. They are light gray with black borders and pattern decorations, and their chief advantage is their power of deadening sounds. All footsteps seem light upon them.

The building is heated, like the other college buildings, by steam from a central plant. The radiators are concealed in ducts in the wall behind the bookcases and under the floor, and thus offer no obstruction to the arrangement of cases or furniture. Fresh out-of-door air

is brought over the heated pipes, so that the air admitted through the registers above the bookcases is pure as well as warm, and its circulation through the building to the shafts between the stack and the main building has proved very satisfactory.

Plans for the building had been made long before there was any promise of money. The librarian drew the first rough floor plans from which, at the suggestion of the Library Bureau, an architect worked out full plans to be considered in detail and discussed with other librarians. When, in the fall of 1903, the trustees took the matter up and invited Mr. George F. Newton, of Boston, who had already planned Dwight Hall, the college art building, to make tentative plans, the requirements were quite clearly established, and his early plans were only slightly modified the next summer when \$100,000 had been secured and the work could be begun. Mr. Newton gave his attention to every suggestion made, and was most successful in incorporating each smallest feature which could be thought of for convenience in administration, without detracting from the architectural effect.

The contractors, Caspar Ranger & Son, of Holyoke, were also anxious to please throughout the entire course of the building, and were willing to incorporate afterthoughts. All the tables, desks, cabinets and periodical cases, and the wooden shelves were made in their workshops. The cost of the building, of fireproof construction except in the roof, with its furnishings, was \$112,000, and, exclusive of the lower floor, it will accommodate more than 300 readers. The college numbers 700 students and 100 members of the faculty. My rough estimate of the average number of readers seated at a time during the busier hours of each day is 115 or 125.

One year of occupancy has proved the new library well adapted to our needs. The abundant light and air, the large reading room for general students and secluded rooms for research are conducive to good work. The beautiful and harmonious interior produces the right atmosphere for scholars, an environment favorable to study and high thoughts, and is an inspiration to better administration.

THE LIBRARY IN RELATION TO SPECIAL CLASSES OF READERS: BOOKS FOR THE FOREIGN POPULATION—I

BY JAMES HULME CANFIELD, *Librarian of Columbia University.*

AT the 15th annual meeting of the New York Library Association, last September, I tried to say something about the service which the public libraries may render in making new Americans. I am now asked to present the substance of this very briefly as a basis for discussion of this general theme; to be continued by others who have come more directly and practically in contact with what may very properly be called a new movement in the public library world of this country.

Immigration to this country has become so enormous, and is affecting so directly all the conditions of urban life, that unless we can digest and assimilate these immigrants there will soon be a sick man of the West as well as of the East. We need these people and they need us. It is a mistake to consider their presence here a menace. While there may be and probably are some undesirable immigrants, the great mass of all immigrants are to become American citizens, and with proper care and reasonable thoughtfulness on our part will become desirable American citizens. Immigration in itself is no ground for distrust or avoidance. We do not propose to close our doors, and we could not do this if we wished.

That we may have some fair idea of the problem pressing for solution we should remember that by the census of 1900 the foreign born population of 14 of our more important cities is as follows:

New York 1,270,080, Chicago 587,112, Philadelphia 295,340, Boston 197,129, Cleveland 124,631, San Francisco 116,885, St. Louis 111,356, Buffalo 104,252, Detroit 96,503, Milwaukee 88,919, Pittsburgh 84,878, Baltimore 68,600, Cincinnati 57,961, New Orleans 30,325.

As showing the diversity of origin, language, tradition, etc., in a single city—of these foreign born people in the city of New

York 118,000 came from Austria, Bohemia and Hungary; 322,000 from Germany, 155,500 from Russia, 145,000 from Italy, 40,000 from Norway and Sweden, and 32,000 from Poland. Of the present population of the same city 2,650,000 are (entire or in part) of foreign parentage; which means no very great removal in point of time from the immigrant status.

The question is, How can these people be given most quickly a fair understanding of their new life and their new relations? As far as the church is concerned, quite generally they have their own ecclesiastical organizations. Inevitably they drift into certain portions of our cities occupied by their countrymen who have come here earlier, which tends to make them clannish and is not very helpful in the process of becoming acclimated. The day schools are doing something for the children, and the night schools are supplementing this work and adding instruction for adults. At best little more can be done in this way than to give them elementary knowledge of our language—they have little time for other instruction than this. This is the least with which we ought to be satisfied, because they need to know what we are trying to do, and we need to know their needs and desires—and English is, after all, the only practicable method of intercommunication. But we surely ought to do far more than this necessary minimum.

There ought to be in every public library of every city of any size at least the classics of several languages, in order that those speaking these different tongues may appreciate our willingness and desire to recognize the literature of their fatherland. This sympathetic temper will help bring these people to our libraries. But we ought to go further than this, and, having brought them within the library and made them its patrons, they

should find there good translations of elementary text-books in civics from English into other languages, and other literature that will be helpful to them in their new relations.

It is entirely true that many immigrants have not the education nor the mental equipment necessary to intelligent enjoyment and successful mastery of the classics in their own tongue. But a surprising number of them are interested in these classics, as appears in more than one public library on the sea coast. Just as our best literature advances all the standards of thought and life, so the best in these strange tongues will minister directly to the welfare of those who are strangers in a strange land. But their immediate needs are other than this. For the sake of illustration, imagine yourself seeking a home on the continent, without definite information as to the conditions of the new life, unable to speak or understand any language but your own, inexperienced as a traveller, not particularly well read as to the country or countries within which you must choose your residence, and possibly without kinsfolk or friends in that distant land. What you would need to know almost immediately would be something of the conditions of life which you must meet, of the laws to which you would be subject, of the manner of acquiring citizenship, of your civic rights and duties, and of the opportunities which the various countries or various parts of one country present to a newcomer. If you could find these in your own tongue, coming to you from such an authoritative source as a library considered as a public institution, having what may be called official standing, and your attention called to all this and your investigation directed by a pleasing personality showing sympathy and expressing interest in your welfare—your battle would be half won from the start.

Inverting the illustration—an Italian landing in New York ought very soon to find his way to some branch library where, in answer to his inquiry, he would have opportunity to learn of those simpler ordinances of the city which cover sanitation, education, contracts, licenses, carrying of concealed weapons, and those general police regulations with which

every intelligent citizen needs some acquaintance in order that they may most efficiently protect him and advance his interests and that he may "keep out of trouble." He ought to be able to find also some intelligent and authoritative discussion of the industrial conditions of the country, something which would tell him of diversified climate and products, information which might guide him to cheap farming lands, or to the fruit regions, or to the various mining districts, or to the great lumber regions; which would give prevailing wages, cost of living, general distribution of labor, and so on through the whole circle of possible occupations. Later perhaps he would care to know something of the political history of this new-found land, of its industrial development, of its educational system, of the men who have made it what it is, of plan and purpose for the future. All this is necessary for his immediate information and guidance in the choice of occupation and home, and is exceedingly desirable in his preparation for intelligent citizenship.

I understand that your immediate answer to this will be that such text or texts are not in existence, even in English—if we except the leaflets and folders sent out by the more ambitious steamship and railroad companies or by more enterprising states. It is this very point upon which I hope the discussion this morning will turn—what this Association may be able to accomplish in the way of the preparation of such information. In simpler form, such as leaflets, something has already been accomplished by Dr. Blaustein of New York—editions in the thousands being circulated among the immigrants at Ellis Island. This in itself is admirable, and the plan ought to be taken up either by the nation or by the more interested states, or by boards of trade, or by patriotic citizens, or by some definite organization in which all these forces may have full play: with a very general distribution of these leaflets on the other side of the water, either in the countries from which the immigrant comes or at the ports of departure, say through the hands of the American consuls. With regard to such work as this, this Association can do little more than express its appreciation and approval. But it

seems to me high time that an organization as influential as this should set itself very definitely to the task not only of a wise use of such literature when prepared but of the preparation itself. Whether this will be best accomplished by agitation and discussion, or by a systematic use of the public press, or by the appointment of a special committee which shall make careful study of this whole problem I do not pretend to say. My impression is that we shall go at it along all these lines and by a use of all these means, and I doubt if there is any more important work to which a special committee could give thoughtful consideration for the next two or three years.

In order that this matter may come directly before the Association for discussion, and to place the whole question in a concrete form, I beg leave to offer the following resolutions:

"Resolved, That the Library Institute be asked to give all necessary time and effort to a careful and thorough investigation in every detail of the possible service of public libraries to immigrants; that the Institute embody the results of this information and recommendations concerning the same in a preliminary report which shall be printed at the expense of this Association and sent to each of its active members, with a request for comment or criticism by mail; and that with this correspondence in hand a final report shall be prepared by the Institute and submitted to this Association at its next regular meeting, in 1907.

"Resolved, That because of the direct interest of the public schools of this country in this as in many other questions discussed by this Association, the officers of this Association be requested to at once enter into negotiations with the officers of the National Educational Association, the object of which shall be to secure in 1907 either a joint meeting of the two Associations or meetings at the same place, the one following so immediately upon the other that both may derive some benefit from the membership and attendance of each."

BOOKS FOR THE FOREIGN POPULATION — II

By ARTHUR E. BOSTWICK, *Chief of Circulation Department, New York Public Library.*

THE problem of providing reading for foreigners who understand only their native languages in a city of such population and extent as New York would seem at first sight an almost insuperable one, but the peculiar distribution of nationalities in the city, especially during the year or so immediately after arrival, is a great aid in this work and reduces it largely to a question of providing one or two collections of books in each foreign tongue—a fortunate circumstance, since it would scarcely be practicable to duplicate such collections for perhaps twenty different languages in thirty or forty centers.

We may say roughly that the person who takes a foreign book from a library belongs to one of two classes; he is either one who reads the language as his mother tongue, or who is reading it merely as a foreign language either for its educational value or perhaps for recreation. Now the languages read in this latter way are practically limited in New York to four—German, French, Italian and Spanish—given in the order of fre-

quency. The demand for this purpose is naturally confined to no particular localities, and it is necessary to have small collections, particularly of French and German, in all branch libraries. But besides these languages there are fifteen to twenty others that are spoken by immigrants as mother tongues; and for a considerable period after their arrival, varying for a year or two to a lifetime, they are limited in their intellectual intercourse entirely to these tongues. Owing to this fact as well as to natural gregariousness, the incoming immigrant seeks out those of his own race; hence the various "colonies." Dr. Blaustein, the director of the Educational Alliance, tells us that the subdivision goes even further than this. People from the same province and even from the same village seek each other out, so that a map of the East Side might be drawn reproducing somewhat fantastically the map of Europe with its political and racial subdivisions.

This grouping of immigrants is strikingly illustrated by the collection of posters in

foreign tongues, displayed in the streets of New York, which has been gathered to accompany this paper. These were all secured by the branch library assistants in a few days in the vicinity of their libraries and represent nothing out of the common life of the districts where they were displayed. Evidently a foreign colony must be not only large but compact to make the display of such posters worth while. The same cannot be said, of course, of newspapers; but size and extent, if not compactness, are certainly indicated by the figures in the following table, which are from Rowell's directory and cover the borough of Manhattan only.

	Daily.	Semi-Weekly.	Weekly.	Bi-Weekly.	Semi-Monthly.	Monthly.	Total.
Arabic.....	1	1	2
Bohemian.....	2	..	2	4
Chinese.....	2	2
Croatian.....	1	1
Danish.....	1	1
French.....	1	..	2	3
Gaelic (Irish)	1	1
German.....	6	..	26	1	..	7	40
Greek.....	1	1
Hungarian.....	1	..	1	2
Italian.....	4	..	8	1	13
Japanese.....	1	1

Spanish.....	2	..	1	5	8
Swedish.....	1	1	2
Yiddish.....	7	..	4	1	12
	25	1	51	2	2	16	97

This clannishness is not permanent, however. In a few years the immigrant learns at least some English, begins to feel at home, and moves off to some other part of the city, his place being taken by a newcomer. In this way, Dr. Blaustein says, the entire population of the East Side is renewed every three years—a conclusion that he reaches from personal knowledge of the capacity of the district coupled with statistics of annual accessions to its population. However this may be, it is certainly a shifting population, as our library experience in the district shows us. Older residents continually move away and newer ones move in. Here, then, is an ideal situation for the librarian—bodies of people who speak only one language, who wish to read books in that language and who find it difficult to secure them, so that they gladly read anything that is offered to them. More-

over, these people are not scattered over the city, but classified by languages and bunched together by classes, and from these groups are periodically eliminated those who have learned English and who are therefore not so eager to read in their native tongues. Surely if the librarian is ever going to influence the reading of anybody, here is his chance among these "new-caught" peoples, who are not "sullen," like Kipling's. The question of the propriety of giving these people something that may retard their acquisition of English may be dismissed with a few words. There is no evidence that the possibility of obtaining books in the native tongue does retard it; but even if it does, we can afford to wait a little longer for our new Americans if we have a greater chance of getting thereby better and more contented citizens. Homesickness—nostalgia—is well recognized as a specific disease, causing functional derangement and even death; and we cannot afford to have our future citizens start off with an attack of it. That they are afraid of it is shown by the instinctive huddling together of which I have spoken. But there is little chance in a city like New York, whose population is something like the contents of a seething caldron, that permanent foreign communities, retaining foreign ideals and resisting Americanization, will ever be formed. There is much more danger that this will take place in farming regions like the great Scandinavian districts of the West. Perhaps the most striking instance of the retention of a non-English tongue in an American community is that of the so-called Pennsylvania Dutch. Yet no one would accuse these people of being foreign or un-American. They all talk English as well as their peculiar dialect, and so will any body of immigrants under similar influences. I cannot see that it is ever going to be necessary for us to have a polyglot congress, like Switzerland, and least of all do I fear that giving a homesick immigrant a welcome in his mother tongue is likely to help along such a result.

So the temporary grouping of non-English-speaking immigrants by nationalities in the city of New York is not to be regarded as a

menace to future good citizenship, but rather as an opportunity for its acquirement.

We have been slow to see and slower to take advantage of this opportunity in the city of New York. We are not yet taking care of the English-speaking population as we ought. A circulation of about two books annually per capita in the greater city is imposing in the aggregate because of the size of our population, but it certainly does not represent the maximum of library effort.

In fact, until recent years the expansion of library opportunity in New York has not been a direct response to a demand, but rather an anticipation of it. Even now there are districts not served by branch libraries which make no complaint; yet we know from our experience that the opening of a library in such regions will be followed by the sudden development of an overwhelmingly large circulation. This has been the case with our foreign work. A Roumanian or a Hungarian does not expect, when he comes to the city, to find books for free circulation in his home language. If these were never offered demand for them would not develop, and it is not until the first purchases are made and the ball starts rolling that we realize the energy that is stored up in a great body of the population hungry for literature. A few years ago our foreign circulation was limited to the general foreign tongues and included none of the "neighborhood" languages. The consolidation with the Aguilar Library brought in the Russian and Hebrew collections at the Educational Alliance, and that of the Webster gave us the nucleus of a Bohemian collection, since largely increased. A year ago we had added Hungarian, Yiddish, Roumanian, and, during the past year, Swedish, Finnish, Dano-Norwegian, modern Greek and Polish, beginning with a few hundred volumes of each, mostly literature and fiction, and placing each collection in some branch library near the center of the corresponding linguistic group. Our experience has thus not been long, but it has been enough to bring out the fact that our foreign circulation is practically an adult circulation. This has always been the case with our German, in which our experience in neighborhood language circulation dates back twenty

years, from the establishment of a branch of the Free Circulating Library by Oswald Ottendorfer in Second Avenue. The circulation here has always been practically confined to adults. Its percentage of juvenile fiction (German and English) in its first year was 13, only one-third of that at the other branch. No separate German classification was then kept; but if the English proportion was the same as at the other branch, the German juvenile use must have been vanishingly small. Among the German books circulated there last year only two per cent. were juvenile fiction, and I judge from the reports of desk assistants that many of these were taken out by adults. Desk attendants at most of the branches estimate that the juvenile German issue is less than one per cent. At the Rivington Street branch it is larger—estimated at ten per cent. The children here take out German books for purposes of study. As for other languages, the juvenile circulation in Roumanian, Hungarian and Russian is estimated about one per cent. each. No Yiddish is circulated among children. There is a small demand, but the stock is not great enough to supply the adult readers. Hungarian is not refused to the children, but those under 16 are not encouraged to read it. Russian is read by only a few immigrant children, and by them only until they learn English. Bohemian is read by perhaps ten per cent. of children. Their parents usually take out the books for them, being anxious that they shall become familiar with the literature of the fatherland. These data show strikingly the speed with which English becomes the tongue of the younger generation and the fact that our foreign collections are only for the comfort and intellectual nutrition of those who are still occasionally looking backward to the fatherland.

It is probable that after reaching a maximum the circulation in what I have called neighborhood languages will decline and that it will become somewhat more scattered. This is indicated by our twenty years' experience with German. Our German circulation at the Ottendorfer branch during the first month (December, 1884) was nearly four times our English circulation. For the first year the German circulation was 63

per cent. Last year it was 22 per cent. The total foreign percentage of the two branches then constituting the Free Circulating Library was 33. That of the present 36 branches is 4, varying (if we exclude the Ottendorfer branch) from 10 down to one per cent. The abandonment of the neighborhood by the Americanized population would evidently scatter the demand for a particular language at the same time that the increasing use of English would diminish it.

As this scattering makes itself more and more evident in the demand for books in other parts of the city, as it already has with German, we may find it necessary to scatter our collections somewhat; but probably the bulk of each will remain as now, in one or two convenient centers.

We have been buying a few books at a time in a considerable number of foreign languages. Would it have been better to spend the money available for such books on one language at a time? For instance, would a fairly representative Hungarian collection, purchased within a few years, have been preferable to inadequate collections in a dozen tongues? This question will confront any library when beginning to form foreign collections for circulation. I can see many arguments for concentration on one language at a time; but on the whole I am satisfied with our present policy of purchasing a few hundred books yearly in each of a considerable group of literatures. We are confining our-

selves at the outset almost entirely to the literature and history classes—representative fiction, poetry and essays, with history, biography and some travel; although we have carefully considered local demand for other classes.

Of course we include dictionaries and language manuals, especially books for learning English. These, we find, require careful scrutiny. Except in the case of such languages as French and German, they are rarely prepared by persons familiar with idiomatic English, and their colloquial phrases are peculiar, to say the least.

There is room for an amusing book on "English as she is taught" in Italian, Russian or Polish manuals. Some of these are so outrageously absurd that we have had to reject them after purchase, and others we have reluctantly kept because there appear to be no others. In some languages they are altogether lacking. A list of such books, which we had begun to prepare for publication, has been postponed for lack of time to give each an exhaustive examination.

The need of books on American history and civics is also especially noticeable; but instead of preparing such works ourselves, as Dr. Canfield suggests, it would be better simply to call public attention to the lack of them. Proper bodies to supply the need would be the various civic or patriotic societies, which would doubtless be glad to take it up if the matter were brought to their attention.

BOOKS FOR THE FOREIGN POPULATION—III

By J. MAUD CAMPBELL, *Librarian of Passaic (N. J.) Public Library*

DR. CANFIELD has covered the field so effectually and stated the case so fairly, I think the cause of the immigrant might satisfactorily rest where he and Mr. Bostwick left it.

I would like to second Dr. Canfield's motion and ask if it might not be possible, while the Institute is investigating and preparing a report to be submitted to the Association, for each member of the American Library Asso-

ciation, and particularly the state associations, to agitate this point in such a vigorous way that the state authorities' attention may be called to this crying need, and co-operate with us in investigating and advancing the cause of the immigrant.

There is hardly a state in the Union which has not commissions of some sort, and all productive of good—library commissions, fish and game commissions, forestry commis-

sions. In New Jersey we have even a mosquito commission to look after the extermination of the insect which has given our state such renown. We had no trouble in getting both departments of the legislature to authorize the governor to appoint "a commission to investigate and report on the condition of immigrants coming into the state." This has brought the matter to the attention of the men who govern the policy of our state. As librarians, we cannot translate, publish or actually give away books; but with financial backing from the state it will be possible for libraries to secure the books and pamphlets in foreign languages necessary for our immigrants, and, in addition, to offer educational assistance.

While Dr. Canfield's figures as to the present immigrant population of the large cities are staggering, they are not sufficient to make us feel the task is hopeless. America has handled a bigger immigrant proposition before this, and the country has not entirely gone to the dogs. Take the hundred years between 1800 and 1900: between 1820 and 1830 there were 15 aliens to the 1000; between 1830 and 1840, 47 per 1000; between 1840 and 1850, 100 per 1000; between 1850 and 1860, 110; the next decade it fell to 73; between 1870 and 1880 it was 104 per 1000; and between 1890 and 1900 (the last census) it fell to 59 per 1000, showing that fewer immigrants came here between 1890 and 1900 in proportion to the population than in any decade since 1850, notwithstanding the hysterical cry of our being overrun with foreigners.

A prominent New York criminal judge, after having faced the worst class the country produces for twenty-seven years, said: "All evil influences, whether derived from inheritance or example, might be overcome by education; that our thoughts would direct the trend of our lives." We have given the adult immigrants very little opportunity to show what they would do for themselves about education; but their own deficiencies in this particular seem to stimulate them to great efforts on behalf of their children. In 1900 statistics show that in the whole United States the school attendance of children of foreign parentage stands highest—71

per cent.; those of foreign birth second—68.6 per cent.; while that of children of native parents is actually lowest—65.2 per cent. They show, also, that the illiterates born in this country of foreign parentage (5.7 per cent.) is only about half the percentage (9.2 per cent.) of illiterate children of native born parents.

By the last census 13.6 per cent. of our population were of foreign birth and 34.2 per cent. of foreign parentage, who naturally absorbed in early life many of the sentiments and customs of their parents, and so are not very far removed from the immigrant state. Of the foreign born the majority land here past the age when it is easy to acquire a reading knowledge of a new language, bringing us a much-needed supply of muscle and brawn; for the chief elements of wealth production in this country—and it is for its wealth that America stands prominent in the eyes of the world to-day—may be classed as the products of mines, the products of agriculture and the products of manufacture, all absolutely dependent on manual labor, much of which is obtained from this foreign element of our population, to the great prosperity of the country. These immigrants reach here at an age of productiveness without having cost the state one cent for education and protection and immediately become, not only producers, but consumers. Of 7,218,755 persons owning their own homes in 1900, 1,730,970 were foreign whites, showing that they come here meaning to make this country their home. How can we expect this country to continue to prosper if we separate society into two classes, the one encouraged to improve the mind and the other condemned to hopeless ignorance?

If the office of education is to feed life; to change existence from a dull round of necessary duties to a pulsing, living desire to reach out for something better; we will have to feed life on something better than our present starvation diet! It is not to our credit, either as a nation or as librarians, not to be able to place in the hands of our foreign-speaking patrons the assistance they so constantly ask—"Give me some book about America in my language"—and while, as Dr. Canfield says,

the supply does not begin to meet the demand, I fear we do not post ourselves as thoroughly as we might on the books that really do exist. A curious instance came under my observation last fall. Being anxious to secure a simple book on the laws of the country suitable for our Italian immigrants, I wrote to the Bureau of Immigration, both in New York and Washington. They "knew of no publication in a foreign language on this subject." The Congressional Library reported "there seems to be very little in this line," but gave titles of three books in Spanish, one in German and one in Italian. The New York Public Library reported having 39,000 books in foreign languages, but could only suggest one in Spanish, one in German—Münsterberg's "Americans," which is rather over the heads of our immigrants—and two or three in Yiddish. Brooklyn, with 24,573 vols. in foreign languages, had nothing simple and not a single title to suggest in Italian. The report of the Boston Public Library on what we should endeavor to do for our large foreign population warmed my heart to such a degree that I felt it was worth taking a trip to Boston, for there they surely had found the book I needed so badly! I went, examined the catalog, inquired in the reference room and was disappointed; I left Boston a sadder but not a wiser woman. The following week I happened to speak to an Italian priest on the difficulty I had in making his people un-

derstand our health laws, one woman having sent her little girl to spend the day in the library because she was not allowed to attend school, as she had the measles. He immediately suggested a book in Italian, written by an Italian lawyer in New York and copyrighted the previous April—Caccia's "Manuale delle leggi degli Stati Uniti ad uso degli Italiani in America"—which fully explains all these points; and a few days later the same book was suggested by an ordinary Italian laborer, showing that those people keep a closer watch on the helpful books than we do, in spite of our profession. Nor is this a solitary instance.

In order that we may remove the stigma put upon libraries and books by a recent writer in the *Annals of the Academy of Political and Social Science*, who, in speaking of the assimilation of immigrants, says, "Little need be said of books and libraries. They tend to assimilate a certain class of immigrants, but they do not reach those who are hardest to assimilate and those who need it most," I beg to add the following resolution to those of Dr. Canfield:

"*Resolved*, That all members of the A. L. A., and especially the state associations, agitate in their own state the appointment of state commissions to investigate the general condition of non-English-speaking residents, with the view to their education and enlightenment upon the principles and policy of our government and institutions, and the rights and opportunities of its citizens."

THE LIBRARY IN RELATION TO SPECIAL CLASSES OF READERS: SUPPLY AND USE OF TECHNOLOGICAL BOOKS

By HARRISON W. CRAVER, *Technology Librarian, Carnegie Library, Pittsburgh, Pa.*

THE question of supplying communities with technological books through the agency of municipal libraries is one which at present is attracting considerable attention among librarians. In the past the library has had its largest success in meeting the wants of women and children, but has not succeeded so well in obtaining the interest of the men. This has been a disadvantage in more ways

than one; it has largely reduced the possible influence of the library and has also deprived it of the assistance it might have obtained from a large number of men—men who vote and pay the taxes which support the library—if it were to them an institution of practical value and not merely "a good thing for the city."

For some time it has been felt that this con-

dition was wrong, but until recently little seems to have been done to change it. The library has been content to move along the line of least resistance—a line along which all its resources could easily be spent usefully—leaving the department of applied science practically undeveloped. Departments of music and art have been established, the children have been given careful attention; it now seems time to turn some serious effort to practical work for men.

In discussing the question I will speak first of the larger city libraries, as the conditions under which they work are more familiar to me and the problem seems more easily capable of satisfactory solution.

This branch of work requires, of course, a fair degree of acquaintance with technological topics, and with manufacturing, mining and engineering; subjects which are not ordinarily a part of the prospective librarian's education. While it is possible to select books well enough without this special knowledge, by the use of various aids in selection with which all librarians are familiar, the reference work is very difficult and unsatisfactory unless the patron can be met half way and his questions intelligently discussed. The proper solution of the question in the large library is to place upon the staff one trained in industrial work, either by college or by practice, or preferably both, and who is broadly interested in the literature of the subject. With this equipment he is able to take up the question of book selection intelligently and also to give efficient service in rendering the resources of the library available to its patrons. Such an assistant can simplify the problem greatly for the head of the library.

The actual selection of technological books is not such a bugbear as many librarians seem to believe it. Just as in other lines, there are certain publishers who maintain a high standard, certain who rarely issue anything of value, and certain others who hit or miss by turns. The technical journals review the new books regularly and often well. In no other class of literature is the reputation and position of the author a safer index of the value of the book. Of course if modern science

and industry is an absolutely unknown field, book selection is difficult; but this is equally true of music or of art.

In our own library we make weekly lists of the new books and carefully collate all reviews. From these and from our general knowledge of the author and the present condition of our collection along the line in question, the decision is made. By watching all sources for book titles, we believe that little really valuable material escapes notice.

The special trial of the technology librarian is the rapidity with which his collection ages to the point of uselessness. In five or ten years his good working collection no longer represents actual practice, and he finds its usefulness vanishing. Changes occur with marvellous rapidity in many industrial lines and the library must be prepared to keep pace. In a collection devoted to the applied sciences and intended to aid men in earning their livelihood, the point of first importance is that information furnished shall be accurate and modern, shall represent present-day thought. To be able to fill this requirement constant buying is necessary, not only of good new books, but also of new editions of old standards. Because a library has a copy of Thompson's "Dynamo-electric machinery" it does not follow that it has *the* copy of Thompson's "Dynamo-electric machinery." Times change and the books must also change, the old ones going to the scrap pile or to a historical collection of what has been. This point is often not sufficiently appreciated. Size means little in a technological collection, modernity means much.

In selecting books it must be remembered that among the readers there will be many who have no knowledge of these subjects but that acquired by daily toil at a trade, and that to these, but little versed in the reception of knowledge through the printed word, the books of theory will often prove of little use. It is necessary to have books of a rudimentary nature as well as the best books, for many which are a little weak in theoretical explanations have much useful practical information.

It should also be remembered that the public library's collection should be modelled on

practical rather than academic lines. The demand which comes is not for theories but for facts, and the collection needed is not that which would find greatest favor among scholars. Their needs should certainly not be neglected, but at the same time the wants of practical workers must constantly be kept in mind and supplied as far as is possible.

In addition to books, a collection of periodicals is of utmost importance. There is always an appreciable gap between the most modern book and the present, and this the periodicals will fill. To-day the engineering journals are the most important publications you can have; the back volumes form useful reference sets and the current numbers enable you to supply that demand for "the latest," and that, too, in the department where this cry is most insistent, save possibly in that devoted to fiction.

Looking at it in another way, the periodicals are to be favored because of their cheapness. The average engineering book sells for a cent a page, if not more, while the magazines furnish from two to four thousand pages for five dollars. If economy is a motive, economy lies in the direction of periodicals rather than in that of books, even when the cost of binding is considered.

In looking over the field which a library expects to serve, it is usually found that the industrial life of the people moves largely along certain lines and that many industries are of little prominence or are lacking. In the region supplied by the institution with which I am connected, for instance, the active industries are largely concerned with the metallurgy of iron, the manufacture of machinery, structural engineering, glass-making and mining. Other industries, as potting, are also present, but to a smaller extent; while certain great classes, as wood working and the textile industries, are almost unrepresented. Such a survey of a library's field shows it where it must be strong and where it may be weak, and so aids in book selection. There is little use in buying technical books on a subject in which your community is not interested. Spend your money on those it needs.

All these questions of when and what to

buy are easily solved by the head of a department doing the work with the books if he has a good grasp of the local situation; and so much depends upon local conditions that anything further than suggestions of the broadest character would be of little use.

Turning from book selection to book use we find the field divided, as usual, into loan and reference work. Each of these branches calls for technological books. The loan department is usually more insistent in its demands and may be heard farther, but there is in many places an opportunity, sometimes scarcely appreciated, for much reference work.

This field sometimes seems missing when in reality it is there but unoccupied because of a deadlock. The library buys little suitable material because no one ever calls for it; the engineer or manufacturer will not waste valuable time in consulting the city library because it has never been able to help him. Thus much work remains undone and a large section of the population learns to view the library as a place of amusement, useful enough in its way, but of no assistance in everyday problems.

Now this situation will never be changed unless the library makes the move, and the proper move is the establishment of an active reference department of technology.

There is where your trained assistant will find his best field for work. With his collection of books and periodicals at hand, his next step is to get them used. He must push them forward as he can at first, until his trade is established, so to speak, and must advertise as he can. If he is eligible to local technical societies he should join and become known, and enlarge his acquaintance with his possible patrons in all possible ways.

To my mind, the proper model for a reference technology department in a city is a consulting engineer's office. Some one in the department should be able to treat the questions asked with sufficient knowledge both of their conditions and the resources of the library to point the way toward an answer. To do this is not always a question of having a book; sometimes an advertisement or a trade catalog will do the work, sometimes the

problem can be solved from one's own personal knowledge. It matters little what the method is, provided the result is obtained.

A useful form of library consultation is that obtainable by telephone and by mail. We have a number of regular users of the library whose visits to the building are scarcely semi-annual. In some factory offices we are proud to know that we are the first to be called on for anything not at hand, from an engineering formula to a manufacturer's address. Telephonic assistance seems particularly appreciated and is well worth the trouble it entails.

A good field for usefulness is to be found in the publication of brief bibliographies from time to time. Bibliographies of technological material are not plentiful, and the amount of time needed to search through the mass of poorly indexed periodicals often makes it a troublesome task which might better be done once for all. Certain questions return to the library regularly, and a list of available material concerning these is very useful.

It seems to me that handling technological books becomes a more difficult problem when we come to consider small libraries, in which it must be done as part of the general work. Lacking specially trained assistants, much must be omitted, but there is still an opportunity to be of considerable assistance to those interested in industrial subjects.

In selecting books it is often possible to follow the lead of some larger library, taking from their lists the best books. This will guide one to some extent, by eliminating many books at once. Another plan is to make use of volunteer assistance. Some users of the library will often look over lists or books relating to their work and select those of greatest value to the library. One fault of this plan lies in the tendency of everyone to view with special favor books on his own particular specialty and to minimize the value of other work; it is rather hard for such an adviser to avoid bias. Another trouble is that the aid is often too irregular to be really useful.

There are, however, many libraries in America which are not now large enough to em-

ploy expert service in technology, but which nevertheless have need for some assistance. The best method of meeting their needs lies, I believe, in co-operation; in arranging to have some one with the proper requirements make the selections for a number of different libraries. If the advice given is to be really efficient, however, it cannot be done wholesale by means of a list sent to all alike. Each library and its local needs must be made the subject of special study. If such an adviser were to spend time enough to become acquainted with the town and its needs, and was supplied with full information as to the present resources of the library and the amount to be spent on technology each year, he should be able to advise monthly purchases which would build up a collection well adapted to local requirements, and that at no greater expense than under a system of haphazard buying.

In addition, such an expert bureau would be able to give aid to some extent in reference work. Many questions which come up and are left unanswered could be sent to the bureau.

So far as use is concerned, the small library should work along the lines of the larger ones as far as it can. It cannot give as good service in the way of aid to the readers, but it can have as good books and let the patrons hunt through them for themselves. It must be remembered, too, that it is much easier to handle a small collection than a large one, and so easier for the public to arrive at a knowledge of the material available.

As regards the results obtained by systematic development of a technological department, it is hard to furnish direct statistical evidence of any great improvement. Books on useful arts are but dull reading to most, and will be called for only when needed. Many borrowers come but seldom; but if good work is done the library may rest content with the knowledge that they will come whenever they need help. In our own case, where one-third of the visitors to the reference rooms come for material of an industrial nature, we feel that this work is at least as highly appreciated as that in other lines.

USE OF INDUSTRIAL COLLECTIONS AT THE PROVIDENCE PUBLIC
LIBRARYBY ETHEL GARVIN, *Custodian-in-charge*

IN a city like Providence, where there are so many art industries, it is natural that in the public library the art and industrial departments should be close together and that many readers should consult books in both departments in looking up anything in connection with their work. For instance, those using the books on jewelry in the art library would very likely also be looking up material on metal coloring by electricity, and this would be found in the books on electroplating in the industrial library. In the Providence Public Library these two departments are known under the general name of "the special libraries," and are under the charge of one custodian.

The industrial collection contains about 7600 volumes and the art collection about 3500 volumes. The classes best represented are textiles, electricity and its applications, machinery, mechanics and jewelry design, and general books of flower and animal design.

The industrial library contains a full set of the proceedings of the American Society of Civil Engineers; transactions of the American Institute of Mining Engineers and of the American Society of Mechanical Engineers; and (among English sets of the same kind), the journal of the Institution of Electrical Engineers; the proceedings of the Institution of Mechanical Engineers and the journal of the Iron and Steel Institute. It has a fairly complete set of the journal of the Franklin Institute, and the "Annales des ponts et chaussées" and a complete set of Dingler's "polytechnisches journal," which supplements the German patents. The set of the *Official Gazette* of the United States Patent Office is complete to date, and the 552 volumes of the "Specifications and drawings of patents" are complete from 1880 to the present time. One of the special features in the industrial library is the collection of 589 industrial "trade catalogs." These cover a wide variety of in-

dustrial subjects, and are arranged alphabetically by the name of the firm, the Cutter order number for the name of the firm being used in this classification. If more than one kind of catalog is published by a firm, the different ones are distinguished by the figures 1, 2 and 3 separated from the order numbers by a period. In order to distinguish them from books in the card catalog, a card is used with "Trade Catalog" printed at the top. These trade catalogs are used a great deal in answering certain kinds of questions, such as the most recent makes of electrical machinery, gasoline launches or locomotives.

Although the library is a city library, an important feature of the industrial work is the collection of agricultural reports and bulletins of the divisions and bureaus of the United States Department of Agriculture and those of the experiment stations located in the various states, these bulletins treating in many instances of biological and chemical subjects. These bulletins—about 5000 at present, representing all but two of the experiment stations—are indexed by the printed cards of the United States Department of Agriculture, for which this library has been made a deposit library, and by the card index to agricultural experiment station literature. This catalog, which is in a case by itself, now numbers 15,000 cards; it represents not what we have in the library, but what has been published.

The reader finds in this department duplicate catalogs of the books both in the art and industrial library, and duplicate class lists. The subject headings vary somewhat from the main catalog of the whole library, which is on the first floor, partly because only those headings are used which are likely to be asked for in these departments.

One of these two rooms contains a draughting table, and also a photographic dark closet for developing plates if the reader desires to

do so, and tracing paper and weights are supplied. Nearly every day some of the tracing paper is asked for by designers.

The notices of civil service examinations are regularly posted on the bulletin board in the industrial library, the only other place where they can be seen in the city being the post office.

In the purchase of books, opportunity is taken to utilize the titles which are suggested by readers, or the reviews in such periodicals as the *Engineering News*, and we have also profited very greatly by the recommendations of Mr. Craver, the technology librarian of the Carnegie Library of Pittsburgh, and by that of specialists in Providence. A book so reported upon is, however, submitted to the day and evening custodians of the special libraries in order to be sure that it is especially desirable in this particular library.

In the art library scarcely a day passes without some inquiry for books on jewelry or silverware design, and it is no wonder when one considers that one-fifth of the wage earners of Providence are in the jewelry trades, and that the output from Rhode Island represents one-fourth of the total value in the United States. Workers in these trades, especially designers, are sent to the library during their working hours to get suggestions to be used in their work. In this case the custodian does more than to lay out such books as will probably contain a picture of the flower or animal wanted and leave the reader to find it for himself. An unremitting search is kept up for the design, as, for instance, for a "sweet pea (side view)," until she finds the exact thing wanted. Everything is brought into requisition—the books on gardening, natural history, plates cut from imperfect or duplicate copies of "Country life in America," and even the covers of seed catalogs at times.

There is a collection of art trade catalogs also which are used by readers in looking up designs for such subjects as iron work, mission furniture, jewelry and silverware.

Articles are cut from the magazines when we have imperfect copies and paper covers made and the whole held together by the star paper fasteners.

Another line in which the connection of art and industry is very close is in the making

of furniture. A worker who has an order for an Elizabethan bedstead comes to the library and uses the books on old furniture for careful examination before beginning work on it. Architects use the library, looking up Dutch and English colonial houses for suggestions, and also designs for mill construction and church and school house plans.

A special purchase of books was made recently in the line of jewelry and silverware. This list was made after careful study of books in other libraries and at the Rhode Island School of Design and by consultation with teachers and workers in the various branches to be covered, as well as with the users of the library in these lines. In such practical subjects as die-sinking and stone setting no books could be obtained, but in other subjects in which books were bought, the additions were very much appreciated.

A number of methods of advertising the library's resources have been employed. Any reader who is known to be interested in a book of a kind recently added receives a postal from the library giving the title and number of the book and the length of time that the book will be reserved for him. The custodian of the department sees that these cards are sent out. One of the assistants in the telephone exchange asked for a list on telephone work, and a list of the books in the library was sent, and in addition twenty application blanks for cards. All had been used in two weeks afterward.

A list of books on automobiles was sent out to the school of automobile engineering. The publication of lists on metal coloring and books on plant and animal design in successive lists in the daily papers, and one on the additions in jewelry design in the local organ of the jewelry trade (the *Manufacturing Jeweler*) has been another method of "advertising the library." The lists in the daily papers were cut out, mounted on ordinary pad paper, with the heading, and sent to twenty or more firms to be placed on their bulletin boards, and in the case of the second list, addressed to the designing department of those firms.

The departments have been chiefly advertised, however, by the readers. Frequently readers are seen showing their friends about,

not in the aimless way of a sight-seer, but going to the alcoves and pointing to a certain section saying, "You will find the books on machinery there and those on mechanics on this side of the alcove," and often taking down a particular book as if it were a familiar friend. The main part of the requests for books to be reserved by postals are for industrial and art books, and the requests are usually left with the custodian of the special libraries.

In the industrial library the largest number of users are looking up patents, two persons usually working together. The volumes of the *Official Gazette* and the "Specifications and drawings" remain on the shelves less than any other books. Readers use this department very steadily, spending their noon hours in the winter in reading in the industrial reading room. In the evening and on Saturday afternoons the tables are all occupied, with one or two readers in each alcove, and they even overflow into the art library, which has a larger room. During the six years that the library has been opened there has been a steady growth in their use, and always for serious study. As showing the amount of reference work it should be said that 4500 questions were looked up in the special libraries last year, an increase of 1200 over the previous year, and of this increase more than 1000 were on industrial subjects. The current industrial periodicals

are kept in the periodical room, and so the use of the industrial department does not include anything but books and the bound periodicals on these subjects.

Among those who use the industrial library are apprentices and machinists in the large machine shops, workers in the cotton and woolen industries, textiles being the leading industry or the state, and those interested in the manufacture of gasoline engines and their applications to automobiles and launches.

In the article in the *Independent* of June 15, 1905, on "Libraries for men," the writer spoke of the supposed attendant of a library who would be shocked if a workman came in with his soldering tin and asked for a book. In this library such would not be the case. The more workmen who come the better, and they are welcome. A man came in his overalls to get a certain gilt lettering for sign painting, and after eagerly searching through the books that I found for him until he found the exact letters, he apologized, saying, "I was so anxious to get this that I came here right from the shop." Of course he was at once made to understand that no apology was needed for so sensible an act.

It is just this feeling of the indispensability of the library that one wishes for in all the workers, whether living within the city or outside. Any one in the state can draw books if recommended by the librarian of the town where he lives.

BOOKS FOR THE BLIND

By EMMA R. NEISSER, *Free Library of Philadelphia*

THE first embossed book made in the United States was made at the Pennsylvania Institution for the Blind, in Philadelphia. So, too, the honor of arousing public interest in the first "home teaching" of the blind in America is due to the same institution, for it was by invitation of a former principal, Mr. William Chapin, that Dr. William Moon, of Brighton, England, visited this country in 1882.

Mr. Chapin soon recognized that the work of "home teaching" intended for the adult blind did not properly belong to his institu-

tion. With Dr. Moon Mr. Chapin called upon Mr. John P. Rhoads, business manager of the Pennsylvania Bible Society, and interested him in the "home teaching" idea, so successfully carried out in England. As the funds of the Bible Society could not be used to purchase secular works, Mr. Rhoads applied to his friends for contributions and collected \$200. The Bible Society ordered a stock of embossed religious works and, thus equipped, the pioneer Home Teaching Society and Free Circulating Library for the Blind began its work. Mr. Rhoads applied

to the mayor, asking that a census of all blind persons might be taken by the police. All the blind in the city were then visited by a teacher employed by the newly organized society.

The co-operation of the Free Library of Philadelphia and the Philadelphia Home Teaching Society for the Blind in 1898 gave a new impetus to the circulation of embossed books in Philadelphia and its vicinity. Since the affiliation between the two institutions the most cordial relations have been maintained. The books belonging to the society were all transferred to the Free Library, and were accessioned, classified and placed on the shelves in a separate room devoted to the embossed volumes, which required special shelving. The Free Library purchased a selection of books in Moon type, as well as in the other embossed systems most used. Separate book plates distinguish the books of the Society from those of the Free Library, and separate accession books are used.

The Society now employs three teachers. For the salaries of these teachers the Society is responsible, as well as for their travelling expenses, and for any expenses of transportation of books by mail or express. The Free Library provides the room, rent free, and the services of the assistant-in-charge. Since the increase in circulation has increased the correspondence, the Society has paid to the Free Library the sum of \$100 annually for the additional clerical service required. In 1901 the organization was incorporated under the laws of Pennsylvania, and the name changed to Pennsylvania Home Teaching Society for the Blind.

The work of a department for the blind should not be merely the exchanging of books over a charging desk and the keeping of statistics. Each new person brought to the notice of the librarian should receive individual encouragement. Some years ago a young medical student in our city became suddenly blind just before the close of his second year in college. When he first came to the library he had been without sight nearly 18 months. He had sat most of the time with nothing to do, dependent upon others when he wished to walk abroad, afraid to go alone. Strong and well, under 30 years of age, and utterly despondent, his case seemed very distressing.

It was suggested that he learn to read, and also that he undertake to become a masseur, on account of his previous medical training and knowledge of anatomy. He studied the Moon type and later the American Braille, which he has also learned to write, and having become enthusiastic about the plan to study massage, began his lessons with one of the most competent instructors in Philadelphia. He is now qualified as a masseur, and able to teach others, travels alone to the library, and is regularly connected with one of the hospitals in the city. Only the other day he said, "If it had not been for this library, if I had not learned to read, I do not believe I would have lived; certainly I would have had no ambition."

Another young man, 30 years of age, with a wife and little daughter to support, was suddenly stricken with blindness while conducting the orchestra in one of the theatres. His sudden loss of sight made him very timid, and although an excellent musician, he refused to touch the piano, feeling sure that he could not play. After first learning Moon type and becoming a reader, he learned the American Braille. His confidence was somewhat restored by his ability to read for himself and he was finally induced, as a personal favor, to assist a brother violinist whose accompanist had disappointed him. For the evening's performance he received \$5, the first money he had earned since he lost his sight. This marked the beginning of a new era in his history, for he at once took a position to play the piano in a dancing school several days each week. Since that time he has fully regained his former hopeful spirit, and, with one of his friends, has assumed the responsibility of a dancing school and has been very successful.

Much is being done for children; there are 38 schools in which 4363 pupils of school age are receiving a good education. These young people are all taught to read one of the point systems. Of the 69,258 remaining, a certain number have been former pupils in the schools, but there are many thousands untaught. Co-operation between public libraries and home teaching societies should be secured if the best work among the blind is to be attained, and the establishment of additional societies is urged.

Each state, each large city even, should maintain its own home teaching society.

This is a most excellent opportunity for valuable co-operation of the women's clubs with public libraries and library commissions. Their enthusiasm and help in establishing travelling libraries leads to the hope that the women's clubs may take an active interest in providing "home teaching" for the adult blind, and in the publication of additional volumes in the Moon system, which is most used. That such an interest is already making itself felt is noticed in Mr. Thomson's correspondence. The Association of Collegiate Alumnae, of Portland, Ore., and the Philanthropic Section of the Nineteenth Century Club of Memphis, Tenn., have both written for information concerning "home teaching." Two members of the New Century Club, of Wilmington, Del., called recently at the Free Library of Philadelphia for advice concerning the appointment of a "home teacher" for the state of Delaware, whose salary is to be paid by the club. This is a most excellent arrangement for many libraries, which have seldom more money than is needed for administration. In time it is hoped to obtain an appropriation from the state.

For a discussion of the relative merits of the different types needed by public libraries, the article by Mr. Edward Ellis Allen, recently published, entitled "Library work for the blind,"* deserves careful consideration.

In selecting the kind of print to be used, the *first* type to be supplied should be the system taught in the state school, for that will be called for by graduates and former pupils. As Mr. Allen, in his article, points out, however, "any library pretending to be representative and wishing to increase its usefulness will possess books in both point systems, and so double its variety of reading matter."

The following suggestions may be useful to those interested in the publication of books in the two point systems: 1. Among adults who have advanced from the Moon type to a point system the demand is for books in full orthography and in type large enough to be easily felt. 2. Many of the point books are too large and heavy and cannot be easily handled.

The volumes in Moon type are large, but they are small in comparison with some of the volumes in the two point systems. Recently in sending out a book the package by actual weight tipped the scales at 9½ pounds.

On June 1, 1906, the Department for the Blind in the Free Library of Philadelphia contained 2281 accessioned volumes in 5 embossed systems, belonging to both Pennsylvania Home Teaching Society and Free Library of Philadelphia as follows:

American Braille.....	209 vol.
Braille.....	156 "
Line letter.....	277 "
New York point.....	167 "
Moon type.....	1472 "
	<hr/>
	2281 "

together with a duplicate stock of about 800 volumes in Moon type belonging to the Society.

The distribution of embossed volumes in 1905, from this department, according to types was as follows:

American Braille.....	882 vol.
Braille.....	416 "
Line letter.....	153 "
Moon.....	5458 "
New York point.....	236 "
	<hr/>
	7145 "

Readers who were formerly unable to send for books on account of the great cost of postage or expressage, have now the privilege of frequent exchanges, without any charge, in accordance with the recent act of Congress granting free transportation of embossed books. Great care is taken that no infringement of the law occurs. In two instances it has been necessary to notify readers not to include under the covers of the books the written lists of books wanted in exchange. Even return labels are sent to all readers in separate envelopes, at regular postal rates.

As a protection to the bindings, and for the convenience of the messenger who calls for the books, all volumes are wrapped for delivery in heavy brown paper, known to the trade as "drab express" wrapping paper. Package handles, bearing the words "Dept. for the Blind, Free Library of Phila., 1221 Chestnut St.," are provided for all packages..

**Lib. Journal*, Jan., 1906, p. 8-11.

Among the libraries which suffered from the recent earthquake and fire in San Francisco was the San Francisco Library and Reading Room for the Blind, located at 4th and Clara streets. Mr. Thomson promptly offered the embossed books in the Free Library of Philadelphia for the use of readers in San Francisco, when, after the excitement had subsided, they should be ready for reading again. A letter was received from Miss Harriet L. Young, the librarian, who, after expressing thanks for the offer of assistance, said:

"Our library was totally destroyed, as were banks and everything pertaining to security; it is therefore useless for us to accept your kind and greatly appreciated aid. We have a splendid State Library for the Blind and our readers can draw books from there. They, the trustees, have kindly tendered their assistance.

"We shall be pleased to ask for former reports from you about September, when we reorganize. We saved absolutely nothing—the little the earthquake left was destroyed in 15 minutes by fire. We fear that many of our blind people were killed—we cannot locate all of them."

In regard to time limit in the use of the embossed books, the broadest privilege should prevail. No fines are charged, no matter how long books are kept. It has been found that in many cases one month is too short a time to allow for reading the books. Many of the adult blind read slowly, and over and over again. Some are invalids, and the majority must await the convenience of some other member of the family or some seeing friend to have the books properly wrapped for return. A formal notice asking for the return of a volume is not sent until a book has been in circulation three months.

In the circulation of printed books, the sole purpose of a renewal is to avoid the payment of fines. No fines being charged for embossed books, no renewals are necessary. The circulation of the embossed books from the Department for the Blind in the Free Library of Philadelphia, therefore, numbering 7145 during 1905, represents 7145 actual volumes circulated, and is not a technical repetition of circulation.

All volumes taken from the library by the teacher are recorded by date of issue and

call number on his reader's card, on which is also stamped the date of return of all books.

The daily report of circulation does not include the books taken by the teachers. On the first of the month each teacher presents his record book, which is kept in diary form, to the assistant-in-charge, who makes out the report according to the Decimal classification and also according to the number of volumes of each type circulated, and the number, if any, circulated out of the city. The total monthly report of circulation includes the record of books issued from the department for the blind, plus the record of books distributed by the three teachers.

Philadelphia is fortunate in the cordial relations which exist among the various organizations in the city interested in the blind. Mr. Edward Ellis Allen, principal of the Pennsylvania Institution at Overbrook, is most heartily in sympathy with the work of the Free Library. He is one of the managers of the Pennsylvania Home Teaching Society for the Blind and has given substantial aid to the department for the blind in his large gifts of books in different types. Mr. Allen has made many valuable suggestions regarding appliances for the blind and literature relating to the work. Without any formal co-operation between the different organizations most harmonious relations prevail. The Pennsylvania Working Home for Blind Men, 3518 Lancaster avenue, and the Pennsylvania Industrial Home for Blind Women, 3827 Powelton avenue, are both visited regularly by the teacher.

The Society for the Promotion of Church Work among the Blind was organized in Philadelphia in 1903, under the auspices of the Protestant Episcopal Church. The object of the Society is to promote the spiritual welfare of the blind, and it aims to be a central source of information on this subject. Miss Amelia Sanford, the secretary, 708 Spruce street, Philadelphia, will send, free of charge, the books published for the Society, to any library which wishes to put them into circulation.

From the Pennsylvania Bible Society, 701 Walnut street, Philadelphia, may be obtained portions of the Bible in all embossed types.

Additional literature in Moon type is

greatly needed, and an effort to supply the demand for new books has been begun in this country. The *Moon Magazine* owes its existence to the suggestion and help of a reader. A magazine had been talked of for some time, but had not materialized, when Mr. R. P. High wrote to make inquiry concerning periodical literature. Finding there was no magazine published in the Moon system, he offered to make a contribution of \$100 towards the expense of publishing such a magazine. The initial number of the new magazine made its appearance in January, 1906.

In 1904 the late Hon. John Hay, Secretary of State, paid for embossing his "Eulogy on the late William McKinley," delivered before the Senate and the House of Representatives. To Mr. John T. Morris, a friend of Dr. Robert C. Moon, we are indebted for the "Call of the wild" and "Mrs. Wiggs of the cabbage patch" in embossed type. It is also a pleasure to announce that the Hon. J. M. Pereles, of the Wisconsin Free Library Commission, has arranged for the publication of Helen Keller's "Optimism," and has also offered to make his subscription an annual contribu-

tion towards the publication of new books in Moon type.

It is hoped that the example of a few individuals may serve as a suggestion to others. Much may be done along this line by various societies, especially women's clubs. The providing of new literature to be circulated by libraries and library commissions, free of charge, will add greatly to the happiness of the adult blind, many of whom are unable to work, and who have no occupation but reading. The cost, or rather the half-cost, of embossing Moon type is 75 cents per embossed page of 900 letters. The other half of the cost is borne by the Moon Society, of Brighton, England, which publishes the books.

Is it not possible for a number of women's clubs, the International Sunshine Society, and other organizations, to furnish annually a stated sum, to provide for new volumes in Moon type, which is most used by the adult blind?

This paper closes with the hope that the American Library Association Conference in 1907 may report a large increase in the number of home teaching societies, employing blind or partially blind teachers.

LIBRARIES IN RELATION TO SETTLEMENT WORK

BY CORA STEWART, *Custodian of Station P, Boston Public Library*

IT is not possible for me to present a definite program of library and settlement work, for the program varies with conditions which change every day. The nature of a settlement neighborhood is such that the work of its library is necessarily scrappy, and can only be truthfully expressed in a scrappy fashion. I have attempted to offer merely some suggestions which have come to me through a somewhat varied experience of fourteen years in settlement regions.

The library where the observations have been made upon which this paper is based is one of the smaller branches or larger reading rooms of the Boston Public Library. It has a permanent collection of 2500 books, half juvenile, and a deposit of 400 constantly

changing books from the central library. Its maximum circulation is 30,000 volumes a year. It is housed in an irregular shaped store occupying the street floor corner of a large apartment house, into which one old gentleman moved because of the library. He said he had never had enough books. The station is a mile from the central library, in a thickly populated tenement house section, on the edge of the business district. It serves specially three grammar schools. The nearest neighbors are two rival ladies' tailors, a paper and cigar store of a Russian socialist, and at the corner, directly opposite the police call-box, the boot-blackening establishment of the most popular man on the street. Neapolitan to the core, the passing show on Washing-

ton street and the excitement attending arrests, reconciles him to Boston. I found him once on a stifling summer day out on the pavement, chair tipped up against the wall, reading a library book, "For English," he said, "a fine book!" He held it up for me to see as I went by, and it was Vasari's "Lives of the painters."

Two powerful and characteristic influences of the district are the theatres and the credit clothing houses. Aside from these it is a neighborhood of pawnshops, saloons and settlements. Into the pawnshops go the classics. The entire family take turns in tending shop, and some of the sons are in Harvard, some in Technology, and many are in the Latin school. Into the library from the saloons come deputations of gentlemen with statistical and literary disputes to be settled by a book or by the librarian. Often there is money up on the result. To explain to unsteady but quite courteous men the difficulties in the way of deciding absolutely whether Great Britain and her colonies or China has the largest population is not so easy as to find the author of a rather broad poetical selection, admirably recited for you by the leader. The meaning of the Latin inscription on the seal of the city of Cork is sometimes an embarrassing subject.

For the settlement and the settlement activities the station does something, and might do more. The first settlement in the United States was opened nearly a score of years ago. The same year the Children's Aid Society started in Boston the first home libraries. So much enthusiasm was aroused about the home library idea that, when a few years later the first settlement was opened in Boston, it barely escaped being turned into a home library. That enthusiasm is still felt in every children's room of every library in the country.

It was natural that the first effort of settlement workers should be with the medium with which they were most familiar—books. The early settlements started with donated libraries, calculated to interest small children and their older brothers and sisters; and the library day, when children changed their books and spent the afternoon variously entertained by games, story telling and music,

was a feature of the settlement weekly program.

It was thought that this was the best introduction to the children, and through them to the families, and it served the purpose. Groups of library children were formed into clubs and classes, and, as special interests grew up, the library days became of less importance. Here and there the settlement had the advantage of a resident who was a natural librarian, who knew her books, knew her children, superintended their reading, "put the right book into the hands of the right child at the right time," and did most of the acts done in the foremost children's libraries to-day. This was two years before the first children's room in any library in the country was started.

But the library day developed objectionable features. As the small boy, posted outside to note when the "Open" card went up, expressed it, it was "Come on to the game house," and it drained the strength of the ordinary ever-changing settlement households to get satisfactory results from the uproarious material.

One Boston settlement finally combined with a neighboring club and opened a reading room on a nearby street. To this the public library sent a deposit of books. A year later, through the influence of a librarian resident in the settlement, the public library was induced to place a delivery station in the district, the settlement presenting to it their children's library. This practically was the turning over to the city library of the *general* book work for the children of the vicinity.

Something similar to this happened in all the large cities as the library branch system developed, and the settlements desired to have special sociological, class or club book collections, rather than general juvenile libraries. There are some exceptions. Hale House, for instance, retains its library, strong in the history of Boston, and with a good collection of children's stories. It is open constantly to Hale House club members, serves as an informal meeting place, and aims to prepare for the public library by personally introducing the smaller children into the realms of good reading. It is a fact that the public library holds the members of the

Hale House clubs as it does not those of other settlements. It is a question, however, if this is not due to difference in race. Hale House works with the Jewish race. A settlement living among some of the other races cannot hope to do the book work possible in a community of Jews. In one case the effort is one of intelligent stimulation, in the other, one of passing out books on demand.

In the ten years since the station has been established the little that has been done toward an ideal mutual helpfulness between the branch and the settlements has grown out of the needs of new club workers to know more of what children were capable. The librarian, through the work with the schools and the home lessons studied in the library, gains an insight into those subjects which interest individuals and groups of children (subjects which can perhaps be only superficially treated in the limited school time), and by a careful watch on new books and methods, tries to be prepared to answer specifically the various club leaders, who seek advice about their program for the year.

The typical question often brought is, "What can be done with my club of girls from 14 to 16 years old, graduates of grammar schools, working in shops and factories, the most difficult age, and, so far as I can see, interested in nothing." On discussion it develops that they are interested in three things—the theatre, clothes, and the other sex—and that it is perfectly possible to present all three subjects in attractive form. For instance, there is that closed book to a grammar school graduate, the "Idylls of the king," with its dramatic possibilities. Of Irish, Russian, Greek, Syrian, Jewish, Italian descent, all the diverse elements in the neighborhood, except the Chinese, meet on the subject of the stage. And for a club worker to have scruples about presenting the story of Guinevere, or for the librarian to hesitate to recommend to young girls the reading of the "Scarlet letter," "Adam Bede," the "History of David Grieve," is to leave the girls to the moral and literary standard set by the cheap newspapers and the facts of a "tenderloin" district, known to every child in it.

It has been found worth while to start lists for club workers on certain suggestive sub-

jects, the lists to include books the children themselves can use, short stories and articles in periodicals useful to the leader, and books and articles giving manual training hints, together with lists of illustrative pictures and posters possible to be loaned.

"Where do you keep books about poor boys who get rich quick?" "Will you get me two works of affliction for my father? He likes the kind that ends well." (In this type of library there is seldom use for any but a subject catalog or a classified fiction list.)

There was a tiny old lady who demanded two stories, but not love stories.

"You know there are times when you don't want a love story," she said. "I have never been in love, and I have been married twice."

I suggested that there was time yet.

"No, there isn't; I'm seventy!" she replied.

"Then the only thing for you is another incarnation. They say being in love is an experience worth living for. You will have to come back to get it."

She grasped my arm. "Do you know, I dreamed I did last night. I was tall—and I always wanted to be tall—and I was young and in love; and I woke myself saying 'There, that was what I wanted when I was here before!'"

The settlements learned to know the families through the children. In a small library which the neighborhood feels belongs to them the same knowledge is gained. It serves them all, from the smallest girl in the kindergarten to the oldest son in the Common Council, and through the children, the fathers and mothers.

"Please can I have a dictionary and a commercial geography? My father, he has a fine business, but he has not the English."

It is not alone Vasari and the commercial geography which is used by the adults as text-books to learn English; Tolstoi's novels are popular as readers, and attempts to use Shakespeare's plays are not uncommon. One little foreigner told the librarian of the central children's reading room how she was teaching her mother to read. Too much kitchen work left the mother no time to go to the library, and, indeed, too little time to read a book, but she wanted to learn English. So the child wrote the lessons in chalk on the kitchen door in the morning, heard the lesson recited

by the mother in the evening, and then rubbed it out and prepared for the next day's work.

There is endless work at the station with individuals, done by simply offering our commodity in response to a demand. An exceedingly bright girl graduated from the grammar school, went to work as soon as she reached the age of fourteen years, but was determined to continue studying. After some consideration she decided to go to the evening drawing school. In November we noticed that she was taking out French history. In December she came to me and said, "I want to study something besides drawing. I've tried the French history, but I can't get interested. I suppose I don't know enough. You know what I've studied—isn't there any way I can take up French history by myself and not have it dry?"

As a result she took a course of reading, beginning with the French royal chateaux and the people who built and lived in them. She read the Champney books, "Old Touraine," books on Anne of Brittany, Joan of Arc, Agnes Sorel, Bayard. Because the Italians of the same period are almost inseparable and yet form points of comparison and contrast, she read Armstrong's "Lorenzo de Medici," Rea's "Tuscan and Venetian art," Hewlett's "Little novels of Italy," a sketch of Vittoria Colonna, and Cartwright's "Beatrice d'Este." We aimed for books which would bring out enthusiasm—brief biographies, novels—sometimes those throwing side-lights, like "When knighthood was in flower." In the spring she was ready for Dumas, and she read his novels of the Renaissance period. Though protesting that she was wading through massacres and intrigues, she was quite prepared to see that the same France of the massacres and intrigues produced Joan of Arc and Bayard. This child has moved into a factory town where she knows no one but her sister's family. If introductions are ever of use, why should we not take a leaf out of settlement practice and see that the librarian of that town knows of her need of guidance and is specially prepared to help?

The settlements having university extension classes are often able to offer special teaching for special cases coming to their notice through the library. But a settlement is a col-

lection of busy people who may or may not be interested in district library work. It depends upon the composition of the household at any one time. All settlements are prone to fall occasionally into the condition of that Martha of the New Testament who was "Cumbered about much serving" and "troubled about many things." And at such times, no matter what are their principles, it is wise not to depend on them for co-operation. As long as the library is the permanent factor in a settlement district (where the demands for information are apparently never satisfied) it is the library that must serve as the educational directory for the community. It must know what the evening schools, clubs, settlements, societies, are prepared to offer or can be induced to offer.

Conditions differ in every library neighborhood, and there are many types of libraries. There is a little village in Maine where the only elements, which by any stretch of the imagination might be called settlement or social agencies, are three mortgaged churches and a non-resident school mistress. The librarian of the library there needs settlement training, for settlement work she must do and do it alone. The best example in Boston of a library bound up with a settlement is the North Bennet Street Industrial School library. Here a settlement has slowly evolved out of a day nursery in response to neighborhood needs, and the relation of the library to the other work is of the closest.

A most interesting example of similar conditions is the Loring Library of the cordage factory at North Plymouth, Mass. Here the library does purely library work, but has all the settlement agencies co-ordinate and co-operating with it in the same isolated community. In all cases the library is there to quicken intellectual life, whether it itself does the settlement work of story-telling, game-playing, conducting home libraries, organizing clubs and classes, providing social and lecture headquarters, or, these being provided by other agencies, its work is concerned mainly with providing on request lists, books and pictures for these agencies. In any case, the library and the librarian, like the settlement, should be an integral part of the life of the district.

SOME METHODS OF LIBRARY ADVERTISING

BY PURD B. WRIGHT, *Librarian St. Joseph (Mo.) Free Public Library*

IN the matter of advertising the smaller library, giving it publicity among the masses, the most important considerations are cost and results. Even in the smallest library, where the librarian may be an actual Poo-Bah, more or less time should be found for some kind of advertising. This is an essential part of the duty of the librarian. The library belongs to the people; and those in charge of it should proceed on the assumption that with ownership goes the right to be informed as to what it has, what it is doing, even what it would like to do; that its use is theirs by right, not by consent of those in charge.

The essence of library advertising is to convey to the people this message, using the words of a western librarian in a recent letter to the citizens of his city: "The library is yours. Get acquainted with it. Get better acquainted with it. Its use and value will increase in direct proportion to your familiarity with what it already offers."

As to methods used in pressing this message home, an attempt will be made to summarize some of those which have seemed to be most successful.

More people of the reading class may be reached in a shorter time and at less expense through the medium of the newspaper than any other. The average editor is broad minded and liberal when he is convinced the people are interested. A mere list of books received will now and then be used, but news in this shape is not as interesting as it might be and should be presented as seldom as possible. Short lists, with a few illuminating lines about each title, will always be used. Notes about literary work, a few titles on topics in which there is a passing interest, will be gladly used by most newspapers. Reports of all meetings of the library board; items from the current reports, and by all means all of the annual report (except the tables of statistics, which should be summarized); donations, with the names of donors; work featured on the special tables or bulletin boards; school and club work;

new periodicals for the reading room; changes in the regulations of the library; explanation of the two-book system, or any special privileges granted, and hosts of minor things that serve as a solid pretext for a library item. With most editors arrangements may be made to use a certain amount of library news at stated periods, even on a given day each week. But live news should not be saved for these occasions; it should be "served hot," while interest is at its height. For the library department the copy should be provided by the librarian. No such department should appear in any paper without some general library news—what is going on in other libraries; what the state commission or association is doing; a word now and then as to the American Library Association; contemplated changes in or the workings of the copyright law; news or descriptions now and then of the great libraries of the world.

Owners should be educated in the things of vital interest to their property as well as those employed to run it. A bit of good work done by the library in another town may prove to be the lever to provide the means for doing the same thing or something better in our town. Books news and literary chat will occasionally be used and prove helpful to the library. Furnish the copy a day or two before it is to be printed. It will be sure to get into type, and more certain to be printed than if held to the last minute, when it may have to give way to a political or other sensation. Such columns may gradually be made to cover a constantly widening field, dropping as a distinctive feature the local happenings of lesser import, which will have been picked up by the city page as a matter worth while and in which many readers are interested. When this has been accomplished it will be found that the public, your public, knows about and is interested in library work in general—what it all means, what is sought to be done—not the petty details, but the things which count. The larger the city and the more general the

circulation of the newspaper the sooner is this likely to occur. The library department in the *Boston Transcript* is a present day model of what may be accomplished, not to mention others; it talks of vital things in the library world. The ultimate aim is to make the library a force in the community; something to be recognized and reckoned with. This may be brought about sooner by the aid of the intelligent editor.

The library bulletin is effective, though expensive. Quarterly issues are good, monthly better. The bulletin should be the means of communication through which the library says many things to the public which may be placed before it in no other way. In addition to the list of accessions, with annotations, if possible—a line or two clipped from the reviews—announcements and various items of interest may be included, as well as special lists on timely or interesting subjects. The bulletin should not only be free to those who come for it, but it should be placed where it will be seen by as many people as possible. The primary object of the bulletin is to keep patrons informed as to books received, etc., but the library is failing in an important particular if it does not also use the bulletins as a means of increasing its patronage. The regular mailing list should include all organizations, employers' associations, Young Men's Christian Association, Young Women's Christian Association, clubs, societies, schools, colleges, lodges, recreation and lunch rooms in factories, machine shops and large mercantile houses and similar places. There should be special mailing lists, for instance, of ministers of the gospel, students interested in special subjects, mechanics in the different trades, contractors, architects, teachers, and so on. It may not be advisable, on account of the cost, or for other reasons, to send all on these lists a copy of each bulletin, but numbers containing special lists, notes, important new titles, should surely reach the class of people supposed to be interested in the subject covered.

Special lists, to supplement the newspaper or bulletin, have been found to be very helpful. For results worth while, these must be placed in the hands of those whom it is desired to bring to the library. For the reason that no one person may know the minds, the likes and dislikes, the ambitions

of all other persons, I cannot resist making a plea for a wide distribution of all special lists. Surely the library may in this respect follow the methods of the successful business man to a certain extent. It has nothing to lose, everything to gain. Placed in books taken from the children's room, short lists of good books on any subject will find their way into the homes and bring adults to the library who had thought of that institution only in conjunction with school work. Placed in novels which are popular with certain classes, they likewise are taken home and find a place for a time, at least, on the tables, where they are likely to attract the attention of other members of the family. The typewriter and duplicating processes have made these lists possible in every library.

Successful and lasting results are obtained from the right sort of advertising with children. Library leagues, children's clubs, travelling school libraries, neighborhood libraries, playground libraries, supplementary reading in the schools, get the children and the books together. If the books are right, the children will become interested and sooner or later find their way to the library and the library card. If received in the correct spirit, if the attendant knows something of child nature and has somewhat more than a passing knowledge of children's books, everything else may be taken for granted.

Picture bulletins are a source of delight to children; exhibits of drawing or color work from the different schools bring the pupils from all the schools to see what other children are doing. Very often it results in visits from fathers and mothers. Picture bulletin boards, days of special import emphasized on the calendar, nature exhibits, anything which appeals to the juvenile mind, assistance given to the teacher—these are all good advertising. School work may be aided through the term. The library should be ready to do its work during vacation. Be prepared to help the children with outdoor games, nature studies, and like features, emphasizing them by means of the bulletin board and pictures, with the most attractive books shelved underneath before the school closes, and they will not be forgotten after the freedom of the first few days of vacation. In helping the children with the things in which they are interested, the library

worker will find how easy it is to interest them with various things it is desirable they should know.

Good novels are worth reading. Advertise them. They bring people to the library. It is better that the novel reader should get a good book from the library than that they should get poor ones some other place. They get the novel for entertainment, and presently they may want something else in the book line, and they will know where to get it. But they are entitled to the novel as mere entertainment or amusement if they want it. It may be the link which binds them to the library and gives that institution the opportunity it might not otherwise have to interest them in some other department of reading.

Not enough advertising is given the reading room. Too few people know about its benefits, its delights and comforts. Newark informs many people about interesting articles in various magazines through type-written lists duplicated by the mimeograph process. To teachers it sends an educational bulletin, with a few words bringing out the salient features of articles on education and teaching; to business men, mechanics and other classes it indicates articles which it is presumed will appeal to them. The smaller library, with its limited means and few workers, cannot do much of this kind of work; but it can let the people know the various newspapers and periodicals which may be seen regularly in the reading room. A little slip containing titles of periodicals relating to electricity or mechanical trades, or advertising, or teaching, distributed in the proper place, will bring people to use them. There is little difficulty in reaching skilled mechanics, because they will come if they but know the reading room contains good trade periodicals. Coming there, they will soon learn whether the books on our shelves in their callings are worth while or not.

As a usual thing, the average business man is wrapped up in his business affairs. He reads his newspapers, a few magazines, and buys books which appeal to him. The value of the library may be brought to him in various ways. He should be made to understand that it will try to furnish any sort of information he may require; that it will answer questions over the telephone; that it will try

to aid his business by books and periodicals on advertising, business methods, book-keeping, typewriting, punctuation, business letters, correspondence, or technical matters relating to his special line. If he is told these things in a short, crisp way, some time he will remember it. Little desk reminders, a small calendar, with a photo of the library building, and a line or two as a suggestion that information may be asked for over the telephone, has been known to make library friends and to lead to a business use of the library. But it doesn't do to be cocksure of answering every question that comes to one or of claiming to be able to do so. Smoking rooms, lunch rooms, also attract men in some places; billiards have been tried in others, and still others have chess, checkers and other games. These, however, are only for abnormal conditions. Traveling libraries for shop or factory use, men's clubs, labor unions and similar places all tend to bring increased attendance from men at the library.

It should be unnecessary to say that the library is especially strong in both its reading room and books on the shelves on any industry which is strikingly prominent in its home. If it be an iron town, then metallurgy and iron working should be carefully covered. So with any other industry. Every effort should be made to make the people at the head of business concerns understand that the library is willing to aid to the extent of its ability, and thus secure their assistance in getting employees to know about and make a right use of the library.

In this connection, the work of the Grand Rapids (Mich.) Public Library is worthy of study and emulation. Grand Rapids, as all know, is a furniture-making city, and the library is proving its value to factory employers and employees alike by its special collection of books and periodicals on furniture and wood-working, and its method of furnishing catalog cards of these to persons interested, at a nominal expense.

It is well to bear in mind that advertising, no matter how valuable in other respects, will not of itself make a library. For when all has been said and done, intelligent, cheerful and courteous aid rendered to those who come to the library ranks above and beyond everything.

REPORT ON LIBRARY WORK WITH CHILDREN*

By ARABELLE H. JACKSON, *First Assistant, Children's Department, Carnegie Library, Pittsburgh, Pa.*

SINCE the program for this meeting of the American Library Association has been made to center mainly on the work of the larger city public library—its relation to the city as a tax-supported institution; its adaptation to the needs of distinct classes among the population—it is very fitting that among those distinct classes the needs of the children should be considered.

To ascertain what is being done for children in the public libraries of the 100 largest cities of the United States having public libraries, questions were sent to those libraries late in April, 1906.

The questions covered:

Population.

Yearly appropriation for work with children.

Organization of children's department considered as a system of library education for all the children of the community and as distinguished from the administration of a single children's room, including not only supervision of a system of children's rooms, but also work with schools, homes, co-operation with settlements and other allied agencies for social betterment. These questions also covered the following points of administration in both children's departments and children's rooms: number of books in juvenile collection, selection of books, periodicals, number of books loaned, age limit, guarantor, assistants in children's room, charging, discharging, care of books, discipline, fines, advertising books through bulletins, story hour, etc.

As a result of the 100 sets of questions sent out, 82 libraries were heard from, six returned the questions unanswered, some of them, as in the case of San Francisco, because it was impossible to answer the questions. 76 sent more or less full reports. Grateful apprecia-

tion and thanks are due those libraries that recognized the importance of the undertaking, and made the report possible by sending in such full answers. Not all the questions asked are reported on at this convention, but those of general vital interest in children's work have been made the basis of the report.

It was intended to make an exhibit at this convention of material illustrating library work with children from photographs, book lists, bulletins, etc., which were requested from the libraries to which questions were sent. While some libraries sent such material, there was not enough received for an exhibit. That which was received will be used to good advantage by the Training School for Children's Librarians, Pittsburgh, Pa., with the consent of the libraries that sent the material.

CHILDREN'S DEPARTMENT

60 libraries report that they have a separate children's department. The majority of these, however, have each but a single children's room with the juvenile work confined to the one room.

Some of the answers to the question "What is the scope of the departmental work?" may be interesting and helpful in distinguishing between an organized children's department and a single children's room.

Scope of Large Departments

Brooklyn Public Library says: "The superintendent of the children's department has charge under the chief librarian of the buying of books for the children's rooms, of the planning, furnishing, decorating of the rooms. She trains the assistants in the work, holds meetings with them and with the branch librarians in order to discuss and decide upon questions of discipline, methods of pushing the best books, school work, story-telling, etc. It is difficult to define the 'scope'—anything of interest to young people in the library may come into this department."

*Based on questions sent to the public libraries of the 100 largest cities of the U. S. having public libraries, in April, 1906.

Cleveland, O., Public Library: "Comprises the selection of books according to definite standards of value, and the arrangement for their distribution so that they may reach the children only through persons who can judge the child's individual needs. The agencies for distribution are the libraries through experienced children's librarians; the schools through teachers in the use of class room libraries and deposit stations; the home through carefully selected visitors and home libraries. The object is to so correlate the agencies that books may be within reach of all children. All methods, equipment of children's rooms, etc., belong to the work of the department."

Philadelphia Free Library: "The department is in charge of a superintendent who selects and trains the assistants in charge of the children's rooms in the branch libraries; selects all books purchased; devises methods of work and co-operation in each library; directs the story hour and bulletin work and aims to promote an interest in children's reading in other educational institutions in the city."

Pittsburgh, Pa. Carnegie Library reports the "aim of the Children's department is the giving out of good books to all the children of the city as far as the funds will permit, especially to the children of the industrial and foreign classes, through the following agencies: children's rooms; schools; home libraries and reading clubs; deposit stations, and educational institutions such as settlements, etc. This department has charge of the selection of juvenile books; the organization of juvenile distributing agencies for the city; the selection of children's librarians; the planning and equipment of children's rooms; the introduction of methods for library work with children; and the compilation of printed material for the use of children, teachers, and children's librarians; it also has the direction of the Training School for Children's Librarians. The work of the department is under the direction of a chief of department who is responsible to the head librarian."

Scope of Single Children's Rooms

Brooklyn, N. Y. Pratt Institute Free Library: "The children's department has a separate room to which all boys and girls under the age of 14, who join the library, come for their books. The room has a collection of about 3000 books on open shelves and has a registration of 2867 members since September, 1904, when the last re-registration was begun. The room is provided with low tables and chairs and there is a collection of picture books. These may be used in the room by any children, whether they are members of the

library or not. The work is in charge of a special assistant."

Allegheny, Pa. Carnegie Library: "This department is conducted as a separate and distinct library. Children between the ages of 6 and 15 years may avail themselves of its privileges."

Some of the special features belonging to the children's departments mentioned in the answers to this question by various libraries are: protection to adults and the direction and guidance of children; visiting of mothers' clubs in the city and working to establish closer relations between the home and the children's department; the critical selection of juvenile books; circulation of a picture collection; giving of lectures with lantern slides, travel talks, etc.; the use of stereoscopes mounted on a table with pictures constantly on exhibition. One library gives as its aim that no child shall be allowed to leave the children's room without having been given books helpful on the subject of which he is in quest.

AMOUNT OF YEARLY APPROPRIATION DEVOTED TO CHILDREN

34 libraries answered the question, "What proportion of the library fund is spent on children?"

9 referred only to the book fund in their answer, the percentages given varying from 3% to 33 1-3%.

7 reported 20% or over of the book fund devoted to children.

23 reported on general appropriation, including salaries and book fund.

These percentages varied from 4½% to 50%.

Of these, 9 reported 20% or over; 11 reported 10% or less of the total library fund spent on children.

JUVENILE BOOKS IN LIBRARY

60 libraries gave the number of juvenile circulating books separate from the adult circulating collection. Of those so reporting 20 libraries report that 10% or less of their circulating books belong to the juvenile collection, two of these reporting 3%, one 4% and two 5%.

32 libraries report their juvenile collection

as ranging from 10½ to 20% of the total circulating collection.

8 report 20% or over, three of which give their percentages as 30% or over. (These include, of course, all juvenile books used in school work.) The highest proportion of juvenile circulating books is 30%.

SELECTION OF JUVENILE BOOKS

In answer to the question, "Are all juvenile books read before purchase, or ordered through reviews?" the Public Library of Seattle, Washington, replies: For book purchase, "All known methods of criticism and censorship are used, including reviews, reading usually, and censorship of other most respected libraries. As a last resort I think every book is prayed over."

Newark (N. J.) Free Public Library reports, "All are read by the head of the children's department and some by a committee of teachers."

Pittsburgh, Pa., Carnegie Library reports, "Juvenile books are read and selected by the chief of the children's department, with the exception of books on useful arts, natural science, history and travel. These last are referred to specialists in their lines."

37 libraries order their juvenile books from reviews, 13 read part of the books ordered and purchase from approved lists, 9 read special classes of books only, such as novels, doubtful books or books by unknown authors, and 13 read all books before purchase.

PERIODICALS

The librarian who answered the question, "What periodicals and magazines do you take for your children?" thus: "St. Nicholas, Youth's Companion and Amateur Work. What other good one is there?" will be surprised to know that 64 other periodicals are taken for children by the 72 libraries that reported on this question.

As to how many of these are "good" or suitable for children he shall be left to decide after reading the list.

The number of periodicals taken in any one library varies from one to 21.

The following magazines are taken in 34 or more libraries: *American Boy* (34),

Birds and Nature (40), *Little Folks* (36), *St. Nicholas* (72), *Youth's Companion* (70).

The other periodicals mentioned in the reports are:

Amateur Work (10)
American Ornithology
Animal's Defender
Babyland
Bird-Lore (5)
Boys and Girls (8)
Boy's Own Paper
Child Garden
Children's Magazine (3)

NUMBER OF BOOKS LOANED TO CHILDREN

- 75 libraries answered the question, "How many books may a child draw at once?"
 49 libraries loan two books to a child at a time, 23 of which allow only one book of fiction. 25 make no special requirement as to the book, and one library loans a magazine in addition to one book of fiction and one of non-fiction.
 18 libraries loan only one book at a time to a child, while 8 libraries loan one book as a rule, but make exception in cases where books are needed for study or are requested by a teacher for the child.

AGE LIMIT

- 75 libraries reported on the question of age limit.
 36 have no age limit for using reading room nor for drawing books.
 23 require ability to read or write or both.
 3 of these make reading alone the test.
 12 make ability to sign his own name the only test.
 8 require some knowledge of both reading and writing.
 16 make a definite age limit.
 2 of these do not loan books to children who are below the third grade in school.
 4 make 10 years the age limit for drawing books.
 7 make 12 years the limit for drawing books.
 1 limits use of reading room and privilege of drawing books in the juvenile department to those between the ages of 6 and 15.
 1 library makes 9 to 18 years the age limit, but the rule is flexible enough to extend the privilege of drawing books to any child who can read.
 1 limits use of children's room to those between 7 and 14 years of age.

GUARANTOR

Of the 75 libraries that answered the question, "Do you demand a guarantor or a parent's signature on the juvenile application blank?" 71 require either a parent's or teacher's signature or a guarantor for the child. The other 4 request a guarantor or parent's signature, but do not always require it.

ASSISTANTS IN CHILDREN'S ROOMS

- 62 libraries answered the questions, "How many assistants have you to one children's room?" "Do these assistants divide their time between the children's room and other departments of the library?"
 44 libraries have one or more assistants who give their whole time to children's work.
 18 libraries, including those of some of the large cities with well-organized children's departments, require the children's librarians to do some desk work or work in other departments of the library.
 27 libraries require their children's librarians to do routine work such as pasting, mending, or cataloging.
 8 libraries require cataloging of children's books only.
 25 libraries report that no pasting, mending, nor cataloging is done by the children's librarian except in emergency.
 38 libraries have assistants in the children's room who have had no special training for their work with children.
 5 librarians report that their assistants in the children's room have received their training in apprentice classes.
 3 libraries have assistants who have taken courses in summer library schools.
 17 libraries have one or more children's librarians who have received their training in a library school; 29 of these assistants have been trained in the Training School for Children's Librarians, Pittsburgh, Pa.

CHARGING AND DISCHARGING

Of the 67 libraries that answered the question, "Do you charge and discharge books in the children's room?" 50 libraries answered in the affirmative. 4 libraries in large cities where there are many branches report that they charge and discharge books in the children's room in the main building and in the branches where the children's room is quite separate from the adult department, but in the other branches the charging and discharging is done at the main desk. 7 libraries charge books in children's room, but discharge them at the main desk; while in 6 libraries both charging and discharging are done at the main desk.

CARE OF BOOKS

Some of the answers to the question, "What methods do you use to teach children to keep books in good condition?" are as follows:

Waterbury Ct. Silas Bronson Library: "Teach care of books by label pasted in books as follows:

'Keep this book clean.

Do not turn down the leaves.

Do not write in it.

If injured a fine will be required.'

Also rule to same effect on card, and personal effort."

Binghamton, N. Y. Public Library: "Individual suggestion, precept and practice, careful explanation of the making of a book in the story hour and wherever the children are met for special work. There are no 'don't' signs in the library."

Akron, O. Public Library: "Personal supervision. Have used a slip pasted in the book calling attention to the fact that it is new and should be kept clean."

Brooklyn, N. Y. Pratt Institute Free Library: "The pledge in our register reads, 'I promise to take good care of the books I read here and of those I take home.' We emphasize this when the children join the library, and insist upon clean hands as a preliminary always to taking books. We also try to note the condition of books when they are returned and to fix responsibility for damage at once, if possible."

Cincinnati, O., Public Library: "The use of the washstand is frequently suggested. Book marks are distributed, and wrapping paper and cord are furnished. Admission to the

travel talks and lectures is secured through the league card."

Dayton, O., Public Library and Museum: "We see that books are in good repair when issued and watch condition when returned, for damage and soil, fining promptly for same. Book covers are shellacked and result has been to induce better care for both inside and outside of books."

Detroit, Mich., Public Library: "Impose fines for carelessness. Direct to washstand in corner—in fact, 'reprove, rebuke, exhort,' appeal to pride, set forth the ethics of good citizenship in the matter and still have grimy finger-marked books."

Grand Rapids, Mich., Public Library: "Grand Rapids is relatively a clean city. When children come with dirty hands we ask them to wash, for which we have provision at the library. By precept and example we endeavor to teach children to respect books simply as books."

Hartford, Ct., Public Library: "Eternal vigilance and a Goop verse."

Norfolk, Va., Public Library: "Fining for actual damage and scolding."

Somerville, Mass., Public Library: "Teach care of books by smiling on the children."

Providence, R. I., Public Library: "Book marks. This, as in every other phase of library work with children, seems in our experience to require personal work, talking and talking and patience. We lose a valuable connection in having our return of books elsewhere, as we miss seeing just what condition a book is in which is returned by a child to whom we are about to issue a second book."

In *Salt Lake City* the teachers in the public schools give talks to the pupils at least once a year on care of library books.

Milwaukee, Wis., Public Library posts an honor roll, on which the names of children returning books in good condition a certain number of times are entered, and marks careful borrowers' cards with a big C honor mark.

Duluth, Minn., Public Library invites the children at certain times to assist in repairing books, and gives lectures on bookmaking and care of books.

DISCIPLINE

In discussing the question of discipline, 43 libraries report little or no trouble with lawlessness or neighborhood gangs. Some of the reasons given for this happy state are the following:

Camden, N. J., Free Public Library: "No trouble with neighborhood gangs because of the boys' and girls' Reading Fraternities conducted by the librarian with the aid of boy and girl officers.

Brooklyn, N. Y., Pratt Institute Free Library: "Orderly behavior in the library is a pretty well established tradition which the children who are old members pass on to the new ones. . . . One must distinguish, too, between wilful lawlessness and animal spirits. We have a playground outside which usually solves the latter problem."

Philadelphia Free Library: "In most sections of the city it is found that the authority of the librarian-in-charge and the janitor, who is a special officer in uniform, is all that is needed to maintain perfect order in the children's room."

17 libraries report more or less difficulty in keeping order in the children's room. Among the methods of securing good behavior:

Cleveland, O., Public Library reports among other methods of discipline "Co-operation with the juvenile court; boys have been reported to court and reprimanded by the judge for disturbance outside of the building."

Pittsburgh, Pa., Carnegie Library: "Control of lawlessness depends largely upon the branch librarian and her children's librarian. Each children's librarian has been trained for work with children and has been given instruction in the best recognized methods. As a rule the gang is controlled through the leader, and individual offenders are temporarily deprived of use of card or reading-room. Other methods are used as occasion demands. The location of the library has much to do with the question of discipline. This problem cannot be the same in a library situated in a residential section and in one in a down town or a tenement district."

FINES

70 libraries charge the same fine for overdue books for adult and juvenile readers.

50 libraries charge 2 cents a day fine.

6 libraries charge 1 cent a day.

14 libraries charge from 2 cents a day with an increased fine after the second or third day, to 5 cents a day.

5 libraries charge 2 cents a day to adults, but only 1 cent a day to juvenile readers.

19 libraries never remit fines, but three of these allow children to work them out.

11 libraries very rarely, on special occasions or for special reasons do remit fines.

The policy of 45 libraries is to remit fines as it seems advisable, and allow children to work them out when possible.

62 libraries allow children to pay fines and damages by instalment if the circumstances warrant it.

9 never allow fines or damages to be paid by instalment.

Oakland, Cal., Free Public Library reports, "Often allow children to bring another book in place of one damaged or lost."

40 libraries in special cases allow children to draw books before the entire fine is paid, while in.

31 libraries the card privilege ceases when the fine accrues.

Wilkes-Barré, Pa., Osterhout Library reports that about 5% of their juvenile cards are held up by unpaid fines; Saginaw, Mich., Public Library reports 10%; Pittsburgh, Pa., Carnegie Library reports 14%; Brooklyn, N. Y., Pratt Institute Free Library reports 15%; Paterson, N. J., Free Public Library and Allegheny, Pa., Carnegie Free Public Library 16%; Waterbury, Conn., Silas Bronson Library 20%; Newark, N. J., Free Public Library 24%. New York Public Library estimates the number of juvenile cards held up by unpaid fines at 15,000; but as the total number of juvenile readers is not given, it is impossible to determine whether the percentage is higher or lower than that of other libraries.

The question of fines is one that is causing a great deal of thought in many libraries. Utica, N. Y., Public Library says, "By actual count a year ago we found that nearly 1-3 of the cards in the drawers bore fines. It was then that the fine was changed to 1 cent by an action of the trustee, and it is probable that a time alternative will be allowed this year."

Allegheny, Pa., Carnegie Free Library reports, "I have found the fine system a great detriment to the work. Out of 2500 cards issued during the past year 400 cards have

been left with fines unpaid, and thus 400 children have been practically driven from the library through their inability to meet the charges."

In Pittsburgh, Pa., Carnegie Library the question has become of so great importance that it is under special consideration with the object of devising some system to replace the one now in force. It is thought that since in 8 years 14% of the children's cards have been held up by unpaid fines, it is likely that some alteration can be made in the system to advantage.

Cleveland, O., Public Library charges 2 cents a day for fines; allows children to work out fines or to pay fines by instalments; allows one book to be drawn before fine is paid. If the child paying by instalment does not continue to bring his penny each time, his card privilege is withdrawn.

ADVERTISING BOOKS

58 libraries use picture bulletins as a means of advertising children's books. The special objects held in mind in making picture bulletins are to lead children to read better books; to illustrate the story hour; to bring certain subjects before the children in an attractive form; to supplement the work of schools in special subjects; to emphasize current events and anniversaries; to instruct by pictures; to develop the artistic faculty, and to beautify the room.

Another method of advertising the children's books that one especially wants children to read is through the story hour; 39 libraries already hold story hours, 21 reporting that they do not. Some libraries are telling miscellaneous fairy tales, myths, animal stories, holiday stories, stories of valor and bravery, classic stories and legends, while other libraries are telling carefully planned series of stories such as the following: heroes of mythology, plant and animal life, children of different nations, famous men in history and their deeds, famous artists and their masterpieces, well-known stories and their authors, travellers from Marco Polo to Perry, Arthurian legends, Greek and Norse myths, stories from the Nibelungenlied, legends of Charlemagne, Robin Hood stories, and stories from Shakespeare.

There seem to be two separate and distinct objects held by libraries conducting story hours.

1. To entertain and instruct children, as is shown by the following answer:

Brooklyn, N. Y. Pratt Institute Free Library: "Its purpose (that of the story hour) is to give the children the enjoyment that comes from hearing stories, and incidentally to broaden their interests."

2. To lead children to books. Notice the following statements:

Brooklyn, N. Y., Public Library: "There is no formal organization of a story hour planned for the library system. About 10 of the children's librarians are telling stories. Their object, to lead the children to better taste in reading and to better ideals and principles."

Cincinnati, O., Public Library: "The purpose of the story hour is to present stories that may be found in books in such a way as to lead to an interest in the books."

Grand Rapids, Mich., Public Library: "To lead the children to read books that they would not otherwise read if left to themselves."

Washington, D. C., Public Library: "To introduce children to books and to cultivate a taste for the best in literature."

Portland, Ore., Library Association: "To direct the reading of children to special lines or classes."

Pittsburgh, Pa. Carnegie Library: "To direct to better reading, especially to the reading of the imaginative and romantic forms of literature, chiefly classics. This we consider to be the only legitimate use of the story hour in public library work."

Some of the other methods of advertising books mentioned by different libraries are school exhibits in the library, book-lists on special subjects, sometimes sent to schools. Wisconsin book-marks; newspaper notices; the posting in bulletin form of decorated book covers; travel talks and other lectures illustrated by stereopticon; vacation lists, a certificate being given to all who read 6 or more books on the list; new books displayed advantageously; reading circles; and boys' and girls' reading fraternities.

Cleveland, O., Public Library:—"The Children's Leaf, published four or five times a year, which has one or more lists of books

a story (reprint) which is not otherwise accessible to children, and one or more good poems. The *Children's Leaf* is given away at the schools and from the children's room. Other methods are the use of book marks, bulletins, reading circles and the picture tiles decorating the mantelpieces of three of the branch children's rooms."

The last but most important method of advertising children's books is the personal work of the children's librarian and her effort to see that all children who come to the library for books have those suited to their needs, as the *Brooklyn, N. Y., Public Library* reports—"We rely principally on steady personal work with children in the room; we visit schools and interest teachers, and occasionally talk to parents at their meetings."

New York City Public Library—"In every class room within this library's jurisdiction (notices) are posted. In many schools the principal talks to the pupils about the branch nearest. At the same time having the teachers give the children application blanks. Personal visits of teachers with their pupils are very strongly urged."

WORK WITH SCHOOLS

37 libraries have a separate collection of books for use in schools. Two others supply schools from the travelling library department

27 libraries make work with schools a part of the work of the children's department.

48 libraries send books to public schools.

24 to private schools.

17 to parochial schools.

14 to Sunday schools, and

22 to other educational institutions.

Of the 36 libraries which supply schools from a separate collection of books all but two have a general collection, which, however, represents only the better books for children. The Brooklyn Public Library says, in this connection, "We think that in loaning small sets we ought to keep a higher standard than in a room with hundreds of books."

Of the 46 libraries reporting on the question, "In what way do you teach the use of

catalogs, indexes and reference books to the pupils of the ward schools?" 24 do the work only in individual cases as the children come to the library, 20 give systematic instruction to classes either in the library or in the schools, while in three cases instruction is given in the normal or high school of the city by the school librarian.

For fuller information in regard to work with schools see *Library Journal* and *Public Libraries*, especially a report prepared by Miss Doren for the St. Louis conference.

HOME LIBRARIES

10 libraries report that they conduct one or more home libraries. In Providence, R. I., the public library co-operates with the associated charities. The library has the care of these home libraries, helps in purchasing new books, and loans books from the general collection.

In the following libraries home library work is in charge of the children's department:

Utica, N. Y.....	2	home libraries.
Grand Rapids, Mich.	5	" "
Detroit, Mich.....	6	" "
Youngstown, O.....	6	" "
Cincinnati, O.....	18	" "
Cleveland, O.....	20	" "
Pittsburgh, Pa.....	32	" "

8 libraries conduct reading clubs for boys and girls outside the library building.

5 libraries purchase books for home library work from the regular library fund.

2 use books purchased from the regular fund and some donated; while 3 depend entirely upon gifts in the form of memorial libraries or otherwise.

This is not in any sense a report on the subject of home library work. This work is carried on in many cities and states from which no report was received. The facts given are limited to those received in the reports.

SETTLEMENTS AND ALLIED AGENCIES

23 libraries send books to settlements and assist in the story hour at the settlements.

13 send books to playgrounds.

13 send books to vacation schools.

Some of the other institutions for social betterment with which libraries work are the Young Men's Christian Association, city missions, boys' and girls' clubs, orphan asylums, boys' industrial reform schools and Sunday schools, bath houses, the detention room for juvenile court, settlements, school houses, newsboys' home, playgrounds and vacation schools are also used for the distribution of books to children.

CONCLUSION

In the 76 cities from which reports were received filled out so that they were available for this report, the number of children between 5 and 14 years of age is 16% of the total population of those cities. In the 67 libraries which reported adult and juvenile circulation for the past year separately, the juvenile circulation was 31% of the whole.

Since it is true that 16% of the population representing the children who are patrons of the children's department, is doing 31% of the home reading in these 67 cities, is it not worth while for librarians who are anxious to make their librarians of as great value as possible in their cities to give considerable time and thought to work with children? The

reports show that some libraries are making ample provision for this work; but the fact that 42 libraries out of the 76 reporting were unable to *estimate* what proportion of their funds is devoted to work with children—that part of their population which is doing 31% of their home reading—shows that they have not devoted much thought to this class of readers. Of the 34 libraries that estimated the proportion of funds spent for children, 16 report less than 20%, some reporting as low as 3% and 4½%. Those 20 libraries that report 19% or less of their circulating books as belonging to their juvenile department are providing a very limited collection for 31% of the reading done.

It is true that library work with children is still in the experimental stage of development and the work in some places is open to the charge of sentimentalism. These facts cannot be denied; but if the results already shown have been obtained while the work is in this stage, we must see what the possibilities are wherever the work is put on a sound educational basis, and wherever this work can be put in charge of those fitted by temperament and training to work with children.

THE CHILDREN'S LIBRARY A MORAL FORCE

By CLARA WHITEHILL HUNT, *Superintendent of Children's Department, Brooklyn (N. Y.)*

Public Library

THE subject I have chosen is the theme around which all discussions have, directly or indirectly, revolved from the time that the children's department of the public library first came into being. Yet because of its very taken-for-grantedness it is sometimes buried under discussions of matters which, after all, are merely devices, so that it seems to be not out of place now and then to hark back to a simple reiteration of foundation principles. To those of us who have been in the profession for years certain beliefs and aims are so a matter of course that we have left off talking about them, forgetting that our new people coming on and the laity

whom it is our duty to teach have not been through the slow process of educating which has made these ideals enter into our grain. And one day, while we are looking about for some new thing to engage attention, we find, to our amazement, that these cherished ideals which we supposed had been accepted past question are not held by all our fellow-workers even, and that we shall have to convince them that we have a right to claim that they are the foundation truths on which we must build.

This is a great age for pendulum swinging. Yesterday the doctors told us that we should boil drinking water to kill typhoid fever

germs. To-day we read of an expert's claim that by so doing we are increasing the danger of communicating the disease. We had supposed that in our profession it was an accepted fact that books make a very positive and lasting impression upon a child's thought and conduct, an impression that, however unconsciously felt by the child himself, has a large part in shaping his character for all time. Yet to-day we hear people in our own ranks say they do not believe that books have any influence on children, while others apparently do not think it matters much what sort of books a child reads at certain stages of his development. We see on library lists of children's books, instead of constant emphasis of the best old standbys, titles which perhaps may not be classed as utter trash, yet which are hopelessly mediocre—pot-boilers dashed off by uninspired writers who know that the libraries will encourage the children to imitate their elders in crying "Haven't you something *new*?"

So we must be pardoned for talking upon a worn out theme. For we do most earnestly believe in the power of books to affect the soul of a child. Even if we were skeptical from looking into our own experience, we do not feel that our experience is broad enough or deep enough to justify our questioning the assertions of the greatest educators and scholars of our day and of the past. Granting without foolish argument that these people know whereof they speak, accepting their declaration that books have a powerful influence upon the child, what sort of an influence shall the librarian endeavor to exert? What standard must the books chosen for the children's shelves reach up to? How shall he decide what to leave out?

Let us inquire first what is the chief aim in the education of the child as voiced by the greatest educators of our day. It is the *moral* aim, the purpose that looks toward the character building of the child. All the wealth poured into the generous support of the public schools, all the thought expended in working out the best methods of teaching, the most hygienic plans for school buildings, all the books written and the meetings held to discuss the thousand and one lines of activity which the great public schools are

following to-day—these all have for their underlying thought, for their ultimate end the making of *men*, not of mathematicians; the building of well-rounded character, not the manufacture of intellectual motors. The state is so educating its youth for the sake of its own welfare, for the very preservation of its national existence, because it knows that history is full of examples of the instability of empires whose walls were reared upon foundations of mere wealth and force of arms and even of intellectual power, and of the splendid growth of those nations whose citizens were, in the main, men of moral worth. The wise men of our day, taking this lesson to heart, compel the attendance of the children at school during the formative years of their lives, and they are thus showing their belief in the possibility of "training up a child in the way he should go."

One of the strangest and most alarming signs of the times that we who are interested in children have to notice is the idea which seems rooted in the American parent's mind that it is *not* possible to train a child to be anything but the sort of young animal he is inclined to be of his own free will; or that this would not be desirable if it were possible. Seemingly the creed of the young parent of our land is, "Give a child a good heritage and good example and then let him grow spontaneously. Do not thwart him, do not cross his will, don't compel him to do what he isn't interested in doing or you will make of him a mere machine." The parents have caught echoes of the excellent principles acted upon in the educating of children to-day—such as working from a child's interests, using his instinct for play as a means of educating him, respecting a child's individuality, never trying to break his will—and catching the surface smattering without the underlying purpose they have swung far from the old Puritan's stern methods that produced men of such fibre as made our nation what it is, and have let their children grow along the line of least resistance, with just the results that one finds in a flower garden left to itself. It seems incomprehensible that one who understands well the laws that govern the successful raising of vegetables and flowers, the training of animals, even the ne-

necessity for intelligent care of a machine in order to keep it in good condition, can at the same time fancy that a human soul can attain its highest development if "left to grow spontaneously."

Take a child of even the best heritage and environment—isn't it "human nature" for him to want the best for himself? And did any one ever see a child learn to be unselfish from the *example* of his mother, who invariably sacrificed herself and gave up the best to him? There are children so well born that it does not seem to occur to them to be anything but truthful and "square" in their dealings. Most little children are transparent, but how quickly they learn to deceive, either from fear or for their advantage in some way; and how are we to make them feel, but by teaching, that the absolute foundations of decent living depend upon a deep regard for the sacredness of a man's word?

Children are not going to grow up to be men and women of purity and strength of character, unselfish, true, brave, considerate of others unless we use every possible effort to train them to those ideals and principles and to the habit of self-control; and unless we do this by "precept upon precept, precept upon precept, line upon line, line upon line, here a little and there a little." And the cornerstone of such training is to be found in the simple, old-fashioned, moss-covered word Obedience! Heredity and environment are beyond count valuable, but librarians and school teachers well know that it is not alone from the tenement of the poor immigrant but from the homes of well-to-do Americans of upright character that many of our most lawless, disrespectful, destructive and unreliable children come. A child who has generally been allowed to "have his own way" from the time he found he could get anything he wanted by screaming for it, will naturally be a troublesome member of society and will surely be a less valuable citizen than one who has been brought up to that "habituation to obedience" in which, as Carlyle says, "it was beyond measure safer to err by excess than by defect." "Obedience," he goes on to say, "is our universal duty and destiny; wherein whoso will not bend must break; too early and too thoroughly we cannot be

trained to know that Would in this world of ours is as mere zero to Should, and for most part as smallest fraction to Shall." And so, when Teufelsdröckh writes of his stern upbringing he concludes, "Hereby was laid for me the basis of worldly Discretion, nay of Morality itself."

The pendulum must swing back nearer the old ways, and we who have to do with children must expect them even as children to behave as creatures with souls, as beings who are daily preparing to become men and women; or we shall continue to have worse exposures in our national life than we are having to-day of the selfish cruelty of those whose first aim is to "get rich quick," the dishonesty rampant in business and politics, the criminal neglect to safeguard human life which are so fearfully common. The child who "looks out for Number One" is going to keep on doing it as a man, and that child may be the spoiled darling of parents whose own standards of life are high, but who could not bear to punish him when he needed correction for his own good, who never denied him a whim if they could grant it at any cost, until the child, grown to manhood, suffers from having failed to acquire early the habit of self-control, the world suffers from the selfishness of him who has grown up with the idea that his wishes must be first. The beautiful things that are done in our day to make children happy, the difference in this generation's attitude toward them—that lovely attitude of sympathy and fellowship in which we rejoice—have carried with them a tendency to look upon a child as an irresponsible creature for so many of the formative years of his life that by the time a parent wakes up to the need of his being taught, the golden opportunity is lost. There is one of Mrs. Ewing's sayings that every father and mother and every worker with children should ponder well. A mother, speaking in excuse of her boy's selfishness, said, "One can't expect boys to consider things. Boys will be boys, you know." And her brother replied, "Too true, Geraldine. Ye don't expect it. Worse luck! I assure you, I'd be aghast at the brutes we men can be if I wasn't more amazed that we're as good as we are when the best and gentlest of your sex—the

moulders of our childhood, the desire of our manhood, demand so little for all that you alone can give. There were conceivable uses in women preferring the biggest brutes of barbarous times—but it's not so now; and boys will be civilized boys, and men will be civilized men, sweet sister, when you *do* expect it; and when your grace and favor are the rewards of nobleness and not the easy prize of selfishness and savagery."

Is any one here thinking "What have these pessimistic ravings of this twin sister to the proverbial old maid who always has good advice to shower upon parents, to do with the work of the public library and the selection of books for the children's room?"

To my mind the connection is clear. We claim for the children's library the possibility, the duty of being a moral force in the community. Unless we, as educators, are fully alive to the obstacles in the way of the American child's growing up to be the sort of citizen the country needs, we shall not be energetic in seeing to it that the young people get nothing but good from our contact with them through the library. Unless we feel that the lawless disregard for public property shown by the broken glass of the street signs which have been used as targets by the boys of our city is a serious indication for the future; unless we look ahead to the results that are inevitable when a child is expected to have so little sense of responsibility that he is not severely corrected for throwing stones at a passing trolley car; unless we hold that the attempt to evade a two cent fine for an overdue book is of a piece with the lack of honor which prompts the older person to make all he can at the expense of people less sharp than himself; unless we realize that our children are absorbing from the very air to-day the false and debasing idea that "success" means "making money"; unless we are willing to be laughed at for taking ourselves so seriously and proceed to take ourselves *more* seriously we shall not be the nursery of good citizenship we are meant to be.

There is much that may be done in this matter of citizen training through the personality of the workers in the library, but we do not begin to have the opportunity of

the school teacher in this regard, and we must rely mainly for our power for good upon what the child absorbs from the books he finds on the shelves. And it is here I feel that librarians as a body are not always loud and insistent enough that our children shall find no book on the shelves of which the highest we can say for it is that it is of no particular harm. We demand that each book be of some particular good.

We believe that we have a part to play in helping our boys grow up to be honorable, strong, clean, manly, gentle men, men not too conceited, not lazy either in mental or physical habit, men who think more of being faithful in little than showy in big affairs, men whose ideals and whose influence, whether exerted as statesmen or hod-carriers, will be such as to help keep the moral atmosphere of our land purer. We want our girls to care not only to be attractive to look upon but to have just as high standards of courage and honor as we shall demand of our boys, to be sensible and broad minded, modest and womanly, to be truly well bred, ambitious to be useful, to hold cheery and wholesome views of life. We know that every book we give these boys and girls will have some effect in changing, shaping, strengthening their ideals and so moulding their habits and character. We all admit enough of belief in this to eliminate from our libraries the class of books usually designated by the color of their covers and their price mark—one dime. But we sometimes neglect to take into account the insidious mischief which the steady reading of the mediocre books we are accustomed to call "harmless" is doing our boys and girls.

Is there no moral harm resulting from the mental laziness which becomes an iron-bound habit with the child who reads volume after volume and series after series of an author whose morals may be good but who hasn't a particle of ability to put anything really strong, vital, stimulating, true into language that is vigorous and pure? And when we examine one of these mediocre books which seems to preach a virtuous regard for certain moral aims, how discriminating are we in deciding whether the child will carry away the impression of righteousness which the well-meaning author perhaps wished to con-

vey, or whether he will really absorb, from the incidents of the story, the character of the hero, the working out of the plot, quite opposite ideas?

In my pessimistic remarks on the upbringing of the modern child I have spoken only of a small class, perhaps—those children from respectable American homes who would naturally grow up to be our country's leaders. There is, besides, the large class of children of foreign parentage whose experience and knowledge of life, whose ideals of character are gained among the sordid and unlovely scenes of the crowded tenement districts. For how short a time does the public school have an opportunity to help mould the lives of these children, and what odds it has to fight against in trying to make a decent citizen out of a child in twenty-five hours a week for a few years when all other influences of the child's life are pulling in the opposite direction! Surely the public library has a duty laid upon it to help supplement the work of the school. So much to do and so little time in which to do it. Shall we waste our time and money by giving these children books embodying ideals only a degree higher than those to which they have been reared? Shall we be satisfied if our boys have read all the books of even such respectable authors as Henty, Stoddard, Kaler, Trowbridge, if they have *not* read and loved and learned by heart the great classics which have lived for generations? Shall we be content if our girls take their ideals of womanhood from the latest "Hildegard" or "Teddy" book while they find Effie Deans and Maggie Tulliver and Agnes Wickford dull? Are we, because the children eagerly demand these books, to buy copy after copy of them, or shall we devote our duplicating to beautiful editions of the best in literature, using all our influence and ingenuity to popularize this class of books as it is possible to popularize them if we care enough ourselves and have any skill at all in managing children? Shall we, in buying the books of the year, obey the clamor of the young people who say they have read everything in the children's room and want something new—shall we descend to buying the mediocre because so few of the new "juveniles" in any year are good? Or shall we

rather ask ourselves why it is that, if a child has read every book in the children's room, he—or more likely she—is still demanding "juveniles"? Shall we then reflect that the children's room has not fulfilled the purpose for which it was intended if we have not set the young people on the road to a taste for the best on the shelves of the adult department?

We claim to be an educational institution. The city supports us because, apparently, it accepts our claim. We shall perhaps have difficulty always with the adult borrowers who demand a class of books we do not feel deserve a place in our libraries. But if we are to follow instead of lead the taste of the children we must not flatter ourselves that we are anything more than clerks whose duty it is to discover exactly what a customer wishes and then to give her that commodity.

But we claim for ourselves that we know better than the children can know what books are best for them, and we shall make our selections with the purpose of graduating into the adult departments of our libraries young people who have a well-defined taste for the best literature.

There are two main lines which the librarian should have in mind in the selecting of children's books. First, she will see to it that every child of fourteen is thoroughly familiar with the classics in juvenile literature, those productions which from every point of view are satisfying, providing food for the imagination and heart, ideals of high and noble living, clothing beautiful thoughts in the pure and lovely garb of gracious language. Into this class we gather such treasures as the Greek myths rendered by Kingsley and Hawthorne and Lamb, the Norse stories retold by Mabie, the fables of Æsop, the folk tales of Grimm, Jacobs, Harris, the fairy stories of Andersen, Kipling, Dodgson and Ruskin, the legends of the Middle Ages told in no less beautiful style than Howard Pyle's, the tales from Shakespeare in Lamb's English, Darton's Canterbury pilgrims, with Robinson Crusoe and Pilgrim's progress, Don Quixote and Froissart and Plutarch; and always the stores of beautiful verse which it is a sin not to help a child to love. These are the books which cultivated people call literature, and it is our duty to try by

every possible means to emphasize them. We must never allow our stock of these to run short or become unattractively shabby. If we have story hours and bulletins and book marks and literary ladders we must use them to arouse interest in and curiosity regarding these best treasures. With our smallest children we must use especial effort to see that they do not acquire the mediocre habit, for it is very easy to guide the beginner. With the older ones it means the exercise of consummate tact, but the results are worth the effort. When we have an opportunity to talk before parents' associations or women's clubs we must be able to convince them of the importance of a child's not being deprived of the joy, both now and hereafter, of knowing and loving the best in literature.

And then, in the next place, to the deciding of which and how many of the confessedly mediocre books we shall admit to our shelves we must bring much careful thought. We realize that for the children who have acquired the taste for poor stuff, so that it is difficult to persuade them of the joy to be found in those great books, which they would have loved if brought up with them from early years, we must provide some things to be used as baits, but we mean they shall also serve as stepping stones upward. Our task is to decide what ones, out of the mass of material bordering on trash, have enough of merit to make them useful to our end without being harmful to the children.

While there are plenty of books classed as non-fiction which need more careful elimination than is sometimes given, our chief concern is with the child's story book, because fiction is the most popular class and because it is from the story book hero or heroine that the child unconsciously but surely absorbs many of his ideals and principles and is therefore strongly affected in his character. We shall be obliged to let down the bars in the matter of literary style, but there are degrees even of mediocrity and we never need to include those which are written in the language of a positively common person. But when it comes to moral tone we should never lower our standard an iota, and to the decision as to whether a book will leave a child no worse for the reading of it one must bring

first a belief that it matters what sort of books we give the children, next a knowledge of child nature, and third the penetration to discriminate clearly between "preaching" and "practicing" I might say—that is, to decide unerringly whether the impression to be made on the child will be that of the author's highly moral advice or of the hero's immoral actions and bad associations.

There is not time to enter here upon a discussion of the faults of the average story book for boys and girls that will fill the counters of the book stores next fall. The time limits hold one to the merest opening up of the whole subject. The most I allow myself to hope is that some few who have not looked upon the selection of their children's books as a matter of serious importance may give more of personal attention and care to the subject. Of course, when all has been said, any two librarians in this Association might agree entirely as to the qualities a book should possess and differ entirely as to whether a given book fulfilled those requirements. In book criticism the personal equation will always be a factor. But in these days, when children's rooms are springing up like mushrooms all over our land, when trained children's librarians are few and far between, when thousands of our future citizens are reading a book a day from the public libraries, and hundreds of librarians, with the best intentions in the world, have not the time nor the expert knowledge to choose their children's books wisely, I think it behooves the large libraries steadily to set an example of emphasizing the best and weeding out the mediocre; and I believe that the American Library Association ought to be able so to set a standard and affect the book buying of the smaller libraries that the production and sale of wishy-washy stuff will be actually modified and finally cut down from lack of profit in the business.

For all of us who have to do with the children in the library there is inspiration in the picture of the great possibilities which William DeWitt Hyde holds up before the teachers, in speaking of the value of good literature in the public schools. I cannot better close than by quoting from him words which tell briefly what I have been trying to express:

"To feed the mind of youth on the ideals of a noble and elevated human life; to win his fidelity to the family through sweet pictures of parental affection, and filial devotion, and pure household joys; to secure his loyalty to the state by thrilling accounts of the deeds of brave men and heroic women; to make righteousness attractive by pointed fable, or pithy proverb, or striking tale of self-sacrificing fidelity to the costly right against the profitable wrong; to inflame with a desire to emulate the example of patriot, martyr, and philanthropist—this is the social mission of good literature in the public schools. To interpret this literature, so that it comes home to the boys and girls, so that they see re-

flected in it the image of their own better selves, so that they carry with them its inspiration through all their after lives—this is the duty and privilege of the public school. It is not of so much consequence what a boy knows when he leaves school as what he loves. The greater part of what he knows he will speedily forget. What he loves he will feed on. His hunger will prompt his efforts to increase his store. The love of good literature—a genuine delight in Longfellow and Whittier, Lowell and Tennyson, Hawthorne and Scott, Shakespeare and Homer—is, from every point of view, the most valuable equipment with which the school can send its boys and girls into the world."

THE PROBLEM OF THE GIRL*

BY LUTIE E. STEARNS, *Wisconsin Free Library Commission, Madison, Wis.*

THERE is no more perplexing problem that confronts the modern librarian, teacher and parent, than the selection of books for the girl whom some one has described as the girl who has outgrown her doll and her dishes along with her short skirts, who has passed beyond the stage where material make-believes satisfy, who has become conscious that the life before her means energy and has caught glimpses of happiness and sorrow, dimly realizing the mighty current of human effort. This is the girl who is separated from womanhood by such a brief span that her ideas, acts and ideals are rapidly taking on the aspects of maturity. And the problem of the book for her! How to get at it! How to obtain the knowledge of this most intangible time in her intellectual life so as to give practical help. These are the questions that confront us.

As showing the wide diversity of taste among girls between the ages of fourteen and eighteen, an investigation conducted by a Western teacher may be of interest. 82 girls were asked to signify their choice in books. 20 wished anything full of excitement or adventure; 15 wanted his-

torical stories; 9 wanted anything about girls—their home life, college life of boys and girls; 12 voted for any sort of fiction; 6 for poetry; 4 for travel; 3 for history; 1 for music "containing the motifs"; 1 for biography; 1 for anything patriotic; 1 for anything comical. There were 9 who had no choice; 4 of these had done no reading and the other 5 are well represented by the girl who expressed herself as follows: "What do I like to read about? That is a very doubtful and difficult question to decide. Books containing simple, pathetic life are very entertaining; love stories of the right kind are very good, but books composed of both these qualities I think I like the best. Histories I do not care so much for, although 'Trumpeter Fred' is very good. After I have read and enjoyed one sort of a book I think I like that kind the best, and after I have read and enjoyed another sort I think I like that kind the best; altogether it is a very doubtful question in my mind."

From the 20 girls who voted for the book full of action, these replies are typical: "I like stories of adventure about the late war." "I like to read about war and domestic dramas." "I like detective stories and history best." Another desires "adventurous stories"; another something "intensely ex-

*A list of books for girls and young women may be obtained by addressing Miss L. E. Stearns, 547 Prospect Ave., Milwaukee, Wis.

citing." Those who spoke of history liked it very much or not at all. Many showed a preference for certain periods. "Early times in the colonies and Egypt" was the text of one reply. Another said: "I like to read history. I don't mean dry history, but something besides history connected with the book." One wanted "a book of real life with a little spice of history."

Another matter which comes to light is the difference in the maturity of the reading. One girl reads "Eye Bright," "Five little Peppers," and "Birds' Christmas Carol," while another of the same age is interested in "Adventures of François," "Ben Hur," and "Lorna Doone." A typical list is the following: "Polly, a new fashioned girl," "The senator's daughter," "David Harum," "Gold Elsie," "Tempest and sunshine," "Melody," "Mr. Bonaparte of Corsica." Henty and Oliver Optic are often present, also E. P. Roe and Mary J. Holmes. "The necklace of pearls," "The sin of the home," "The daughter of the serpent," and others of this ilk find place on the lists. The latest novel has many readers. The influence of some momentary cause is shown. Olga Nethersole's appearance can be traced on three of the lists, where "Sappho" and "Camilie" appear. Books of essays are not commonly read. The book of poetry is the exception. When it appears it can generally be traced to the school influence or required reading. When the teacher of the school had found even a little time to look after the reading, there was a difference in the style of the book. When the girls went to the public library there was improvement. Many girls whose reading showed contact with good, healthful literature, showed also the influence of a refined home in their answer to the question, "Where did you obtain the book?" On the other hand, the girl who was not influenced by her home, teacher or library invariably presented a list such as the following: "The last rebel," "Honey and gall," "A sad, strange comedy," "Her only sin," "Old Mam'selle's secret," "Marguerite," "Inez," "Dombey and son," "Water babies," "West lawn," "Moore's poems," and "An earnest trifer." As pre-

sending an aimless mixture of good and evil, this list is extremely suggestive.

While most girls of the West wish books of action and adventure, reading history if the action of men and women is made prominent, and biography if it records the deeds of great men and women, we find a different type of book demanded in the South. There girls from fourteen to sixteen ask for "straight" love stories. Mary J. Holmes and Augusta Evans Wilson are eagerly devoured, the latter being the most popular author recorded. "Ouida," the "Duchess," Miss Fothergill, Marie Corelli, Mrs. Henry Wood, Edna Lyall, Amanda Douglass, Susan Warner, Mrs. Wister's translations, and Miss Carey find favor at this early age—such authors usually being read at a later period in northern climes. Jane G. Austin, Amelia Barr, Barrie, Burnham, Chambers, Churchill, McCutcheon, Richard Harding Davis and Tarkington are also read. When we know that in the same town from which this list is taken there is required reading in the schools of the works of George Eliot, Dickens, Scott and Thackeray, we realize something of the difficulties of guiding the outside reading of young women.

In the East we find Thomas Bailey Aldrich, James Lane Allen, Jane G. Austin, Alice Brown, Clara Louise Burnham, Frances Hodgson Burnett, Maud Wilder Goodwin, Blanche Willis Howard, Sarah Orne Jewett, and Mary E. Wilkins in highest favor—all, with but two or three exceptions, it must be noted and regretted, New England authors. Loyalty to our native state and courtesy to our hosts and hostesses prevents any reference, upon this occasion, to the possible provincialism resultant from so narrow a course of reading.

The results of an investigation recently made in England are of interest. The replies received from girls may be regarded as genuine expressions of opinion, for no names were signed, and the girls were told that their own teachers would not read the lists. The following questions were asked: "Which are your favorite novels? Which of Scott's novels have you read? Thackeray's? Dickens's? Jane Austen's? Mrs.

Gaskell's? Charlotte Yonge's? Do you like Miss Mulock's stories? Miss Thackeray's? Do you read magazines? If so, which? Which are your favorite poets? Name six poems you are fond of."

The replies revealed some striking and surprising facts. There was little difference of opinion about the favorite novels—the majority voted for Edna Lyall; next came Merriman's novels, and close to these Anthony Hope Hawkins. Marie Corelli scored a large number of votes, as did L. T. Meade and E. E. Green. A few of the older girls, not more than three per cent., named David Copperfield. With the exception of Dickens, no standard novelist found a place among the favorite books, though most of the girls showed that they had read a considerable number of Dickens's and Scott's novels. It seems to be clear, therefore, as the compiler observes, that these two novelists, although still read by some of the younger generation, are no longer loved with that absorbing passion which so often took possession of their parents and grandparents. Thackeray and Jane Austen were only known to a select few who, in several instances, added the gratuitous but informing statement, "I find I cannot read Jane Austen; she is so dull." Mrs. Gaskell's "Cranford" appears but six times. Miss Yonge and Miss Mulock, usually actively disliked, received the following comments: "I do not like these writers," "I like them fairly well," or "I used to like them when I was young." The name of Miss Thackeray was unknown to all.

The answers to questions on magazine reading show that the habit of miscellaneous reading has taken firm root in England as in America. "I read nearly all the well-known magazines," writes one young lady. Another girl, who read five periodicals such as *The Strand*, *The World and His Wife*, and *The Smart Set*, had never read a single book by Dickens, Scott, Austen, Yonge, and Thackeray, and could only recall one favorite novel of a most juvenile description. Were these two answers exceptions it would, perhaps, not be worth quoting them, but they are largely typical of the rest of the replies.

Concerning poets and poetry, there was

almost absolute unanimity. Tennyson was the favorite, and of his poems the "Idylls of the king" took the first place. Longfellow's "Evangeline" and "Hiawatha" were much beloved. Scott had a fair number of admirers.

"It is curious," the investigator writes, "to compare the taste of the modern girl with that of the girl of twenty years ago." Fashion in reading has changed and, it must be confessed, for the worse. Many of the best writers seem to have passed into the limbo of forgotten things. Charles Kingsley, the most popular novelist of the '70's and '80's probably, whose muscular Christian heroes appealed to boys and girls alike, whose "Westward ho!" would have been voted one of the very finest of modern novels twenty years ago, is neglected, while Mrs. Ewing is scarcely more than a name. Equally inexplicable is the neglect of a host of others. The investigator attributes the neglect in part, however, to the fact that after girls satiate their minds with the second-rate, the insipid, or the ultra-sentimental, they have lost the key to the great kingdom of the good and the beautiful. If the girl does not read the great novels in her youth she is seldom likely to do so; partly because, later on, she will want to keep abreast of contemporary literature and partly because she will have no desire to read them. If till the age of eighteen or nineteen her taste for good literature has not been cultivated, or, to put it more truly, if till this age she has cultivated a taste for inferior books and really appreciates them, it is not to be expected that after twenty her taste will change to any considerable extent.

The modern parent, teacher and librarian cannot escape blame for the present state of affairs. The modern mother exercises far less supervision over her daughter than did the mother of a generation ago and she is particularly lax in the matter of her daughter's reading. Ofttimes, unknown to parents, an "underground travelling library" is established, through which system books of an immoral nature are passed from hand to hand. In the matter of drawing books from the public library, the parent shifts the entire responsibility, as to proper selection, on the

shoulders of the librarian and busy assistants. During seven years' experience in charge of the circulating department of a large city library, there was but one parent who ever came with his son, and no mother ever appeared, to our knowledge, with her daughter. It is true that mothers do sometimes visit children's rooms, in the company of their offspring, but they are seldom if ever seen with them in the circulating department. Much would be gained if mothers would not alone aid in selecting proper literature, but also if they would read with their daughters. Horace E. Scudder has said, "There is no academy on earth equal to a mother's reading to her child." The habit of reading aloud at the family fireside has gone out, more's the pity. As some one has said, "This old habit united the family, for old and young alike could take pleasure in the reading, and it accustomed the young people to good English and to a concentration that is seldom demanded in these days. An hour's reading in the family circle three or four times a week would mean acquaintance with a considerable number of books, and might, perhaps, help to stem that desire for outside pleasures and excitement which is a marked feature of the age and to be deplored as leading to weakening of family life and interests."

So much for the parents. Now for the schools. Required reading of certain authors in our public schools often kills any desire for further acquaintanceship. Enforced reading of John Milton, for example, has caused many a literary "Paradise lost," never to be "Regained." A really great teacher may inspire her pupils with an enthusiasm for the best novels, drama, and poetry, but in the majority of cases the result of study, with the subsequent examination, is boredom and dislike for the best in literature. As a teacher has said, "If we would only banish this foolish idea of treating young people as if they were scholars and demanding from them a knowledge that is quite beyond their understanding, we might send our girls out into the world with a stock of good literature and

a love for it which would be their best possession forever after." That girls will read good books and keenly enjoy them is seen in the fact that for the last ten years in a certain large secondary school a literary society which all girls over thirteen may join has flourished exceedingly and has done excellent work in cultivating the taste of girls for the very best literature. The girls join the society voluntarily and continue to keep up their connection with it long after they have left school. The girls have read Thackeray, Jane Austen, Scott, Dickens, Mrs. Gaskell, "Pilgrim's progress," and selections from the works of Wordsworth, Tennyson, Coleridge, Browning, and others. This plan might well be adopted by public libraries as a method of interesting young women in the best authors. The Milwaukee Public Library has had a girls' club that has spent the past two winters in studying the heroes and heroines of history. The story hour, now commonly conducted for the smaller children, could be used to advantage for the older girls. And this brings up the whole question of the neglect of the young girl by public libraries. Children's rooms are being established all over the land, but in nearly every instance supervision stops when the girl of fourteen leaves the children's room for the general circulating department. An occasional assistant at a bureau of information aids when called upon, but in no case that we have been able to discover is there systematic or regular assistance furnished at this most trying period of a girl's intellectual life. In only one library in the country, so far as we know, has the need been fully recognized and provision made to satisfy it. The Carnegie Library at Pittsburgh, the forerunner of all that is best in work for young folks, is the first to officially recognize the fact that the modern transition from the children's room to the circulating department is too abrupt, and it is therefore providing in its new building, or addition, an intermediary section of special open shelves in its adult circulating department. The result will be awaited with interest.

THE BEGINNINGS OF A LITERATURE FOR CHILDREN

By CAROLINE BURNITE, *Director of Children's Work, Cleveland (O.) Public Library*

IN studying literature written for children (which is the scope of this paper and not that large class of literature which children have made their own, such as the myth, folklore, legend) we soon see that it is entirely evolutionary, and that it sprang from and was moulded by forces which we would consider upon first thought entirely extraneous to the subject. Thus the first impulse for a children's literature sprang from the religious movements of the 16th, 17th and 18th centuries. Great spirits such as Luther and Watts, in their contemplation of the beauties of spiritual life, saw the exquisite analogy of the divine and human child and the result was the first form of children's literature—the cradle hymn. This analogy has been so universal in the religious lullaby that it may repay us to see what its characteristics are.

"Soft and easy is thy cradle,
Coarse and hard thy Savior lay"

is Watts' simile in his cradle hymn, which he follows by the most realistic touch in which he gives the vague imagings and fears of a young child:

"Lo He slumbers in a manger,
Where the horned oxen fed:
Peace, my darling, there's no danger;
There's no ox a'near thy bed."

Like the early religious pictures, in which the child is always directly associated with the Madonna, Watts does not consider his poem complete without actually picturing the mother. This he does by depicting her feelings.

"Yet to read the shameful story,
How the Jews abused their King,
How they served the Lord of glory
Makes me angry while I sing."

When these early writers wrote their cradle hymns, they discovered childhood, in that they recognized its individuality and appreciated its thoughts and feelings, and from that time there is a literature, created for the children themselves.

The great principle in children's literature

is that, in order to catch the child's attention and prompt his belief in the truth of the story, either the theme, incident or illustration must touch the experiences of the child. When this basis of understanding is built upon the child's real world, upon the life around him and what he has experienced through his mind, we call the literature realistic, and when the hymn writers made their appeal to childhood through childhood, they laid the foundation for the realistic school. That this class has a direct ethical value is shown in the Watts cradle hymn by a child's desire to imitate the Christ-child's acts because of his innate love of beauty and goodness, after his belief in the heroism of the Christ-child has been established through the contrast in their situations. The other class of literature is based upon the child's experiences in the unreal world and chiefly upon his ability to hark back to the experiences of primitive man. For the primitive mind, in its imagings and its search for primal truth, corresponds to that of the child. This literature is based entirely upon the imagination and is called idealistic literature. It is mainly the myth, folklore and legend. For years idealistic literature has received its proper evaluation. The literature of realism needs more consideration.

The second form of children's literature was the moral poem, and the first good moral poetry was written by Watts. He used the realistic method of arguing from something which a child knows to be true to the principle which he wished to inculcate.

"Let dogs delight to bark and bite,
For God hath made them so,
* * * * *

But children you should never let
Such angry passions rise."

Goldsmith's "Goody Two Shoes" was the first bit of prose which had vitality enough to last through generations, and for that reason it may be considered the cornerstone of children's fiction. The test of a book does

not lie, of course, in the generation in which it was written. It may respond to a certain popular sentiment which has no permanency rather than to a universal chord. There were in the middle and latter part of the 18th century many little books for children. They were entirely cautionary and negative, and childhood was but a symbol of natural depravity and human weakness. They were the product of a time when undue stress was laid upon moral values, and they lived through their day. Like the old Italian masters who gave children a knowledge of the weight of life, Goldsmith conventionalized his characters and made a child of eight a woman of thirty in thought and action, but he caught many of the interests of children and he gave us a story which even to the young child is quaint but interesting; for "Goody Two Shoes" appears to children as a child.

Any contemplation of the great moral school and of the Taylors and Maria Edgeworth raises the question of the value to children of a literature which to the grown-up is so exaggerated in its teaching and so mechanical in its method. But we must remember that all great lessons in idealistic literature which are for the primitive mind and the child are drawn with the boldest lines. Do we not readily except the exaggeration of the fairy tale because it appeals to our fancy! Certainly the means by which Little Red Riding-Hood is taught has a very picturesque quality, and it is much stronger in its lesson than The Three Bears because it is more exaggerated. In the same way we must accept the methods of the didactic school, even though it appeals to us as overdrawn according to our mature ideas of the values of life. This exaggeration is necessary because children are imaginative, emotional and impulsive, and they are so detached from the laws of life that they must learn what the governing forces are. The basic principles are virtues which must be inculcated when life is young—honesty, truth-telling, obedience, bravery, along with the formation of habits of cleanliness, industry, etc. Such qualities are the foundation of a fine moral character, and in this connection both the idealistic and didactic literature have their function. The two great lessons

of idealistic literature are lessons of a primitive people—bravery and obedience. In acquiring these lessons through the imagination they become a part of moral fiber, and the child can be brave and obedient from impulse. However, the very fact that we are a product of a civilization and the myth is of primitive man means that the myth and the folklore do not teach all of the lesser virtues which we wish to inculcate. Moreover, the fine moral being will not only be able to do right from impulse; he must be able to see the wrong and choose the right, for thereby is moral judgment developed. This is the opportunity of the didactic school. The theme of the Edgeworth school is the direct result of the choice of right or wrong elaborated upon with great detail, which gives reality to the story, while the incidents are so entirely within a child's comprehension that the force of the lesson is given. Maria Edgeworth's work is the product of her talent as an author and her intimate experience with her innumerable brothers and sisters; it was from their need she drew her theme. Nowhere else can we find the simple nursery virtues taught with such intricacy of plot which illustrates the truth of their value. Simple Susan's honest, heroic nature, as shown by her sacrifice of her pet lamb in her efforts to save her father from the army, stands in contrast to Barbara's deceit, which is so true to a petty, spiteful disposition, and at the close of the story the reader's sympathy is entirely with the good. To the adult the most serious detraction is the strong, materialistic side of the story, the attitude that honesty is the best policy; but this strong materialistic phase is balanced by the spirituality of the child reader. The principle for use is this: all literature which has great exaggeration should be given to young children. "Rosamond" and the poetry of the Taylors belong to children before they are eight or nine, while the "Parent's assistant," because of its detail of plot, belongs to children of eleven and twelve. "Rosamond," more than any other child's book, has been pointed to by the finger of scorn. Pedagogically, it refutes the very principle which the author wished to teach—the value of the absence of external authority. Its vitality lies in the

universality of illustration, and it undoubtedly develops judgment in the child who reads it.

It was the Lambs who first recognized the vitality for children in great idealistic literature, but it was also with an appreciation of its didactic qualities. In his preface to *Ulysses*, Lamb interprets giants, sirens, enchanters as "things which denote external force or internal temptations, the twofold danger which a wise fortitude must expect to encounter in its course through the world." Until Lamb interpreted Shakespeare children had come in contact with life in its simple forms only. He broadened their horizon by bringing within their understanding the complexity of life, and all who wish to interest children in Shakespeare must use his method of dealing with such characters as Hamlet and Lear. His lucid analysis of psychological situations required a master mind. "Mrs. Leicester's school," which is largely Mary Lamb's work, marks another radical departure and is a wonderful bit of realism in its delicacy of delineation of the tender sensibilities of young children. Mrs. Molesworth later took up the same theme as exemplified by "Carrots," and both of these books have great value to the student in showing how apart children are from actual life. Mary Lamb's stories have more plot and a more didactic atmosphere than Mrs. Molesworth's, but "Mrs. Leicester's school" has that exquisite refinement of feeling which always belongs to any book of the Lambs.

Harriet Martineau brought to children's literature her peculiar ability to delineate national life and its problems by means of individual example. She is realistic both in her theme and in her method. There is no indication that she was inspired by any early children's books. Her "Feats on fjord" is a masterly delineation of the influence upon the people of national customs. With a well-constructed plot, she pictures the stultifying effect of superstition and its slow eradication from the peasant mind, with a clearness which makes one believe that all things are understandable to young children if it comes to them by the hands of genius. In "Crofton boys" she was far ahead of her time. There she confines herself entirely to a picture of

English school life and the development of a boy's character under its influence. This book is a forerunner of "Tom Brown," and, in its very truthful delineation of child life, of Miss Alcott and Mrs. Ewing.

It is interesting to notice the motive of the first American author who acquired a reputation as a writer for children—Peter Parley. He began to write about the close of the first quarter of the last century, and he undoubtedly gained his impulse from the members of the English school who wrote mainly to impart information. The Aikens' "Evenings at home," which is now the best-known book of that school, elucidates all manner of subjects from the manufacture of paper to the transmigration of the soul. While a book of such character naturally touches upon many things which are beyond children, it has the attraction of the modern magazine for desultory reading, which children as well as grown-ups enjoy. Peter Parley was quite as versatile as the Aikens; his main subjects were history, biography, travel, astronomy, natural science, and his books had a tremendous popularity. He had a certain mental quality of childlike love of wonder which gave his work the naïveté which is charming to the grown-up, but it is doubtful if his books could ever be resuscitated. American children's literature at no time showed any breadth of imagination or any unity of spirit. The work of each author seems quite detached from the work of others. Jacob Abbott, who wrote later, has some claim for a permanent place in literature based at least on his atmosphere of rural New England life. He shows fine ability for detail and an excellent knowledge of children's interests, but he lacks entirely a sense of the dramatic, and, unfortunately, the life of the modern American child is too fast moving for much sympathy with these pictures of quiet, wholesome life. Now and then a child will show great fondness for his books, but they cannot be popularized unless, perhaps, in that section of the country in which they were written. Hawthorne was the first American who showed an appreciation of great idealistic literature when he wrote his "Wonder book," but his method was realistic in that he avoided the classic spirit and gave the

myths modern habiliments. Kingsley, in England, followed soon after with his "Heroes," in which he takes great care to preserve the classic spirit. We should say that with Hawthorne's more doubtful method none but his genius could achieve his success. It would certainly be a greater loss to a child never to read the "Heroes" than never to read the "Wonder book," although the latter is more attractive to children because of that touch which is realistic to the child.

About this same time Dickens wrote his "Child's history," which was preceded some twenty years by Scott's "Tales of a grandfather." It is entirely fitting that Scott should be the one to appreciate the value to children of another class of idealistic literature—the legend. Scott's method and ability for such work has never been questioned, while it is now an accepted theory that Dickens's strong partisanship unfitted him for historical work. However, his method is right, although there may be unpardonable inaccuracies. He approaches his subject through legend and he clothes it with reality. He is the main historical basis we have for children of all that is picturesque in the past of England.

The peculiar fitness of the semi-historical romance for young girls was seen by Grace Greenwood, who, in her "Merrie England" and "Bonnie Scotland" rewrote the romantic legends. While her work cannot be called historical, she gave the spirit and atmosphere of early times with a touch of pure feminine sentiment which shows her strong sympathy for a young girl's craving for romance. She is one of the very few fine authors who have produced books which belong peculiarly to girls.

No cursory glance at the development of a literature for children is complete without a mention of the Sunday School books which sprang from the great religious revival of the 18th century. The spirit of this appeal was through the emotions, as instanced by Dinah's preaching in Adam Bede. The methods used were those of the moral school, the over-accentuation of a virtue, usually self-abnegation; but while this was a legitimate means in the didactic school because it appealed to the judgment and reason in an

impersonal way, it was an illegitimate use in the religious book because the appeal is so entirely personal that the judgment is unbalanced and the real meaning of life and one's relation to it is destroyed. However, about the middle of the 19th century we find a saner method of religious teaching in both verse and prose. Dr. Watts's doctrine

"Tw'as to save thee, child, from dying,
Save my dear from burning flame"

becomes with Mrs. Alexander,

"We may not know, we cannot tell
What pains He had to bear,
But we believe it was for us,
He hung and suffered there."

The great opportunity of the religious story was shown by Miss Yonge when she wrote her home stories. With even greater detail than is usual for such books, and with an analysis which is entirely realistic, she pictures a girl's small faults and their gradual correction by means of the practical application of the Christian ideal to the trials of everyday life. It is possible for a girl to see in one of Miss Yonge's books her own place in the home life as well as to realize the possible evolution of a noble character. Such books as "The daisy chain" are the only sane religious stories we have and should be used with faith in their ethical value.

The period of 1860-1880 marks the greatest development in children's literature. Then were created the most truthful pictures of that child life which had been presaged in Blake's "Songs of innocence" and "Crofton boys" and "Mrs. Leicester's school." In this period, in Miss Alcott and Mrs. Ewing, we find childhood as we know it to be. Blake's interpretation of childhood was entirely idealized and spiritual. The child is his symbol of purest life. Indeed, we sometimes feel that he may not have written for children except that he says:

"And I wrote my happy songs
Every child may joy to hear."

Certainly the appeal he makes is entirely to the mystic child. His "Little lamb, who made thee?" is his best-known and most fitting poem for children. It remained for Mrs. Ewing, who stands at the close of our historical view, to combine the spiritual quality

of Blake which is universal to children with that seed of heroism which also belongs to all children and to picture in a more tangible way the child spirit. In all children's literature she is the classic author, the one who measures highest when judged by accepted standards. There is sometimes a tendency to compare her to her discredit with the modern authors of girls' books because the latter is more popular. One might as well compare a Meissonier with a Verestchagin because the latter would attract more attention in a gallery. Mrs. Ewing has cast her stories in such an exquisite mould that children who have read mainly the mediocre cannot find easily the kernel. Children enjoy "Jackanapes" and "Timothy's shoes" and others of hers when they are disclosed to them.

A study of the development of the literature for children is one of the cultural sides of our work. It develops our appreciation of the place which children's literature has in all literature, to know that great minds bent their powers in its direction when it had no place, and consequently they had no reason to expect that tilling in its fields could bring them either name or fame. With few exceptions the books mentioned are not those which children seize upon, but those which, even though naturally disregarded, have their value.

LIST OF BOOKS ILLUSTRATING THE BEGINNINGS OF A LITERATURE FOR CHILDREN

[This is a selected list of books to illustrate the subject and does not include all early books which may be recommended for use in a children's room.

Only modern editions are noted, and in the instance of Mother Goose and Grimm only editions which are practically reprints of the earlier ones. As far as possible, cheap editions are given as well as the expensive, which are more ideal.

[The date is that of first publication.]

SUBJECT HEADINGS IN DICTIONARY CATALOGS*

BY WILLIAM WARNER BISHOP, *Reference Librarian of Princeton University*

NO library worthy of the name fails to give its readers some sort of clue or guide to the contents of its collections. Its first purpose is, generally speaking, to provide an inventory of its books as they stand on the shelves (the shelf-list), then to give an inventory by authors (the author catalog), and last, perhaps because most difficult, comes the index, or guide, or key to the subject matter of the books. Most librarians are fairly well satisfied with their shelf-lists and author catalogs if they are reasonably up to date and accurate. But few librarians and fewer scholars who use libraries are thoroughly well satisfied with their subject catalogs. The principles of author entry are indeed not all determined. Few matters engage our interest more keenly than the long-expected agreement between our association and the British association in this particular. But the comparative simplicity of the rules now in force, and the substantial progress already made toward uniform and sane entries encourage us to think that we are pretty well off on the side of author cataloging. Our methods of indicating to readers what the library possesses on the subjects of interest to them are by no means so simple or so uniform. It may not be out of place, then, to discuss some of the important problems of subject cataloging.

It must be laid down as the prime essential of all subject catalog work that the end in view is the rapid and easy consultation of the catalog by the student who uses it. I say "student," because no one spends much time on a subject catalog who is not interested in some subject to the extent of wanting to see what books the library has on that

topic. Now he must not be discouraged at the outset by any formidable and intricate machine which only an expert can use. The catalog must be so constructed that he can discover easily and quickly what he wants to know. This seems a simple requisite. Yet practice shows that it is one of the most difficult ends to secure. No amount of ingenuity can make a subject catalog which shall be absolutely without flaw in the matter of uniformity; no one can always consult it without effort. The student who knows at least a little of his subject and related subjects must then be the normal "public" of a subject catalog. But his road must be made straight and the rough places must be made plain for him. Ease of consultation, then, may be laid down as a fundamental basis for work.

Rapidity and ease of consultation will be secured only by most careful planning. There are certain decisions which must be made by every librarian beginning or revising a catalog of subjects. Once taken, these decisions must be adhered to, while a change once decided on must be carried out root and branch. Too many of our subject catalogs of all sorts are medleys of opposing decisions of different catalogers, all made in good faith and with the best of motives. As compared with an author catalog there are few means of checking divergences. Careful planning, then, is half the battle. It matters little, from one point of view, what the decision is. The important thing is to have a conscious policy and to stick to it.

The larger the library the greater is the need for uniformity in the matter of subject headings. The small library need not bother itself greatly about principles of subject entry. When its books are all easily accessible, its readers and the library staff alike will rely on classification and current bibliography rather than on catalogs. When you can go straight to the shelves and pull down in a few minutes all the books in the library having any possible bearing on the thing you want to know, you don't care much for a set

*In this paper I have limited myself strictly to my individual opinion on the matters treated, and have in no way endeavored to set forth the practice or theories of the Princeton University Library with regard to subject cataloging. I wish to make this statement, not because of any lack of sympathy with the practice of the library in which I am at work, but simply in order that my personal views may not be held to be an expression of Princeton's policy.

of cards in a tray. But the library which confidently expects to become large must needs beware. The day when the librarian or reference librarian with his ordinary tools can answer all ordinary questions will pass suddenly, and then, if the subject catalog work has been badly or inadequately done, comes confusion and trouble. Particularly is this true of the college libraries. Their catalogs are likely to get out of hand easily, and they are liable to periods of sudden inflation by gift, and the most careful attention is needed lest the entries under subjects become the butt of students and faculty, the despair of the reference librarian, and the torment of the cataloger.

One of the greatest obstacles to successful work in the field we are considering is the unfortunate fact that fashions in nomenclature change rapidly. Such headings as *Mental Philosophy*, *Natural Philosophy*, *Fluxions*, and scores of others current not so long since would hardly help the student of to-day. But more puzzling to him than these odd and old-fashioned forms will be the vague sort of "catch-all" headings that so frequently get into catalogs which do not have to be subjected to the test of cold print. "Practical Piety" in one card catalog I have seen was made to cover all modern sociological and economic works. The one essential for securing continuity and correctness in subject work is definition of the subject heading combined with sharp directions as to its use in the library's practice. It is not enough to determine on a heading. It must in all doubtful cases be defined most carefully and the definition preserved. The manner of interpreting the definition in practice must also be indicated. In other words, a (card) list of subject headings in use with all needed notes should be kept in every cataloging room. The extent to which these notes should appear in the public catalog is a matter for individual judgment.

In this paper there will be no discussion of the relative merits of classed, partially classed and dictionary catalogs of subjects. These matters have been long before us, and their respective claims are well understood. The dictionary catalog has—for good or ill—been generally chosen in our American

libraries. Hence our study will be directed toward certain typical difficulties which are met with in actual work.

Before taking these matters up in detail, let me call attention to one source of assistance and guidance which we too often overlook. Since the seventeenth century the makers of encyclopædias have been working at this problem. Scores of excellent encyclopædias have been in constant use in our reference rooms—and even in our cataloging rooms—but have they been studied diligently as models for headings? We may be very sure that they have been studied by their makers with exactly our chief problem in mind; and that is how to choose a caption which shall in a single easily understood word or phrase express the topic to be treated so clearly and definitely that it may be found and comprehended at once. The good encyclopædias do not show the fatuous entries and references found in even our good catalogs. There is doubtless a reason. I suspect it lies partly in the excellence of the editorial supervision for which publishers can afford to pay, and partly in the undoubted fact that each encyclopædia is based on half a dozen, or perhaps half a hundred, predecessors, and thus the headings as well as the articles are in a continual state of revision. The fact that the headings are all in print in convenient form, and are easily seen and found, is also a great aid in producing uniformity of editorial treatment. Still the fact remains for us to ponder. Encyclopædias seem to present fewer difficulties in consultation than subject catalogs, and are familiarly and easily used by many people to whom a card catalog is a bugbear.

Everybody is agreed on the fundamental principle that in dictionary cataloging the "specific" subject must be our norm. We want to get exactly the caption which fits our book and no other. Especially do we wish to avoid general headings for treatises covering a limited field. A man looking for a book on trees does not want to be sent to look through all the cards on botany, nor does the inquirer for information about Nelson want to see all the cards on British naval history and biography. He wants what we have about Nelson. As I have said,

everybody admits this. The smallest possible unit must be sought out and made the basis for the subject heading.

But the library has also books—many thousands of books, probably—which do not deal with one small, particular topic. It has treatises on Botany and British naval heroes. Hence there arises of necessity a set of subjects of a general nature, which are in effect identical with the large divisions of the classifications. We have general treatises on Philosophy, on Religion, on Sociology, on Philology, and so forth. And, further, we have general works on such topics as Physics, Electricity, Mathematics, Latin literature, Hydraulics, Political Science, Psychology, side by side with works of equal bulk and importance on divisions of those subjects, such as Heat, Alternating currents, Differential invariants, Latin pastoral poetry, Canal locks, Proportional representation, the Sense of touch. There must be general headings, class headings, if you please, in your dictionary catalog. The difficulty is to use them wisely. These general headings must never be used for anything but general treatises of an inclusive sort. They will be the same in a classed and in a dictionary catalog, and should be treated alike in both. Moreover, a first-rate dictionary catalog will use under these class headings—or headings common to both sorts of catalogs—a few of the simple and large subdivisions of classification, such as *History, Essays and addresses, Outlines, syllabi*, etc. In doing this it will not violate the dictionary principle.

But we should stop right here. Let us use the class headings when needed, but let everybody understand that they are strictly limited in their scope. Put it on the guide card so that all may see that "General works only are listed under this caption. For special treatises consult the cards with the heading of the particular subject wanted." An example should be given in each instance, and more than one, if necessary. In the case of the guide card for Chemistry there should be a statement that works on particular chemical products and compounds are to be sought under their own names. The illustration might perhaps take such a form as this—"for example, treatises on Chloroketodimethyltet-

rahydrobenzene will be found under that word."

It should be said, further, that caution is necessary at this point. Because some headings must be the same in any sort of catalog, and because some which are definitely group headings have to be used as a practical matter of common sense in a dictionary catalog, you will find catalogs continually reverting to these class headings. It's vastly easier to label a book Sociology than to pin its generally elusive contents down to one particular phase of social inquiry. We all tend to move unconsciously along the lines of least resistance. We shall never get our catalog of specific headings without constant vigilance, constant self-criticism, and drastic revision. We must have class headings so long as our libraries are not composed wholly of theses for the doctorate. And we must avoid them as much as possible.

There is a special form of class heading which bobs up serenely with exasperating frequency. I refer to the so-called "forms of literature," such as poetry, ballads, essays, orations and fiction. Shall we leave these out of our subject catalogs? Many libraries do. Shall we say to the student looking for German ballads, "You'll find them all classified in number so and so"? But then, you know, he won't. There are dozens of volumes of them in collections of one sort and another, for one thing. Shall we let our novels go without subject cards and depend on a special finding list of fiction? Shall we lump them all under Fiction in the subject catalog? Shall we subdivide fiction and the "forms" by language, or perhaps by nationality? Or shall we classify fiction in our subject catalog, and put historical novels with the history divisions to which they supposedly belong? These are burning questions with many libraries. Probably every one of them represented here has a policy already decided on and in force in this matter. Here I will content myself with saying that it is my observation that the form divisions in a subject catalog when thoroughly made and kept up to date are a great help in reference work. (And the reference work should be in close touch with the catalog work for their mutual good.) It is, moreover, a con-

siderable advantage to carry out the principle that every author card, generally speaking, should have a subject card matching it. Incidentally I may remark that I have found a mild form of the classification of fiction a great help. I refer to such headings as *U. S. History, Civil war, Fiction*, which have satisfied many a lazy body who wished to take his history diluted and disguised.

There are few librarians who will not follow us up to this point. We all know that we cannot wholly escape headings which are the same as the major divisions of any classification, and most libraries make some sort of subject lists of their works of so-called pure literature. But when we come to those large subjects which from their very nature suggest a geographical subdivision we leave uniformity behind. There is hardly any such thing, for example, as a treatment of Mathematics, or Logic, by countries, although we do find works on Greek Mathematics. These are, however, incidental to a certain period in the development of the science, and not a proper regional division such as may well be demanded in the case of Agriculture, or Geology, or Architecture. The pure sciences, then, do not enter very largely into this problem. But a very large proportion of the subjects about which books are written offer a double interest. They may be considered from the view-point of the region or country described, or from that of the subject treated. A work on the geology of Texas, for instance, may seem to belong to Texas, and to require the subheading *Geology*; or it may appear to have its chief interest for the geologist, in which case it goes under Geology, with the inevitable subhead *Texas*. This is all familiar enough. Mr. Cutter (Sec. 164) insisted that the only satisfactory solution of this problem was that of double subject entry. With this view I cannot agree. A consistent policy with regard to this class of subject headings which will rigorously enter under either the topic or the country is demanded in the interests alike of economy and of common sense. Whatever decision is taken, a reference must be made from the opposite form. Thus, if the library decides to enter under Geology. *Texas*, there should be a subject reference from *Texas*. *Geology*. Such a subject ref-

erence is much better than duplication of hundreds of subject cards.

But what shall the policy be? The practice of our leading printed catalogs is extremely varied. On the one hand we have a tendency to provide long lists of subheads under each country. This is the practice at least impliedly recommended in the American Library Association's "List of subject headings" by the printing of the long list of subheads to be used under country and state. On the other hand, to cite but a single instance, the Subject Index to the British Museum Printed Books (1881-1900) restricts vigorously the entry under the country or region, and allows but few subheads. Between the two plans there is a great gulf fixed. One assumes that a reader thinks along geographical lines when he wants a book, and looks under Greece for a book on Greek Architecture or Mythology, or for a treatise on the Geology or Agriculture or Education of that country. Perhaps he does. The other presumes that a reader considers his subject first, and then runs down its geographical ramifications later. Is there any principle on which this matter may be decided? Must we always make special decisions? There is at least one principle which favors grouping by countries rather than by topics. It is generally held that the dictionary catalog should supplement rather than copy the classification. Now the books will doubtless be classified on the shelves by subjects rather than by country in these topics which admit of double treatment. Therefore if books treating of such topics as Education, Missions, Agriculture, Slavery, Architecture, Painting, etc., from a regional or national point of view—as Central African Missions—and not covering the whole field, are entered under the country or region, the subject catalog will show more about those regions than the classification will at any one point. This seems to me the sole argument for making use of this form of entry.

Now, on the contrary, I believe that the British Museum practice and that of the Library of Congress are more nearly in line with the habit of readers and the view-point of the makers of books. If we leave out the historical sciences, the main interest is the

topic and not the region. In the pure sciences we have already eliminated the regional or national principle. In the applied sciences and the arts, both useful and fine, we may safely do the same thing. These divisions are very extensive. I advocate, then, a deliberate policy of restricting the entries under the country or region to those topics which have a strictly local interest, *i.e.*, the field of the historical sciences, and such of the social sciences as depend for their value on local conditions. To be specific, I would not put a book on the geology of Texas under Texas, but under Geology with the subheading *Texas*. I would limit the subheads under a country to those which seem absolutely necessary. For everything else which might be expected under country I would make a subject reference card. This may be begging the question. It may be abandoning the search for a guiding principle. But it seems to me that the habit of most readers and authors is a fair guide for us. After all it is for them that the catalog is made.

One word before leaving this topic. At no other point of subject catalog work is definite adherence to a fixed rule more necessary than here. A decision once taken in this matter should be rigidly executed. If this is done, the people who use the catalog will quickly learn to follow the principle adopted and will in consequence consult the catalog with ease.

If the practice of restricting the entries under subheads of countries or locality be followed, we at once encounter the difficulty of the so-called "national adjective." Having eliminated *France.Art*, are we going to cut out French Art, Greek Mythology, Roman Roads? Certainly we must. We must say *Art.France*, *Mythology.Greece*, *Roads.Rome*, or we shall soon find ourselves in a maze of confusion. It will, however, be necessary, in my opinion, to use the national or linguistic adjective with the literature or language of a country or region. We shall probably be obliged to say French language and French literature, since *France.Language* and *France.Literature* do not necessarily express the same ideas. As in the case of France, so also in many other instances the national and linguistic areas are not

identical. German language and German literature, for example, are wider in their scope than the political boundaries of the present German Empire, and the same is true of the English language. The linguistic and national areas are different in Switzerland, in India, and in many other regions. Another objection to the use of the national adjective is found in the fact that we have all sorts of corporations and institutions whose names begin with American, British, French, etc. Read the headings beginning with either "American" or "British" in the published catalogs made on the dictionary principle of any of our libraries, and see what a medley is produced by the mingling of names and topics. I hold that the national adjective should be eliminated from subject headings, save for the two linguistic usages mentioned. This will cause some trouble, for a great many people are accustomed to think of American Indians, British commerce, French porcelain, etc. But the practice will save trouble, too. It will reduce the number of places in which one must look for a topic (the chief drawback of Poole's Index), it will obviate much apparent confusion in the arrangement of headings, and it will introduce some system into alphabetical subject catalogs at a point where system is much needed. The practice of the encyclopædias is against the extensive use of the national adjective.*

It may be objected to this that we merely transfer our excessive use of subheadings from the country heading to the subject or topic heading. It may be urged that by this plan the subdivisions under topics become very unwieldy. In answer I would say that the subheads undoubtedly become more numerous under the topic, but that they belong there rationally, and there will be plenty left under the country. The person consulting the catalog is obliged, it is true, to run his eye over many guide cards, and perhaps over several trays to find his particular books. But that is far easier for him than going from one part of the catalog to another, look-in now under France and now under Spain for a work on the mineralogy of the Pyrenees,

*There are some exceptions, notably the most recent edition of Brockhaus.

for instance. Again he remains certain, after looking at the subdivisions under Mineralogy, that he will not have to look also at the cards headed Pyrenees Mts.—he has all the cards before him for Mineralogy. We can't eliminate subheadings from our alphabetical subject catalog. At least, if we can, no one has arisen to show us how. If a separate guide card is used for each heading and subheading, we shall find the difficulty of consultation very greatly diminished. And with all the admitted difficulty of finding a small subdivision of a big topic, we still get it more quickly, I think, by this method than by the classed catalog with its alphabetical index.

It will have occurred to those who have followed this discussion thus far that a good many subheadings under both country and subject might be avoided by the use of inversion. We might say, "Roads, Roman," "Architecture, Gothic," "Psychology, Social," etc., and everybody would understand what we mean. The use of inversion has its chief defense, it seems to me, in the fact that it keeps together related topics. It is certainly convenient to have "Psychology, Animal," "Psychology, Comparative," "Psychology, Morbid," "Psychology, Social" in orderly sequence and close together. But despite this convenience, as a matter of form of heading, the practice of inversion is to be regarded as fully as pernicious in the subject catalog as in the author catalog. The objections to it are patent and well known. There is one catalog which regularly and always inverts, which enters under an adjective form only in the rarest instances. I refer, as most of you will surmise, to the magnificent Index Catalogue of the Surgeon General's Library. No one will dispute the high authority of this catalog as a scientific product. It is the most remarkable thing of the kind ever done in this country. But I imagine that despite its example we may be more truly scientific if we set our faces squarely against inversion. The worst thing about inversion is the utter lack of certainty as to which several forms may be used. If in our author catalogs we have come to the point where we can write "Michigan. University," why should we not write "Psychology. *Animals*"? There is not time to elaborate in this paper the argument against inversion. We must

be content to dismiss it with the single proviso that well established phrases beginning with an adjective such as Republican Party, Political Science, etc., need not be called in question either by those who would always invert to serve their convenience, or those who are steadfastly against the practice of inversion. The larger question whether the ordinary phrase, e.g., Comparative anatomy, Animal psychology, should not always be employed instead of some device whereby the noun remains in the first position is well discussed by Mr. Cutter in his Rules. My own opinion is for the regular use of the phrase in current use in the form in which it habitually occurs in titles, save in the numerous cases in which a caption with proper subhead better expresses the idea.

There is one class of subjects which gives trouble alike to classifiers and catalogers. Wherever a classification or a catalog is subdivided on a geographical basis, or wherever geographical headings are given, the fact stares us in the face that "geographical expressions," to use Prince Metternich's phrase, are by no means permanent or dependable. The map of the world has suffered startling changes since books began to be made. Certain difficulties which confront us in geographical headings deserve attention.

Even the continents give trouble. The terms America and Asia are used very loosely in popular speech, and even in indexes of subjects. Does North America include Mexico and Central America? Where does Western Asia leave off and Central Asia begin? Does the term America as a heading or subheading include both North and South America? Shall we write America, North or North America? What do we mean by Central Africa? These are questions which have but to be asked to raise sharply the point that definition and consistent adherence to definition are essential in the geographical terms to be used. I say nothing of the formidable adjective American, for I hope we may largely banish initial geographical adjectives from the catalog. But the official catalog of subjects should certainly contain very carefully planned directions as to the use of continental designations, as well as of the smaller divisions of geography.

But troublesome as ill-defined geographical

concepts may be, they are nothing in the way of difficulty compared to the name of regions which have ceased to represent present political conditions. There are a number of countries which no longer exist as states, whose political life as separate entities has ceased. A region such as Poland, for example, which has been absorbed by one or more countries offers a most perplexing problem. The word Poland corresponds to nothing on the map or in official gazetteers, but it is still in everybody's mouth. Travellers still use the old national name on title pages of descriptive works; historians and others write on former or even present-day conditions. And yet in our larger libraries we have official documents and other works treating of this once independent state from the standpoint of Prussian, Austrian and Russian provinces. I do not believe that we can get around the difficulty by lumping everything under the popular name. Neither do I believe that we can ignore it in the case of travel and descriptive works. (Of course I am not referring to books on Poland before the partition.) There are plenty of similar cases, although few with such complications. It seems to me that the common name must still be used where it is employed on title pages, and that the official regional designation of the present day must be employed where needed because of either the title or the contents of the work. This will necessitate a lengthy "See also" reference, a thing to be avoided wherever possible.

Ancient and mediæval states and countries with no continuing name or precise modern geographical equivalent give less difficulty. Their ancient names may safely be used. The trouble is, however, that both descriptive and historical works dealing wholly with present-day (or at least modern) conditions frequently employ the ancient name in titles. In such cases the modern form of name should be regularly used as a heading. Such ancient regions as Pontus, Epirus, Dacia, Africa, Gaul, Granada (Kingdom) may well receive separate subject entry, but it will instantly be seen how much confusion would arise from using these headings for modern works dealing with present conditions. Take "Africa,"

for example. Properly used it means in antiquity the single Roman province erected on the ruins of the Carthaginian city-state, limited in its extent to about the boundaries of modern Tunis. So used the term has a distinct value. But a modern work on Tunis, or even a discussion of archæological problems occurring in the limits of the ancient province should not receive the heading of Africa. There is, then, great need for care and a well-defined policy in these matters of ancient geographical designations which have no precise modern equivalents. Somewhere a very careful working out of the proper limits of the subject heading adopted for such countries and regions must be accessible to the cataloging staff, and perhaps to the public. It will not do, for instance, to say merely, "Tunis—See also Africa (Roman province)"; "Africa (Roman province)—See also Tunis." These loose "See also" references are the refuge of careless catalogers. In their stead must be a careful explanatory note giving the dates and boundaries within which the heading is applicable.

It may be worth while to stop at this point for a word as to these "See also" references. It was a rule at some time in the dim and distant past of cataloging to make "See also" references from each subject named on a title page to every other subject so named. All students of cataloging methods well know some of the ludicrous results of this rule. It is creditably reported that as a result of this rule rigidly applied such references as these were made and printed. "Brain, *See also* Cheek, Tumors of the:" "Cheek, Tumors of the, *See also* Brain," because forsooth both subjects got into one of the long-winded titles of earlier days. Probably these "See also" references cannot be wholly eliminated from catalogs. It is a very good thing at times to have a student reminded of allied topics and similar headings. But the tendency to their abuse is so great that it would seem a better course to make carefully worded explanations rather than to multiply these references. And I believe we should not suffer greatly were they excluded entirely from the subject catalog. They frequently give the im-

pression — unjustly, of course — that the cataloger is either trying to show off his knowledge of subjects, or considers that the user of the catalog has none.

To return to matters geographical. Few problems are more difficult as matters of actual practice than the making of a perfectly clear arrangement in a card catalog of easily understood and intelligible headings for countries or regions which have had a continuous written history from ancient to modern days. The most conspicuous of these are Egypt, Greece, Rome, and Syria. The boundaries of Egypt have been practically the same from antiquity to the present day. Hence we are not so much troubled by the question of the physical extent of the heading. But we are directly "up against" the question whether we shall say Egypt (Ancient), Egypt (Græco-Roman), Egypt (Saracenic), Egypt (Turkish), Egypt (Modern), or something of this sort, or whether these headings should be used as second subheads following the recognized subdivisions under the country. For example, Taxation is a frequently employed subheading under country, and we happen to have a great mass of material on taxation in Egypt in many ages. Shall we write Egypt (Ancient).*Taxation*, Egypt (Græco-Roman).*Taxation*, etc., or Egypt. *Taxation*. (Ancient), Egypt. *Taxation* (Græco-Roman) period, etc.? The second method keeps the country as the main heading and places the period last, and is therefore preferable, in my opinion. But in neither case can we get away from three alphabets in arrangement. The method advocated, namely, of keeping the period division last and considering the topic as the more important matter, falls in with our ordinarily received method for modern states. Thus we generally find such headings as this: United States. *Taxation* (Colonial period), rather than United States (Colonial period). *Taxation*. Whichever method is adopted, whether we break up the country's history into certain well-defined periods and treat these as if they were separate wholes, or whether we regard the country in all its history as one and arrange topics under it with chronological divisions, the dates of the different periods will have to be

worked out with care and recorded in the official list of headings. When this is done it will probably be found that the books seldom fit the dates previously arranged. What to do with overlapping books — books which fit into no general scheme — is a sore problem in cataloging as in classification. We must either go on forever making new and more minute subdivisions and arranging the subject cards chronologically by the first date in the heading, or else we must assign the subject by the preponderance of interest of the book itself, placing it in that division of the subject where most of the narrative or discussion falls. The majority of catalogers will doubtless prefer the latter method. The specific dates may be put in the heading as a matter of guidance to the person consulting the catalog, but in this case they will be ignored in filing.

Rome presents worse difficulties than Egypt. In the first place we have to encounter the fact that both the city and the state — originally one — have a voluminous literature. Confusion here is disastrous, and yet it is found in many catalogs. The city of the seven hills must be a subject by itself, reserved for separate treatment. Its municipal history is to be kept separate — where possible — from the march of the mighty empire, and its monuments must receive treatment distinct from that of Roman remains in general. It would seem a very good plan in arranging cards to put the country heading first, then the city heading, and finally the heading for its numerous monuments and regions. Thus I would have such classes of headings as Rome. *History. Empire*, Rome (city). *History. Middle Ages*, Rome (city). *Forum Romanum*. If this distinction between the city and the state is not made in this and other cases, we shall have a confusion which will make our catalogs unusable. Moreover, in treating the Roman state it will be as necessary to define dates and boundaries as in the case of Egypt. I will not go on to speak in detail of Greece and other countries having a continuous recorded history of many centuries. Enough has been said to show the need for careful planning in giving subjects to works on such countries.

Still another cause of confusion is closely allied to these we have just been considering. We have numerous cases in which ancient and modern geographical terms do not mean the same thing. I have already cited Africa as an example. The loose habit of catalogers of projecting modern geographical terms into the past is most discouraging to students. Take, for example, such designations as Germany and Austria, to cite large regions. Their boundaries are not to-day what they were even fifty years since, and books describing particular regions not formerly in their limits and referring wholly to former times should not be listed under the modern caption, if suitable ones can be found in the older names. This is merely the principle of the specific heading applied to geographical problems. Again in certain particulars the modern geographical term may represent a much smaller area than the same term at an earlier date. Venice and Genoa are instances in point, and many more might easily be cited. A book on the Venetian remains in the Greek islands hardly deserves a subject, *Venice. Description and travel*, although one on the Venetian supremacy in the Levant might well have a subject for Venice. Separate geographical entities such as islands and peninsulas are more easily treated as a rule than other regions, as confusion is less likely to arise in their cases.

Finally a word should be said in protest against subject headings of an indefinite sort for frontier or partially settled regions. "The West" in American history is one such. The phrase "Old Southwest" is another. The objection lies rather against the indefinite nature of the heading than against its use, if once it be well defined. The various regions in Central Africa offer similar difficulties.

If countries having a continuous recorded history present difficult problems to the cataloger, so also do subjects of inquiry which have given occupation to generations of scholars. Such studies as political science, economics, philosophy, mathematics, chemistry, botany, medicine, theology, rhetoric, etc., had their beginning for our Western world in Greece and are live topics to-day. History and description of countries show the same

long line of writers. Now it is obvious that some discrimination is needed in cataloging the authors who for twenty odd centuries have discussed such important subjects as the theory of the state, the art of healing, or the science of mathematics. The distinctions which a printed catalog can show by varieties of type and the rapid view of many pages with their headings are of course impossible in a card catalog. If it is manifestly improper to compel the student seeking the library's best treatise on agriculture to turn over numerous cards for editions of Cato and the other *Scriptores de re rustica*, so also is it unwise to neglect the fact that agriculture and all other sciences have their historical side. If we are going to give subjects to all our books, then Cato must have a subject card somewhere under agriculture. Here is where the average dictionary catalog breaks down. It furnishes under such topics as those we have mentioned a dreary array of cards, frequently many trays of them, through which the discouraged student must work to find his modern books. Every hundred thousand volumes added to the library but increases the task of consultation. The cards thus become what no one wants, an alphabetical list of all the writers who have ever treated of a given topic. The catalog must either distinguish books whose value *for the subject* is purely historical, or it must arrange its cards chronologically (by author), putting the latest works first. In other words, the alphabetical principle of sub-arrangement must be abandoned under subjects, or else we must introduce another division under these subjects having a continuous history, *i.e.*, a class of books having an historical value only.

But when does a book begin to have a merely historical value? There's the rub! It is not possible to determine this by chronology alone. Can we consider Aristotle of merely historical importance in the discussion of poetry or drama, of political science or ethics? Most assuredly not. But yet his works on physics and natural history are absolutely without profit to the average student of to-day. No one will say that Kant's writings are out of date, and yet his psychology would

hardly benefit the modern student in our college classes. It is plain that discrimination of the highest order must be employed in this matter, or else we must adopt some mechanical arrangement such as the filing of cards in chronological order, which after all works a sort of rough justice in the matter of relative values. Let us be severely honest with ourselves here. Who of us can say that the trays headed Theology or Law in most of our catalogs of libraries of over one hundred thousand volumes are practically useful as they stand to-day? Who would not rather consult a good bibliography and then the author catalog for books on those topics than attack the direful array of cards in the hope by some means of at length securing an interesting and valuable set of references?

In formal political history and in economic history as well the sources should certainly be distinguished from the recent treatises. The Germania of Tacitus, for instance, is an excellent source for the early history of the German Empire, but it is positively foolish to list it side by side with the works of Von Sybel and Ranke under Germany. *History*. The subhead of "Sources" under history is a convenient and valuable limbo for bygone works and for collections of documents. There is opposition, and sensible opposition, however, to using it for merely obsolete treatises.

We might adopt some such scheme as this:
Political Science. *Modern works (since 1850)*
and important earlier works.

——— *Works between 1500 and 1850.*

——— *Mediæval works.*

——— *Ancient works.*

The divisions suggested here might perhaps be the same in all cases, or they might better be made to conform to well-recognized divisions in the history of each topic. The alternative plan is the arrangement of cards by date of publication, or by first date of the author (to keep editions together). I confess I prefer the latter, although I am far from wishing to put myself in the position of assuming that the most recent work is necessarily the best. Still the chances are that it represents the most recent stage of investigation.

Almost every librarian is willing to concede this in the matter of bibliographies, acknowledging that the last to appear should first meet the eye of the person consulting the catalog. Why not adopt the same principle for every topic, as is done in some of our libraries? We have, be it remembered, the author catalog at hand for every one who already knows the authors he wants. Why compel the seeker after information to wade through another author list under each topic? It may be observed that an annotated catalog would be almost forced to put first its cards for the books most highly recommended.

There are a few practical points which I wish to take up before closing this paper. First, shall we definitely limit the number of subject cards to a given book? In view of the immense size to which our card catalogs are growing is it wise to say that when the library reaches a certain size—say 500,000 volumes—it will henceforth assume that the necessity for making cards for any other than the subject of prime interest in a book has passed? Shall we take it for granted that there will always be other works which cover the topics of secondary interest? This view is maintained in some libraries whose authority we all acknowledge. I venture, however, in opposition to this idea, to call attention to the statistics of our Princeton work published in the *Library Journal* for June, 1906. It was there shown that the number of subject cards per main entry was 1.47, and per title 1.2, although no restriction was placed on the catalogers other than a rigid insistence on the specific heading in all cases. This is so nearly the result aimed at in the rule that I submit that it is a better way of attaining the desired restriction of the unduly rapid growth of the card catalog than the strict limitation to one subject per book. It permits the liberal handling of a book which treats definitely of several topics, and yet it does not too greatly burden the subject catalog. The device of using but one subject entry for the various editions of a work whose value is chiefly historical would diminish the per cent. of subject to author cards to less than one in our library.

Again, it may not be amiss to urge that the

revision and co-ordination of subject headings should be definitely assigned to one person. Only thus can continuity and uniformity of the work be secured. Particularly is this provision needed in our largest libraries. I urge also as a most vital matter of practice that the chief reference librarian should be in constant touch with the cataloger who passes finally on subject headings. They will work together to great mutual advantage.

Moreover I wish once more to set forth the imperative necessity for an official list of headings in use in the library. This should be kept up to date with the utmost care. Each cataloger should have in convenient form a list of all subheads previously authorized under each class of topics, together with definitions of all these subheads. The list without definitions and interpretative notes will be of some small value, but with them will be vastly more useful. It should be kept where every cataloger can consult it, preferably in a case of trays made to swing on a pivot so that it may be consulted without disturbing the one at whose elbow it must be placed. The American Library Association list and the Sydney list, admirable as both are in their own way, will not suffice for any large library. An up-to-date list of subjects with adequate definitions kept on cards, is an absolute necessity in a well-ordered catalog department.

Is all this worth while? Is the card catalog

of subjects alphabetically arranged a real service to an institution? Most assuredly it is. When once it is made on consistent principles, when the student no longer has to fumble long trays of cards without headings or guides, filled with all the contradictory accumulations of generations of catalogers, when the specific topic stands out prominently, when each subject capable of two interpretations is sharply defined on a guide card, when consistency in geographical matters and uniformity of entry and sub-entry in topics of debatable form have been reached, there is no reason why a student should not find the card catalog of subjects self-interpreting, inclusive, useful. It has the all-important merit of definiteness and point. It tells any one who knows his topic what he can get directly on it. It lists both the obsolete book and the dead and gone state by themselves. It opens up to the reader the contents of the library. It is, in short, an alphabetical subject index to the books. If this is not worth while, what library effort is? If this be formal, dry-as-dust work, why are we working with books at all? Our aim as librarians is not merely to accumulate books. It is to help the reader to the books he wants—or ought to want. In a large library the only tool which accomplishes this result is the catalog, and of this the subject catalog is the part most difficult to make, most useful when well made.

SUBJECT HEADINGS FOR STATE DOCUMENTS

BY ADELAIDE R. HASSE, *Chief of Document Department, New York Public Library*

IT is only proper that I should say at the outset that the theories which I advance in the course of this paper are my own, and that they in no way represent any library. It is, however, also proper to say that those theories are not based on speculation. My first seven years' library experience was gained in a typical public library, a government depository, and brought me into contact with the document problem as it obtains in probably 450 out of the 500 depos-

itory libraries. Next came two years' experience in organizing the library of the Superintendent of Documents, bringing me into close touch with the entire range of American federal documents, many of which are not common in depository libraries. After that came the privilege of nine years' work in building up the document department of the New York Public Library from a collection of 10,000 pieces to one of 185,000 pieces, representing almost all states of the

globe. This sums up what I believe I can say without arrogance is an experience unique so far as handling public documents is concerned. During the last nine years particularly, it has been necessary to make studies which have sometimes led me to take issue with standard cataloging rules where these applied to documents. It must be remembered that when these rules were first compiled the question of public documents had not been raised. The fact that subsequent amendments to these original rules particularize concerning documents, would seem to indicate the feeling of a need for a special code pertaining to this literature. It must, furthermore, be remembered that this literature is technical, and that the distinguishing feature of technical literature is not its form of issue but the subject which it represents. The cataloging rules are largely confined to provisions for the various forms of issue. It would be unwise for any librarian, as librarian, to dictate concerning the details of technical literature unless he were also specialist in that literature. As librarians we are all to prone to remark upon the effects of a specialist undertaking the duties of librarian. The rule works both ways.

In discussing subject headings for state documents you are touching upon a phase of the question for the first time. You have discussed author headings, always, however, confining yourselves to American federal documents. You have arrived at no conclusion in general, but you have two excellent models to aid you, namely, the Library of Congress cards and the session catalogs of the Superintendent of Documents.

In taking up subject headings I shall consider no documents the subject of which comes within the range of public economics or of the sciences. This eliminates at once from this paper all finance, tax, bank, insurance, geology, forestry, education, meteorology, agriculture, land, road and similar reports. The fact that books dealing with these subjects happen to be government publications does not in the slightest affect the subject headings for them. Subjects of the reports mentioned are not peculiar to public documents, and, in drawing up a schedule of headings, you will need to confer with the

economists and scientists. The only consideration these reports could have in a discussion of subject headings for state documents is not the assignment of headings, but the arrangement of headings after assignment. Thus, shall government reports on education, for instance, be arranged with periodicals, shall they be made a group by themselves under the subheading "government reports," or shall they be arranged geographically by state and country?

You ask, if the reports mentioned are eliminated from this paper, then what is there left? I answer that which is left represents the two fundamental powers of the state and belongs to Law and Government.

Law

For the sake of discussion we will divide the literature of the law into two groups, on the one hand polemics and exposition, on the other the textual literature. The latter comprises reports (used in the legal sense), statutes, treaties and proceedings of arbitration tribunals. Your method of subject entry for the former group, whether it is dictionary or class, is irrelevant to this discussion. I am presupposing that in using the dictionary method your system of cross references is perfect, and that, in theory, therefore, your class of law is intact in your subject catalog. Taking up first the reports, your author entry is "Country. Courts," or, "Country. Judiciary." Your subject entry is either "Law. Courts," "Law. Reports," or "Courts." The question I raise for discussion here is, what purpose is served by duplicating these entries? Is it customary to duplicate them? If not, what is the custom? In discussing this subject you should not stop with merely the entry word, but you should consider subarrangement of the reports of the courts of common law and of equity.

In the case of statutes your author entry is "Country. Laws," etc., or "Country. Statutes." Here again I raise the question of expediency of duplication. In both of these cases you have three alternatives, namely, to use both author and subject, author only with reference from subject, or subject only with reference from author.

The reports and statutes form such a large mass of always current literature, thus necessitating continual additions to the catalog record, that, on the ground of library economy alone, some recommendation for an economical method would be desirable. The rules are, I believe, silent concerning this detail.

While I have suggested the possibility of merging author and subject headings in the case of reports and statutes, in the case of treaties and arbitration tribunals I recommend such mergers. In the case of treaties the rules at present say: enter under each country party to the compact. In the first place, this rule does not provide for collections of treaties, and in the next place, providing for two or more authors for single treaties, the question arises, which author is the cataloger to use in making the subject entry? I have five editions of the Jay treaty. Am I to make ten author cards, five for Great Britain and five for the United States? And when it comes to the subject, which of these cards am I to use? That is the actual dilemma in which the rule, as it is to-day, places the cataloger of implicit confidence. Economically, the rule is a violation. Bibliographically, it is also disastrous. The five editions are cataloged at different times. The titles are not the same. The common practice is to arrange titles alphabetically under author. Your five editions of the Jay treaty may therefore be in five places under each of your two author entries. Does not the practical operation of this apparently harmless rule appeal to a sense of the ludicrous? I am perfectly prepared to have you describe my proposed alternative in the same way. I recommend, namely, the abandonment of author entries for all treaties, single and collected, and the concentration of all this material under the heading *Treaties*, if your catalog is of the dictionary model, or *International law, Treaties*, if it is a classed catalog. Under the heading of *Treaties* I would arrange, first, general collections, then collections by country, and then single treaties in chronological order. There would be references from "Country. *Treaties*," from personal compilers and from popular name of treaty. The chronological arrangement should in-

clude month and day of conclusion, and, whenever there is a popular name, that should be added in brackets. It should not be forgotten that in many cases a treaty may be the subject of a considerable literature. Some provision should therefore be made to keep together the text of a treaty and the literature about that treaty.

The next point I raise is the treatment of arbitration proceedings. I am not supposed to touch on author entries to-night, but before we can assign subject entries, we must have an author entry. Let us take as an example the Geneva arbitration for the settlement of the Alabama claims. I am sure most of you have worried over the six red cloth bound volumes in which the United States has printed the arbitrations under the treaty of Washington of 1871. Under this treaty there were four arbitrations, namely, under provisions of articles 1, 12, 22 and 24, that of the so-called Geneva arbitration settling the Alabama claims, that of the mixed commission, settling civil war claims other than the so-called Alabama claims, the Halifax commission settling fishery disputes, and the Berlin arbitration settling the northwest water boundary.

I will ask you to recall only your treatment of the arbitration under article 1 of the treaty of Washington, viz., the Geneva arbitration settling the Alabama claims. The United States and Great Britain are the two countries involved, and they agree, by treaty, upon a tribunal whose arbitration shall settle the differences they could not settle with each other. Each country presents to this tribunal an argument, a statement of its case, and a counter case. These arguments, cases and counter cases are printed in each country as a whole and also in parts. Now if we enter the edition of the whole arbitration which is printed in the United States under "U. S. State Department," which I find is the common practice, and the same arbitration as printed in London under "Great Britain. Foreign Office," are we not making two author entries for two editions of the same book? And when you stop to think a moment, what reasonable excuse have we to make the United States Department of State or the British Foreign office either, the

authors respectively of the proceedings of a specially appointed tribunal or court? The case becomes more complicated when you try to catalog according to the rule of country entry a separate of the American case, let us say, printed in London. Shall you enter it under United States because it is the American case, or shall you enter it under Great Britain because it is printed in London? Are you not sensible of the incongruity of your action in either case? Is it not reasonable to admit that popular custom here, as well as in the case of treaties is a compromise? And if it is a compromise, why we cannot put a finger on the difficulty, and settle upon some simple, rational way out of it? Why should we be any more timid to decide a case with the evidence in hand than were our predecessors to lay down general rules with apparently no consideration for specific cases? I have cited only the most prominent features of one of four arbitrations under the treaty of Washington. The cataloging of all editions of all four arbitrations and the retention of their connection with the treaty of Washington makes Mr. Crandall's famous instance of "part 2 of part 2 of volume 4 of part 5 of no. 1 of part 2 of volume 14" a simple proposition. The latter is an editorial idiosyncrasy and does not affect the cataloger as much as the collector. The former is an obstacle which the cataloger must overcome or be overcome by.

This matter of author entry for arbitration tribunals is one that cannot be decided without some deliberation, and until it is decided there does not seem much point in talking about subject headings. A brief review, however, may be of help to both phases of the difficulty. The large majority of arbitrations relate to either claims, boundary or fishery disputes. Many of these litigations are best known by popular names as Behring Sea Controversy, Alabama Claims, etc., and many catalogers use these popular names, some as authors, some as subjects. As I have suggested to you the desirability of formulating some rule for author entry, so I now recommend the desirability of a uniform subject entry. I would suggest

some heading which would prevent duplication of entry. If you follow the first impulse and use a country, either as main subject, or as sub-arrangement, as Alaska, Boundaries, for the Alaskan Boundary Tribunal, or Fisheries U. S. for the Behring Sea Controversy, for international proceedings, you are unavoidably driven to duplication. For if it is Alaska, Boundary it is also Canada. Boundary, and if it is Fisheries, U. S. it is also Fisheries. Great Britain. I would suggest as a simple substitute: Boundaries. International Disputes; Fisheries. International Disputes, etc., with a chronological sub-arrangement. You have now a focus and can refer from Alaska. Boundary; Canada. Boundary; U. S. Boundary disputes; Great Britain. Boundary disputes; Alaskan Boundary Tribunal, etc. You will object that no reader would look under Boundaries. To this I would reply that ordinarily the reader looks for that word which to him individually is most familiar. If the press has popularized a phrase for a certain controversy your reader will look for that phrase, as Alaskan Boundary Tribunal. Your rules, customary or written, tell you to put Boundaries under country or countries. There is conflict. You have got to compromise. With whom? With what? On the other hand, if the local press has not popularized a controversy, as the Venezuela-British Guiana boundary dispute, is not a reader just as apt to look under one as the other country? Your objection, therefore, to follow the reader in cases of this kind is not always valid.

Government

I had intended to consider here subject headings for those general publications of the state, included under parliamentary proceedings, government newspapers, hand-books, general reports, such as the American federal annual report of the Interior Department, etc., but there is no time. If you do nothing more than open up a discussion on the points raised, viz., duplication of entry for reports, statutes and treaties, and the proper entry for international proceedings, you will have accomplished much.

COMMON SENSE IN CATALOGING SMALL LIBRARIES

By AGNES VAN VALKENBURGH, *Head Cataloger, Milwaukee (Wis.) Public Library*

NO doubt many of my audience, driven by a sense of duty, have attended, in former years, the meetings of the Catalog Section, and some of the bravest of you may have read our printed reports and have been discouraged thereby. The year that I was an officer of this section we spent nearly the whole of a lovely summer afternoon discussing the burning topic, "Shall the collation and series note be on a separate line immediately after the date and preceding other notes?" with the corollary, "Shall the collation precede the contents?" The battle as to whether 32 or 33 size cards are preferable has been waged up one side and down the other, and after quantities of oratorical blood have been spilt, the invariable result is that each side is more than ever convinced that they are in the right. The question of indicating size notation by letter or figure, or by giving the actual measurements of the book, has employed the brightest intellects of our profession during long spaces of time.

Attending these sessions has always produced in me a feeling of ignorance and depression. Now, depression is not a normal state, and ignorance is something which no cataloger can endure for a moment, so seeking a way to soothe my feelings without compromising my self-respect, I was inspired with the knowledge that these things are not for us. The Library of Congress, historical and university libraries are for scholars, and bibliographical details are important for them; but for any public library, small ones in particular, they are of no importance. If our entries should stray one-sixteenth of an inch too near the top of the card, nobody knows and nobody cares. Colophons and collation, thickness of cards and color of ink are as if they were not, to our grateful and careless public, who rise up and call us blessed if we can quickly give them what they are looking for; or better still, if we can enable them to help themselves to the library's resources.

The catalog of a public library may mean either a printed list or a catalog on cards. For the small library, however, the printed catalog is out of the question because of its expense; then it is out of date before it is in the hands of the people, and the American public is so progressive it always insists on having the very latest thing. There is a library in Michigan, with an annual appropriation of \$2100, which spent \$1526.70 in hiring an amateur to print a catalog for them. It was worth the money as a curiosity, and had the added charm of being up to date for a long time, as they could not afford to buy any books for nearly two years, but somehow it was not regarded as an unqualified success. At any rate they never did it again.

As a substitute for a more formal printed list, the local paper is nearly always willing to print a weekly column furnished by the library, either notes on new books or special lists taken from the card catalog, and the printer will usually run off as many extra copies of the lists as are wanted, for the cost of the paper. To print even a title-a-line finding list is beyond the reach of most small libraries, so this talk will be confined entirely to the card catalog, as that, like the poor, is always with us and often seems to be regarded with dread by the person destined by Providence and the library board to be the maker thereof.

A catalog is, or should be, the means of placing the contents of a library at the disposal of the public in the clearest, simplest and easiest form; the dictionary definition of this word differs from this and is not entirely satisfactory, but librarians should unite in adopting the revised version. The cataloger who bears this definition always in mind will find her duties greatly simplified. It is also desirable for her to remember that she is making the catalog for the public and not for herself; if she finds that her patrons are confused by cards of various colors,

written in inks of divers hues, let her drop the rainbow scheme and stick to black and white.

It is well to use the capitalization in ordinary use by the best writers; it is unpatriotic to write American with a small letter, *l'ère majesté* not to give the King his due honor, blasphemy to show so little respect for saints and martyrs, and lack of courtesy to deny any gentleman, but a Frenchman, a capital for Mr. Now that the linotype has done away with the scarcity of capital letters in type, let us stop being a warning instead of an example in this respect, and join the teachers in their efforts to instruct the young in the correct use of written English.

If it is necessary to consult a memorandum or look at a sample in order to remember how many times to underscore the principal word of a title, it will be perfectly safe to omit the underscoring altogether, as a detail which has so little significance for the cataloger will not greatly benefit the general reader.

Title entries are very simple, as it is only necessary to ask oneself if any one would look for the book by its title and make the entry accordingly, but author and subject cataloging are more complex, and present many difficulties to the beginner.

It is customary to make a very full entry on the author card, but for the small library it is only necessary to give the author, all of the title which will serve to explain the contents of the book, translator or editor, series if well known, and date. Of course one must beware of the man who has written a "Hand-book of botany," a "Manual of botany," a "Text-book of botany," and a "Treatise on botany"; his titles will not bear shortening, but such monotonously prolific writers are fortunately uncommon. It is unnecessary to give either the publisher or the size of the book on the catalog card, since all these details are given in the accessions book and may easily be consulted there.

The error of abbreviation to the point of confusing the patrons is to be carefully avoided in the struggle for simplicity. No community has ever yet been found which takes kindly to colon substitutes for Christian names. "J:" never seems to mean John

to the non-professional intellect, and is usually translated as an error in punctuation and a complexity in arrangement.

Give the Christian name in full if there is but one; if two or more, give the first in full and initials for the others, unless the author elects to place the emphasis on his middle name, when we will be courteous enough to follow his lead, only gratuitously adding the first name in full for the sake of the alphabetical arrangement. Whichever way one decides about authors who use pseudonyms, the choice will be regretted; but what is the use in making every one who wants Anthony Hope's books look under Hawkins? Of course it will increase the sum total of human knowledge, but will not information so acquired be more than overbalanced by the mental irritation of the patron? It also seems the only gracious procedure to take a man's name as he himself prefers it. Why should an unholy joy fill the cataloger's heart when she has searched the records and restored to an author a middle name or a few initials which he has discarded as superfluous? Librarians seem to be the only people in the world who have a constitutional unwillingness to let a man overcome the injustice or prodigality of his sponsors in baptism. This officiousness at times brings its merited punishment, for one library at least duplicated a set of the "Philosophical works" of Kuno Fischer, in eight volumes—German at that—because a too zealous cataloger supplied him with two additional names and neglected a cross reference card.

The idea of giving a brief biographical sketch of each person on every card, written is a wicked waste of the most precious thing in the world. Catalogs are not unknown where there are 30 entries, each saying "Washington, George, first President of the United States, 1732-1799." Isn't that dreadful? If the patrons of a library do not already know who was the first president of their country, they are past helping by reiteration on a catalog card; but with a mistaken idea of helpfulness these catalogs will probably go on offering that truthful but absolutely useless bit of information until the end of time. Dates of birth and death are unneces-

sary on any card, unless to distinguish members of those fortunate families where the gift of authorship has proven hereditary.

The most important part of cataloging is the indexing of subjects, and here comes into play every scrap of knowledge which has ever been acquired. This is the only profession where a smattering of everything is of more value than an exhaustive knowledge of any one branch. Breadth, not depth of learning, is the desirable thing for a cataloger, and the only way to acquire this rather superficial knowledge is to listen when wiser folk talk, and to read, read, read. Read everything, prose and poetry, religion and the magazines, limericks and philosophy, good books, and those not so good; one can never become learned by following this course, but she will increase her usefulness, and that is better.

Entries for articles in books of collected essays or biographies ("analyticals" so called) form the most useful feature of a catalog. Any one can find a life of Milton on the shelves, but not every one knows that an illuminating essay about him is contained in Lowell's "Among my books"; the librarian might even forget it for the moment, but a good catalog does not forget.

The ability to judge of the importance of articles grows with experience; but it is better to include the doubtful one than to omit it and then regret it when too late. In this also it is well to season zeal with discretion; to enter Mrs. Alexander's "Forging the fetters" under "Slavery" or that old nursery classic, "The motherless turkeys," under "Poultry" is ridiculous but not unknown. A list of subject headings is absolutely necessary, and as this work has been done by experts so much better than any amateur could hope to do it, one should buy the "American Library Association list of subject headings" even if it means some sacrifice. It is not necessary to follow these headings exactly if others are preferred; it is always well to have a little independence in one's work, and each librarian knows the needs and peculiarities of her readers better than any one else can, and she should have courage to stick to the results of her own experience.

Subject entries should be made as easy to understand as possible; there was once a catalog where Catherine II. of Russia masque-

raded as "Yekaterina," because, forsooth, that is a transliteration of the Russian name. Of course librarians are familiar with the Latin names of plants and animals; but the small boy who has never heard of the *merula migratoria* looks in your catalog for "robin" and should find under that heading all which the library contains about that sociable bird.

Cross-references are so called from the effect they have upon the patron, but they are nevertheless essential and should be freely used. A cataloger should never be afraid to make entries in her catalog; it is a very desirable thing for librarians to have a good memory; but unfortunately, when they die, as does sometimes happen, they are compelled to take their memories with them as their reward or punishment, and an entry on a catalog card is of more stability than they. It is always a good plan to keep an eye on the topic which is of local interest in one's own town or state. When the Woman's Club has decided to study Russian history, Art in Spain, Earthquakes, and Cleanliness of slaughterhouses, all at the same time (many times the subjects are more diverse) the catalog should have as much as possible to say on each topic.

Fortunately one can catalog only one book at a time, and if it is impossible to determine what it is about from preface, table of contents, index or by dipping into it oneself, it may be handed to some specialist for his decision; or wanting such a coadjutor, one may consult the state library commission or the nearest cataloger who has had more experience. In many cases a book which is unintelligible in the afternoon may be as clear as day the next morning, so it is well not to feel that the perplexing ones must be done on the instant.

The librarian of the small library has so many duties that cataloging must be sandwiched in between janitor work and labors at the desk, and there is little time which can be devoted strictly to that branch; but after all it is not so very formidable, and the odds and ends of time cannot be more profitably employed. Made with a spirit of patience and courage and common sense, the catalog will come to stand for the two best things in the world, simplicity and helpfulness.

REPORT OF THE COMMITTEE ON BOOKBINDING

GEORGE F. BOWERMAN, *Chairman*; W. P. CUTTER, ARTHUR L. BAILEY.

AT the St. Louis meeting of the American Library Association the chairman of this committee presented to the Council on behalf of Mr. J. C. Dana (then absent in England) a request that a committee be appointed to investigate the subject of bookbinding for libraries, including book papers and publishers' bindings, leathers and methods and processes generally. The Council took the matter under advisement, and not many weeks previous to the Portland meeting appointed such a committee, with Mr. Dana as the natural chairman. On his declining to serve, on the ground that he was preparing for publication a book on the subject, the committee was constituted with its present membership, and at the Portland meeting presented a mere formal report. We now report as follows:

The committee soon became convinced that although Mr. Dana would not retain a place on the committee, yet because he has shown more interest in the subject than any other member of the Association, and because he was systematically investigating the subject for the purpose of preparing a brief work on it, now in the hands of the profession in his recently published "Notes on bookbinding for libraries,"* no good purpose would be served by duplicating his work and everything expected of the committee would be secured by the adoption of his conclusions in so far as they cover the work assigned to the committee.

As a further application of the principle of not doing independently what is being done as well by some one else, the committee, having found that the Leather and Paper Laboratory in the Bureau of Chemistry of the U. S. Department of Agriculture is making elaborate tests of leather and paper similar to those carried on by committees of the Society of Arts in Great Britain and by the German government, will therefore not take up this subject independently. The ultimate

purpose of these investigations by our government laboratory is to establish standards for leather and paper. These results will, when completed, be published by the Department of Agriculture.

Your committee will, therefore, confine its report to emphasizing some parts of Mr. Dana's book, with dissent from or supplements to statements made in it, to summarizing the results thus far obtainable from the government Leather and Paper Laboratory and to offering certain supplemental information considered useful to libraries.

Before taking up systematically the points to be covered it is desirable to restate the problem before the committee and librarians. It is a matter of common observation that publishers' book papers and bindings (in most books more accurately called casings) are steadily growing poorer; also, partly as a result of this, that with increases in circulation, bookbinding bills are steadily consuming disproportionately larger shares of annual appropriations. This is partly due to the fact that the first rebinding of books in active demand is often not effective and partly due to the fact that leathers most used on periodicals and other reference books are so poor as often to require renewal. The question, therefore, is one of great moment to all types of libraries from the point of view of economical administration.

DANA'S "NOTES ON BOOKBINDING"

The committee cordially commends Mr. Dana's "Notes on bookbinding for libraries" to all librarians. It is not and does not profess to be a systematic treatise on bookbinding. Readers of it are directed by Mr. Dana to Cockerell for such a work. But it does cover from the point of view of the librarian the most pressing of the questions involved in the field proper to this report—not finally, but tentatively, as any book or report must which deals with questions that have been so long largely neglected. What is also of great

*Published by Library Bureau, Chicago.

importance, the book serves to arouse interest on the part of librarians to make independent studies of the subject and to put them on the alert to get good value for the money expended. The experiences of both Mr. Dana and this committee in collecting statistics of the wearing qualities of original bindings and rebindings would seem to indicate a general indifference to this subject. If this report can do no more than to lead librarians to study the subject each for himself, it will be worth while.

Your committee, therefore, directs special attention to the following portions of Mr. Dana's introduction:

"In considering the subject of economical binding and rebinding for libraries, we find that we are entirely without standards. We have no figures for comparisons. Librarians have, save in a very few cases, made no study of the comparative value of bindings, either of original cloth or of the rebindings they have had put on their books. . . . The test of a binding, whether publisher's original, special from the sheets, or a rebinding, lies, for ordinary lending books, in the ratio of its cost to the number of times the book it covers is lent for home use before being discarded. This ratio has rarely been systematically noted. To the inquiry, does the method of rebinding which my library now employs give the best possible return for the money spent? most librarians must reply that they do not know. Reference and college libraries are often also much in the dark. The continued quite general use for permanent bindings of a leather which tests have shown will not last over 25 or 30 years at the most is an evidence of this. In England, as is well known, a good many years of careful observation and comparison of experiments have led a large number of librarians to the conclusion which some American librarians also accept, that first-class bindings, even at what seems like a high figure, put on before a book has received any wear at all, directly from the publishers' sheets, is the part of sound economy."

Mr. Dana proceeds to give a mathematical demonstration of the economy of the plan of buying books bound directly from the publishers' sheets, based on the life histories of 74 books in 18 libraries. These 74 books cost, including first price, rebinding and cost of handling for rebinding, an average of \$1.38 each. They circulated an average of 79 times each before and after binding, and were out of use an average of 5 weeks while being

rebound. Similar books can be bought so bound from the publishers' sheets that they will never require rebinding or repairing, and circulate 100 to 150 and sometimes 250 times before being discarded, for \$1.50 each. Of the 79 books reported on, 52 were rebound a second time at an average cost, including handling, of 40 cents, and were again out of use an average of 5 weeks. They then circulated an average of 43 times. These 52 books, therefore, cost an average of \$1.78 each, circulated 122 times each and were out of use 10 weeks, as opposed to a cost of \$1.50 for books bound from publishers' sheets that circulate from 100 to 250 times, with no repairs or loss of use necessary. Incidentally, it should be said that these figures are fully substantiated by statistics collected by and observations on the part of this committee.

The introduction to the book is so filled with sensible advice on this subject that it is hard to choose the best things from it. Mr. Dana controverts the idea that the high grade binding put on books bound from the sheets last too long, that is, until after the book is too much soiled. He points out that a book well bound, opening easily and lying flat without pressure keeps clean many times longer than one that opens hard, as is the case with books sewed on cords or with the whipstitching applied to most rebinding.

Speaking generally of American binding Mr. Dana says:

"One may frankly say that the character of binding done in nearly all libraries in America has been, up to the present time, a discredit to the library profession. We owe it to ourselves to take up this craft and do what we can to elevate it."

After his introductory chapter, from which we have quoted so largely, Mr. Dana describes the various processes of binding, machine work, the ordinary binding on sunken cords and the preferred flexible method of sewing on tapes with French joints, including the use of guards for plates and for end papers and first and last signatures, and a process of overcasting to produce flexible bindings. Binding materials suitable for books to be subjected to different kinds of use are given, based on experience and specifications designed to secure binding that will come up to

the standards outlined in the book. The latter are excellent as far as they go, but in certain points are hardly specific enough to secure from a binder accustomed to current methods and wedded to them, the recommended bindings.

A useful chapter is the one entitled "The literary side." By many examples it points out the necessity, often overlooked by librarians, of studying each book presented for rebinding, to determine whether it would not be more economical to replace it; whether the stock of that particular title or its demand require its retention at all, and whether if bound it requires a covering for hard use or only for occasional references. In order that the librarian may know the bearing of these things on the question of economical administration, not only knowledge of mechanical details of book-making but also knowledge of literary values, popularity of books and authors, editions and prices is required.

Two practical chapters are those outlining the process of paper-making and giving notes on leather. In the latter is summarized the report of the committee on leather for bookbinding of the Society of Arts. Important information is also given, in alphabetically arranged lists, of leathers, book cloths and imitation leathers, technical terms used in bookbinding and styles of ornament.

Under the heading of "Repairing books" Mr. Dana begins by giving as a universal rule "Don't." He then proceeds to give very useful suggestions for making the necessary repairing most effective, and what is quite as important, least harmful. He frequently dwells on the point of the harm to be done by repairing, using such expressions as "Mend sparingly, rebind early." He also gives a list of the machines and tools necessary for repair work. An exceedingly useful feature of the book is the one giving the names and addresses of firms from which binding materials may be secured. The book is concluded by a bibliography of bookbinding, paper and leather.

The foregoing review of Mr. Dana's book was written before the publication in the June number of *Public Libraries* of parts of the book from which we have made copious extracts. Readers of that publication will

agree that we are justified in the emphasis we place on the passages we quote.

The committee has arranged with Mr. Douglas Cockerell to supply enough copies of his pamphlet, entitled "A note on bookbinding," so that free copies will be sent to all who apply to the chairman, as soon as the stock arrives from England. This pamphlet, referred to in Mr. Dana's bibliography, summarizes the most practically useful parts of the Society of Arts report on "Leather for bookbinding," including the specifications for library binding.

LEATHER AND PAPER

Thus far this report has been chiefly concerned with methods and processes. Among the other important factors which shorten or prolong the life of a book are the paper on which it is printed and the material with which it is covered. In the case of paper and original bindings we must now take what the publishers give us. With American fiction, juveniles and illustrated books it is a matter of common knowledge that they are usually bad. Book cloths offer an improvement over papers, especially where buckram is used, but are still not suited to library use. Most American leathers, except some (by no means all) moroccos, are likewise by common observation known to be short lived. It is certain that hundreds of dollars are being wasted by libraries, always short of funds, by using leathers that will have to be replaced in 10 or 15 years.

Abroad, efforts for improvement in these matters have been made through the agency of the imperial government in Germany, which conducted elaborate physical and chemical tests of paper, and in England by committees of the Society of Arts which have investigated both paper and leather. Our own federal government, through its Department of Agriculture, has established a Leather and Paper Laboratory in the Bureau of Chemistry. We are able, through the courtesy of Mr. F. P. Veitch, the chief of the laboratory, to give a brief account of the progress of the work, with plans for the future. He writes:

"In reply to your request for a brief statement of our proposed work on book papers and binding materials, which may be laid be-

fore the Library Association at its next meeting, I beg to say that it is our purpose, to express it in a few words, to make such a study of papers and leathers, of their manufacture, and of causes of deterioration as will enable us to specify the characteristics which these materials should possess for various uses, and to outline the conditions under which they may be best and most usefully preserved. Of course, we fully realize that much of this information has already been obtained in a general way, but it does not appear definite enough nor as generally disseminated among those having to do with leather and paper as it should be.

"It is our desire not only to add to our present knowledge, but bring the whole subject more fully before those who should be acquainted with it. Our investigation will embrace a thorough chemical and physical examination of these materials to show in paper the kind of stock used, the kind and quality of sizing and loading material present, the presence of chemical residues resulting during the manufacture of the paper, and the effect of all these constituents, as well as of the character of finish, on the strength, durability and value of the paper under the conditions of use. The same points will be covered in the work on leather for binding.

"You can readily see that there is a great deal of work to be done here, and that it will take some time to accomplish it. The members of the Library Association can materially assist us in this work by calling our attention to and sending samples of those papers and leathers which have come to their attention by reason either of durability or of lack of durability, stating as far as possible the conditions under which the materials have been kept and the most apparent cause of deterioration where this has occurred.

"We also hope at a later date, when we have the foundation laid, and our methods of work well developed, to offer the services of this laboratory to public librarians in testing paper and binding materials and advising as to the value of samples submitted by them. This feature of our work, however, will not be in shape for at least a year yet.

"We would be glad to have you call the attention of the Library Association to these matters, particularly that relating to the experience of the members with various papers and leathers and the factors of deterioration. We cannot receive too much information of this kind, and the help thus offered will be gratefully received and duly acknowledged, and summarized with our results, which will bring the experience of each to the assistance of all in this important matter."

Although it is not specifically so stated in Mr. Veitch's summary, the purpose of the

work is nothing less than that of establishing standards for leather and paper. When these are established and the Leather and Paper Laboratory is able at the request of libraries to test samples of leather which it is proposed to use for binding, and paper which it is proposed to use for catalogs, reports and bulletins, for example, libraries will have placed in their hands an effective means of enforcing these standards on those who cater to them. The publications of the United States government are notable as possessing nearly all of the bad features found in trade publications. These include the use of glazed paper, heavily loaded with clay, light quality of book cloth, case work, and sheep bindings that soon crumble into dust. Of course, the first effort in this reform must be directed to overcoming the conservatism of bureau chiefs and to securing legislation that will make possible the use of the best materials for the preservation of the printed records of the government. Little improvement, perhaps, can be expected in the production of works that are ephemeral, and are so regarded by their publishers, until the permanent records of the government are issued in permanent form.

When the government itself invariably uses good paper, leather, cloth and buckram, the force of example will do something to improve commercial work. If, however, an appeal can be made to the self-interest of tanners and leather dealers, it may be possible for librarians to effect some improvement even before the government standards are established and published. If librarians, generally, will systematically include a clause in binding contracts that leather used shall come up to the Society of Arts' standards, the library binding business is of sufficient importance to make American tanners and leather merchants take notice. Leather so guaranteed may be ordered in New York or can be imported. Of course, librarians must expect to pay for it, but it is worth the difference.

In the case of paper, perhaps systematic effort is less easily possible or effective. The importation of English editions is one means of making American publishers heed our demands. Where there are competing editions of non-copyrighted works the systematic choosing of editions having good paper is

another means. Just what can be done in this direction of securing better paper and better original bindings will be best shown by a report of our negotiations with the publishers.

COMPARATIVE WEARING QUALITIES OF PUBLISHERS' BINDINGS

An attempt has been made by the committee to get statistics showing the relative wearing qualities of books of different publishers. Although 19 libraries sent statistics, yet the results do not, in the opinion of the committee, indicate anything of great value. Several of the largest libraries were unable to send statistics, and the statistics which were sent were not sufficient to make a large number of volumes recorded for any one publisher. In order to make any adequate comparison, a circulation of at least 500 volumes of a publisher should be obtained. The highest number received in the experiment of the committee was 362, and the number of volumes for most publishers fell below 150. If it is possible for all the larger libraries during a period of six months or more to keep a record of the number of times each volume has circulated before it is first sent to the binder, the average ought to show the relative wearing qualities of books of the different publishers. These figures should be kept separate for fiction, juveniles and class books. In the recent experiment of the committee only the records for one month were kept, except in the case of two libraries.

In view of the fact, as will be shown in this report, that many of the publishers express a willingness to issue their publications in bindings suitable for library use, it does not at present seem wise to publish a list showing the relative rank of the publishers graded according to the wearing qualities of their books. It is sufficient at this time to report that the statistics collected indicate that the books of 18 of the leading publishers are sent to the binder after circulating an average of from 13.7 to 35.96 times.

The committee recommends that unless there is devised a working plan for inducing publishers to issue books in special library bindings, further records of the circulation of books of different publishers be kept and the detailed results, together with those now

in the hands of the committee, be published for the benefit of libraries and publishers.

NEGOTIATIONS FOR BETTER PUBLISHERS' BINDINGS

An effort has been made both by correspondence and by personal interviews to induce the leading publishers to issue fiction and juvenile works in editions bound for the special use of libraries. About 25 publishers were asked to consider the plan. Of these, three refused outright, 16 showed interest and willingness to meet the committee half way in any discussions, and 6 made no reply whatever to the letters of the committee.

Although many publishers expressed interest and a desire to meet the needs of libraries for better binding, they were almost unanimous in saying that it would be impossible to issue a special library binding unless assurance could be given of the number of copies that libraries would order. It must be said at once that no attempt to induce the publishers to better their bindings for library use will succeed unless librarians devise some plan of letting publishers know the number of copies they will need. At the same time actual orders must go through the regular channels, for it is certain that any attempts to centralize orders will meet the opposition of booksellers. In personal interviews, several of the leading publishers in New York expressed a purpose to protect local booksellers.

At present only one plan for learning the number of copies wanted by libraries has occurred to the committee. It is suggested that libraries wishing to order new fiction or to replace standard works such as the Alcott and Brownie books, send to the A. L. A. headquarters a statement of the number of copies of each work wanted. These statements might be tabulated at the A. L. A. headquarters and a notice sent to each publisher once a month, or perhaps oftener, that so many copies will be needed of such and such books. The publishers can then bind in a specially strong binding the number of copies wanted and the libraries can order through their regular agents. In this way neither publisher nor bookseller would be obliged to carry in stock for any length of time two different styles of the same work.

We learned that several years ago Doubleday, Page & Co. issued all their fiction in a special binding for library use, but they found the demand from libraries so very small that they were obliged to abandon the plan. Copies of these books were examined by the committee and found to be so strongly bound that it was almost impossible to pull them apart. The failure of librarians to take any interest in this effort of Doubleday, Page & Co. to provide specially for their needs shows great neglect of a very important part of library economy. No attempt to get better bindings from the publishers will meet with success unless librarians all over the country give it systematic support.

In the communications with the publishers, they were asked to estimate the extra cost of books bound according to the following specifications: books to be sewed on tapes, first and last signatures guarded with muslin, and good muslin used on the back instead of the coarse super ordinarily used. All publishers agreed that the cost of books bound in such a way would not be increased more than ten cents a volume; that is, fiction now costing libraries \$1 would cost \$1.10, or less. It is certain, however, that books well bound according to such specifications would last at least twice as long as the ordinary case binding. Instead of a circulation of 35 or less in the original covers—a liberal average as shown by the statistics collected from libraries by this committee—books so bound ought to circulate *at least* 70 times.

The number of copies to be issued in a special binding is an important point in all calculations of publishers. Although one publisher mentioned 100 copies as a minimum number for undertaking such editions, most publishers stipulated that they be assured a sale for 500 copies or more.

The actual results of the efforts of the committee to induce the publishers to issue books in a special binding for libraries are as follows:

George W. Jacobs Co. will issue according to the specifications submitted by the committee without special charge if 100 copies or more are needed.

D. Appleton & Co. are willing to publish in a special binding at an additional expense of

"ten cents a copy over the regular edition," provided libraries place orders with them for 500 copies.

E. P. Dutton & Co. agree to quote on any books on their list. As they have agreed to issue the works of Mrs. de la Pasture without extra charge, it is fair to assume that they can be relied upon to do this in the case of other fiction.

A. S. Barnes & Co. will issue in the special binding at an additional cost of six cents to the net price of the book and make no stipulation as to the number of copies. They are willing to issue in "full cloth, head bands, sheets to be folded in 16s, book to be sewed on tapes," without extra charge if 500 copies are ordered.

Doubleday, Page & Co. have made no definite promise, but it is the opinion of the committee, based on a personal interview, that they will again try the experiment which they made several years ago, if they can be assured of a reasonable sale. Five cents a copy would cover the extra cost.

Little, Brown & Co. agree to issue books in a special binding at an extra cost of eight cents a volume on editions of not less than 500.

McClure, Phillips & Co. think that seven to ten cents would cover all extra cost and give 250 copies as a minimum.

A. C. McClurg & Co. estimate five cents as the extra net cost, but are unwilling to undertake it for any number of copies less than 500.

L. C. Page & Co. add five cents to the cost and make no stipulation as to the number of copies.

Henry Holt & Co. write that they are willing to bind according to the specifications of the committee, at an extra cost of five cents a volume for an edition of 500 copies.

The Century Co., after a visit from members of the committee and a practical demonstration of the instability of ordinary binding, agreed to consider the strengthening of all their work, but did not think it feasible to issue in two different styles. It was learned from them that the Cleveland Public Library had bought many copies of the Brownie books in a special cloth edition at an extra cost of ten cents a volume. Mr. Brett reports that these books wear much longer and show soil much less quickly. These books have not been sold by the Century Co. through the trade, but directly, to one or two libraries. Later the Century Co. agreed to issue the Brownie books in cloth, in accordance with the specifications of the committee, at \$1.10 if ordered in moderate quantities.

Charles Scribner's Sons have, at the suggestion of the committee, agreed to issue Hopkinson Smith's "Tides of Barnegat" in an edition to conform with our specifications. The publishers will send announcements to

libraries direct. We urge upon librarians the importance of responding promptly, thus making the experiment a success, and thus proving that co-operation between librarians and publishers is possible.

No other publisher has given a definite answer, but it is fair to assume that if the A. L. A. can remove the great and practically the only objection, namely, the present inability to find out the number of copies wanted by libraries, most publishers will be glad to meet the desires of librarians. It is the opinion of the committee that all that is necessary to assure success in this matter is the earnest co-operation of librarians. The publishers are willing to meet us at least half way, and permanent failure will be charged to librarians rather than to the publishers.

LIBRARY AND CONTRACT BINDING

In the preparation of this report it seemed well to learn of the experience of American public libraries that are conducting their own binderies by direct employment and those that have work done by contract, either in library binderies or in outside shops. Inquiries addressed to 44 public libraries brought 41 answers. Of these Boston, New York, Cleveland, Milwaukee and Seattle, among large libraries, and Easton, Pa., among small libraries, conduct their own binderies by direct employment. In the case of Easton, the regular library staff does the binding work. The public libraries of Philadelphia, Newark and Washington have well-equipped binderies in their own buildings in which bindery work is done by contract. The Carnegie Library of Pittsburgh has its binding done by contract in its own building, but does not own machinery or tools. The other 31 libraries answering our questions have binding done by outside binders.

The Boston Public Library has conducted its bindery for many years and finds the plan satisfactory. It employs 29 persons in its bindery, nearly all of whom receive union wages. Last year 35,720 volumes were bound. For fiction the estimated cost was 28 cents for 12mos bound in art canvas. About 15 per cent. of the product of the bindery is repairing, map and photo mounting, periodical cover

making, stitching and trimming library publications, etc. Cost of equipment about \$2000.

The Milwaukee Public Library has conducted its own bindery for 15 years, and last year bound 11,350 volumes. The estimated cost of 12mo fiction was 40 cents; binding, half roan. Seven persons are employed. Cost of equipment, about \$650.

The Seattle Public Library has run its own bindery for 10 years, starting with \$200 worth of second-hand machinery, type, etc., and with one man and a girl. Four persons are now employed and the value of the machinery and tools now amount to \$641. Last year 4308 volumes of all sizes were bound at a cost of \$3520. The usual mending, lettering, magazine cover making, etc., were also done in the bindery. The cost of 12mo fiction in imperial morocco cloth is estimated at 55 cents. Labor and material are high at Seattle and only the best of both are used.

The New York Public Library has conducted its own bindery with satisfaction and economy since Jan. 1, 1887, and until within recent years has done all the library's binding. With the expansion of the library system, about three-fourths of the binding is now done outside. When the new central building is occupied it will be possible to enlarge the library bindery. The bindery equipment cost about \$800; six persons are employed and 13,643 volumes were bound last year. Ordinary 12mo fiction is bound in full art vellum, sewed on tapes, with strong cloth hinges. The cost approximates 25 cents a volume, not including lettering.

The Cleveland Public Library has had a library bindery for 12 years. It has been found that the expense is less than by contract; the work is excellent and the delays are a great deal less frequent. The estimated cost of the equipment is \$1373 and 21 persons are employed. The product of the bindery in 1904 was 17,359 volumes bound and rebound, 34,544 volumes repaired and 23,280 volumes numbered and lettered, besides miscellaneous work. The cost of 12mo fiction is about 35 cents, bound in art vellum. As some work is now done by contract, there is a good chance for comparison. Fiction bound in art canvas costs from 36 to 45 cents. Only at

the latter price is it as satisfactory as work done in the library bindery at 35 cents.

That the plan of conducting a library bindery is not limited to large libraries is shown by the interesting experience of the Easton Public Library, as outlined in the *Library Journal*, 30:796-7 (Oct., 1905). The cost of the equipment is given as \$127.30, lessons in binding \$50, materials and interest on money invested for fourteen months \$44.16. In that time 2544 books were repaired at a cost of .017 each and 293 volumes were re sewed or rebound at a cost of \$11.72, or an average of 4 cents a volume. This reckons the labor as nothing, inasmuch as it is stated that all work is done by the regular staff, and as no more time is given to this grade of work, which is real binding, than would be required by the repair work ordinarily done in libraries, the utility of which is often doubtful.

Among the advantages to be noted in the plan of conducting a library bindery are the following: the greater safety of the books being bound, the ability to consult them while they are being bound, greater promptness, the saving of the profit that would accrue to the contractor, the greater flexibility of the method over contract work, enabling the library to try experiments with new methods or materials, the opportunity to do special work such as picture and map mounting and the doing of repair work by skilled workmen, instead of by library employees who by their zeal to repair many books injure many. Among the disadvantages are the difficulty of getting a satisfactory foreman in whose judgment of materials, methods and workmen you can have confidence. This feature is so important that speaking generally, rarely can any but the largest library afford to employ such a man, when one can be found. A librarian already has so many administrative problems that ordinarily he ought not to undertake a new one involving a highly skilled craft and the purchase of materials the imitations of which deceive even the elect, unless he can secure as foreman a man in whose judgment he has perfect confidence. However, if the difficulties of getting good bindings in other ways prove very great, he may be forced, in order to get good work for his library, to

master the subject for himself to such an extent that he can personally supervise his own bindery.

The public libraries of Newark, Philadelphia and Washington have found it desirable to fit up binderies of their own and then have the work done by contract, while the Carnegie Library of Pittsburgh has work done by contract in its central building, where room, heat, light and janitor service are furnished. The plan has many of the advantages of conducting one's own bindery and at the same time eliminates most of the disadvantages. It shifts the responsibility of everything but results from the librarian to the contractor. If one secures a contractor sufficiently progressive, if one is willing to pay him for trying experiments, and if the contract is subject to frequent revision to include new and approved methods, this plan is, in the judgment of this committee to be preferred to the one of direct employment.

Of the four library binderies run by the contract plan, three are conducted by Mr. Gilbert D. Emerson, of Philadelphia, a personal element that has undoubtedly been a large factor in their success. The bindery equipment of the Philadelphia Free Library cost about \$1000. The cost of binding 12mo fiction in half cowhide, with cloth sides, is 35 cents. The Newark Public Library's bindery equipment cost \$875; the cost of 12mo fiction in half cowhide, with keratol sides, is 37 cents. The bindery equipment of the Public Library of the District of Columbia cost about \$800; that for the repair work now run separately, about \$60. The cost of 12mo fiction is at present 43 cents for full buckram, 50 cents for half cowhide and 60 cents for half morocco. These prices are exorbitant and the work is unsatisfactory. Arrangements are being made for a more favorable contract for another year.

A summary of the reports from some of the libraries having rebinding done by outside contractors is as follows:

For the Chicago Public Library 27,698 volumes were bound or rebound last year by four contractors at a cost of 35 cents for half roan and 50 cents for half morocco for 12mos. The work is considered very satisfactory. The advantages of the plan are stated to be these:

The annual advertisement for bids brings enough competitors to keep down prices and at the same time keeps work in the hands of those having experience. Contracts are enforced by bonds, if not found satisfactory. Labor troubles are unknown. Odors of paste, glue, etc., inseparable from a bindery, are avoided. Contract covers the books in constant demand on "rush" orders. It is regarded cheaper for the library to have binding done by the competitive system than by a non-competitive system, as would be the case in direct employment.

There is the greatest possible variety in the reports from the various libraries on the results of contract work, prices paid and satisfaction with the work. Cloth bindings range all the way from 22 cents paid at Paterson for 12mo fiction said to be satisfactorily bound in buckram, including lettering of titles and class numbers, and 25 cents paid at Springfield for satisfactory binding in imperial morocco cloth, up to 50 cents paid at Salem for binding in half art canvas, black lettered and only fairly satisfactory, and 60 cents paid at Atlanta for buckram binding. In leather bindings prices range from 30 to 35 cents paid at Grand Rapids for half cowhide which is not wholly satisfactory up to 50 cents paid at Wilkes-Barré for only fairly satisfactory binding in buffing, and the same price paid by the Pratt Institute and the Brooklyn and New York public libraries for satisfactory binding in pigskin by Mr. Chivers. The average price paid for rebinding seems to be about 40 cents for half leather and about 35 cents for cloth.

Although a considerable portion of the answers indicate that librarians are perfectly satisfied with the results obtained, yet a large number are dissatisfied and would like a change. Several would like to have their own binderies if they had the space.

It is significant that several libraries reported their entire satisfaction with the books they have bought bound from the sheets by Mr. Chivers. The Medford Public Library has for six years sent its books to be rebound at Bath, England, at a cost of about 35 cents in durable line. The New York and Brooklyn public libraries and the Pratt Institute Free

Library are having much rebinding done by Mr. Chivers, both in Brooklyn and in England.

A WORKING BASIS

A study of these reports only serves to show the absence of standards of economical binding among American librarians. Another generalization that may be made is that only rarely in America have we binders who have any adequate conception of good binding from the point of view of the library. Since the librarians are without standards and binders do not have any conception of the needs of libraries, it is a case of the blind leading the blind. This report may not shed much light on the subject, except to show us what we are doing, and set us to thinking and point the way so that each may work out his own binding salvation. It does not profess to be more than tentative. As a working basis until more definite rules may be laid down your committee recommends the following:

1. Master Dana's "Notes" and follow the advice there given for all the points it covers.

2. If you have a good binder keep to him, pay him adequately for his work and lead him to give good, honest, craftsmanlike work. Make sure that the work you are getting will stand the test of many home circulations, without the need for any repairing whatever or a second rebinding. If asked to suggest the number of times a book should circulate after being rebound we would say that under ordinary conditions of cleanliness (that is, outside of the soft coal smoke belt), the minimum should be 75 times.

3. Large libraries are recommended to do their own binding, but even then only provided it is impracticable to get good contract work. This advice is in line with that given in England in Mr. J. D. Brown's "Manual of library economy" (p. 330) and by a writer in the *Library Association Record*, 8:74-78 (March, 1906). For the convenience of those who are thinking of opening binderies we give as an appendix to this report a list of suggested equipment for binderies for small libraries.

4. Wherever possible to secure well-made publishers' original editions librarians have a duty of co-operation with publishers and a

duty to their own libraries to buy these editions that bid fair to last until so soiled as to require withdrawal without rebinding. Where it is not possible to buy such well-made publishers' editions, it is the part of sound policy to buy replacements especially and new books that are sure to have long use, strongly bound from the sheets, thus saving repair work, loss of use and much of the cost of rebinding. The committee has thus far only heard of one binder, Mr. Cedric Chivers, who systematically furnishes libraries with books strongly bound from the sheets. His books are used with great satisfaction in a large number of American libraries. If any criticism can be passed upon them it is that they are somewhat awkward and clumsy in appearance. In our correspondence with publishers, some of them preferred not to make special editions for libraries, but recommended that libraries secure their publications bound from the sheets, and one firm specifically recommended Mr. Chivers.

Many important binding questions have not even been touched upon in this report. Among them are the questions of magazine covers, pamphlet bindings and bindings for music. These and revised judgments on the questions here considered might well be covered by bulletins to be issued in the future by the A. L. A. committee on bookbinding and book papers. Your committee has only to point out again that it has considered these questions solely from the point of view of economical administration, and not from that of expert knowledge of binding as a craft.

APPENDIX

EQUIPMENT FOR A SMALL BINDERY

The committee has had considerable correspondence with dealers in bookbinding materials concerning the equipment necessary for small library binderies. Extracts from some of the letters are here given.

J. L. Shoemaker & Co., of Philadelphia, write as follows:

"A very small bindery containing the essential tools for binding library books in the simplest way could be had for about \$250, to include the following items:

"One small wood frame standing press; 1 pair of table shears; 1 laying press, plow,

knife and pin; 1 pair backing boards; 1 finishing press; 1 sewing bench; about a dozen cherry press boards; 1 lettering pallet; 1 gold cushion and knife; 1 type cabinet; 1 small finishing stove, for gas or oil; 1 glue pot; 1 round and one flat burnisher; 1 hammer; 1 paring and 1 cutting knife; 6 bone folders; 1 paste brush; small assortment of finishing rolls and stamps, and small quantity of brass type.

"Should the work increase to any extent, some larger machine would be needed, namely, a job backer costing about \$70 and a cutting machine costing about \$175. However, with a good mechanic all the work of a small bindery could be done with the items first named."

The O'Bannon Corporation, of New York, gives the following as necessary for a small bindery:

"One 30-inch lever paper cutter; 1 33-inch iron table shear; 1 No. 6 standing press; 1 21-inch job backer; 1 gold cushion 8x16 inches; 2 sewing benches 28 inches; 1 15-drawer type cabinet; 12 16x24 inch press boards; 1 finisher's press 24 inches; 1 pattern pallet; 1 gas stove; finisher's tools."

The cost of this equipment they give as about \$550.

Louis de Jonge & Co., New York, give the following itemized equipment, which totals about \$425.

"One standing press; 1 pair board shears; 1 stamping press; 1 pair 21-inch backing boards; 1 small size finishing stand; 1 7-case type cabinet; 1 lettering pallet; 1 laying press without plow; 1 finishing press, 21 inches between screws; 1 sewing bench, 24 inches between screws; 6 pressing boards, 16x24 inches; 6 pressing boards, 10x13 inches; 4 pressing boards, 8x12 inches; 1 single finishing gas stove; 1 12-inch back saw; 3 bone folders; 1 glue kettle and gas heater; glue and paste brushes; 1 beating hammer; 1 flat steel polisher; 2 agate burnishers (1 flat and 1 round); knives and shears; 1 forming iron; 1 pair compasses; joint rods; 1 bookbinders' hammer, best steel; rolls and stamps."

Inasmuch as some libraries may wish to have a well-equipped repair room it may be worth while to enumerate the equipment of the repair shop of the Public Library of the District of Columbia, which cost \$60. It follows:

One sewing bench; 6 brass keys; 12 cherry boards (small); 4 cherry boards (large); 1 press; 1 finishing press; 1 nickel paper holder and cutter; 2 pairs shears; 6 paste brushes; 6 glue brushes; 1 shoemaker's cast hammer; 6 bone folders; 1 saw.

Addresses of dealers in binding machinery and materials are given in Mr. Dana's "Notes."

REPORT OF THE COMMITTEE ON PUBLIC DOCUMENTS

BY ADELAIDE R. HASSE, *Chairman**To the American Library Association:*

YOUR committee on public documents respectfully submits the customary report on current legislation and publication:

The committee suggests the expediency of excepting its report from the rule requiring committee reports to conform to the calendar year. The major part of the reports of this committee relate properly to federal and state legislation bearing upon public documents. Congress does not convene until the first Monday in December, and the majority of state legislatures sit during the early part of the winter. If the rule is suspended so far as this committee is concerned, then the committee will be enabled to report to the Association on new legislation concerning documents while it is new. If the rule is enforced for this committee, the subject matter of the committee's reports will always be a year old.

Although laying itself open to the charge of violating the present rules, the committee believes that the document problem is of sufficient importance to libraries to warrant the transgression on the grounds stated.

NATIONAL DOCUMENTS

AMERICAN

1. *Federal*

The Commission to Investigate Public Printing, the appointment of which was announced in the last report of this committee, made its first reports during the present session of Congress. An examination of the reports shows that an extensive inquiry into the printing of documents was made. No changes materially affecting the depository libraries have been recommended. In a report dated March 26, 1906, the commission lays stress on congressional distribution as one of the greatest evils in the existing printing abuses. Although no mention is made of depository libraries, the commission did take steps to ascertain the

attitude of these libraries towards either possible retrenchment or graduated distribution. The practical unanimity of replies received from depository libraries has induced the commission to believe that all depositories are in a position to maintain the trust which the government imposes on them. On the other hand, the Superintendent of Documents, in his report of 1905, states that since the organization of his office, 800,000 volumes have been returned to him by depositories, as being duplicates.

There is, without question, a defect in a system of distribution which serves the small library of limited income on the same compulsory basis as it does the largest libraries. When designated depository libraries approach this question in a liberal spirit many of the abuses in the depository distribution of public documents can undoubtedly be corrected. The comparatively limited use of public documents in the majority of libraries when compared with the cost of cataloging and maintenance, probably makes them one of the most expensive assets of a library. If they are carted away into cellar or attic, there is a breach of the trust which exacts that these books be made and kept available. If they are shelved, then a disproportionate amount of shelf room is being given by most libraries to a class of books for which there is very limited demand. If, finally, they are cataloged by the library, their cost to the library is enormously increased. It is also difficult to understand why congressional selection should be made the basis of these grants. Libraries neither originate nor do they develop coincidentally with congressional representation.

Legislation

The following acts relating to public documents have been introduced during the present session of Congress. As Congress is still in session no final report can be made:

1905. Dec. 5. Res. in House facilitating distribution of documents to members. H. res. 17. Referred.

—13. Res. in House relative to printing of engravings, drawings and maps with executive documents. Congr. Record, 59 cong., 1 sess. (daily ed.): 324.

1906. Jan. 13. Bill making libraries of land grant colleges depositories of government publications. H. R. 11785. Referred.

—27. Bill making state historical societies designated depositories of public documents. H. R. 13301. Referred.

—Feb. 15. Bill to promote civic education through reprints of public documents at private expense. H. R. 15066. Referred.

—Mch. 20. Bill to furnish public documents to those entitled to admission to press galleries of Senate and House. H. R. 17042. Referred.

—30. Joint resolutions to correct abuses in public printing, and so forth. H. J. Res. 127. Approved.

—Joint resolution on prevention of unnecessary printing and binding, etc. H. J. Res. 128. Approved.

—Apr. 10. Amendment in Senate making appropriation for indexing documents, bills and hearings during sessions of Senate. Cong. Record. 59 cong., 1 sess., p. 5108 (daily ed.).

Reports, etc.

(Official.)

1906. Jan. Report on public printing by committee on department methods. 12 pp. 4°.

—Executive order directing that head of each Executive Department shall appoint advisory committee on printing and publication, and assigning rules governing annual reports of departments. 1 p. f°.

1906. Feb. Amendments and additions to printing laws; published by Government Printing Office. 77 pp.

—Mch. 24. Report of Committee on Printing on H. J. Res. 127 on correction of abuses in the public printing, etc. 1 p. (House rept 2652).

—Same on H. J. Res. 128 on prevention of unnecessary printing and binding, etc. 1 p. (House rept. 2653).

—26. Report from Printing Investigation Commission. 92 pp. (Senate rept. 2153.)

This report, without the tabular matter, is also printed in the Congressional Record of March 26.

(Non-official.)

1905. Sept. The problem of federal printing; by Wm. S. Rossiter. (Atlantic Mo. Sept., 1905.)

1905-6. Monthly List of Selected Public Documents; issued by Free Library of Philadelphia, and prepared by Wm. Reinick, chief of dept. of public documents.

Sold at \$1 per annum.

Very useful work.

1906. U. S. government documents; by James I. Wyer, Jr. Albany, 1906. 78 pp. (N. Y. State Library Bull. 102.)

Reviewed in L. J., May, 1906: 233.

Manual of method of great practical use.

—April. What shall we do with public documents?; by Wm. S. Rossiter. (Atlantic Mo., April, 1906.)

Offices created and abolished, etc.

(Including changes in publications.)

1905. July 17. Daily consular reports; title changed to Daily consular and trade reports. With change publication transferred from the Bureau of Statistics, Department of Commerce and Labor, to Bureau of Manufactures. Change occurred with no. 2310.

2. STATE

The third part of Mr. Bowker's "State publications" has been issued during the year. It includes the states of Minnesota, Iowa, Missouri, Kansas, Nebraska, the two Dakotas, Montana and Dakota territory. Librarians will ever owe to Mr. Bowker a debt of gratitude for venturing on this undertaking. It will always remain a foundation for every subsequent bibliography pertaining to this subject.

The project for the indexing of American state documents, referred to in the last report of this committee, is proceeding under the most favorable circumstances. Indexes for the states of Maine, Vermont and New Hampshire have been completed and are ready for the press. Early publication is anticipated. It is hoped that librarians will be enabled, by this new tool, to find increasing use for a hitherto most forbidding mass of material. Both the arrangement and the references to documents have been made as simple as possible in order to facilitate the use of the indexes.

It is to be regretted that librarians generally do not make more use of the indexes to legislation issued by the New York State Library. In order that librarians may have an opportunity to collect a file of this very useful publication a collation of the series is

given below. The current number of the "Review of legislation" is the first to report especially on public printing.

Comparative Summary and Index of Legislation

1. 1890. Legislation bull. no. 1.
2. 1891. *Same*, no. 2.
3. 1892. *Same*, no. 3 and App. 3, 76 Ann. rept. State Library.
4. 1893. *Same*, no. 4 and App. 4, 77 *same*.
5. 1894. *Same*, no. 5 and 4, *same*.
6. 1895. *Same*, no. 6 and App. 2, 78 *same*.
7. 1896. *Same*, no. 7 and App. 2, 79 *same*.
8. 1897. *Same*, no. 9 and App. 2, 80 *same*.
9. 1898. *Same*, no. 10 and App. 1, 81 *same*.
10. 1899. *Same*, no. 11 and App. 2, 82 *same*.
11. 1900. *Same*, no. 13 and App. 3 in part 83 *same*.
12. 1901. *Same*, no. 15 and App. 2 in part 84 *same*.
13. 1902. *Same*, no. 18 and App. 2 in part 85 *same*.
14. 1903. *Same*, no. 21.
15. 1904. *Same*, no. 24.
16. 1905. *Same*, no. 28.

Review of Legislation

1. 1901. Legislation bull. no. 16 and App. 2 in 84 Ann. rept. State Library.
2. 1902. *Same*, no. 19 and App. 2 in part 85 *same*.
3. 1903. *Same*, no. 22.
4. 1904. *Same*, no. 25.

Digest of Governors' Messages

1. 1902. Legislation bull. 17 and App. 2 Ann. rept. State Library.
2. 1903. *Same*, no. 20 and App. *same*.
3. 1904. *Same*, no. 23.
4. 1905. *Same*, no. 27.

Year book of Legislation

1. 1903. Contains Legislation bulletins 20-22.
2. 1904. Contains Legislation bulletins 23-25.

Trend of Legislation in the U. S.

1. 1900. Legislation bull. no. 12 and App. 3 83 Ann. rept. State Library.

Legislation

The following acts relating to public documents have been passed by those states, excepting Hawaii, holding sessions in 1905. An examination of the laws of 1905 shows that 34 states and territories legislated changes in their fixed administrative branches. These changes numbered 129. To the document librarian, however, those offices only which are specifically required to make reports will have a more direct interest than do those whose duties are supervisory or inspectorial merely, without the responsibility of handing down reports for publication. The following tabulation of reports so required may, therefore, be of use to that official in the performance of his duties.

- Ari. Office of Public Examiner to enforce uniform system of county accounts; annual report to Gov. 9§ ('05 ch. 40, 16 Mr.)

- Cal. State Bd. of Forestry; annual report to Gov. ('05 ch. 264, 18 Mr.)
- Bureau of Building and Loan Supervision; annual report to Gov. ('05 ch. 504, 21 Mr.)
- Col. State Bd. of Nurse Examiners; biennial report to Gov. 8§ ('05 ch. 136, 11 Ap.)
- Del. Division of Public Records; biennial report to Gov. 5§ ('05 ch. 77, 16 Mr.)
- Fla. State Bd. of Accountancy; annual report to Gov. 9§ ('05 ch. 54, 5 Je.)
- Bd. of Control of State Educational Inst.; biennial report to legislature. 40§ ('05 ch. 13, 5 Je.)
- Id. State Live Stock Sanitary Bd.; annual report to Gov. 39§ ('05 p. 39, 6 Mr.)
- State Bd. of Pharmacy; annual report to Gov. ('05 p. 319, Mr. 7.)
- Ill. State Geological survey; annual report to Gov. ('05 p. 30, 12 My.)
- State Highway Com'n.; annual report to Gov. 7§ ('05 p. 74, 18 My.)
- State Civil Service Com'n.; annual report to Gov. 37§ ('05 p. 113, 11 My.)
- Ind. State Bd. of Veterinary Medical Examiners; annual report to Gov. and State Veterinary Medical Ass'n. 17§ ('05 ch. 98, 4 Mr.)
- Kan. State Live Stock Sanitary Com'r.; annual report to Gov. 32§ ('05 ch. 495, 4 Mr.)
- State Bd. of Control of State Charitable Inst.; annual report to Gov.; biennial, to Leg. 54§ ('05 ch. 475, 4 Mr.)
- Me. State Bd. of Veterinary Examiners; annual report to Gov. ('05 ch. 17, 22 F.)
- Mass. Bd. of Registration in Embalming; annual report to Gov. 10§ ('05 ch. 473, 26 My.)
- Mich. Pathologist of State Asylums for Insane; annual report to Gov. 9§ ('05 ch. 140, 25 My.)
- Bd. of Accountancy; annual report to Gov. ('05 ch. 92, 4 My.)
- State Highway Dep't.; biennial report to Gov. 17§ ('05 ch. 146, 1 Je.)
- Minn. State Highway Com'n.; annual report to Gov. ('05 ch. 163, 13 Ap.)
- State Bureau of Child and Animal Protection; annual report to Sec. of state. 6§ ('05 ch. 274, 18 Ap.)
- Mo. State Dairy Com'r.; annual report to Gov. 8§ ('05 p. 133, 8 Ap.)
- Mon. Bureau of Child and Animal Protection; biennial report to Gov. 11§ ('05 ch. 96, 4 Mr.)
- Nev. State Veterinarian; biennial report to Gov. 14§ ('05 ch. 135, 15 Mr.)
- N. J. State Bd. of Forest Park Reservation Com'rs.; biennial report to Leg. 12§ ('05 ch. 47, 22 Mr.)
- Com'r of Charities and Corrections; annual report to Gov. 6§ ('05 ch. 57, 25 Mr.)
- State Bd. of Equalization; annual report to Leg. 12§ ('05 ch. 67, 29 Mr.)
- N. M. Territorial Irrigation Engineer; biennial report to Gov. 42§ ('05 ch. 102, 16 Mr.)
- Insurance Dep't.; annual report to Gov. ('05 ch. 70, 14 Mr.)
- Territorial Coal Oil Inspector; annual report to Gov. ('05 ch. 66, 14 Mr.)
- Bd. of Inspectors in Optometry; annual report to Gov. 16§ ('05 ch. 96, 16 Mr.)
- N. Y. Com'n to investigate sources and disposition of available water supply; annual report to Leg. 10§ ('05 ch. 723, 3 Je.)
- Com'n. to regulate gas and electric light rates and supervise lighting corp.; annual report to Leg. 22§ ('05 ch. 737, 3 Je.)
- N. C. State Geological Bd.; biennial report to Leg. 7§ ('05 ch. 542, 6 Mr.)
- N. D. State Bd. of Embalmers; annual report to Gov. 9§ ('05 ch. 111, 28 F.)
- State Bd. of Bar Examiners (reports are required, but it is not specified at what time or to whom they are to be made.) 8§ ('05 ch. 50, 18 F.)

- N. D. State Banking Dep't. (reports and note as above). 42§ ('05 ch. 165, 6 Mr.)
- State Historical Soc. to be trustee of state; biennial publications. 4§ ('05 ch. 25, 16 Mr.)
- Bd. of Water Com'rs.; biennial report to Gov. 64§ ('05 ch. 34, 1 Mr.)
- Or. State Library Com'n.; biennial report to Leg. 6§ ('05 ch. 44, 9 F.)
- Pa. State Water Supply Com'n.; annual report to Gov. 9§ ('05 ch. 236, 4 My.)
- Dep't. of Health; annual report to Gov. ('05 ch. 218, 27 Ap.)
- Dep't. of Public Printing and Binding; annual report to Gov. 42§ ('05 ch. 1, 7 F.)
- Tenn. Dep't. of Game, Fish and Forestry; biennial report to Leg. 9§ ('05 ch. 455, 15 Ap.)
- Vt. Office of Atty.-Gen.; biennial report to Leg. 10§ ('04 ch. 57, 18 N.)
- Wash. State Railroad Com'n.; annual report to Gov. 27§ ('05 ch. 81, 7 Mr.)
- Bd. for Promotion of Uniformity of Legislation in U. S.; biennial report to Leg. 4§ ('05 ch. 59, 3 Mr.)
- State Bd. of Tax Com'rs.; biennial report to Gov. 6§ ('05 ch. 115, 9 Mr.)
- State Oil Inspector; annual reports to Gov. 10§ ('05 ch. 161, 11 Mr.)
- State Highway Bd.; biennial report to Leg. 12§ ('05 ch. 174, 13 Mr.)
- W. Va. State Bureau of Archives and History; annual report to Gov. 5§ ('05 ch. 64, 18 F.)
- Dep't. of Mines; annual report to Gov. 5§ ('05 ch. 46, 24 F.)
- Wis. State Tax Com'n.; biennial report to Gov. ('05 ch. 380, 15 Je.)
- State Bd. of Forestry; annual report to Gov. 24§ ('05 ch. 264, 25 My.)
- State Civil Service Com'n.; biennial report to Gov. ('05 ch. 363, 14 Je.)
- Wy. Com'r. of Public Lands; biennial report to Leg. 11§ ('05 ch. 36, 15 F.)
- State Bd. of Pardons; annual report to Gov. 4§ ('05 ch. 56, 20 F.)
- State Bd. of Horticulture; biennial report to Leg. ('05 ch. 50, 18 F.)
- Bureau of Mining Statistics, provision for establishment of by State Geologist; latter to report annually to Gov. 6§ ('05 ch. 92, 21 F.)
- Dairy, Food and Oil Com'r.; annual report to Gov. 8§ ('05 ch. 49, 18 F.)
- Fla. Board of commissioners; Indian war claims; report to legislature of 1907. ('05 ch. 80.)
- Ga. Joint legislative committee; examination of convict camps; report to legislature of 1906. ('05 p. 1257.)
- Commission; registration of land titles; extended; report to legislature of 1906. ('05 p. 1257.)
- Committee; erection of state sanatorium for consumptives; report to legislature of 1906. ('05 p. 1255.)
- Joint legislative committee; public park; report to legislature of 1906. ('05 p. 1255.)
- Joint legislative committee; revision of tax laws; report to legislature of 1906. ('05 p. 1259.)
- Ill. Commission; internal improvement; report to legislature of 1907. ('05 p. 40.)
- Commission; industrial insurance and old age pensions; report to legislature of 1907. ('05 p. 401.)
- Ind. Commission; tuberculosis hospital; report to legislature of 1907. ('05 ch. 172.)
- Kan. Commission; coal mine explosion in S. E. Kansas; report to present legislature. ('05 ch. 534.)
- Board of r.r. com'rs. to investigate rates in Kansas and neighboring states; report to Gov. in 6 mos. ('05 ch. 540.)
- Mass. Commission; technical education; report to legislature of 1906. ('05 r. 94.)
- Committee; taxation of forest lands; report to legis. of 1906. ('05 r. 60.)
- Bd. of Gas and Electric Light com'rs. to investigate sliding scale for gas rates; report to legis. of 1906. ('05 r. 101.)
- Minn. Commission; state hospital for crippled indigent children; report to legis. of 1907. ('05 ch. 78.)
- N. H. Joint commission with Me. and Vt.; bridges; report to legis. of 1907. ('05 ch. 119.)
- N. J. Commission; poor law revision; report to legis. of 1906. ('05 p. 565.)
- Commission; master and servant law codification report to legis. of 1906. ('05 ch. 94.)
- Commission; revision of corporation laws; report to legis. of 1906. ('05 ch. 30.)
- Commission; granting and taxation of public franchises; report to legis. of 1906. ('05 ch. 261.)
- Commission; improvement of judicial system; report to legis. of 1906. ('05 ch. 88.)
- Commission; turnpikes and public roads; report to Gov. in 1905. ('05 p. 564.)
- N. Y. Commission; reconstruction of prison buildings; report to legis. of 1906. ('05 ch. 718.)
- Commission; investigation of probation system; report to legis. of 1906. ('05 ch. 714.)
- Oreg. Commission; tax code; report to legis. of 1907. ('05 ch. 90.)
- R. I. Joint legis. committee; school for feeble-minded children; report to legislature not specified. ('05 r. 93.)
- Metropolitan park commission to report to legis. of 1905 on system of public parks for Providence. ('04 ch. 1204.)
- Joint legis. committee; modification of general election laws; report to present legis. ('05 r. 91.)
- S. C. Joint legis. committee; terrapin and shell fish culture; report to legis. of 1906. ('05 ch. 569.)
- Tenn. Joint legis. committee; rates of Cumberland telephone, etc., co.; report to legis. by Mr., 1905. ('05 p. 1318.)
- Utah. Commission; consolidation of Univ. of Utah and Agric. College of Utah; report to legis. of 1906. ('05 ch. 104.)

For the benefit of the document librarian, the following list of reports of special state inquiries required by the laws of 1905 is appended:

- Cal. Joint legis. committee; cattle industry as affected by national forest reserves; time of report not specified. ('05 p. 1074.)
- Joint legis. committee; system of revenue and taxation; time of report not specified. ('05 p. 1067.)
- Col. Commission; location of irrigation reservoirs; time of report not specified. ('05 ch. 130.)
- Conn. Commission; law for uniform municipal charters; report to legis. of 1907. ('05 special acts ch. 399.)
- Joint legis. committee; compensation of state officials; time of report not specified. ('05 special acts ch. 135.)
- Commission; corrupt practices; report to legislature of 1907. ('05 special acts ch. 499.)
- Fla. Commission; relocation of insane hospital; report to legislature of 1907. ('05 ch. 83.)

- Vt. Tuberculosis commission continued; report to legisl. of 1906. ('04 ch. 142.)
- Wis. Board of control to investigate binder twine plant in prisons of other states; report to legisl. of 1907. ('05 p. 989.)
- Commissioners on Dells of Wisconsin continued; report by Mr., 1906. ('05 ch. 169.)
- Forest commission to examine water power; time of delivery of report not specified. ('05 ch. 95.)
- Geological and Natural Hist. Survey to co-operate with U. S. Geol. Survey relative to water power; time of delivery of report not specified. ('05 ch. 475.)
- Wyo. Commission; codification of laws relating to water rights; to report to legisl. of 1907. ('05 ch. 32.)
- Neb. State Architect (created by C.S. '03 5976-79;) abolished ('05 ch. 149, 30 Mr.)
- N. J. State Board of Taxation (created by '03 ch. 208;) abolished ('05 ch. 67, 29 Mr.)
- Utah. Utah Silk Comn. (created by '96 ch. 92;) abolished ('05 ch. 59, 9 Mr.)
- Wis. State Forest Comrs. (created by '03 ch. 450;) replaced ('05 ch. 264, 25 My.)

AMERICAN DEPENDENCIES

No material changes have taken place since the last report of this committee.

In December, 1905, the Bureau of Science of the Philippine Islands was created by the consolidation of the former Bureau of Government Laboratories and Mining Bureau. For further note see Monthly Catalogue, December, 1905: 582.

FOREIGN DOCUMENTS

The present is the first report of this committee since the merger of the former public documents committee and the foreign documents committee became operative.

The committee submits for inspection as an appendix to this report a list of the summaries of foreign legislation which have been printed in Great Britain and France. These, together with the lists of summaries of American state legislation, will give to this report the nature of a general bibliography on the subject.

Your committee has believed it to be advisable thus to bring together such current source material on a general subject as is readily accessible before undertaking any bibliographic work on its own account.

The field for such work is rich and well defined. But as there would clearly be very little object in even planning such work without having at first the unanimous sanction of this Association, and as the committee is annually appointed with no further instruction or suggestion for its work, a review of what might be accomplished is submitted for your consideration.

In general the committee would propose to confine itself entirely to printed administrative documents. In doing this the work would not conflict with that of any other existing body, but would supplement that of the several agencies reporting on legislation and on manuscript material. There would seem no doubt of the utility to the library

Reports, etc.

The most notable contribution to the literature of American state documents is the report on state archives made by members of the Public Archives Commission, and printed in the annual report of the American Historical Association for 1904: 487-649. While relating largely to the state archives there is much information of value to the collector of state documents. The present report covers the states of Alabama, Georgia, Kansas, North Carolina and Pennsylvania. For purposes of reference, a summary of similar previous reports is given:

- Alabama. (5 A.R. Pub. Arch. Com. 1904: 487-553.)
- Colorado. (4 ib. 1903: 415-437.)
- Connecticut. (1 ib. 1900: 26-36.)
- Georgia. (4 ib. 1903: 439-478.)
- *same*; supplementary. (5 ib. 1904: 555-596.)
- Indiana. (1 ib. 1900: 37-38.)
- Iowa. (1 ib. 1900: 39-46.)
- Kansas. (5 ib. 1904: 597-601.)
- Massachusetts. (1 ib. 1900: 47-59.)
- Michigan. (1 ib. 1900: 60-63.)
- Nebraska. (1 ib. 1900: 64-66.)
- New Jersey. (4 ib. 1903: 479-541.)
- New York. (1 ib. 1900: 67-293.)
- North Carolina. (2 ib. 1901: 345-352.)
- Oregon. (3 ib. 1902: 337-355.)
- Pennsylvania. (5 ib. 1904: 629-649.)
- Rhode Island. (4 ib. 1903: 543-644.)
- Texas. (2 ib. 1901: 353-358.)
- Virginia. (4 ib. 1903: 645-664.)
- Wisconsin. (1 ib. 1900: 294-297.)

Offices Created and Abolished

A list of state offices legislated out of existence is given below. Offices newly created can be traced from the items under the heading of Legislation preceding.

- Cal. Bd. of Comrs. of Loan Assns. (created by '93 ch. 188;) replaced ('05 ch. 504, 21 Mr.)
- Kan. Bd. of Examiners of Barbers (created by '03 ch. 70;) abolished ('05 ch. 70, 25 F.)
- Bd. of Trustees of State Charities and Corrections ('01 ch. 99;) replaced ('05 ch. 475, 4 Mr.)
- Live Stock Sanitary Comn. ('01 Rev. G.S. 7421 et seq;) replaced ('05 ch. 495, 4 Mr.)

as well as to its patrons of such report. Authentic information, even though but annually issued, on the more important recent foreign documents bearing on commerce, public works, taxation, agriculture, fisheries, shipping, local administration, etc., is at present not available without considerable research. The fact that we have so long done without such a report is surely no argument in favor of doing without it longer. The chief value to the librarian of such information would depend not on its bibliographical completeness nor yet on the fullness with which the documents of any one country might be reported, but rather on a concise, topical comparative report on the more important economic and administrative subjects, with as general a regional representation as possible.

The material for such a report is perfectly accessible, nor is it at all probable that the report need assume any proportions not commensurate with its usefulness.

A body, however, empowered to prepare such a report could work to better advantage if it had less of the temporary composition of a committee. In view of the recommendation already made to except this committee from the calendar year rule, the further recommendation is made that this committee be given a fixed term of service, to report to the Association annually on American legislation affecting public documents and on foreign and American state administrative documents.

Legislation

The two best known foreign sources of comparative legislation are the *Journal of the Society of Comparative Legislation* and the "Annales" of the Société de Législation Comparée. The annual review of legislation in the *Journal of the Society of Comparative Legislation* is but a feature of the contents of this publication, whereas it makes up the contents of the French serial. Until its seventh issue the British review was confined to imperial legislation. Thereafter it extended to foreign as well as to British legislation, including sketches of that of Denmark, France, Germany, Italy, Sweden, the United States, and a summary of Egyptian decrees.

The following are the annual reviews which have appeared in the *Journal of the Society of Comparative Legislation*:

1. 1895. Review of legislation of the British Empire (Jnl., etc., 1 : 1-133.)
2. 1896. *Same.* (ib. 2 : 141-258.)
3. 1897. *Same.* (ib. n.s. 1 : 81-192.)
4. 1898. *Same.* (ib. 449-580.)
5. 1899. *Same.* (ib. 2 : 520-647.)
6. 1900. *Same.* (ib. 3 : 275-433.)
7. 1901. *Same.* (ib. 4 : 176-390.)
8. 1902. *Same.* (ib. 5 : 291-487.)
9. (current) 1903. *Same.* (ib. no. xiv : 299-505.)

The following is a collation of the "Annales" of the Société de Législation Comparée:

- Annuaire de législation française.
Année 1-18. 1880-1904; and, Table décennale, tome 1-10. 1 v.
Annuaire de législation étrangère.
Année 1-30. 1872-1900.
ib. n.s. année 1-3 (whole no. 31-33.) 1901-1903; and, Table des matières contenues dans les trente premiers volumes. 1 v.

INTERNATIONAL DOCUMENTS

There seems little inclination as yet, on the part of librarians, to differentiate this class of documents from those which are the product of a single government. The tendency of the greater powers to arbitrate their differences and to engage jointly in works of scientific and other undertakings, is producing an ever-increasing mass of international documents. It would seem expedient, therefore, that this literature should be formulated from the librarian's point of view, which is neither quite that of the international lawyer nor of the historian. Two factors operate to make a collection of international documents useful, viz., the collector, or curator, and the cataloger. The former is more or less equipped for his task with the various bibliographies on international law, and to him is due the character of the collection in bulk. But even though the collection may be a well-balanced one, if it is one to which the reader is not allowed access, its usefulness depends upon the cataloger. Owing largely to failure to differentiate international documents, this latter individual has sometimes been the author of incongruities which tend unduly to confuse the reader. The two greatest needs on this subject for the librarian are first a bibliographical index of international documents and second a code of rules for the use of the cataloger.

REPORT OF THE COMMITTEE ON LIBRARY ADMINISTRATION

BY W. R. EASTMAN, HILLER C. WELLMAN, CORNELIA MARVIN

To the American Library Association:

YOUR committee on library administration at the meeting of 1903 at Niagara Falls, recommended the preparation of a schedule of library statistics with a view to uniformity of reports. They were instructed to prepare such a schedule. At the meeting of 1904 at St. Louis they proposed 3 forms of library report, one for preliminary statement containing certain descriptive and more or less permanent items; another form for annual use to show the library work of each year in its simplest outline, and a third supplemental form with more details intended for such libraries as might desire to use it. These forms were subsequently printed on 3 separate sheets, precisely as if prepared for actual use in collecting statistics, and were then submitted to each of the state library commissions for revision. The results of this revision were embodied in the committee's report to this association at Portland in 1905 submitting the same tables with some slight modifications. Copies of the revised schedules of 1905 were then distributed to all state commissions for further revision and were also offered by advertisement in library papers to any interested person.

The committee have received during the last year returns and valued suggestions from New Hampshire, Vermont, Connecticut, Pennsylvania, Georgia, Wisconsin, Minnesota, Nebraska, Washington and Oregon, while Indiana has copied the blanks as proposed.

These 11 are about one half the number of existing commissions. The other half by silence give their consent. Of those who reply, New Hampshire, Georgia, Indiana and Washington accept the committee's forms. Nebraska thinks the forms too complicated, does not ask its own libraries for exact totals of circulation, considering a weekly average sufficient, doubts the propriety of separating children from adults in the re-

turns; and desires each year to ask some additional questions to set librarians thinking. Vermont, also, is inclined to lay stress on special inquiries, at least for the present year and prefers to ask questions in the colloquial manner rather than by the use of a single word for each heading. There are also some criticisms regarding space, type, time of ending the year, etc., which do not touch the substance of the material in hand. Connecticut would be glad to use the form as a whole, but also would ask a few locally pertinent questions which cannot well be changed. Pennsylvania approves, but makes an exception as to the emphasis laid on the use of fiction believing that the time has come to deal with fiction precisely as we do with any other class of literature, reporting it as one class out of 10, but not setting it apart as one of two classes to be held in contrast with the combined total of all the rest. Oregon wishes to see more interpretation of statistical tables, written explanations, and, in many cases, a separate showing of expenses in the different departments of a library to determine at what points the outlay shows the best returns. The publication of such details would often prevent wasteful expenditures. Minnesota submits a statistical blank prepared for their own use which includes all the items proposed by the committee, and expands some of them. This state also prefers a different grouping of topics. Wisconsin suggests a number of minor changes, transferring certain items from one form to another and would add a few items such as number of "Country readers" and total number of borrowers.

The committee is greatly indebted to one and all of these correspondents for the light thrown by them on so many different phases of the subject under discussion. It is more and more evident that an exact agreement in the details of a form of report is neither to be expected nor desired. A certain adjustment to local conditions and to the plans and

views of each individual commission or librarian is not only inevitable but imperative. And yet underneath some variety of detail, it is now becoming possible to discern the distinct outline of a desired result.

There are some points on which a general agreement is possible

1 A report required by an authority outside the library itself should be extremely simple and contain few items.

2 One descriptive report of each library should be separate from the annual report.

3 The annual report, after giving name, place and date, properly contains only such items as bear directly on the year's work, indicating changes, growth, service, and present condition.

4 Intelligent comparison of the extent of circulation of books by many libraries requires uniform rules for counting results. If our statistics are to have any comparative value we must agree on such rules.

5 Many libraries owe it to their constituents, their neighbors and themselves to report in greater detail than required and in order to secure a general conformity a supplemental form of report may properly be presented to them.

6 Active libraries will not confine their reports to any schedule. While answering questions and giving figures they will also interpret and explain the facts and fully discuss the library situation with a view to direct results in their own communities.

7 Special information of local or temporary significance will often be deemed important by state commissions and can best be obtained by special circulars apart from the annual report.

8 The forms of questions and subdivision of items in the report blanks of different states may differ widely without impairing essential unity so long as they call for substantially the same things. How much detail, beyond a certain point, is worth while and

when it is worth while is a question for each state to decide for itself.

In conformity with these principles and believing that definite action at this time will be in the interest of the libraries your committee resubmit the forms proposed by them in 1905, which have been in the hands of all the state library commissions with the results stated above, and now ask for a vote of the Association to express their judgment on the following points:

1 That each library should place on file at the library headquarters of its own state its official report giving the general features of its organization, history, resources, and methods of work substantially as shown in accompanying Form I. for Preliminary report.

2 That every library should report at the end of each year the work of that year including for substance the items shown in accompanying Form II. for Annual report with such other items, not inconsistent with the general plan, as the library authorities of its state may propose.

3 That for the purpose of establishing a basis of comparison of circulation among free lending libraries the *circulation of books should be counted in accordance with Rules contained in accompanying Form II.*

4 Every library circulating 5000 books a year or distributing books through branches or schools should make a supplemental report, substantially as shown in accompanying Form III.

5 Every public library serving a city or large center of population should also issue annually its own report containing the items named above with considerable enlargement and interpretation of the same and with such discussion of the library situation as will tend to secure public interest in the work.

[NOTE. This report was adopted by the American Library Association July 4, 1906, and the Executive Board later continued the committee with authority to promulgate the recommendations made in the report.]

Rules for counting circulation

1. The circulation shall be accurately recorded each day, counting one for each lending of a bound volume for home use.

2. Renewal of a book under library rules at or near the end of regular terms of issue may also be counted, but no increase shall be made because books are read by others or for any other reason.

3. Books lent directly through delivery stations and branches will be included, but the circulation from collections of books sent to schools or elsewhere for distribution will *not be included*. A separate statement of such travelling libraries will be made.

4. Books lent for pay may be included in the circulation, but must also be reported separately.

In these rules there is no intent to determine the policy of any library as to the manner or terms of circulation, but only to place the count on a uniform basis which will render comparison possible.

Librarian

Date

REPORT OF THE AMERICAN LIBRARY ASSOCIATION PUBLISHING BOARD

BY WILLIAM C. LANE, *Chairman*

THE chairman of the Publishing Board is compelled to make his report of the board's transactions for 1905 a brief one because the "Portrait index," which has been passing rapidly through the Government Printing Office, has engrossed the time of chairman, secretary, and all our staff, and has made it necessary to let all other duties take, for the time being, a secondary place.

At the expiration of the terms of Messrs. Fletcher and Wellman, at the American Library Association meeting of 1905, their place on the board was taken by Mr. H. E. Legler, of the Wisconsin Free Library Commission, and Miss E. C. Doren, of the Western Reserve University Library School in Cleveland. Mr. Fletcher had been identified with the board from the beginning, and his associates were glad to put on record a minute in regard to the value of his services (printed in the *Library Journal*, October, 1905, 30: 813). Mr. Wellman had served on the board for only a single term, but had shown a generous readiness to devote time and thought to its affairs, and his suggestions and advice were always to the point. The addition of Mr. Legler and Miss Doren brought us new strength by making more close our connection with the library commissions and the library needs of the West. For many years the members of the board had been drawn from a comparatively narrow territory, and meetings could be called as often as necessary for the consideration of new business. But with the distribution of its membership between the East and the middle West, frequent meetings became impossible, and it was therefore agreed that meetings should be limited to three each year—with the Association in the summer, at Lake Placid in the fall, and at Atlantic City in the spring. The fall meeting of 1905, at Lake Placid, was adjourned to Boston, in order that the new members might have a better opportunity to become acquainted with the work and methods of the board.

Provision was made for conducting the business of the board by correspondence in the intervals between meetings, the chairman being instructed to submit new propositions to sub-committees for investigation, and to transmit to the other members of the board the reports of such committees in duplicate, one copy to be kept by the member, the other to be returned to the secretary with comment. If the opinions are in substantial agreement, the chairman or secretary is to make provision for their being carried into effect. If there is a substantial difference of opinion, the comments of all the members are to be submitted to each member for a further expression of opinion. Other matters on which the secretary requires guidance, if they involve any change of plan or new instructions, will be submitted in the same manner. In voting by correspondence, two adverse votes, when the question has been re-submitted to the consideration of the board, will prevent action. In this way it is hoped that action in regard to new matters may be taken with reasonable promptness in spite of the fact that frequent meetings cannot be held.

The accompanying tables show, first, the general character of the year's transactions, and second, the receipts and expenses for the year connected with each of our publications. In the first table we find, on the one hand, the available cash capital with which we began the year (\$1278.98), the \$3000 received from the Endowment Fund trustees, and the net balance of profit from the sale of our publications (\$590.88), and, on the other hand, the expenses of our office and staff (\$3046.34), the money spent on the "Portrait index" and one or two other similar items, and finally, the balance at the end of the year available for the business of 1906 (\$768.06).

It should, of course, be remembered that we have a stock of publications on hand which also constitute part of our capital.

On Jan. 1, 1905, this stock was valued

at \$874.42; on the 31st of December its valuation was \$2920, the basis of valuation in both cases being the cost of manufacture rather than the selling price. In other words, we manufactured during the year, in excess of what we sold, over \$2000 worth of stock.

In the second table, showing cost of publications and receipts from their sale, it should be remembered that the cost includes in general only expenses of manufacture, and not any of the expenses of running our office. The total sales of 1905 amounted to \$5679.50, or \$5401.38 after deducting the receipts from the sale of "Books for girls and women," Larned's "American history," and its supplement by Wells (\$278.12), all of which have to be paid over to Mr. Iles; the total of expenses for manufacture incurred during the year was \$4810.50, to which must be added the \$278.12 paid over to Mr. Iles, making \$5088.62, and leaving a net balance of receipts over expenses of \$590.88. To this might properly enough be added the \$2000 by which the valuation of our stock on hand has been increased.

Mr. E. C. Hovey has made out for the board a valuable series of tables, showing the history of, and the net result from, each of our publications from the beginning. The details cannot be given in this report, but it is interesting to note that at the end of 18 years the net result of our book publications, including both those which have brought us a good profit, like the "List of subject-headings" and Kroeger's "Guide," and those which have never paid for themselves, like the "Reading for the young," the "Bibliography of fine arts," and our "Library tracts," is a profit of \$1921.27, with stock on hand worth almost \$3000; while the net result of our card publications, current cards for printed books, periodical cards, bibliographical cards, miscellaneous sets, etc., is a profit of \$9742.03, making together \$11,663.30. We do not expect this balance to be sufficient to pay the salaries and running expenses of our business, as is the case with an ordinary publishing house, but they have gone a good way toward providing the \$15,198.33, which salaries and office expenses have amounted to in 18 years. toward the \$1638 expended on the "A. L. A. catalog," and the \$4255 spent on the "Portrait index."

The "Portrait index," I am happy to state, is now all in type in the Government Printing Office, about two-thirds of the proof has been corrected and passed along, and samples of the first 64 completed pages are at hand for inspection. The book promises to be something over 1200 pages. After careful revision of the material and of its arrangement, made with a view to diminishing the number of corrections to be made in the proof, work began at the Government Printing Office April 16 and the whole was put into type before June 25, eleven monotype machines having been employed at once. It is needless to say that the reading and correction of proofs in our own office has not kept pace with this rapid work, though it has been pushed as fast as care and a reasonable degree of correctness would allow. The selling price will probably not be over \$3.

The *A. L. A. Booklist*, now (1906) in its second year, has taken a good deal of the board's time, attention and money. It has been somewhat enlarged during the current year, and it may be that the price will have to be slightly raised next year in order to meet the cost of manufacture. The board considers that the expense of editorial work and of the preparation of copy may be properly borne by the income of the Carnegie Fund, but that the sales and subscriptions ought to cover the cost of manufacture. For the year 1905 the receipts from sales came to \$712.65, and the cost of manufacture was \$649.45, giving us a safe margin; but for the current year (1906) the sales will probably fall considerably short of covering the cost. This is because we have enlarged the *List*, are printing an edition of 5000 copies, and are distributing the *List* free to all members of the American Library Association, with the natural result that our subscriptions have fallen off. The subscription price is 50 cents a year, but the numbers are sold to library commissions at \$2 per 100 copies. About 3000 copies are taken monthly by the several library commissions, and about 1500 copies are now sent free to the members of the Library Association. Another year we shall probably print 12 numbers a year instead of eight, but we shall try to keep the size down so that copies

may be sold in quantities at the present price. The annual subscription will, however, probably be raised from 50 cents to 75 cents or \$1 a year, and we must consider making a nominal charge of 25 cents to members of the American Library Association so as to avoid a wasteful distribution.

At the September meeting of the board, the scope of the *Booklist* was carefully discussed, and it was then decided that the *Booklist* should include (1) current buying lists for small libraries; (2) current buying lists for larger libraries; (3) official news and announcements of the American Library Association, its committees and affiliated organizations; (4) select bibliographies and special topic lists (to be reprinted separately and sold at cost of paper and press work); (5) lists of reference topics in library bulletins and similar publications; (6) bulletins of the American Library Association committee on book buying; (7) advertisement of the publications of the American Library Association Publishing Board. For the year 1906 the *List* has been published on these lines, but some modification may be found necessary in 1907.

Two tracts have been added during the current year to our series — No. 7, "Cataloging for small libraries," by Theresa Hitchler, of the Brooklyn Public Library, 84 pp., and No. 8, "A village library in Massachusetts; the story of its upbuilding," by Mary A Tarbell, librarian of the Brimfield Public Library.

Two of our recent tracts — Miss Hitchler's "Cataloging for small libraries" and Miss Stearns's "Essentials in library administration" — have been so much larger than our other publications of the same series, that the board decided to transfer them to a new series, to be known as "Handbooks," and the later copies of these papers have been issued under this name. They will not be distributed gratis as freely as the others, and they are sold at 25 cents each, instead of at the merely nominal price of the "Tracts."

Of all the numbers of our Tract series, 17,000 copies had been printed up to January 1, 1906, at a cost of \$866.29. 11,376 copies had been sold or distributed gratis, the receipts from those sold being \$380.31. The expense,

therefore, of providing this somewhat extensive missionary literature has been but \$485. The board had expected to issue more Tracts before the present meeting of the American Library Association, several papers having been offered by the League of Library Commissions. The board stands ready to print in this way whatever the league asks to have printed, and to make the printed copies as freely useful as possible to the commissions of the league and to other library workers throughout the country. A tract or handbook on library architecture will probably be our next publication.

At the request of the publicity committee, appointed at the last meeting of the Association, several of the papers contributed to the last meeting have been issued as reprints in a "Reprint series." The expense of printing from 500 to 1000 copies each of 10 papers has been about \$170. About half the stock was placed in the hands of the publicity committee for missionary use; the other half has been held by the board subject to the order of library commissions and others, and of nearly all the reprints the entire stock is now practically exhausted. The board stands ready to co-operate to the extent of its ability in any similar missionary work.

The "List of subject headings" has again proved a source of income to the board, 356 copies having been sold during 1905. Of this useful list, we have now printed 4000 copies, of which 3534 have been sold up to Jan. 1, 1906, at a profit to the board of \$2647.01. It is quite time that a new edition was prepared, and steps have already been taken in this direction, Miss Doren and Miss Browne having been appointed a committee to collect suggestions and material for a new and enlarged edition.

Another publication which it would be desirable to reissue is a new edition of Sturgis and Krehbiel's "Bibliography of fine arts." The first edition, it is true, never brought us back the money put into the manufacture, but it was a thoroughly good piece of work, the cost of preparing which was borne by Mr. Iles. The board would now be glad to find the means of having the list revised and brought up to date, but it has not yet seemed advisable to incur the necessary expense.

Miss Kroeger's "Guide to reference books" also continues to sell, 270 copies having been disposed of in 1905. In all 1950 copies have been sold of the 2500 which have been printed.

Our stock of the "A. L. A. index" ran out during 1905, and a small new edition was printed. In spite of the expense involved in this reprinting, the receipts from sales have at last begun to exceed the expense of manufacture, and for the first time we have been able to pay over to Mr. Fletcher a small balance, in accordance with our original agreement with him.

The issue of printed cards for the contents of periodicals has gone on with little change during this, the eighth year of the undertaking. To the so-called "miscellaneous sets" of catalog cards, comprising cards for extensive works or series of reports of miscellaneous contents, we have added only the cards for Reed's "Modern eloquence." The reprint of the cards for the National Museum reports will be the next thing which we shall give to the printer. The cost of these cards up to January 1, 1906—mainly printing charges—had been \$3346.59. From their sale we have received \$4441.01, which shows a profit of \$1094.42. The 250 sets of cards for Warner's Library have now all been sold, at a profit to the board of \$281.72.

Early in the year the librarian of Clark University asked us to print for the university annotated catalog cards for the articles in one of the Clark University publications, the *American Journal of Religious Psychology and Education*, intending to distribute the cards with the magazine to subscribers. This seemed to open an interesting development of printed cards, but so far we have not been asked to continue the work.

At the meeting of the board in October, 1905, definite arrangements were made for work on the list of children's books, which has been talked of for some years, Miss Moore being asked to take editorial charge of compiling the lists. It was the intention to enlist the services of a number of persons who had had good experience in work with children, and to make each responsible for a section of the list. The board intended to apply to the libraries in which such persons

might be engaged and to ask permission that the editors should be allowed time for the work, in order that it might not be too heavy a burden on the individuals, and might not be long delayed, as it might be if all the labor had to be taken from outside time. In the spring, however, the board learned that Miss Moore was obliged to give up the editorial charge, and at the time the best way of continuing the work seemed to be in connection with a similar publication about to be undertaken by the Pittsburgh Carnegie Library. A further discussion of the project shows that the Pittsburgh library can best be left to do the work on its own initiative, and that we shall be able to make some arrangement with that library, by which we may reprint their list and give it a wider circulation.

The largest and most generally useful undertaking which the board now has before it is an "Index to the economic material contained in state documents." This index has been compiled, state by state, by Miss Hasse, of the New York Public Library, or under her direction, for the Committee on Economics and Sociology of the Carnegie Institution. The committee for whose use the index was first made did not contemplate printing it, but they are willing that the index should be offered to us in manuscript, and that we should print it for general circulation. The work has been done with great care and in great detail, and includes a large amount of useful material. The expectation is to print it one state at a time, and finally to issue the indexes for all the states in a combined volume, or volumes, with some general index which will give a clue to the contents. Work will probably be begun on this in the course of the summer, and now only awaits some final action by the Carnegie trustees.

The committee on catalog rules, appointed by the board, has continued its work, and reports that it has a new and revised code of rules ready to issue at an early date. Its work has been very much assisted by the Library of Congress, which has printed an advance edition of the rules, and has been interested to see that its own methods as adopted for printed cards should agree, so far as possible, with the rules adopted by the committee. The committee has also succeeded

to some degree in gaining the co-operation of an English committee in the attempt to establish a uniform international code. Mrs. Fairchild having been obliged to resign from the committee on account of ill health, Mr. W. S. Biscoe, of the New York State Library, was appointed in her place.

The board waits with interest to see what action will be taken by the Association in regard to the establishment of general headquarters. It holds itself ready to co-operate in this matter with the Association, and to establish itself wherever headquarters are opened, but it is glad that, up to now, it has been able to remain in the convenient rooms which have been for so long placed at its disposal by the Boston Athenæum. For its work up to the present time, no more convenient place could have been found, and the Association is under great obligation to the trustees of the Athenæum for the comfortable quarters which have been at its service in the Athenæum library ever since the board be-

gan to employ a paid secretary and required desk room for its work. So far, its rent charge has been a merely nominal sum, and it feels that when it joins the other officers of the Association in occupying headquarters elsewhere, its income should not be permanently burdened with a charge for rent, although it is quite willing for a time, as a temporary and preliminary measure, to assume a part of such charge in connection with the Association.

Up to the first of April, 1906, we had the advantage of commanding a part of Mr. Hovey's services, and we have been glad to take advantage of his experience in business matters and in book-keeping. We hope to derive further benefit of the same kind by a close connection with the executive offices and officers of the Association, and we hope to be able in return to place the experience and skill of our secretary at the service of the Association in its correspondence with inquirers so far as this is practicable.

REPORT ON GIFTS AND BEQUESTS TO AMERICAN LIBRARIES, JANUARY
1 TO DECEMBER 31, 1905

By DREW B. HALL, *Librarian The Millicent Library, Fairhaven, Mass.*

THE data have been gathered, as heretofore, from the daily press, the professional journals, and chiefly from replies to nearly 1000 circulars sent to commissions, clubs and individual libraries. I realize fully how great the task of answering such circulars often is, and I wish to offer my sincere thanks to all those who have courteously lent their assistance. Despite this assistance and the greatest care in cross checking and in comparing data, errors, especially in the correct names of libraries which were often omitted on the returns, will probably be found, and omissions most certainly will be, for an inquiry directly addressed to only one-eighth of the 8000 libraries in the country must fail to discover many interesting gifts. I should like to urge the Executive Board to take under consideration plans for more full and accurate reports, possibly by the central office of the Association or in connection with the report on libraries by the United States Commissioner of Education.

This report attempts to show the number, value and kinds of gifts and bequests received by American libraries during the calendar year 1905. By the recent decision that each report should cover the calendar year, not that between conferences, this is in effect the first of a new series, and for ease of comparison the excellent arrangement, even the phraseology of previous reports has been followed with all apologies to previous reporters. It is required by the A. L. A. year after year with the purpose I take it of recording past and stimulating future interest in library growth among public-spirited citizens. It has also seemed that the interest of the giver and the service of the gift is rarely accurately denoted by the mere size, for the hundred dollars raised by an entertainment of school children means more to the little village library than the many thousand dollar fund to the great city. Because of these facts I have not observed the minimum limit of 250 volumes and \$500 of previous reports, but have

* Receipts from sales paid over to George Hies, who paid first cost of manufacture.

asked information concerning all gifts. In the first draft of the table the previous limits, however, were observed; gifts below the limit being set in a separate column. Except under "Books" these were in every case less than 10 per cent. of the gifts above the limit, so that in the final table herewith printed all are included. So large were the receipts of pamphlets and volumes from various sources that I have introduced under "Books" two new divisions, "Various" and "Pamphlets."

In reckoning the number of gifts which is set down in the first column as 680 each library's "Various" record was counted as one, as is that of "Pamphlets," even though hundreds of givers were in fact concerned; this method was followed, since large libraries accumulate such masses chiefly through their institutional connections and not through special personal interest. They may readily be separated from the individual gifts by examination of the detailed statements in the alphabetic list of states.

Ten gifts are recorded in Canada (8 from Mr. Carnegie), and 680 in the United States. The 680 represent 234,649 volumes, 111,497 pamphlets, 9 collections, 6 sites, 4584 pictures and other objects, buildings and sites valued at \$313,100, and \$5,609,266.

An analysis of the gifts in money shows that \$658,723 were for endowment funds for general library purposes; \$81,900 for the establishment of book funds; \$90,879 for the cash purchase of books; 211 amounting to \$3,162,140, of which \$2,247,740 is listed as accepted, from Andrew Carnegie, for buildings; \$1,492,253 from other donors for buildings; \$500 for sites; and \$21,571 for objects largely unknown.

The money gifts other than those of Mr. Carnegie amount to \$2,347,126. Of this sum the total of 11 gifts of \$20,000 and more from individuals is \$1,712,000, given as follows: \$20,000 from Mrs. Walter Hurlburt to Rochester, Minn.; \$25,000, a bequest from Mrs. Helen G. Coburn to Andover, Mass.; \$35,000 to Wooster (Ohio) University, from H. C. Frick; \$40,000 to New London, Ct., a bequest from Mrs. H. C. Haven; \$50,000 to Phillips Exeter (Mass.) Academy, a bequest from

Benjamin P. Davis; \$50,000 to Lynchburg, Va., from Mrs. George M. Jones; \$58,000 to Providence, R. I., from the estate of C. C. Hoskins; one-third of the \$400,000 estate of E. M. Walker to Springfield, Mass.; \$150,000, a bequest from C. H. Hackley to Muskegon, Mich., for the purchase of pictures; \$150,000 to Syracuse University from friends; \$1,000,000 to Harvard College, a bequest from William F. Milton. In connection with these gifts should be noted those of a building and site valued at \$20,000 to the People's Library, Newport, R. I., from Christopher Townsend; a building and site at \$30,000 to Menominee, Mich., from Augustus Spies; and a building at \$90,000 to Salt Lake City from J. Q. Packard.

Among the notable collections of books may be mentioned 10,000 volumes, the educational library of Henry Barnard, from J. Pierpont Morgan to the Wadsworth Athenæum of Hartford, Conn., and deposited in the Watkinson Library; 1000 volumes, the collection of William C. Prime on the "history of illustration by printed pictures," to the Watkinson Library, from Mrs. Annie T. Slosson; the Squier letters and the Breckenridge and Vanburen papers to the Library of Congress; Professor S. I. Curtiss' bequest to the Chicago Theological Seminary of 4000 volumes on the Old Testament; 1000 volumes and 2300 pamphlets to Bowdoin College from the library of Alpheus S. Packard; 1000 volumes to Andover Theological Seminary from the library of Professor E. C. Smythe; the library of Professor C. E. Norton from friends to Harvard College and 838 sheets of its topographic map from the government of Japan; 914 volumes on music to Fitchburg, Mass., from H. I. Wallace; 3000 volumes on horticulture to Grand Rapids from C. W. Garfield; 278 volumes, Great Britain state papers, to Minneapolis, from G. W. Peavy; 7000 volumes, the library of Rev. C. H. Spurgeon, bought for \$3000 by friends of William Jewell College, Liberty, Mo.; to Cornell University, special collections from Willard Fiske, A. D. White, G. C. Caldwell, T. F. Crane, and Theodore Stanton (see detail under Ithaca, N. Y.); 1160 volumes Scandinavian literature to North Dakota State University; 1354 vol-

umes oriental literature and folklore to Cleveland from J. G. White; 1000 volumes on zoology and geology to Oberlin College from Professor A. A. Wright; 1500 volumes and 3000 pamphlets from the library of Professor Alpheus S. Packard to Brown University, and 58 letters of George William Curtis from Mrs. E. M. O. Connor-Calder; and 1000 volumes of Germanic languages to Norwich University from Professor Adrian Scott. It is also of interest that James J. Hill has given \$5000 to the University of Wisconsin for the development of a library on transportation; and that Mr. Hubert Howe Bancroft "in disposing of his famous library to the University of California accepted \$150,000 as payment, thus virtually making a gift of \$100,000."

Portraits, statues, busts, plants and clocks are reported among other gifts; and in particular may be mentioned that Northwestern University, Evanston, Ill., and Charlotte, N. C., West Stockbridge, Mass., and others received funds for books from plays given by students and school children; \$250 made at a fair paid the expenses in Centreville, Mass., for a year; and \$8000 was given by C. C. Wolf and his wife to the Methodist Episcopal Church of Parkersburg, Ia., on condition that the building include public library rooms; 2700 oriental coins and 150 volumes on numismatics to Essex Institute, Salem, Mass., from John Robinson; Grand Rapids received five memorial libraries for sick and crippled children costing \$50 to \$75 each for box, books and bookplate, part of their Sunshine Work; \$35 for a stereopticon lantern to be used for the children's story hour from A. E. Howell to the Carnegie Library, Nashville, Tenn.

By the data I have been able to gather, Mr. Carnegie's gifts in the United States number 211 and amount to \$3,162,140; and in Canada they number eight, amounting to \$53,415. In their distribution the North Atlantic division of states received \$717,200 in 31 gifts, the South Atlantic \$331,700 in 18, the South Central \$326,000 in 21, the North Central \$1,498,240 in 117, and the Western \$289,000 in 24. Ohio ranks first with 19 gifts, Indiana, Illinois and Iowa are second with 18 each, Wisconsin third with 17, California fourth with 14, then Kansas 9, Pennsylvania 7, Minnesota 6, Mas-

sachusetts, Vermont and New York, North Carolina, Kentucky, Tennessee and Michigan 5 each, Alabama 4, Maine, Georgia and Mississippi 3 each; 13 states with 2 each and 11 with 1 each, and only the District of Columbia, Utah and Arkansas of the 47 states and territories received none. The larger amounts were four of \$40,000 each to Pomona College, Claremont, California; Marietta (Ohio) College; Miami University, Oxford, Ohio; and University of Tennessee, Knoxville; eight of \$50,000 each to De Pauw University, Greencastle, Ind.; Drake University, Des Moines; Western College, Toledo, Iowa; Radcliffe College, Cambridge, Mass.; University of North Carolina, Chapel Hill; Zanesville, Ohio; Washington and Lee University, Lexington, Va.; and Lawrence University, Appleton, Wisconsin; \$75,000 to Pittsfield, Ill.; \$100,000 to Toledo, Ohio; \$125,000 each to Wellesley and Oberlin Colleges; and \$150,000 each to the City Library, Springfield, Mass., and Brown University, Providence, R. I. It will be noted that most of the larger amounts went to colleges; and an examination of the details show that 50, or one-fourth of the 211 gifts amounting to \$1,525,600, or one-half the total, were made to schools and colleges.

ALABAMA

AUBURN. *Alabama Polytechnic Institute.* \$30,000 for library building from Andrew Carnegie.

DECATUR. *Public Library.* \$2000 additional from Andrew Carnegie.

ENSLEY. *Public Library.* \$10,000 for a building from Andrew Carnegie.

MONTGOMERY. *Alabama State Normal School.* \$15,000 for library building from Andrew Carnegie.

ARKANSAS

TEXARKANA. *R. R. Y. M. C. A.* 300 volumes, annual gift from Miss Helen M. Gould.

— 50 volumes on medicine from a local doctor.

CALIFORNIA

BERKELEY. *University of California Library.* \$1000 from Mrs. W. H. Crocker for books on physiology.

— \$140 from R. B. for Californiana.

— \$190 from Ladies of Temple Emanuel for Semitic philology.

— \$300 from J. K. Moffitt for books.

— 3594 volumes from various sources.

— 1000 volumes, the Marius J. Spinello library, presented by his friends.

BERKELEY. *University of California Library*. "Mr. Hubert Howe Bancroft in disposing of his famous library to the university accepted \$150,000 as payment, thus virtually making a gift of \$100,000."

CLAREMONT. *Pomona College*. \$40,000 for a library building from Andrew Carnegie.

COLUSA. *Free Public Library*. \$10,000 for a building from Andrew Carnegie. Accepted.

CORONA. *Public Library*. \$10,000 for a building from Andrew Carnegie.

— \$1500 additional from Andrew Carnegie.

COVINA. *Public Library*. \$8000 for a building from Andrew Carnegie.

— \$1000 additional from Andrew Carnegie.

— Site from Mrs. Italia I. Cook.

FRESNO. *Free Library*. \$400 received from entertainment given by school children for benefit of the children's room.

FULLERTON. *Public Library*. \$7500 for a building from Andrew Carnegie.

LONG BEACH. *Public Library*. \$12,500 for a building from Andrew Carnegie.

MONROVIA. *Public Library*. 600 volumes bequeathed by Mrs. Stickney.

— \$10,000 for building from Andrew Carnegie.

OAKLAND. *Free Library*. \$2000, bequest from Mrs. Caroline C. E. Ver Huell.

— *Mills College*. \$20,000 for building from Andrew Carnegie.

ONTARIO. *Public Library*. \$10,000 from Andrew Carnegie.

PALO ALTO. *Leland Stanford Jr. University*. \$150 for books from Prof. James Barr Ames.

— 100 volumes relating to law from different donors.

— *Public Library*. Chairs to the value of \$132, trees \$8, labor on grounds \$14.

RED BLUFF. *Public Library*. \$10,000 for a building from Andrew Carnegie.

SAN DIEGO. *Free Public Library*. \$18 for books from Wednesday Club.

SAN FRANCISCO. *Public Library*. \$5000 from Andrew B. McCreery for books for the McCreery branch.

SAN MATEO. *Public Library*. \$10,000 for a building from Andrew Carnegie.

SAN PEDRO. *Public Library*. \$10,000 for a building from Andrew Carnegie.

SELMA. *Public Library*. \$6000 for a building from Andrew Carnegie.

VACAVILLE. *Public Library*. \$5000 for a building from Andrew Carnegie.

COLORADO

BOULDER. *University of Colorado, Buckingham Library*. \$80,000 building and site from state.

— 1825 volumes from various sources, principally government.

COLORADO SPRINGS. *Public Library*. 370 volumes, including a collection of books on pottery, given by College Women's Club.

SALIDA. *Public Library*. \$9000 for a building from Andrew Carnegie.

SILVERTON. *Public Library*. \$10,000 for a building from Andrew Carnegie.

CONNECTICUT

BRISTOL. *Free Public Library*. \$1000 bequest from Charles S. Treadway.

DARIEN. *Public Library*. \$5000 for a building from Andrew Carnegie.

FAIRFIELD. *Fairfield Memorial Library*. 300 volumes from Miss Jennings.

— 480 volumes from Oliver G. Jennings.

— \$800 from unmentioned sources.

HARTFORD. *Connecticut Historical Society*. \$400 for an endowment fund from anonymous giver for books.

— \$250 for books from the Wadsworth Athenæum. The books to be deposited in library of Connecticut Historical Society, but technically to be owned by the Athenæum.

— \$1000 from state of Connecticut for printing and issuing the society's publications.

— 1139 volumes and pamphlets from various donors. (For year May, '04-April, '05.)

— *Public Library*. \$6314 from estate of Miss Esther Pratt.

— *Watkinson Library of Reference*. 10,000 volumes, the educational library of Henry Barnard, which was presented by J. Pierpont Morgan to the Athenæum of Hartford, has been permanently deposited in the Watkinson Library.

— From Mrs. Annie Trumbull Slosson, the collection of the late William C. Prime, "The history of illustration by printed pictures," about 1000 volumes.

HUNTINGTON. *Plumb Memorial Library*. \$500 from Mrs. Horace Plumb.

MADISON. *E. C. Scranton Memorial Library*. \$500 from Miss Scranton.

MERIDEN. *Curtis Memorial Library*. \$1000 for an endowment fund.

MIDDLETOWN. *Berkeley Divinity School*. 650 volumes from various sources.

— *Wesleyan University Library*. 3300 books and many pamphlets, the library of the late Prof. J. C. Van Benschoten, purchased for \$1500 and presented to the library.

MILFORD. *Taylor Library*. \$50 from estate of Mrs. Jacob Bristol.

NEW BRITAIN. *New Britain Institute*. \$5000 from J. B. Talcott.

NEW HAVEN. *Free Public Library*. \$5000 from Philo S. Bennett.

NEW LONDON. *Public Library*. \$40,000 bequest from Mrs. Henry Cecil Haven upon the death of her husband and sister.

PROSPECT. *Public Library*. \$5000 from Mrs. Bronson Tuttle.

ROCKVILLE. *Public Library*. \$2500 from J. Alice, Francis T., William and Robert Max-

- well, to be known as the Emily Kingsbury Kellogg fund, the income for the purchase of books.
- 477 volumes from the above.
- SAYBROOK. *Deep River Public Library*. \$1000 from Mrs. J. W. Marvin.
- SUFFIELD. *Kent Memorial Library*. 212 volumes, of which 32 are state and government publications.
- Portrait of the late Sidney A. Kent, the donor of the library.
- THOMASTON. *Public Library*. \$1700 for a building from Andrew Carnegie.
- WASHINGTON. *Gunn Memorial Library*. \$3000.
- WINSTEAD. *Beardsley Library*. \$8025, endowment fund, bequest from Amanda E. Church.
- DELAWARE
- GEORGETOWN. *Public Library*. \$6000 for a building from Andrew Carnegie.
- DISTRICT OF COLUMBIA
- WASHINGTON. *Library of Congress*. Very numerous and valuable books, mss., prints, etc., including in particular the Breckinridge and the Van Buren papers, the Squier letters, and reproductions from the German and French governments.
- *Public Library*. \$100 from James T. Du Bois for technological periodicals.
- FLORIDA
- MARTIN. *Fessenden Academy*. \$5000 for building from Andrew Carnegie.
- WINTER PARK. *Rollins College*. \$20,000 for library building from Andrew Carnegie.
- GEORGIA
- ALBANY. *Public Library*. \$10,000 for a building from Andrew Carnegie.
- ATHENS. *State Normal School*. \$10,000 for library building from Andrew Carnegie.
- ATLANTA. *Carnegie Library*. \$4000, to be continued for three years, from Andrew Carnegie for library school.
- 648 volumes relating to sociology and literature.
- COLUMBUS. *Public Library*. \$25,000 for a building from Andrew Carnegie.
- MACON. *Mercer University Library*. 850 volumes from Dr. P. D. Pollock.
- IDAHO
- BOISE. *Public Library*. \$5000 additional from Andrew Carnegie.
- ILLINOIS
- BUNKERHILL. *Public Library*. \$7500 for a building from Andrew Carnegie.
- CHICAGO. *Chicago Historical Society*. \$250 for manuscripts from Dr. Otto L. Schmidt.
- 1823 volumes and 609 maps, broadsides, etc., from members of the society and its friends.
- Various works of art.
- *Chicago Theological Seminary, Hammond Library*. 4000 volumes, bequest of Prof. S. I. Curtiss, relating to Old Testament.
- *The John Crerar Library*. 700 volumes and pamphlets relating to charities from Hull House.
- 8480 volumes and pamphlets from 1155 donors.
- *University of Chicago Library*. \$18,650 for books in modern and classical languages.
- 10,215 volumes from various sources.
- DE KALB. *Public Library*. \$15,000 for a building from Andrew Carnegie.
- EL PASO. *Public Library*. \$6000 for a building from Andrew Carnegie.
- EVANSTON. *Free Public Library*. Site from city of Evanston valued at \$31,600.
- \$25,000 for a building, also from city.
- \$1000 additional from Andrew Carnegie.
- *Northwestern University Library*. \$150, proceeds of German play, for books in German literature.
- GALENA. *Public Library*. \$12,500 for building from Andrew Carnegie.
- GREENVILLE. *Public Library*. \$1000 additional from Andrew Carnegie.
- HARVEY. *Public Library*. \$12,500 for a building from Andrew Carnegie.
- JOLIET. *Public Library*. \$200 for books from Col. John Lambert.
- Two fine pictures for children's room.
- LEWISTON. *Public Library*. \$5000 for building from Andrew Carnegie.
- LINCOLN. *Public Library*. 75 children's books from Hon. S. A. Foley.
- MONMOUTH. *Monmouth College*. \$30,000 for a building from Andrew Carnegie, if an equal sum be raised for maintenance fund.
- MOUNT CARROLL. *Public Library*. \$10,000 for a building from Andrew Carnegie.
- NAPERVILLE. *North Western College*. \$25,000 for library building from Andrew Carnegie.
- OREGON. *Public Library*. \$7000 for a building from Andrew Carnegie.
- \$3000 additional from Andrew Carnegie.
- PITTSFIELD. *Public Library*. \$75,000 for a building from Andrew Carnegie.
- PLANO. *Public Library*. \$1250 additional from Andrew Carnegie.
- SALEM. *Public Library*. \$1500, a bequest of P. S. Bennett, of New Haven, Conn., for library purposes, if W. J. Bryan give an equal amount, and the city provide maintenance.
- \$1500 and a site from Hon. W. J. Bryan.
- SAVANNA. *Public Library*. \$1350 additional from Andrew Carnegie.
- SYCAMORE. *Public Library*. \$2000 additional from Andrew Carnegie.
- INDIAN TERRITORY
- MUSKOGEE. *Public Library*. \$15,000 for a building from Andrew Carnegie.
- TAHLEQUAH. *Public Library*. \$10,000 for a building from Andrew Carnegie.

INDIANA

- BATESVILLE. *Public Library*. \$8500 for a building from Andrew Carnegie.
- DECATUR. *Public Library*. \$2000 additional from Andrew Carnegie.
- DELPHI. *Public Library*. \$12,000 for a building from Andrew Carnegie.
- FOWLER. *Public Library*. \$7000 for a building from Andrew Carnegie.
- FRANKFORT. *Public Library*. \$17,500 from Andrew Carnegie.
- GREENCASTLE. *De Pauw University*. \$50,000 for a building from Andrew Carnegie.
- GREENFIELD. *Public Library*. \$15,000 for a building from Andrew Carnegie.
- HAMMOND. *Public Library*. \$2000 additional from Andrew Carnegie.
- MARTINSVILLE. *Public Library*. \$12,500 for a building from Andrew Carnegie.
- MT. VERNON. *Public Library*. \$1500 additional from Andrew Carnegie.
- MUNCIE. *Public Library*. 100 volumes of the American Journal of Medical Science from Dr. G. W. H. Kemper.
- POSEYVILLE. *Public Library*. \$500 additional from Andrew Carnegie.
- RENSSELAER. *Public Library*. \$2000 additional from Andrew Carnegie.
- RICHMOND. *Earlham College Library*. \$30,000 from Andrew Carnegie for a building.
- \$100 from Benj. Johnson for books on education.
- \$100 from E. Cecil for books on history.
- ROCHESTER. *Public Library*. \$10,000 for a building from Andrew Carnegie.
- SALEM. *Public Library*. \$1500 additional from Andrew Carnegie.
- TOPEKA. *Sycamore Corners Literary Society*. \$4000 for a building from Andrew Carnegie.
- \$4000 from Jacob Strauss.

- DALLAS. *Public Library*. \$500 for books from Mrs. A. H. Belo, Sr.
- GALVESTON. *Rosenberg Library*. 5000 volumes from the City Library, given by city of Galveston, and 1300 pamphlets.
- NACOGDOCHES. *Public Library*. \$10,000 for a building from Andrew Carnegie.
- SAN ANTONIO. *Carnegie Library*. \$55 from G. W. Brockenridge for books.
- \$25 from Mrs. E. B. Chandler for children's books.
- Bronze bust of Dr. Ferdinand Huff by his friends.

UTAH

- PROVO CITY. *Free Public Library and Reading Room*. 1800 volumes from citizens.

- PROVO CITY. *Free Public Library and Reading Room*. \$63 from Womans' Clubs.
- \$90 from entertainments.
- SALT LAKE CITY. *Free Public Library*. \$90,000 building from John Q. Packard, who in 1900 gave site worth \$30,000.
- 417 volumes from various sources.

VERMONT

- BELLOWS FALLS. *Public Library*. \$15,000 for a building from Andrew Carnegie.
- BENNINGTON. *Public Library*. \$8000 for a building by bequest from G. E. F. Dodge, of Nashua.
- BURLINGTON. *Library of the University of Vermont*. Pedestals of verd antique for two busts.
- CASTLETON. *Free Public Library*. \$500 endowment fund from Mrs. Mason S. Stone.
- 50 volumes from Mrs. Emma Gurney.
- FAIR HAVEN. *Public Library*. Site valued at \$5000 from citizens.
- \$8000 for building from Andrew Carnegie.
- LUNENBURG. *Alden Balch Memorial Library*. Universal cyclopedia from Womans' Club.
- LYNDONVILLE. *Cobleigh Public Library*. \$16,500 for building from E. W. Cobleigh and \$3000 from estate of I. W. Sanborn; the building will be completed this year.
- MIDDLEBURY. *Middlebury College Library*. \$1000 for books from Dr. M. Allen Starr.
- 1100 volumes, the library of the late Prof. W. W. Eaton, from Mrs. Eaton.
- NORTHFIELD. *Norwich University*. \$25,000 for building from Andrew Carnegie; accepted May, 1905.
- 200 volumes from Gen. G. M. Dodge.
- 600 volumes from the library of Major H. E. Alvord.
- A library of the Germanic languages, about 1000 volumes, from the late Prof. Adrian Scott.
- RUTLAND. *Public Library*. \$6000 for a building from Andrew Carnegie.
- SHELLBURNE. *Free Library*. \$50 for books from Mrs. W. Seward Webb.
- 60 volumes from Mrs. W. Seward Webb.
- SHOREHAM. *Free Library*. \$53 for books from supper for benefit of library.
- \$72 for historian's history of the world.
- WILMINGTON. *Public Library*. \$5500 for building from L. F. Pettee.
- Site valued at \$1500 from town.

VIRGINIA

- LEXINGTON. *Washington and Lee University*. \$50,000 for a library building from Andrew Carnegie on condition that an equal amount be raised.
- LYNCHBURG. *Public Library*. \$50,000 from Mrs. Geo. M. Jones for a building as a memorial to her husband; also a site. Mrs.

Jones will also give a maintenance fund of \$50,000.

NORFOLK. *Public Library*. 511 volumes, exclusive of public documents.

— \$1402 from various persons.

— 198 volumes of bound newspapers from various sources.

WILLIAMSBURG. *William and Mary College*. \$20,000 for library building from Andrew Carnegie.

WASHINGTON

CLARKSTON. *Public Library*. Mr. E. T. Libby has given a lot for library building.

FAIR HAVEN. *Public Library*. \$3500 additional from Andrew Carnegie.

SPOKANE. *Public Library*. \$10,000 additional from Andrew Carnegie.

— 25 volumes from Robert Keith; literature.

— Etching of Shakespeare from Arthur G. Duncomb.

— Portrait of Andrew Carnegie from D. E. Fultz.

WALLA WALLA. *Public Library*. \$500 from Mr. Henry Osterman for books.

WEST VIRGINIA

BETHANY. *Bethany College*. \$20,000 for a library building from Andrew Carnegie.

PARKERSBURG. *Public Library*. \$9000 additional from Andrew Carnegie.

WISCONSIN

APPLETON. *Lawrence University*. \$50,000 for a building from Andrew Carnegie.

ARCADIA. *Public Library*. \$5000 for a building from Andrew Carnegie.

BELOIT. *Public Library*. \$100 for books from Daughters of American Revolution.

— \$27 from East End Club for mechanical department.

CUMBERLAND. *Free Library*. \$10,000 for a building from Andrew Carnegie.

DURAND. *Public Library*. \$7500 for a building from Andrew Carnegie.

EDGERTON. *Public Library*. \$10,000 for a building from Andrew Carnegie.

ELROY. *Public Library*. \$10,000 for a building from Andrew Carnegie.

EVANSVILLE. *Public Library*. \$10,000 for a building from Almon Eager.

HAYWARD. *Public Library*. \$10,000 for a building from Andrew Carnegie.

KAUKAUNA. *Public Library*. \$2000 from Andrew Carnegie for fixtures for building.

LA CROSSE. *Public Library*. \$450 for furnishing and decorating children's room.

MADISON. *Free Library*. \$50 for children's room from Mrs. W. W. Hobbs.

— 80 volumes of eclectic magazines from Mrs. B. J. Stevens and daughters.

— Bust of Webster from Mrs. S. N. Pinney.

MADISON. *Free Library*. Photograph of Roman Forum from Mrs. Conover.

— *University of Wisconsin Library*. \$5000 from James J. Hill for the development of a library on transportation.

— Books valued at \$800 from John Kremer.

REPORT OF COMMITTEE ON LIBRARY TRAINING

BY MARY W. PLUMMER, HENRY E. LEGLER, J. C. DANA, ELEANOR ROPER, GRACE ROSE,
ISABEL E. LORD, W. C. KIMBALL, A. S. ROOT

THE committee on library training, continued at the Niagara Conference in order to report to the Association at the 1905 conference, on standards for schools of library training, made its report at Portland and was discharged. Another committee was formed, according to recommendations made at Niagara, and this committee, composed of one member of a state library commission, one library trustee, one librarian of a college library, one librarian of a public library, one member of the faculty of a library school, and three graduates of library schools engaged in library work, presents the following report:

It seemed wise to the committee, meeting at Atlantic City in March, to take the tentative report on standards presented at Portland as a basis for its work, for two reasons. One, that it had already, as a reprint, been sent out to schools and librarians by the Wisconsin Free Library Commission, and the other, that the commissions had seemed to look upon the standards suggested as desirable. It was decided, however, to use only that part of the report which referred to schools, and, for the present, to suggest no standards or regulations for apprentice classes and correspondence courses; also to rearrange the matter in more convenient form.

This being done, so that under the heading "Winter schools" and "Summer schools" the recommendations of 1905 were grouped under the subheads "Entrance requirements," "Instruction," "Tests and credentials," and "Subjects of instruction," these recommendations were sent out to the present committee to be adopted or rejected or modified.

The comments of the committee were tabulated, and where no expression was made on a given point, it was taken for granted that that meant approval, or at least not disapproval, of the recommendation on that

subject formulated the year before. This gave a majority vote to the following recommendations:

WINTER SCHOOLS

1. Entrance requirements:

Three years beyond the high school preparation; or, an entrance examination in history, literature, language and economics.

2. Instruction:

- a. At least one-third of the instructors to have been trained in and graduated from a recognized library school.
- b. At least one-third of the instructors to be experienced in other libraries than those connected with the school.
- c. Some of the instructors to have library duties.
- d. One instructor to every ten students in laboratory work.
- e. At least one-sixth of the students' time to be given to practical library work under supervision.

3. Tests and credentials.

The giving of a certificate or diploma at the end of the course, which shall certify to the satisfactory completion of the course, and the fulfilment of tests, but not to fitness for library work.

4. Subjects to be taught:

- | | |
|------------------|--|
| Classification. | Decimal |
| | Expansive. |
| Cataloging. | Classed |
| | Dictionary. |
| Library economy. | Accession-work |
| | Shelf-listing |
| | Loan systems |
| | Binding and rebinding |
| | Supplies and statistics |
| | Order work. |
| | Reference-work, lectures and problems. |

Bibliography, Trade.

Book-selection.

The majority test of the recommendations produced a set almost exactly like those of last year, as will be seen; and these recommendations were sent to the following schools, or departments:

1. New York State;
2. Pratt Institute;
3. Drexel Institute;
4. Illinois University;
5. Carnegie School for Children's Librarians;
6. Simmons College;
7. Western Reserve;
8. Southern Library School;
9. Wisconsin Library School;
10. Indiana;
11. Syracuse University;

making in all 11 sources of instruction giving a winter curriculum.

Entrance requirements. Of the eleven, nine require at least three years beyond high school work, or an examination. Two of these nine (Indiana and Carnegie) do not examine in languages, and two which have not examined in economics will probably do so this year in response to the committee's recommendation. One of the other two (Syracuse) admits on high school preparation, taking the high school certificate, and one (Wisconsin) expects to add a month of practical library work to this requirement.

Instruction. In regard to instruction, all the schools but one (Syracuse) meet the first two recommendations, as to the instructors being graduates of recognized library schools and experienced in other libraries. The exception has one instructor in five (not a graduate) from a recognized library school, the remainder being of its own training. It has one instructor with public library experience, the remainder knowing of other libraries only through visits.

All the schools report some instructors with library duties; all observe the proportion of one instructor to every ten students for laboratory work.

Three (New York State, Syracuse [according to its catalog] and Indiana) fail to meet the requirement of one-sixth of the students' time to be spent in practical library work.

One (Indiana) reporting one-tenth will meet the requirement another year.

Tests and credentials. There are two exceptions to the certificate and diploma requirement, both in the interests of greater care, however; one school (Simmons) granting its certificate only after three months of approved work in some library, and one (Carnegie) certifying to fitness for a definite division of library work, since it is a specializing school.

Minimum number of subjects taught. Three schools (Simmons, Wisconsin and Western Reserve) do not yet give classed cataloging, and two report that they do not teach the Expansive classification (one, at least, "with any thoroughness," to use its own words). Otherwise, the requirements as to subjects seem to be more than met.

On the whole, the committee feels that this is a good showing.

SUMMER SCHOOLS

As to the recommendations of 1905 for summer schools, they were adopted almost as they stood by the present committee, the majority agreeing as to the entrance requirement, which was stated as follows:

A paid position as librarian or assistant, or a definite written appointment to the same.

Instruction.

a. The committee with no exception agreed to the recommendation that there should be at least one instructor trained in a recognized library school, and with one exception only, that there should be

b. at least two instructors with experience in other libraries than that connected with the school. The excepting member wished all instructors to have had experience in a *small* library.

c. It was unanimous in recommending at least one instructor to every fifteen students.

d. The recommendation of the proportion of one-fourth practical work was accepted by a majority.

Tests and credentials. Five out of eight voted for the pass-card, stating subjects, rather than the certificate, and the three others agreed that the certificate should state

plainly that the course completed was a summer school course.

Minimum number of subjects. The committee, with one exception, agreed as to the list of subjects recommended in 1905, the exception not being prepared to discuss the question.

The recommendations of the majority were sent to the following summer schools:

New York State.

Chautauqua.

Wisconsin.

Minnesota.

Indiana.

Iowa.

New Jersey.

Washington, with the following results:

All the schools except two (New Jersey and Washington) have of their own accord, by their own judgment, adopted the recommended entrance requirement, one, however, exempting such people as volunteer unpaid workers such as college settlement people, an obviously just exception.

It is hoped that the schools which have not adopted this recommendation may see their way to do so another year, as history shows that the others have found it expedient.

The two requirements as to instruction, "a" and "c," are met by all the schools but Washington, which has not reported on this point; "b," requiring at least two instructors with experience gained in other libraries, was met by all but three (New Jersey, Iowa, and Washington), two of which did not reply at all on this point, though the committee believes in one case this was simply an oversight, and that it does meet the recommendation.

"d" in regard to one-fourth practical work

for beginners (*i.e.*, persons under appointment) is observed by three schools, and two others will require this proportion this summer. One school (Chautauqua, per M. E. Robbins) as a reason for not doing so states that theory is what the inexperienced student needs, as practice will come afterward, and another (Wisconsin) dissents, because it does not admit beginners (*i.e.*, persons without experience), requiring all to secure some experience before coming.

Tests and credentials. All the schools meet the recommendation that their credentials show the course to be a summer school course.

Subjects. All the schools give instruction in the recommended list of subjects, the New York State School, however, devoting each year to a specified subject, leaving the general course to Chautauqua.

It would seem as if the committee would have to set its recommendations still higher, if it wishes to prove any school appreciably below standard. Even a school which begins with the impression that a high standard will frighten students away, comes gradually to see that instead of this it attracts a more desirable class of students, and so by degrees the school raises its own requirements. The only hopeless source of training is the one that cannot see any difference between itself and others, even when the differences are pointed out. But it is to be hoped that enough good schools, in accredited hands, may spring up to do away with the chances of success for poor ones.

The committee hopes to present next year a statistical showing of all organized sources of library training, tabulated in such a way as to form a convenient pamphlet for reference.

THE PROCEEDINGS

NARRAGANSETT PIER, R. I., SATURDAY, JUNE 30 TO FRIDAY, JULY 6, 1906

FIRST SESSION

(BALL ROOM, MATHEWSON HOUSE, SATURDAY AFTERNOON, JUNE 30)

THE first general session of the Narragansett Pier Conference was called to order by the president, FRANK P. HILL, at 2.30 o'clock.

THE PRESIDENT: As president of the American Library Association I declare the Twenty-eighth Conference open and ready for business. As we meet in the state of Rhode Island, it is quite proper that the first day should be "Rhode Island Day," and it is quite as appropriate that we ask a librarian from that state to preside at this first meeting. Therefore I have pleasure in introducing to you Mr. Harry L. Koopman, librarian of Brown University, as chairman for the afternoon. (*Applause.*)

MR. KOOPMAN: Ladies and gentlemen, clothed with this brief but not little authority, I have the honor to present to you the Lieutenant-Governor of the State of Rhode Island, the Honorable Frederick H. Jackson, who will address you in behalf of the state of Rhode Island. (*Applause.*)

LIEUT.-GOV. JACKSON: Mr. Chairman and ladies and gentlemen, it is my pleasing duty to welcome you to the state of Rhode Island and Providence plantations. I believe there have been but three meetings of your association in New England. Consequently we feel flattered to have this assembly of earnest and gifted men and women gathered in our state. You can readily understand why we should feel aggrieved were you to measure the degree and the heartiness of our welcome by the degrees of latitude and longitude with which our little state is fettered. So as we stand here upon the shore looking to our farthest horizon we look eastward and assure you that all is yours, and we trust that the sea, the sky and the air may conspire with our little commonwealth in our welcome to you, so that the days that you are with us

may be days full of profit and joy and fellowship long to be remembered, and so complete as to make you forget anything that may be lacking in our hospitality. Through the munificence of some of the sons and daughters of Rhode Island we have, in our state, libraries that might well be the pride of any municipality or community. Generation after generation will have cause to bless the names of Brown, Hazard, Sayles, Hale, Harris, Rogers and Wilcox. Nevertheless, we look with anticipation as the direct outgrowth of this meeting, to a new and deepening interest in libraries for the smaller towns and rural communities in our state. With the rapid influx of foreigners no greater safeguard to American ideals could possibly be reared than the multiplication of libraries throughout the state, managed under such auspices as shall be best calculated to awaken an interest in a higher and more wholesome sort of literature than now finds its way into the homes of the common people. In all that is being done in the way of education nothing is of higher importance than the cultivation of a love for good literature among the people in general, and that is what libraries can and must do. It must be their contribution to the development of the nation and the perpetuity of its institutions. Inasmuch as it is more blessed to give than to receive, I hope you may be blessed in your meeting here far beyond your farthest anticipations and ambitions, because of the inspiration and impetus to needed effort throughout Rhode Island which your coming may arouse. Again welcome to Rhode Island. (*Applause.*)

MR. KOOPMAN: I now have the pleasure of presenting to you Rowland G. Hazard, Esq., of Peace Dale, who will speak to you in behalf of the local committee. (*Applause.*)

MR. HAZARD: Mr. Chairman, ladies and gentlemen, I have hastened home for the purpose of telling you how glad South Kings-

tion is to welcome this society. In coming from New York yesterday on a very crowded train—as some of you did also—I had to sit with an Irishman, one of the “common people” who form the sinew of this commonwealth and of all the other commonwealths. He was afflicted with curiosity on two points, and he incessantly demanded to know, first, when we should reach Long Island, and, second, “What makes this crowd?” His second point was the most difficult one, for I assured him that Long Island was to be seen from the car window and pointed it out. He was greatly disappointed, but he admitted that that answered his first question. His second one, however, stayed by him and he offered two suggestions. First, he said “I have it. It’s them Christian Scientists going to Boston.” (*Laughter.*)

But he soon weakened on that, for I told him that I didn’t think it looked like it. Then his eye fell upon a group—I think there were six ladies in the group, and they occupied three seats; but in that group there was also a man. How he was seated you may imagine for yourselves; but it was a very crowded train. This gentleman was a very communicative individual, and he gave out information freely and continuously to the ladies. The Irishman’s observant eye fell upon him and he offered a suggestion. He said: “If it wasn’t so far East I should believe that he was a Mormon elder.” (*Laughter.*)

The Narragansett country, to which I have the honor of welcoming you, is one of the oldest settled parts of the United States, of the New England coast. This part of the state has, particularly, a habit of welcoming strangers, and it has had this habit for many years. We have welcomed strangers of all sorts among the feathered tribes. There was heard here three years ago, for the first time in Rhode Island, the note of the cardinal bird. I dare say you all know the cardinal bird. I notice that the libraries show the pictures of the cardinal bird in some parts of this country, and he is sometimes shown in New England by mistake, because only his note is heard here. For it is not the cardinal bird that we have welcomed, it is the great Carolina wren who, according to Nuttall, rejoices more particularly to imitate the car-

dinal bird than any of the birds in his repertoire. We had the cardinal bird by grace of the Carolina wren three years ago through a whole season. And so we welcomed that stranger. Then among the flowers that grow here we have only to point out to you the flower which is just beginning to bud, growing upon the sandy shores of our ponds, the sabatia, that beautiful flower that comes from the South, this being its northern limit. And upon the hills in the country south of us there are the rhododendrons growing in as full profusion as upon any mountainside in Carolina. So that we are in the habit of welcoming strangers of the bird and flower tribes; but you, coming as the harbingers of the season, are doubly welcome. It is with real feeling that I utter the sentiment which I know prevails throughout this region in welcoming you to South Kingston. (*Applause.*)

Mr. KOOPMAN: I stand here now a representative of the librarians of Rhode Island, but not to make a speech. I have been asked several times by reporters for a copy of my address on this occasion. I avoided them as best I could, and now I am going to tell you why I cannot make a speech at this time. I had two very good speeches, but they have both been taken away from me. (*Laughter.*) When I first heard that I was to appear before you at this time I thought it would be a good idea to prepare an address giving you something of the history and description of Rhode Island libraries, and so I wrote an address that I thought would be very interesting and would not have taken more than an hour to deliver, but some of my friends heard of it and asked to see it, and they straightway sent it to the printer and so I was robbed of that speech.* And for my other speech, a few days ago the Rhode Island librarians met and coached me. They said, “All that is wanted of you is not to make a speech, but simply to give them a warm welcome.” I came down here yesterday and I found that the weather had got in ahead of me (*laughter*), and there was no one left here who would be willing to listen to a warm welcome.

*See “Library progress in Rhode Island,” p. 10.

But perhaps you will allow me to refer to just a few points which may be of interest. One is the name of the state of Rhode Island. A few of you in Providence the other day saw a letter written by Roger Williams 241 years ago, in which he gives the meaning of the words "Rhode Island." You can still read it in the John Carter Brown Library, in his handwriting. He says, "Rhode Island is an isle of roses"—a beautiful name, and those of you who have taken a ride on the Sea View Railroad or have wandered along our byways will realize how appropriate it is this month, and as next June comes around and finds you somewhere else, and succeeding years come with their train of roses, I hope they will remind you of Rhode Island, and then you will remember, I trust, how glad we all were to see you, what a good time you had at Narragansett Pier and how much profit you derived from this Narragansett Pier meeting of the American Library Association.

Just one more point. Not all the visitors within hearing this afternoon may realize that not every state in the Union is able to entertain so large a company of guests as now come to our American Library Association meetings; but Rhode Island is fortunate in having two summer resorts where you can be entertained. One of them is this one, on the eastern shore of the Narragansett country, and the other is at the extreme southwest point of the state. When we met together to decide where we should invite you, no sooner was the other place mentioned than we all said, "That is entirely superfluous this year. If they go to Narragansett Pier they can do both," and so, ladies and gentlemen, while you have now met at Narragansett Pier, I invite you for the rest of the season to "Watch Hill!" (*Applause.*)

The PRESIDENT: It is a pleasant duty for me to acknowledge in behalf of the Association the greeting which has come to us and our sincere appreciation of it, and to thank our friends for the very kind words which they have spoken—you, Governor Jackson, for making us feel at home; and you, Mr. Koopman, for bringing us into your state; and you, Mr. Hazard, as representing the committee which has borne the burden and

heat of preparation, for the completeness of your arrangements. (*Applause.*) With such an auspicious opening it seems to me that the sessions ought to be productive of lasting benefit to all concerned.

Mr. HILL then delivered the

PRESIDENT'S ADDRESS: ONE PHASE OF LIBRARY
DEVELOPMENT

(See p. 3.)

The secretary read a letter to Mr. Hill from HENRY R. TEDDER, of the Athenæum Library, London, regretting his enforced absence from the meeting, and saying: "I do not think it is of any use sending you a written paper, as the only value or interest in whatever remarks I have to make would be in its personal character, not reproducible in a written essay, so that I beg you will excuse this omission. I assure you that I wish you and the American Library Association every success and happiness."

The secretary read also the following letter from Dr. A. S. STEENBERG, of Horsens, Denmark:

I send the best wishes for the 28th annual meeting of the American Library Association. I trust that the meeting will bring the American library work a large step onward on its glorious progress.

I feel very glad for having many friends present at the meeting, friends who through years have helped me in my work. It will interest them to hear, I am sure, that also in Denmark the library movement is going forward.

Last year we have had a renewal of the work for school libraries (both pupils' and teachers'); we have begun to work for soldiers' libraries; and, what I think the most important thing, we have got a library association.

The work for *children's libraries* has not the same form in Denmark as in America. We have no library buildings with reading-rooms for children, and we have very few trained librarians. We therefore had to give the work over to the school. It is the municipalities who own the libraries (in Denmark the public school is municipal), and the state gives grants to the libraries, not exceeding the sum which the municipality itself spends on the library. The state library commission distributes the grants to the libraries and

gives advice and instruction to them. I have written a small book, "The school and the library," which has been sent to all schools in Denmark, and to many schools in Norway and Sweden also; in this I have tried to show how reading can best be connected with the other work of the school, and have given rules for the management of the library.

Because with us it is the school which manages the children's libraries, it is of the greater importance that the teacher himself be fond of books and well informed about reading. Last year the state resolved to give grants to the *teachers' libraries*; the library commission helps these libraries just as it helps the children's libraries; and I have for some years given lectures on books, reading and library work on the normal schools.

For some years there has been a movement for using a part of the time, during which the young men get their training as soldiers (in our country all healthy young men must go in for soldiers and are trained during six or 12 months) to forward their enlightenment. The library commission has got to distribute grants to *soldiers' libraries*, as well as to the other libraries.

The good old truth about "strength in union" has at last taken hold on the Danish librarians. They have formed an *association*: "Danmarks Folkebogsamlinger" (the popular libraries of Denmark). The first result of the union was that the libraries got a discount of 25 per cent. on all new books. Then the association published in May the first number of the first Danish library journal, *Bogsamlingsbladet*. On the program of the association stands the development of a system of travelling libraries and the founding of more reading-rooms in connection with the lending libraries. But besides all this, the association will, I am sure, create a love for the library work—and a hope for its future in those people who, spread over the country, have worked for the libraries and have felt very often how difficult it is to work separately, when you wish to bring forward a new movement.

Surely our library work is then advancing, although in a slow pace. And for our work we also in the future will go to our American colleagues for models and for help.

The president announced

TELLERS OF ELECTION

as Arthur L. Bailey and J. T. Jennings; and a

COMMITTEE ON RESOLUTIONS

as Dr. J. H. Canfield, Miss Anne Wallace, Miss Katharine L. Sharp.

The secretary presented the

REPORT OF THE COUNCIL

(See Transactions of Council.)

first summarizing the business transacted at the two interim meetings of Council, held at Lake Placid, Sept. 25-30, 1905, and at Atlantic City, March 10, 1906.* For the two sessions of Council held at Narragansett Pier there were reported selection of place of 1907 meeting as Asheville, N. C., with acknowledgment of invitations from Virginia; nominations (with announcement that ticket would include any supplementary nominations sent in signed by five members); appointment of Council committee to report on A. L. A. district meetings; and action taken regarding library post, "A. L. A. catalog" five-yearly supplement, and report of the delegates to copyright conferences.

The PRESIDENT: No action being necessary, this report will simply be considered as presented to the Association.

We will now listen for a moment to Mr. Hazard, who did not give us quite light enough on the subject of the library here at Narragansett.

Mr. HAZARD: If you will allow me to add a word that I intended to say before, Mr. President, there were two of us who started out from Peace Dale this afternoon upon missions somewhat dissimilar—one to investigate a colony of gypsy moths which has taken up its residence in our neighboring village of Wakefield; the other, myself, who came down here to investigate very much the same thing, an army of bookworms who have invaded Narragansett Pier. (*Laughter.*) But we have no idea of extermination in regard to the bookworms—we believe in bookworms, and we have evidence of that belief in the establishment long ago, in the year 1854, of our little library at Peace Dale. It is still a very modest little library, and we would like very much to welcome every member of this conference to the library at Peace Dale. We hope you will take advantage of such opportunities as you may

* (For transactions of Council at these interim meetings, see *Library Journal*, Nov., 1905, p. 862; April, 1906, p. 176.)

have to visit us, to give us your ideas, tell us what we need, and to look us over. At all events, you shall have a very hearty welcome. Thank you again. (*Applause.*)

J. I. WYER read the

SECRETARY'S REPORT

The secretary's report will cover certain matters of interest to the Association at large which do not naturally fall within the province of any of the regular committees or officers:

Amendments to constitution and by-laws

At the Portland Conference of 1905 the Council voted and the Association in joint meeting approved the amendment to section 12 of the constitution by adding thereto the words, "It shall have authority to include in the publications of the Association so much of the program, notices, circulars and proceedings of affiliated associations as it may deem advisable." Similarly section 17 was amended by adding thereto the words "It may by two-thirds vote upon suitable conditions affiliate with the American Library Association other organizations kindred in purpose."

In accordance with section 26 of the constitution these amendments must be approved by the Association in open session at two successive meetings, and they will, therefore, be presented for final adoption at the present conference.

The purpose of these amendments is to facilitate mutually satisfactory affiliation with associations and societies of national scope having related aims and work, and upon their final ratification by the present conference the executive board will be able to act formally and distinctly upon the applications now before it from the League of Library Commissions and the National Association of State Libraries. Should the Bibliographical Society of America be disposed to make similar overtures for affiliation the relation will assuredly be welcomed.

At the meeting of the executive board held in Atlantic City, N. J., March 10, 1906, the board recommended to the Council an amendment to section 1 of the by-laws by inserting after the word "January" the words "save that

for the first year the dues for individuals shall be \$3. Any person renewing membership shall pay all arrears of dues or dues required from new members." This recommendation was duly adopted by the Council and the by-laws thus formally amended. The effect of this action is to create an entrance fee of \$1 for new members. It does not change the annual dues of the Association, which are \$2 per year as heretofore. It will not affect in any way the sum paid by any member of the Association who joined before June 1, 1906, or who maintains regular membership year after year. The executive board and Council considered it a wise step as encouraging continuity of membership, and in adopting the change the American Library Association is but following the practice and policy common to nearly all associations similar to our own. It was felt that continuance of membership is a professional duty which may not unreasonably be expected from all library workers; and as ample notice was given of the amendment before it went into effect abundant opportunity was afforded to forestall its provision. Twice within the past year the executive board have considered a proposition brought before it to increase the annual dues to \$3, and upon each occasion have refused to take the step as tending to discourage regular membership among the rank and file of the library profession.

Representation at Liège Conference

The Association was represented by Professor C. M. Gayley, of the University of California, and Mr. P. L. Phillips, of the Library of Congress, at an international conference held at Liège in August, 1905, to consider the systematic reproduction of valuable manuscripts.

Copyright revision

During the past fifteen months three important conferences have been held (the initiative coming from the Librarian of Congress) looking toward an harmonious codification, with necessary revisions, of our inconsistent American copyright laws. These meetings have been attended by representatives of the various interests concerned, chiefly the publishers, authors, and printing trades. Libra-

ries have been affected chiefly in the provisions touching importation of books from other countries, a matter of much greater importance to all libraries than is realized by those who do not buy foreign books at first hand. The whole question is one so complicated that it is impossible to understand it thoroughly without careful study. It is of interest to this Association to know that library interests have been represented and safeguarded throughout by two delegates appointed and instructed by the Council, to whom the Association is greatly indebted for a vast deal of good service in securing results which have been approved by the executive board and Council of the Association. The resulting bill, which is in the hands of the congressional committee on patents, has not failed of considerable opposition among individual librarians, which has been presented at public hearings before the committee within the present month. It cannot become law at the present session of Congress, so that no change in the present importation statute will occur before next winter.

Membership

The number of members in good standing at the close of business June 14, 1906, was 1841. This is the largest number that the membership roll of the Association has ever carried. The growth during the past four years is indicated by the following figures, showing the number of new members received during the last four years, ending May 31:

1903	232
1904	207
1905	310
1906	523

As the total number of members enrolled during the 30 years' life of the Association has been 3844, it appears that one-fourth of them has been added in the last 4 years.

Several causes contribute to the very gratifying and unusual increase during the past year.

1. The efforts of the ways and means committee, which while they have been primarily directed towards the securing of funds for the establishment of permanent headquarters have also brought before several thousand

library workers in the country who are not now members of the Association, the importance and professional obligation of joining.

2. An eastern conference, widely advertised in advance, and following two distant meetings, has attracted many new members.

3. The action of the executive board in establishing an entrance fee of \$1 on June 1, 1906, has without doubt resulted in hastening the action of many librarians who wished to avail themselves of the old rate before the date on which the new one became effective.

4. The secretary's office has given more attention than usual to the names of those who have allowed their membership to lapse; and especially to enrolling the students in library schools, and those who have just come into library work, or who have been promoted from assistantships to independent positions and on that account feel the increased propriety of membership in the American Library Association.

5. The executive board has made membership more attractive by arranging during the past year to send the *Booklist* free to all members.

While the new members for the past year have included a fair number of libraries as institutions, it is not unreasonable to feel that there should be a further and very considerable increase in library memberships, and it is earnestly urged that all librarians whose institutions are not members of the Association should make a special effort to induce them to become so. It is encouraging to report that several state library associations and two library schools have become members of the American Library Association within the past two years. It is hoped that more local associations, all of which are more or less directly offshoots of the American Library Association, will feel that the small annual sum necessary to carry an American Library Association membership is an appropriate and commendable charge upon their funds, and is but an inadequate though fitting recognition of the parent association and its increasingly useful work for American libraries.

It may not be amiss at this point to indicate briefly just what significance attaches to membership in the American Library Association. Considered merely as a *quid pro quo*,

it offers in return for the annual fee of \$2 the volume containing the "Papers and proceedings" of the annual meeting; the Handbook, the completest current directory of American library work and workers; the *A. L. A. Booklist*, a useful and authoritative guide to what to buy and how to buy it. Its chiefest significance, however, is far other and more than the mere matter of value received. If the American Library Association has done or is now doing anything for American librarians, with a small and slowly growing membership and consequently a very slender and inconsiderable income, it can surely do immeasurably more when it has at its back what is entirely possible—a steady membership of from three to five thousand library workers. A. L. A. membership, then, means holding up the hands of the chiefest library organization in the land, enabling it to accomplish for all of us, through the strength of union and co-operation and in a dozen useful lines of work which are crying to be done, what none of us, singly, could even attempt. The bare mention of the library fields, white for harvest, leads naturally to the next topic to which your attention is called, namely,

Permanent headquarters

For 30 years, since its organization until the present moment, the business and administrative work of this Association—the work of its treasurer, its secretary, its recorder, the trustees of its permanent funds, and to a great degree the administration of its most considerable business enterprise—the work of the Publishing Board—all these have been done as a labor of love, in most cases absolutely without money remuneration, and when payment in money has been made it has been always so nominal a matter as to be practically a negligible quantity, entirely incommensurate with the worth of the service performed. Money cannot measure the worth of such distinguished and conscientious service as has been rendered to the American Library Association in its formative period and often at distinct personal sacrifice as president, *e.g.*, by Justin Winsor, who was eleven times elected to its highest office; by Dr. Hill and Dr. Dewey, who together served for 24 years as secretary; by Mr. Carr

and Mr. Jones, whose joint services as treasurer cover 17 years; or by Mr. Fletcher and Mr. Soule in their years of service on the Publishing Board and endowment fund. Within the past five or six years, however, the business of the various American Library Association offices has grown so that it is not only impossible for busy men to live up to the manifold opportunities, abundant on every hand, but it is almost unjust to the active officers and quite unjust to the Association to ask them to assume these considerable and steadily increasing obligations.

The Publishing Board now finds itself a full fledged publishing concern employing a capital of \$100,000. The trustees of the endowment fund are asked to invest, take care of and keep books for a sum of about \$110,000. The normal annual income of the Association from all sources is now about \$8000 per annum. The volunteer service of the treasurer has grown to a laborious routine in one state; the constantly enlarging work of the secretary's office has been carried on in another and sometimes a distant state; the Publishing Board has its offices still elsewhere. The work of all suffers from lack of centralization, and it has become apparent that the business affairs alone of the Association need a permanent headquarters, not to mention the inspirational, instructional and missionary opportunities of an ideal library headquarters such as were outlined in the library journals a few years ago.

It has been hoped that some generous benefactor would come forward with a gift sufficient to inaugurate the ideal plan, and it seems only a reasonable belief that a real national library headquarters in the broadest, deepest sense, realizing to the full the certain and suggested possibilities, would render a large return on any endowment, in increased library efficiency throughout the land. It would seem that a liberal gift specifically devoted to advancing the standard of administration and *esprit de corps* within the four walls of our libraries is but a rational complement of that generosity which has provided the buildings themselves. However, no such gift has been forthcoming, and believing that the Lord helps those that help themselves, about 15 months ago your executive board employed a field agent and appointed a com-

mittee on ways and means to provide funds for the consolidation and conduct of at least the most pressing of the Association's business functions under one roof and management at some metropolitan point. The report of this committee on ways and means will be presented at a later session of this conference, and will be heard with interest by all those who have at heart the best interests of the American Library Association.

This brief statement of the gradual development of the needs of the Association for permanent headquarters is made so that the Association may be fully informed as to the reasons for the present effort to secure them. It is not in place here to discuss plans for them in any detail. If it appears that sufficient funds are available, the executive board will work out carefully the many important and difficult arrangements as to scope, organization and administration. And in definitely turning our back upon the old régime of loyal and earnest work by those who have loved our Association, believed

heartily in its purpose and given of their best time and strength to its upbuilding, the executive board and the Association must not lose sight of the fact, for it is a fact, that there are some qualities and assets far more fruitful and significant than mere money in the successful conduct of the best work of an association like our own. There must be no hint of commercialization of the American Library Association. If permanent headquarters are to become a reality they will succeed in just the measure and to exactly the extent that the old spirit which has prompted and inspired the best work done for the American Library Association during the past 30 years shall be found in those who may be chosen to administer the new American Library Association. It will still be a high-minded and devoted *personnel* which will outweigh all funds or endowments.

Voted, that the report be accepted and placed on file.

The number of members in good standing on

Dec. 31, 1905, was as follows:

Honorary members.....	9
Perpetual member.....	1
Life fellows.....	2
Life members.....	45
Annual members.....	1162
Library members.....	34

1253

The count of annual and library members includes only those who had paid for 1905, or, in advance, for 1906.

During the year 1905, 258 new members joined the Association, and 9 members died.

In conformity with custom, this report covers the calendar year 1905, but in order that members may understand the present financial condition of the Association, a further statement is necessary.

The receipts and expenditures from Jan. 1 to June 23, 1906, were as follows:

Receipts:

Dues	\$3308.00
Life memberships.....	225.00
Ways and means committee.....	1180.00
Interest	37.65
	<hr/>
	<u>\$4750.65</u>

Payments:

Secretary's salary.....	\$50.00
Secretary's and conference expenses.	199.87
Treasurer's expenses.....	32.95
Committee on book buying.....	101.22
Committees, sections, etc.....	180.14
Assistant secretary.....	975.48
Trustees of the endowment fund...	225.00
	<hr/>
	<u>\$1764.66</u>

The balance on hand June 23 is \$4783.72.

The unexpended balances of appropriations for the year 1905-06 amount to \$2484. This includes the salary of the assistant secretary to August 1, but makes no allowance for further payments on headquarters account. Some of the other items are likely to exceed the estimates.

I thank the members of the American Library Association for the honor they have conferred upon me by electing me treasurer of the Association for the past nine years. The work has been agreeable, but it has increased so as to be burdensome, and I must now ask to be relieved from further service.

GARDNER M. JONES, *Treasurer*.

The following account of audit was appended:

These accounts have been duly audited and found to be correct, the proper vouchers being shown.

Necrology

1. Rache Berry (A. L. A. no. 3185, 1904) died March 24, 1905. Miss Berry was born March 1, 1853. In the fall of 1902 she, with two friends, started the McCook (Nebraska)

Public Library, and she devoted all her time and attention to the same until the time of her death. She was a trustee of the library and president of the Nebraska State Library Association, having been elected to that office in October, 1903. She attended the St. Louis conference.

2. John Clarkson Houghton (A. L. A. no. 161, 1878) died at Lynn, Mass., July 26, 1905. He was born in Lynn July 1, 1823, and was educated in the public schools of Lynn and at Wesleyan Academy, Wilbraham. He was for six years a teacher and for 22 years in the shoe business, both in his native city. He served on the common council and in the state legislature, and was for 10 years a member of the school committee. On the organization of the Lynn Public Library, in 1862, Mr. Houghton was chosen a trustee, holding this position until his election as librarian in 1877. On June 1, 1904, he resigned on account of ill health due to his advancing years. In all he gave 42 years of consecutive service to the institution. He was a vice-president of the Massachusetts Library Club for the year 1891-2.

Library Journal, August, 1905.

3. Sophia A. Mery (A. L. A. no. 1877, 1899) died Sept. 10, 1905, in Lakeside Hospital, Cleveland, Ohio, after an illness of two years. Miss Mery was a graduate of the Toledo High School in 1892. After teaching several years in the public schools, in December, 1898, she was appointed assistant in the juvenile department of the Toledo Public Library, and a year and a half later was placed in charge. In August, 1903, Miss Mery took her vacation preparatory to a year at the Pratt Institute Library School, a leave of absence having been granted by the library board, but failing health prevented her carrying out the plan.

4. Leonard Dwight Carver (A. L. A. no. 1008, 1892) died in Augusta, Me., Sept. 16, 1905. Mr. Carver was born in Lagrange, Me., Jan. 26, 1841. He was educated in the common school, and was fitting for college at Foxcroft Academy when the Civil War broke out. He at once enlisted in the Second Maine regiment, and took part in every engagement until the regiment was mustered out in 1863. He then resumed his studies and graduated from Colby College in 1868. He taught school for six years and then studied law, being admitted to the bar in 1876. He practiced law in Waterville, Me., from 1876 to 1890, when he was appointed state librarian. In 1892 he joined the A. L. A. and attended many of its conferences. He took an active interest in the work of the National Association of State Libraries, serving as its president and upon its committees. He was the leading spirit in

the Maine Library Commission and a friend and adviser of the state library association.

—*Library Journal*, October, 1905.

5. James Read Chadwick, M.D. (A. L. A. no. 108, 1877), was found dead outside his summer residence at Chocorua, N. H., early in the morning of Sept. 24, 1905. It is supposed that he fell from the piazza roof some time during the night. Dr. Chadwick was born in Boston, Nov. 2, 1844. He graduated from Harvard College in 1865 and from the Harvard Medical School in 1871. After two years of study in Europe he returned to Boston and began the practice of his specialty, gynecology, in which he soon gained high distinction. He was instrumental in founding the American Gynecological Society in 1876 and was its secretary for six years. He was elected president of the society in 1897. Dr. Chadwick was an ardent booklover, and in 1875 founded the Boston Medical Library, which is a monument to his foresight, his energy, and his devotion to the science of medicine. He was its librarian from its founding to his death. In 1904 he was elected president of the Association of Medical Librarians. He was also a life member of the A. L. A.

6. William Phineas Upham (A. L. A. no. 107, 1877) died at his home in Newtonville, Mass., Nov. 23, 1905. Mr. Upham was born in Salem, Mass., Jan. 19, 1836. His father was Hon. and Rev. Charles W. Upham, author of the standard history of Salem witchcraft, and his mother was a sister of Dr. Oliver Wendell Holmes. He graduated from Harvard College in 1856, then studied law and was admitted to the Essex county bar. He seldom appeared in the courts, but did much work in examining titles and was frequently consulted by other lawyers because of his exhaustless fund of information about the early settlers of the county. He wrote many pamphlets and articles on local historical and genealogical matters, and is said to have furnished most of the facts contained in his father's history of Salem witchcraft. He was librarian of the Essex Institute from 1869 to 1888, and a life member of the American Historical Association and of the Massachusetts Historical Society. Although he attended but one conference of the A. L. A. (Boston, 1879) and was probably known to few of its members, he showed his interest in its work by maintaining continuous membership by the payment of annual dues since his joining in 1877.

—*Boston Transcript*, Nov. 25, 1905.

7. Edward Browne Hunt (A. L. A. no. 1980, 1900) died suddenly on the train from

Boston to Dedham on Feb. 9, 1906. Mr. Hunt was born in Sudbury, Mass., Feb. 19, 1855. He was a graduate of the Boston Latin School and of Harvard College, class of 1878. From 1878 to 1881 he was an instructor at a private school in Newburyport, Mass. Later he became tutor to the son of Hon. R. J. C. Walker, of Williamsport, Pa., and afterwards served Mr. Walker as his private secretary in Washington. Mr. Hunt entered the service of the Boston Public Library June 1, 1883, as an assistant in the catalog department, and by successive promotions he became chief of the department on Feb. 1, 1900. His entire service covered nearly 23 years. His natural qualifications and his exact and scholarly methods made him one of the most valuable members of the staff.

—*Monthly Bulletin of the Boston Public Library*, March, 1906.

8. Richard J. Blackwell (A. L. A. no. 1433, 1896) died at his home in London, Ontario, Canada, March 19, 1906. He was 51 years of age and spent almost his entire life in London, where he was well known. For many years he was engaged in the book business, and when the public library was opened in 1895 he was appointed librarian.

—*London (Ont.) Advertiser*, March 19, 1906.

9. Weston Flint (A. L. A. no. 156, 1878) died at his home in Washington, D. C., April 6, 1906. Mr. Flint was born in Pike, Wyoming county, N. Y., July 4, 1835. In 1858 he graduated from Alfred Academy, and in 1860 from Union College. After teaching in New York, Pennsylvania, and Ohio he went to St. Louis in connection with the hospital service of the army. From 1866 to 1869 he was attorney for claims in St. Louis and active in state politics. Later he became editor and publisher of the St. Louis *Daily Tribune* and organized the second board of the state geological survey, of which he was secretary. From 1871 to 1874 he was U. S. consul to Chin Kiang, China, returning to engage in literary work, lecturing, and the study of law. He was admitted to the bar in 1878. From 1877 to 1887 he was librarian of the scientific library of the U. S. Patent Office, and in 1889 he was appointed statistician of the U. S. Bureau of Education, having in charge the 1893 report on the libraries of the United States and Canada. On Sept. 29, 1898, he was appointed librarian of the newly organized Washington (D. C.) Free Public Library (now the District of Columbia Public Library). This position he resigned in June, 1904. He was a member of many associations and a life member of the A. L. A.

The following report of audit was appended:

At the request of Charles C. Soule, treasurer of the Endowment Fund of the American Library Association, we have examined his accounts and securities.

We find evidence of assets amounting to \$108,591.97, of which \$106,486.84 is the invested principal and \$2105.13 is interest accrued and available.

S. W. FOSS,	} Finance Committee.
DREW B. HALL,	
THEODOSIA E. MACURDY,	

Voted, That the report be accepted and placed on file.

S. W. Foss presented the

REPORT OF FINANCE COMMITTEE

Mr. Foss: All financial details relating to the American Library Association have been embodied in the two previous reports just read, and I will simply say for our committee that we have examined carefully all the bills that have been presented to us by the treasurer and have examined the accounts and the vouchers of the treasurer and found them correct, and also examined the accounts of the endowment fund and their bonds and securities and their accounts, and found them in every instance correct.

Received and accepted.

ARTHUR E. BOSTWICK read the

REPORT OF COMMITTEE ON BOOK-BUYING

Since the last report, presented to the Portland Conference, the committee on book-buying has issued seven bulletins of the usual postal card size, containing in all 17½ pages, and one on letter-size paper with an enclosed postal card for answer. The information contained in these bulletins has been of practically the same kind as that given in previous issues, consisting of selected lists of dealers and their catalogs, notices of special bargains in books, especially those to be obtained through importation, with notices of special sales and dealers in foreign books, and of useful small bibliographies for small libraries. It has also been our aim to keep the readers of these bulletins informed regarding the rules of the American Publishers' Association and the workings of the net price system, both here and abroad, and regarding the progress of the revision of the copyright laws so far as it has appeared likely to affect the interest of the libraries. We have also reprinted from time to time extracts from articles in leading papers which it appeared would be interesting to librarians in connection with the purchase of books, and in Bulletin no. 27 we have tried to emphasize the value of concerted action by librarians and to give them an opportunity to initiate such action along cer-

tain lines. In Bulletin no. 19 we printed an alphabetical index to the contents of all previous bulletins, thus making them more accessible and useful.

We have felt that the bulletins might be still more useful if members of the Association could be induced to give us information which might be used in them for the general good; but we regret to say that most of our attempts so far to secure such information have failed. In our last report we spoke of our effort to secure a list of out-of-print books in general demand at libraries. We have renewed this effort, but received in response only one or two lists—not enough to serve as a basis for action—until a return postal was used, with which we have had better results. Our request in Bulletin no. 19 for simple statistics regarding book purchases for the last library year brought only one or two answers, so that we were unable to give the promised table based on these statistics. There was no response to our inquiry as to whether it would pay to reprint numbers of the bulletin that have become or are likely soon to become out of print.

Besides distributing the bulletins we made arrangements with the publishers of the *Book and News Dealer* to send to each member of the Association a copy of their publication containing information of value to book purchasers. From the beginning of the publication of the *A. L. A. Booklist* the editors of that periodical began to insert our bulletins in full, and as soon as the *Booklist* was sent free to all members of the Association we removed from our mailing list the names of all members in order that useless duplication might be avoided. This left on our list something more than a thousand names, and if the Publishing Board should find it possible to send the *Booklist* free to these addresses, or at least such copies of it as contain our bulletins, we could then suspend independent publication altogether and should be able to carry on our work with only a small appropriation for travelling expenses. It may be, however, that the members of the Association think it best to still keep up independent publication for the sake of making complete sets of the bulletins in this form, and we

should very much like an expression of opinion on this point.

The chairman of this committee has by direction of the executive board continued to act as a delegate of the Association to the conferences on copyright, but as the delegates present a separate report to the Council it is unnecessary to speak further of this matter here.

Our effort to aid librarians in the purchase of books to good advantage has been directed particularly towards helping the smaller libraries, and we are encouraged from what we hear continually from these libraries that we are meeting with some measure of success, but we feel that our success would be much greater if those who receive the bulletins and benefit from them would be freer with their suggestions and with the contribution of items of interest which may come under their personal observation and which might be interesting and valuable to librarians in general.

The certificate of receipt required by the custom house authorities for the free entry of books continues to add a vexatious formality to the troubles that beset the importer of books. This regulation seems never to have been enforced in regard to books and scientific apparatus at any port of the United States until the year 1903. At that time and since, protest has been made, but without effect. Action in the matter, however, has never been taken by this Association and it would seem to be desirable that this should be done. We are informed that such action at this time might possibly have weight in inducing the Secretary of the Treasury to reconsider his action. The certificate of receipt now required appears to be no further preventive of fraud than the affidavit previously furnished by the librarian and importer, but simply to be a vexatious provision requiring much extra work and tending to discourage importation. We therefore recommend that the proper committee be authorized to make to the Treasury Department representations to this effect on behalf of this Association.

In closing we renew our recommendation of last year that this committee be made one of the standing committees of the Association.

Voted, That the report be accepted and the recommendations favorably reported to the Council.

W. I. FLETCHER read the

REPORT OF COMMITTEE ON TITLE-PAGES AND INDEXES TO PERIODICALS

Your committee regret to have very little to report, beyond an honest effort, made rather late in the year, to promote the object of their appointment through co-operation with the Association of Periodical Publishers. Owing to circumstances beyond their control, this movement, which seemed likely to reach some conclusion before this meeting, is yet in a formative state, but is likely to result favorably very soon.

The committee has held one meeting in New York on April 18, 1906, all the members being present. No new views were presented, but it was agreed that an effort should be made to reach a practical co-operation with the Association of Periodical Publishers, along the lines of improvement indicated in the report of this committee in 1902.

The association referred to had a meeting in New York on the same day, to which the chairman of this committee was invited, and where he was given an opportunity to present the committee's views, which were discussed by some of those present. There seemed to be a general feeling that the circular issued by the committee in 1902 was too radical and missed its object by asking for too many things at once. The association appointed a committee of one, Mr. J. M. Chapple, of the *National Magazine*, to work with our committee in the preparation of a basis of reform or improvement in the matter of periodical title-pages and indexes, which should be submitted to the Association for their approval. A few days later this committee drew up such a paper, and submitted it to Mr. Chapple, since which time we have endeavored in vain to secure a meeting with him or agreement by correspondence. We have no reason to ascribe this failure to anything but untoward circumstances and feel sure that with a little more time satisfactory results will be reached. It is evident that our hope of co-operation with the publishers is in putting forward a simple and self-evidencing proposition to

begin with, expecting to secure further advances gradually. To establish the principle of this co-operation and a method of carrying it out has been our aim.

Following is the draft of the proposed agreement:

SUGGESTIONS AS TO THE ISSUE OF TITLE-PAGES AND INDEXES (OR CONTENTS) TO PERIODICALS: DRAWN UP BY A COMMITTEE OF THE AMERICAN LIBRARY ASSOCIATION AND APPROVED BY THE ASSOCIATION OF PERIODICAL PUBLISHERS.

1. It is desirable that all periodicals should be distinctly marked off into volumes, and that title-pages and some sort of index or table of contents should be printed for each volume, for the benefit of those who wish to bind their numbers.

2. When practicable, it is very desirable that the title-pages and index shall be sent out fastened into each copy of the concluding number of a volume. The committee are inclined to lay stress on the desirability of having the closing number of a volume contain the title-page and index, especially in order that volumes may be completed without involving purchasers in the necessity of looking up those essential pages elsewhere than in the number where they are most useful. Many publishers of periodicals may have failed to appreciate the extent to which their numbers are sought for binding, and the consequent importance, from a business point of view, of such an enhancement of the value of back numbers.

3. There may be cases of periodicals issuing large editions for sale beyond those for subscribers where such a practice as is recommended above is hardly feasible. In such cases it is recommended that the title-pages and contents be printed and held subject to the order of those desiring them, enough copies being printed to ensure a supply equal to demand, future as well as present. On this point we would cite the testimony of Mr. F. W. Faxon, manager of the Boston Book Co., extensive dealers in sets of periodicals for public and private libraries. Mr. Faxon has had much experience in making up sets for binding and speaks with authority when he says:

"The present practice of issuing magazine titles and indexes in limited editions, to be secured only by separate application to the publishers, usually every time a volume is completed, is causing much annoyance, to put it mildly, to all who desire to bind their volumes. In cases of change of management, or fire, the supply is often made unavailable, and while it is almost always possible to find an odd number somewhere second-hand, it is never possible to pick up a loose title-page and index.

"The supplying and replacement of sets to libraries is our business, and the present practice of the publishers means that no files, even of such popular periodicals as *Harper's Monthly* and *Everybody's Magazine*, to mention but two of a large army, can be made up complete because certain titles and indexes are exhausted. We have calls in our business for from 10 to 25 titles and indexes a month, from libraries in this country who, in most cases, have failed to get them through the publishers. Had the entire edition of the final number of each volume carried with it the title-page and index, which I assume every subscriber or purchaser is entitled to with his subscriptions, no such trouble could possibly arise. Furthermore, I am sure that any publisher would actually make money by issuing the title and index with the last issue of every volume of his entire edition, though the opinion now is among the magazine publishers that, because perhaps a small percentage of buyers wish to bind, it is a useless expense to put a title and index in every volume issued. This idea is wrong, and can be proved wrong. But publishers should consider the larger

question of satisfying all their subscribers, which there is no question they would do if the entire edition had titles and indexes supplied."

4. It is strongly recommended that title-pages and contents, when issued with a number, be printed on separate sections from reading matter and advertisements, so that they can be taken off and properly bound where they belong without the necessity of separating single leaves which must be pasted in.

5. This last recommendation also applies to the injurious practice of combining advertising leaves and leaves of reading matter in one section, when by a little care, in the make-up, the sections may be separate. Of course, this applies only to periodicals in which the advertising pages are generally removed before binding the numbers.

W. I. FLETCHER,
A. E. BOSTWICK,
E. LEMCKE.

Received and accepted.

The president read a letter, sending greetings and good wishes to the Conference, from Mrs. S. C. FAIRCHILD.

GEORGE F. BOWERMAN read the

REPORT OF COMMITTEE ON BOOKBINDING AND BOOK PAPERS

(See p. 130.)

C. W. Andrews, vice-president, took the chair.

Voted, That the report be accepted and referred to Council with recommendation that the committee be continued.

The secretary read a telegram presented by Mr. J. P. Kennedy, renewing invitation to meet in Jamestown, Va., in 1907, and signed by various officers of the city of Jamestown and the Jamestown Exposition Co.

Adjourned, 5.50 p.m.

AUTHORS' READINGS

(BALL ROOM, MATHEWSON HOUSE, SUNDAY EVENING, JULY 1)

On Sunday evening an informal session was held, devoted to singing, authors' readings, and stereopticon views. Upon motion of the secretary a resolution was passed sending the greetings and sympathy of the Association to Mr. F. M. Crunden, senior ex-president of the Association, in his illness. The singing, under the direction of Mr. Albert T. Briggs, of Cambridge, was general, and admirably conducted. The authors' readings were opened by Harry L. Koopman, librarian of Brown

University, who read a poem entitled "The librarian of the desert" (*see* p. 25). Robert Gilbert Welsh, dramatic critic of the New York *Telegram*, read a short story and two poems. Sam Walter Foss, librarian of the Somerville (Mass.) Public Library, followed with several poems, including "The song of the library staff," written for the occasion (*see* p. 35); and Miss Datha Stone Pinneo, librarian of the Norwalk (Ct.) Public Library, closed the readings with a short original story. After the readings a series of stereopticon views, illustrating the social side of the last twelve conferences (and post-conferences) of the Association, were displayed with running comment by Frederick W. Faxon, chairman of the travel committee.

SECOND SESSION

(BALL ROOM, MATHEWSON HOUSE, MONDAY MORNING, JULY 2)

President HILL called the meeting to order at 9.30, and announced that this session would be a joint meeting of the Library Department of the National Educational Association, and the American Library Association, under the chairmanship of Dr. James H. Canfield.

Dr. Canfield then took the chair.

The CHAIRMAN: It is a full decade since the library people and the public school people began to realize that they were engaged in a common cause, against a common enemy, Ignorance. About ten years ago, I think, the first committee was appointed by the American Library Association to seek co-operation with the National Educational Association, and the Library Department of the National Educational Association was started the following year. The Library Department took up work with the committee appointed by the American Library Association, and the two together formulated a definite and very valuable report, which appeared in the proceedings of the National Educational Association for 1897, and was also published separately and widely distributed throughout the country. We may take that as the initial point of a movement

which, to my mind, means much for both the library and the public school, and means, perhaps for the first time, putting the public library in a position and upon a foundation which settles for all time the relations of the library to the public and of the public to the library. This movement went forward steadily, not with misunderstandings but with a lack of understanding, not with misappreciation but with a lack of appreciation, on both sides, perhaps with a little feeling of intrusion on the part of the schools toward the librarian and a little feeling of intrusion on the part of the librarian toward the schools. For some years Mr. Dana was chairman of the committee on co-operation, and a large gain was made while he was at the head of that committee. Circulars were sent out, letters of information and of inspiration went from the Library Association to the different departments, officers, members of the Educational Association, and in every way everything was done to cultivate the ground, to sow good seed, and to await results. At the St. Louis meeting of the Library Department of the National Educational Association the matter came up definitely again, and from that time on the progress made is expressed completely in the "Report of the special committee on instruction in library administration in normal schools,"* prepared for the American Library Association committee and just published by the National Educational Association. This report I now hold in my hand, and copies are here for distribution, presented as the report of what has been done by the COMMITTEE ON CO-OPERATION WITH NATIONAL EDUCATIONAL ASSOCIATION. There is an error in this report which I must take as entirely my own. Not sufficient recognition is given to the fact that this committee was originally a committee of the American Library Association. In the taking over of the committee's work by the Educational Association, and in the prep-

*National Educational Association. Report on instruction in library administration in normal schools; prep. by Eliz. G. Baldwin; submitted to the National Council of Education by a committee on co-operation between public schools and public libraries. . . . May, 1906. 72 p. O.

aration of the letter of transmittal, I must plead guilty to not making that fact nearly as clear as it ought to have been made; and I can only say that I will take pains to see that due credit and full credit to this Association and to its committee as representing this Association will be given hereafter.

We have, then, this morning, this topic of the relation of libraries to the schools, coming to us through this report—the final step after these ten years of arduous labor. We have also what seems to be a very marked realization of all we have been striving for, in the presence of the president of the National Educational Association, who comes to bring us greetings from that association and to assure us of sympathy, of appreciation, and of most hearty co-operation from this time forth. It gives me very great pleasure to present to you Dr. Nathan C. Schaeffer, Superintendent of Public Instruction for the state of Pennsylvania. (*Applause.*)

ADDRESS OF DR. SCHAEFFER

Dr. SCHAEFFER: When I accepted the invitation to meet the American Library Association on this day I made up my mind that I would resist the masculine tendency to give advice. The proverb, 'tis more blessed to give than to receive, must have been written of advice. I am here rather for the purpose of glorifying the vocation of the teacher and the librarian and of uttering a sort of Macedonian cry, "Come over to us and help us"; for the National Educational Association—especially the library section—needs very much the help and co-operation of the American Library Association. We need that help quite as much as the teacher needs the help of the librarian, and I might announce my point of view as being strictly in accord with the sentiment expressed in this report, namely, that the library as well as the public school forms an integral part of a system of free and public education.

We who teach and supervise schools need your help, for the sake of uplifting the industrial classes. Will you look at this matter for a few minutes from my point of view? I live in the richest agricultural country in the United States, a county that has

more money deposited in its national banks than any one of seven Southern states that might be named, and the wealth of that county is due to the fact that it is a great tobacco county. Now there is perpetual warfare between the school and the tobacco factory. The boy and the girl leave the school just as soon as the law allows them to go to work, in very many cases, and the owner of one of those industrial establishments assures me that during the noon hour the telephone is kept in constant use by the young people who are engaging seats upon the roof garden for the evening. I confess to you I have sympathy for those young people. I have heard of industrial establishments where it takes 22 persons to make a pin; where the leather passes through 64 hands before the shoe is ready for the market. I have never been able to ascertain through how many hands the tobacco passes until it ends in smoke and ashes. But think of a human being spending his time on every working day from the first of January until the last day of December making the twenty-second part of a pin, the sixty-fourth part of a shoe, the infinitesimal part of a cigar, and you can realize for yourself the monotonous drudgery of that sort of life and the innate influence leading those operatives to seek recreation. Now, how much better would it be if these workers in the tobacco factory and in other industrial establishments could at the close of the day go to the public library and there find the recreation which their nature craves, instead of seeking that recreation in the saloon and upon the roof garden. So long as our workers, our industrial classes, do not frequent the library, there to associate with the choice spirits of all the ages, but seek recreation in lower forms of enjoyment, so long, I claim, there is important work to be done both by the teacher and by the librarian.

And I am not willing to accept for the teacher all the blame for this state of affairs among our industrial classes. I find that when anything goes wrong in the public life of the American people, people always look to the school for a remedy and the teacher is blamed for what is wrong, or at least she is expected to correct it. See what the teachers are expected to do. If, for instance, some-

one is found cruel to an animal, straightway there is legislation that teachers must give instruction upon the humane treatment of the brute creation; if it is found that cigarettes and stimulants sap the life of the nation, straightway we have legislation that in every school we must teach physiology with special reference to the effect of narcotics and stimulants upon the human system; if too many boys leave the farm to go to the city, the school is expected to give instruction in agriculture in order to revive an interest in country life; if there is danger that our forests will be all cut down and reach extinction, straightway there is legislation for Arbor Days, in order that the children may know how to plant trees and take care of them; if there is trouble in learning a trade, straightway we must have manual training, in order that the boys, and the girls even, may learn how to use the tools that lie at the basis of all the different handicrafts; and if there is trouble in getting domestic help, straightway we must have the introduction of domestic science into the school curriculum. Indeed, no prophet can tell what problems will be shied at the school in the next 50 years. We are now to celebrate the 18th of May in order to prepare the world for international arbitration, and somebody out in the state of Ohio, which is prolific in new ideas, recently proposed that the school children of this country through their teachers, shall raise \$400,000 to build a bronze ship in memory of those who died in the explosion of the *Maine*.

Now I am prepared to say that the school can, of course, help to solve some of these problems; but here is the difficulty, and it should come very near to the hearts of you librarians: the things which did not originally belong to the school curriculum have been emphasized to such an extent that many teachers have a bad conscience with regard to their legitimate school work. Many teachers feel conscience stricken if somebody catches them teaching the three R's; and I have found it absolutely necessary to show the fundamental relation of that which called the school into existence to the preservation of our modern civilization. There are many people who think that the library and the

school are a burden which our modern civilization must carry. I claim, on the other hand, that modern civilization is a burden which the school and the library must carry. Once a good woman who, in preparing herself for the duties of the school room, goes to summer schools and annual gatherings of teachers, came to me and in a tone of despair said, "I would like to know what we are to teach?" "Well," said I, "what makes you ask that question?" "Why," she answered, "the editor of the *Ladies' Home Journal* says that a crime is being committed before the eyes of American parents through the overcrowding of the school curriculum, whilst President Eliot says that the school curriculum must be enriched." Said she, "I have listened to a professor from Chicago who advocated that no child should be taught to read until it reaches the ninth year; and another professor gave us an interesting lecture on a whale, and another lecture on a butterfly, and still another lecture on a Baltimore oriole, and he made us feel that this is the kind of information that we should give in the school room."

I saw that this woman's notions of the original purpose of the school needed clarifying before she could again be happy in her school work, and I said to her: "You know as well as I do that Pennsylvania has been made the dumping ground for the illiterate populations of southern Europe. Let us watch one of these men who cannot read and write, let us see his experiences during a day. I saw one of them get on the train in the vicinity of Pittsburgh not long ago to go to some point where he was sent by the firm that employed him. Every now and then he asked the brakeman the name of the next station for fear he might be carried beyond his destination; he couldn't read the names that have been put up on tablets on each side of the station. When the noon hour came he was sent to a hotel to get his dinner, and there he was confronted by the hotel register. He made some excuse about his name and got the clerk to write it. When he entered the dining room he was confronted by the bill of fare, but he couldn't read a word of it. In despair he asked for something to eat. That evening he got a let-

ter from his daughter who was attending the public schools. The child thought this was a fine opportunity to show papa she could write a letter. But he couldn't read a word of it. There were ink and writing material in that hotel, free to everybody, but he could not do what he wanted to do, write a letter to the dear ones at home. Somebody handed him a newspaper. Not willing to acknowledge his illiteracy, he held it in the customary position, but soon there was a laugh, for some one saw that he was holding the paper upside down. Now what was it that that man needed all day long? Was it knowledge of a whale, of a butterfly, of a Baltimore oriole, or was it the ability to read and to write?"

The good woman said, "Hereafter I shall teach reading and writing as though the fate of the nation depended upon it." (*Applause.*)

The illiterate man is not adjusted to our modern complex civilization, and no matter what the school teaches, the school is a failure if it does not develop ability to read and in addition to that the reading habit and the library habit. (*Applause.*)

Look at this whole question from the point of view of John Fiske and Lewis Morgan and other scholars who hold their views with regard to the development of ancient culture. I believe that if you look at your own work for a few moments from that point of view every one of you will go home an inch taller, glorifying your work as librarians in a way that you never magnified that work before. According to this theory, you will recall there were three great epochs in the development of ancient culture. The lowest, the stage of the savage, which had in it three upward steps: first, man lived on nuts and fruits, then man learned to fish and how to build a fire, finally man learned to hunt with bow and arrow. Did any one of those occupations call the school and the vocation of the schoolmaster into existence? Far from it. And the next stage came when man stepped from the savage to the barbarian plane of life. And there I would like to make my bow to a woman. Did it ever occur to you that whenever the average girl begins to study a history she wishes she were a boy? And

why? Because our text-books on history devote about 499 pages to the achievements of men, and if women get half a page in the ordinary text-book on history the sex is fortunate. The average girl is made to think that everything heroic in the world—yes, everything worth doing—belongs to the other sex. Now I want to say that I had a good deal of sympathy for that New England woman who, when an assembly glorified the Pilgrim fathers and talked of the hardships that the Pilgrim fathers endured, rose and proposed a toast to the Pilgrim mothers, who endured all the hardships of the Pilgrim fathers and then had to endure the Pilgrim fathers besides. (*Laughter.*)

Three epochs man passes through before he reaches civilization. First, his life is nomadic and his wealth consists in cattle grazing on the adjacent hills. But does that call the school and the library into existence? Far from it. The teacher and the librarian come later. The next upward step is made when man learns how to till the soil, to practice the art of the husbandman. But does that call the school and the library into existence? Although the school makes the farmer a better farmer, still farming did not call the school nor the library into existence. The next great upward step was made when man learned to work in iron, in metals. But that did not call the school into existence. According to John Fiske and Lewis Morgan civilization dawned when man learned how to record his thoughts and how to transmit them to distant peoples and to future generations. It is in the need of recording man's thoughts and achievements and of preserving them for future generations that you have the origin of the school and the origin of the library. So that the vocation of the schoolmaster and of the librarian lies at the basis of our modern civilized life. And civilization, I repeat, is the burden which the school and the library must carry and preserve.

Now, from that point of view we can well glorify these two vocations. The library is of course useless if the teacher fails to teach the children how to read and write. On the other hand, as this report points out, the school life of the average child in this country is five years and the rest

of life belongs to the librarian and to the library if the reading habit and the library habit have been developed in these five years. Undoubtedly even during the short period of the school life of the child it is possible not only to teach the child how to read—and she is the best teacher who with the least expenditure of time and energy makes the child an independent reader—but it is also possible during that school period, if the librarian and the teacher work together, to develop in the child a love of good books, to develop the power to use books aright; and in spite of all the talk we have had about *things* against *words*, the school is a failure if it does not teach the right use of books. And it is at that point that the teacher needs the help of the librarian.

To my mind the vocation of the librarian has the earmarks of a profession. What are they? Well, in the first place, every profession has its own *esprit de corps*, and the first thing I heard when I got into this building was talk about "the library spirit." There is a professional spirit springing up in this organization that will finally pervade the entire vocation in this country. Then, in the next place, every profession requires technical training, and you have your library schools fulfilling that function. More than that, every profession presupposes a liberal or a general education, and the day has come when the brightest of those who graduate from our schools do not hesitate to use their learning, their training, their liberal culture, as a basis upon which to build the vocation of the librarian. In addition, I notice that every profession has certain operations that are not merely mechanical but that are based upon science. Anybody can chop off an arm, but it takes a skilled surgeon to amputate an arm. There is science at the basis of that professional operation. You throw a man, however learned, into a modern library and let him manage it, and he will find how little he has of the technical training and the science that underlie the work in our libraries. And then, last of all, I find that every profession has a noble aim. The theologian seeks to save souls, the physician seeks to save life—and the librarian has a noble aim. It is to fit men and women, not only to get

knowledge from the bookshelves or the books on the shelves, not merely to get recreation, but it is to enable men and women to live the higher life of thought. So many of our industrial classes are dissatisfied because they think money makes life worth living and because they think the millionaire has that which they themselves cannot get. Now, money stands for food and drink, for the garments we wear and the houses we live in and things of that sort; but let it never be forgotten that money cannot make life worth living. If you have plenty of money you can buy a fine house, but you cannot buy a happy home; that must be made by you, and by her who occupies it with you. If you are rich you may buy a fine copy of Shakespeare, but you cannot buy the ability to appreciate a play of Shakespeare.

Plato wrote above the door of his academy, "Let no one enter here who is destitute of geometry." Why did he value geometry so highly? Not merely because he thought it was the best introduction to the study of philosophy, but Plato had an idea and he expressed it when he says "God geometrizes." Plato had an idea that when a youth learns to think the thought of geometry, he is thinking God's thoughts and he is tasting the pleasures of a life that does not turn upon what we eat and drink and upon the things that the almighty dollar will buy. When Kepler discovered the laws of planetary motion he exclaimed in ecstasy, "O God, I think Thy thoughts after Thee!" And when the youth at school learns to think the thoughts that God has put into the starry heavens above and into all nature around us, that youth is learning to think God's thoughts and is enjoying the pleasures of the higher life of thought.

Here is where I glorify the library and the vocation of the librarian. No human being can expect to discover for himself all the thoughts that God has put into the starry heavens above and into all nature around us, but if he has acquired the library habit he will find upon the shelves of the library the books that give what man has discovered of the thoughts that God has put into the heavens above and into nature around us; he will learn that the books upon the shelves of the

library enable him to associate with the choice spirits of all the ages and to think the best thoughts of the best men whenever he enters that library and makes a right use of books.

For that reason I believe that all over this land teachers and librarians should emphasize as one of their chief functions the acquisition of the power to make the right use of books, the development of ability to enjoy a good book. And it is there that the library must help the teacher, for few teachers have leisure enough to select the best books upon the shelves of the library. It is there that the librarian must act as a guide to both teacher and pupil.

Now one word about the National Educational Association. We have a library department of the National Educational Association, as you have been told, and when I was president of the department about 600 special letters of invitation to the meeting of that department were sent to people in different parts of the country. What response did we get? I think we had present at St. Louis, if my memory serves me right, four librarians and less than a score of teachers. The National Educational Association has money; it has an invested fund now of about \$150,000, and some of its finances have been used to print this library report, which has come into being largely through a committee of the American Library Association. I am not here to advocate either organic or federal union between these two organizations, but I wish to raise in your minds the question whether it is not possible to have a closer affiliation between the librarians and the teachers, especially between the National Educational Association and the American Library Association.

I rejoice in this opportunity to bring to you the greetings of the National Educational Association, and I shall never miss an opportunity to glorify the work which you librarians are doing for humanity and for civilization. (*Applause.*)

The CHAIRMAN: It is hardly necessary, after the expression which has been made by those who are present and who have had the pleasure and the delight of listening to

you, sir, for me to say a single word expressive of our pleasure and our gratification at having you with us this morning, both officially and personally. I will only add that from this time forth whenever the National Educational Association shows that you are to be one of its speakers, you may expect an avalanche from this Association. (*Applause.*)

Miss CLARA W. HUNT read a paper on

THE CHILDREN'S LIBRARY AS A MORAL FORCE

(*See p. 97.*)

Miss L. E. STEARNS read a paper on

THE PROBLEM OF THE GIRL

(*See p. 103.*)

The CHAIRMAN: These two papers are given in this general session by the courtesy of the Children's Librarians' Section, where they were to have been presented; but they seemed peculiarly fitting for presenting here. Had they been presented in that section Miss Isabel Lord was to open the discussion, and I will therefore ask Miss Lord if she will be kind enough to do it now?

Miss ISABEL E. LORD: It is from the administrative point of view, I suppose, that a few remarks were requested of me, and it is with some amusement, with much pleasure, that I find what I wish to say has been largely forestalled by a statement in Miss Stearns' paper, a statement of a fact which I did not know, that the Carnegie Library of Pittsburgh, which always does first the things that we all want to do, is to establish in its new building an intermediate department. Since Miss Stearns made this only as a brief statement, I will take a moment to speak of the necessity of such a department, or its advisability, from the point of view of the administrator, as I have seen it, in a much smaller library. Children coming into the children's room sometimes come at the age of six or seven. The great majority do not come until they are nearing, within two or three years, the age limit at which they ought to leave. Even if in the children's room we could give them all the attention they all need—which

is a counsel of perfection that we none of us have reached and none of us, with the present growth of the population, and the popularity of the children's room, can hope to reach—still it would be a very short training they would get in the children's room. As it is, the little children are and must be most important. To them must be given the first attention, the most careful attention, and the older children, as they are nearing the age limit, usually 14, at which they are allowed to pass to the adult room, as they approach that limit and begin to feel restless at being classed with the little children, are given necessarily less and less attention; they find a large proportion of the books on the shelves too young for them, and I think the experience of all children's librarians is that they often leave the room before they are really ready to go up into the adult department, because, as Miss Hunt says, they have read everything in the children's room, and yet they are not, in the opinion of the children's librarian, ready to go to the adult department.

When transferred to the adult department the child is turned loose in a collection made primarily, as it must be, for the adult. The young girl, who is a much greater problem than the boy, starts straight for the fiction shelves, open fiction shelves which we all of us have now, containing novels; a great many of which we would rather older people did not read and we certainly do not want younger people to read. Yet there they are turned loose, with the feeling that they are now grown up and will do as they choose. In that department the first claim is and must be that of the adult. We cannot keep older people, who are using the library often for serious purposes of study, waiting while we attend to the children. Already the adult readers complain of the influx of children from 14 to 18 years old; they find the way blocked by them as they come into the library and they dislike it. From the administrative point of view, as I have looked at it in my own library and as we have tried to work it out, we can see no solution except an intermediate department with a large but careful selection of books for the younger readers. I am sure we shall all be very much inter-

ested in what is done in the Carnegie Library at Pittsburgh.

Just a word for those who cannot possibly have an intermediate department, but who may wish to make some sort of selection. In our own library we take out a selection of books and call them books for younger readers, and young people from 14 to 18 are not allowed to go back into the general stack without permission. If they ask, of course they may go to a particular subject; but there is a careful selection of about 2000 books to which we find a great proportion naturally go. Such a feature is of course possible in any library, even though it is not possible, as I think it should be, to have the tactful, right person to direct the reading without seeming to direct it.

The CHAIRMAN: I have always felt that it was not kind and was in fact only a little short of an outrage that the secretary of an organization should only be known as a notice-monger, and I am going to ask Mr. Wyer to appear before us for a few moments in another capacity. Will you say just a word to us on this subject, Mr. Wyer?

J. I. WYER: I have had some experience in children's work and children's reading—but it is limited to two children. (*Laughter.*) I approve cordially of what Miss Stearns said about reading aloud in the family to children. That is about the best thing that anybody can do, and it is ordinarily as good as the work that you can get in any children's department in any library, if it is constantly followed out and you use the good things that the children's librarians will tell you about to read to your children. Another thing is libraries at home. I am aware that the great percentage of work done by the children's department must be done with children from homes where there are no libraries, where there perhaps can be no libraries. But there is a great class of the community that can have libraries, and the more books there are in a house, as long as they are books of which you would not be ashamed, the better, and I do not see why you should limit a child to the children's room or the intermediate room or any other room if he wants to read anything you have in the library. You ought not to

have in your fiction room, or your general library anywhere else, anything that you do not care to have children read. Keep your libraries pure and wholesome and clean and it does not matter much whether they are all adults' books or all children's books or whether you have one in one case and one in another.

Miss JESSIE WELLES: Our plan for an intermediate department is in such an undeveloped condition that I am afraid to speak of it at all, but I think that people who have been practically working with the public find that it is quite true about the older boys and girls, especially, being in the way of the older people. We greatly desire that the older people shall find no such annoyance, and we equally desire that the younger people shall have a fair chance. It happens that in our plans for the new building we were given a T-shaped room, and the suggestion naturally arose that one of the wings would be a good place to put the books for the older boys and girls. The plan is that those books shall be selected by the staff of the adult department, and by Miss Olcott, chief of the children's departments, and that there should be at least one assistant or probably two or three who will be scheduled, both in the children's department and in the loan department, so that when the boys and girls come from the children's department they will find familiar faces and won't have that strange feeling of being adrift in the world, that they often have when they come from the room where they are constantly helped to the room where they have to learn to help themselves. That is about as far as we have gotten in our plans; we mean to have a selection of wholesome fiction and non-fiction which young people might not pick out from the big collection, and people who can give them intelligent help enough to take them over from the room where they have been guided so constantly.

Miss THERESA HITCHLER: I have not been scheduled to speak at this meeting, but I want to refer to one point that Miss Stearns dwelt upon in her paper and to which Mr. Wyer referred afterwards. That was the point of mothers reading aloud to the children. Now I do not think it has been clearly brought out that most of the children who come to our libraries haven't mothers like us. (*Laughter.*)

We forget the great class of families to which Dr. Schaeffer referred, the parents who themselves cannot read and so cannot intelligently guide the reading of their children. A few years ago I was asked to address a mothers' meeting in a grammar school in New York, where the great majority of mothers present could not read, and I advocated that they make their children read aloud to them, and in that way they could see whether they were reading proper books. (*Applause.*)

Mrs. MINERVA SANDERS: It is generally supposed that the large libraries have an advantage over the smaller ones. But there are things in which the smaller library has the advantage, and one is in dealing with children. The small library can meet the children and exert personally an influence that cannot be given by the large library unless there is a special trained librarian, and not always then. I have always advocated a child's coming to the library as soon as he could climb the steps. In that way the child learns to love books. In our library just as soon as a child can write his name he has a card. Our children also have the privilege of going to all the books. Our shelves are open, and the children go to the shelves when they please. The little ones don't want to go, but a child at 14, in my experience, has judgment enough to go among the books that we have on our shelves. If we have books for adults that we don't want children to read—and, by the way, let me say children wouldn't understand those books—we put them on another tier of shelves; the children do not go to them. And I take pains to examine the books selected by the children. I am surprised at their selection; I think sometimes they select better than I would for myself. But this idea of keeping the children away from the adult books, or out of the reading room for adults until they are over 14 years old, or 15 or 16, I do not agree with at all. I find also that having all books charged at the regular desk is an advantage both to the children and to the adult; the older people are gracious to the children, and we have never found any trouble between our older people and our children.

Mr. H. H. BALLARD: I would like to ask the teachers of the public schools if they would kindly teach the children to read. I

have rarely known a boy or girl of the age of 16 to 18 able to read a book aloud intelligently, easily, and so that listening was a pleasure. Adjourned.

THIRD SESSION

(BALL ROOM, MATHEWSON HOUSE, MONDAY EVENING, July 2)

President HILL called the meeting to order at 8 o'clock.

The PRESIDENT: The secretary will present an amendment to the constitution which should be acted upon at this time.

AMENDMENTS TO CONSTITUTION

The SECRETARY: The constitution was amended at Portland, by the Council, in two sections, 12 and 17. The general association voted its approval to these amendments at the Portland meeting, but the constitution provides that this approval shall be repeated at a second consecutive session. The amendments come up this evening for final ratification, if this general meeting shall approve them.

To Section 12 the amendment adds these words: "It shall have authority to include in the publications of the Association so much of the program, notices, circulars and proceedings of affiliated associations as it may deem advisable." The initial pronoun "it" refers to the executive board, and the object of the amendment is to secure the necessary printing in A. L. A. programs for such organizations as may be affiliated with us.

Section 17, providing for the same object in another way, is amended by adding these words: "It may, by a two-thirds vote, upon suitable conditions, affiliate with the American Library Association other organizations kindred in purpose." In this case "it" refers to the Council.

The purport of the two amendments is to enable the Council to affiliate organizations kindred in purpose and national in scope, and to provide that the executive board may print the programs of such organizations for them or include their programs in our own and publish their proceedings in our annual volume of papers.

I move the ratification of these two amendments to the constitution. *Voted.*

The PRESIDENT: The president has only one duty to perform. As chairman he should not be long-winded. He ought, rather, to be like a door which should be opened with as little squeak as possible to admit the real speakers. It is hoped that the door will squeak in such a small degree as to be hardly perceptible. The subject which we have for this evening relates to the public library as a municipal institution, and the speakers who are to address us appear in the relation of a trustee and of a librarian. In introducing the first speaker I may be permitted to say that some few years ago some women in the city of Brooklyn wanted a free public library. They went to the then mayor of the city and secured his co-operation. A bill was framed with his consent, his sanction, and with his help. That bill was presented to the legislature and became a law. Under that law the city of Brooklyn received for its public library the first year \$5000. It is spending today about \$400,000, such is the growth of that institution. And the man who was the then mayor became a trustee of the first board, and has remained a trustee of the Brooklyn Public Library ever since, and has been its president all the time. I have pleasure in introducing a proved friend to libraries, the Honorable David A. Boody. (*Applause.*)

DAVID A. BOODY read a paper on

THE RELATION OF LIBRARIES TO MUNICIPAL GOVERNMENT

(*See p. 28.*)

The PRESIDENT: After a library has received money from the city it is necessary to spend that money, and it is easy for us to do it; but it is another matter so to expend it that we get the greatest return, and it is quite appropriate that we should hear from the library side as to the best way of spending the money which the municipality has given the library for its maintenance. It is appropriate, too, that the one who speaks should come from a library which we have looked upon for many years as an example that we have been glad to follow. I have pleasure in introducing Mr. Horace G. Wadlin.

Mr. H. G. WADLIN read a paper on

THE PUBLIC LIBRARY AS A MUNICIPAL INSTITUTION: FROM THE ADMINISTRATIVE STAND-POINT

(See p. 30.)

The PRESIDENT: In the absence of Dr. Melvil Dewey, who was to present the next number on the program on behalf of the League of Library Commissions, his paper will be read by title and printed in the proceedings.

Mr. DEWEY's paper is as follows:

THE FUTURE OF LIBRARY COMMISSIONS

Had it been possible to get to the meeting my thesis to be maintained orally in such time as could be spared from the other speakers was as follows:

1. Library commission work will be established in every state as certainly as is the public school department.

2. The chief honor to be conferred on the ablest men and women of the state will be membership in this commission. Its executive officer directing this great department will have the finest opportunities for usefulness afforded any citizen.

3. The commission will become permanent, taking the name "department" instead of "commission," which carries a flavor of temporary service.

4. This department will have full charge of all the state's library, book and publishing interests. Through its influence there will be greatly increased efficiency and economy in state publications.

5. It will have charge also of all home education interests, travelling libraries, study clubs, extension teaching, museums and allied agencies.

6. As a part of the library interests under its control it will absorb the management of the state library. The boards of *ex officio* trustees will willingly give place to the new library department. These trustees, usually eminent state officers, are seldom fitted either by taste or experience to guide a great missionary educational movement, though often admirably qualified to act as trustees for the law library, which was the major part of the traditional state library. In the trend towards

consolidation the greater will absorb the less, and there can be no question that the library commission with its state-wide interests and activities, calling to its service the foremost citizens who are willing to give their best to the public good, greatly outranks in dignity and importance any *ex officio* board entrusted with the old type of state library. Local circumstances in some states will make it best to have two or more agencies, but no greater harm can be done than consolidating into one, two or more institutions which are doing the work better or cheaper and working in harmony. But the general tendency will be toward a state library department, growing out of the present library commission, and including under the comprehensive name "library" all those agencies and methods which make for culture and education outside the regular teaching institutions.

The PRESIDENT: The next subject is "The effects of earthquake and fire on San Francisco libraries." This subject was assigned to Mr. Frederick J. Teggart, librarian of the Mechanics-Mercantile Library, of San Francisco, who had volunteered to prepare a paper, but at the last moment he was unable to come and Mr. Charles S. Greene, of the Oakland Public Library and a trustee of the State Library of California, kindly consented to fill Mr. Teggart's place.

EFFECTS OF EARTHQUAKE AND FIRE ON SAN FRANCISCO LIBRARIES

CHARLES S. GREENE: On April 18, 1906, at 5.15 o'clock in the morning, the state of California was visited by an earthquake, the severest that has been felt in that region since it was visited by civilized man. It extended from Fort Bragg, in Mendocino county, on the north, 150 miles southward to Salinas in Monterey county and beyond, passing off into the sea on either side. The scientists have told us that the cause was a fault, a slip of the earth, that moved the country to the west of the line of the fault eight feet or more to the north, or else moved all the rest of the country eight feet to the south. The damage done was confined to a few places, but in certain localities it was very severe. Fort Bragg was badly shaken; the city of Santa Rosa had nearly

every brick building thrown down; San Francisco was severely shaken; Oakland on the other side of the bay had its share; San Jose, farther south, had many of its brick buildings thrown down; the insane asylum at Agnew was almost totally destroyed; the beautiful buildings of Stanford University were damaged to the extent of several millions of dollars. The damage in San Francisco by the earthquake is hard to estimate. Perhaps three or four millions of dollars would have covered all except the damage done to the city hall; perhaps as much more, or 20 millions, would have covered the total damage in the state by the earthquake.

But there was more to come. In San Francisco the earthquake shock was followed by a multitude of fires springing from crossed wires, from overturned stoves and furnaces, and in other ways, and when the alarm was sent in and the fire department promptly responded, the terrible situation was faced that the earthquake had destroyed the water mains and there was no water to fight the fire. Furthermore, the fire chief, old and experienced, was so injured that within a few days he died, without ever knowing that the calamity that he had predicted for San Francisco had come upon it. So San Francisco, without water, without its fire chief, with fires springing up in scores of places at once, was given over as a prey to the flames. I cannot tell you the horrors of those next three days. You have read of them plentifully. We in Oakland watched the great pillar of fire by night and the pillar of smoke by day, and our hearts were full as we watched, and seemed fuller yet when there came from the ferry by every boat thousands of destitute people bringing with them only such little belongings as they could carry in their hands—a canary bird, a parrot, a cat, a dog sometimes; trifling things that they had caught up in their hasty leaving. Of 250,000 homeless people, 150,000 came across the bay in those three days to be taken care of in the cities of Oakland, Alameda and Berkeley. Every church, every organization was turned into a relief society, and the relief beginning there spread out into the country until all the world had come to

the help of San Francisco in her hour of need. There has been no such outburst of sympathy, as there has been no such great fire, destroying some three hundred millions of property, nearly three thousand acres of buildings, all of the business section except the water front and much of the best residence section of that great city. That is enough, perhaps, for the story of the earthquake.

The effect on the libraries was commensurate. The whole effect it would take too long to tell. The exact physical effect is not so difficult to state. The losses in buildings and books have been listed, and I will note the principal ones: Berkeley, \$1000 damage to building. University of California lost 1007 books in the bindery and some 250 others in the hands of instructors in San Francisco, besides its loss in the great damage to the Charles Doe estate, from which it was to receive a bequest for a new building. The building of the library at Haywards was damaged \$1750 worth, and at Martinez \$1400. The Napa Library was seriously damaged. My own building at Oakland was damaged to the extent of about \$3000; the Redwood Public Library, \$5000; the San Mateo Public Library, the old building condemned; Santa Rosa Library, \$7000; and at Stanford the beautiful library building, which cost about \$300,000, was so wrecked by the swaying of its steel tower that the whole masonry was destroyed.

The San Francisco losses, with the loss by fire added to the smaller loss by earthquake, show large figures. In the San Francisco Public Library there were 105,000 books destroyed. Of all of the books in the main collection, I saw the only one that had been saved, and that was a book that the secretary had put in a safe the night before. The Astronomical Society of the Pacific lost 1400 volumes; Bnai Brith Library, 12,000; Bohemian Club, 5000, many of them autograph and presentation copies from distinguished writers; California Academy of Sciences, 12,300; the Chamber of Commerce, 9000; French National League, 25,000; Mechanics'-Mercantile, 200,000; St. Ignatius, 50,000; Microscopical Society, 2500; San Fran-

cisco Medical Society, 5000; Reading Rooms for the blind, 400—small, but all it had; San Francisco Vercin, 4400; San Francisco State Normal School, 8500; Supreme Court Library, 17,000; Theosophical Library, 1000; University Club, 2500; Wells Fargo Library, 5000; Y. M. C. A. Library, 2500; San Francisco Law Library, 35,000; Sutro Library, 100,000; Society of California Pioneers, about 5000. That makes a total of 610,000 books lost, and damage to buildings \$394,450. Besides, there were the books lost in book stores and in private libraries, making the total loss of books not less than a million volumes. The law libraries, for example, were so totally lost that there were only about two working libraries left in all San Francisco, and those were libraries of lawyers who had working libraries at their residences in addition to those at their offices.

So much for the loss; but if I should stop here it would be a pitiful showing of the effect of the earthquake and fire upon California libraries. The final effect of that earthquake and fire will come in the rebuilding of those libraries. San Francisco will be rebuilt more grandly, more beautifully, more wisely than ever before. Nobody in San Francisco doubts that. I have been asked the question in the East, but never have I heard it raised on the West coast of this country. Let me tell you about some of the plans. The San Francisco Public Library had already bought a site for its new building, paying \$670,000 for it. It had \$1,000,000 bonds voted, which bonds had not yet been sold and now can be sold and made available for a new building. Mr. Andrew Carnegie gave a fund of \$750,000 to San Francisco for library buildings, with the stipulation that one-half of it should be used for branch libraries. That sum, I believe, will be still available and will be used to make the San Francisco Public Library more beautiful in its housing and better than it ever was before, and the insurance money, some \$60,000 on the library, will be used immediately to buy books. The branch library buildings that are left have already been reopened and the new city will find the new library keeping pace with it. The Mechan-

ics'-Mercantile Library sustained a loss of 200,000 books, and yet I am told that they have \$150,000 in sight to buy books to take the place of the ones destroyed. Now, \$150,000 to buy new books exactly fitted to the needs of the city as it now stands, will make a better library than any it has lost.

And all the libraries are going to rebuild. They accept the lesson of the fire—not that San Francisco shall not rebuild, but that she shall build better than ever before. Every large building that was destroyed is to be rebuilt and to be built better, with construction that will stand fire, that will stand such earthquake shocks as may come, that will make a city that shall never again be visited by such a calamity. There will be a new San Francisco in twenty-five years, in ten years—yes, I will say in five years. She will summon the American Library Association back to see a new, a better, a stronger San Francisco, with better, stronger libraries, more fitted to their needs, and prouder of itself than ever before.

The PRESIDENT: This report of library losses only brings into closer view the serious effect of fire and earthquake in California, and I would like to say that those libraries will be glad to receive any books that are of value to any circulating or reference library. Some libraries have already made up packages of books and sent them, and, answering for one, I can say that the Californians, the San Franciscans particularly, are very grateful for gifts of that kind.

DREW B. HALL gave a summary of the

REPORT OF COMMITTEE ON GIFTS AND BEQUESTS

(See p. 159.)

Received and accepted.

W. C. LANE read the

REPORT OF A. L. A. PUBLISHING BOARD

(See p. 154.)

Received and accepted.

Adjourned.

FOURTH SESSION

(BALL ROOM, MATHEWSON HOUSE, WEDNESDAY, JULY 4)

President HILL called the meeting to order at three o'clock.

Miss JOSEPHINE RATHBONE read the

REPORT OF THE COMMITTEE ON PROSE FICTION

The committee on prose fiction believed that the most important service it could render would be to ascertain if there exists any need for a subject-index to fiction which is not met by the indexes now in the field, and, if so, what form of index would best meet that need. They therefore published in the *Library Journal* and in the *Public Libraries* of January a request that all who felt that they could do their work better if they had some other fiction subject-index than those now available would write to the chairman stating their experience and their need.

Opinions were asked especially on the following points:

1. Would you prefer a list containing novels having subject value entered under the specific subject? For example, "Alton Locke," under Chartism ("Chaplet of pearls, under Massacre of St. Bartholomew; "Trilby," under Hypnotism;" "Phra the Phoenician," under Transmigration of souls), with references from the broader inclusive class-headings after the general plan adopted by Mrs. Dixon in her Index? or,

2. Would a list arranged under broad general heads, as Sociological novels, Psychological, Scientific novels, with the heading Historical fiction subdivided by country, with notes to bring out the specific subject covered by the book, better meet the need?

3. Would an author index suffice for these subject lists, or would an arrangement of authors and subjects in one alphabet be preferable?

4. Do you desire a select list of say 2000 or 3000 titles, or would one more broadly inclusive be preferred?

The committee's effort was rewarded by a result of 10 letters. Of these ten, eight desired a subject index of fiction; five of these were in favor of the first plan, an index with specific headings; three preferred a grouping under broad general classes. Four of our correspondents wanted an author index; two

an alphabetical arrangement of authors and subjects; one did not care for an author arrangement at all, and one inferentially did not care for it, as it was not mentioned. Five persons preferred a select list; two, one more broadly inclusive, one expressed no opinion on the matter. One of our correspondents writes: "I think a really well made subject-index of fiction would be of much practical value, but I have lost all faith in co-operative work unless it is in the hands of a clear-headed and strong-minded editor who would need to give a great deal of time to the work. I wish such a person might be found and that a good plan could be adopted, otherwise I do not think the effort worth while."

Another correspondent, not the librarian of a public library be it said in passing, protested against the whole undertaking in the following forceful words: "For goodness sake do your best to stop this nonsense of subject-indexing fiction. The novel should be read for diversion, not for information. To encourage the idle person whose reading is confined to fiction in the belief that information is being acquired, is a contribution to the pinchbeck culture of the day, of which, heaven knows, we are having a constantly increasing supply."

The committee is forced to the conclusion that there does not now exist any such demand for a subject-index to fiction as would warrant it in recommending that the American Library Association should include this among its activities for the present. It would seem, however, from the standing of the librarians who expressed a wish for such an index, that some of the progressive libraries are beginning to desire such an aid in their work, and that the time is undoubtedly coming when the demand shall have to be met by something more adequate than any of the indexes now in the field.

JOSEPHINE ADAMS RATHBONE.
BEATRICE WINSER.

Accepted and approved.

The secretary read a telegram of greeting and good wishes sent to Mr. Crunden on behalf of the Association, and a letter received from Mr. and Mrs. Crunden.

Under the direction of Mr. Albert T. Briggs the audience joined in singing two verses of "America."

The PRESIDENT: Naturally we turn to the state for an example of patriotism and we feel complimented to-day in having with us its highest officer. We feel complimented because the state took the precaution to send its lieutenant-governor ahead to see what sort of a body we were and whether it was safe for the governor to come. The report which the lieutenant-governor took back must have been satisfactory, because of all the invitations which the governor has received for to-day he felt that he could with safety and propriety accept the one which came from the American Library Association. I have pleasure in introducing to you the Governor of the state of Rhode Island, Honorable George H. Utter. (*Applause.*)

ADDRESS OF GOVERNOR UTTER

Gov. UTTER: Ladies and gentlemen, it is very true that the lieutenant-governor brought back flattering reports from this gathering. He told me that they had very large bunches of grapes down here, grapes so big that possibly two men could not carry them, but certainly one man and one woman could. (*Laughter.*)

I am particularly pleased to see you here; I am particularly pleased also to see so many people at one time in the state of Rhode Island and to have you all go home and tell your neighbors that the state was not crowded. There seems to be a feeling throughout the country that if we get two or three people in the state of Rhode Island we are crowded. Now we are not, are we? We shall expect each one of you hereafter to be an apostle of truth so far as it relates to the size of the state of Rhode Island. I am not inclined to ask whether you are all librarians. I hope that some of you are, and I am going to take it for granted that whatever you are you are here in the interest of libraries, and also, therefore, in the interest of truth, because no library can be complained of if it is based upon truth. We are very glad indeed to see you in the state of Rhode Island. It is a small bit of land in acres, but it is one of the largest bits of

territory in history and in principle. Massachusetts tried to steal it from us; Connecticut tried to steal it from us when they argued as to whether this stream of water that lies here at my left was the division line in the old charter. We have fought for this land and it is all historic ground. Of course you know that the birth of religious freedom was here. We like to pride ourselves upon it, although we do have to reflect that while we stood for religious freedom with Roger Williams, it took us almost a hundred years before we granted religious freedom to everybody who did not believe in the same way we did. There is another fact that even some librarians may not know. And that is that the first real Declaration of Independence was passed by the general assembly of the state of Rhode Island on the 4th of May, 1776, two months before that wonderful document was written in Philadelphia and was enacted. So you see that two great principles on which our whole government stands were born here within our own state. It has given of its men, it has given of its life in order that the country might live. It was among the first that struck a blow for original freedom. Its people were represented from Quebec to the Carolinas; they fought from Brooklyn to Stony Point; they were wherever trouble was, wherever there was a call for American patriotism; and during the late Civil War it was the second state in all the Union to send men to the front in proportion to its population. And to-day it is reaping the benefit of all that.

From the very first the state of Rhode Island has given largely to its educational work, and that is what you are engaged in. The man who looks at a library otherwise than as a part of a supplemental education has got a false notion of what a library is. Did you ever see an educated man, outside of the high school graduates, who ever thought he was educated? The man who recognizes the fact that his education is never complete, that is the man who is dependent on the work of libraries. A man goes through public school, college, university, then he enters into life. He finds one thing continually meeting him—he wants more information, he needs continued education. The library

does this supplemental work. In our own state money that is given by the state for public libraries is expended through the state board of education. There is about \$8000 every year expended on the libraries of the state. To receive this aid a library must be a free library, and it must also select its books from books which are approved by the state board of education, and only one-third of the money spent can be spent for fiction. Then we have also our state library. The state is therefore spending something like \$13,000 per year on its libraries, and it is spending it as supplemental education to the public schools.

Personally I don't know anything about libraries. As governor of the state I ought to know everything and I ought to give advice to librarians. That is one of the privileges of a governor. But there are two things I want to say to you in regard to libraries. I hope the librarians here will recognize two things regarding their work. Their work is their own opportunity. A man in a busy life wants help, he must know where to find the information, and he goes to a librarian for it. The work of a librarian, therefore, is not simply the knowing where information is to be found, but the ability to discriminate regarding the information which he passes out to a man or woman. It is not enough simply to know that a given fact is in this book, that a book is on that shelf, that certain books are in this section. It is necessary for a person who has ability as a librarian to know whether the fact in this book or the book on that shelf is what this man is seeking for; and the librarian who does that becomes a wonderful help to the man who is engaged in active life. This is a great responsibility. There is another opportunity for librarians. A librarian has a great deal to do with the selection of books; he owes it to a library to see that it is properly balanced. It is not enough that it should be a popular collection of books; it must also be balanced by books of reference.

And I want to ask if you are willing to give of your life to library work to help the young folks? One of my dearest friends was a man who yielded up his life almost twenty years ago; he was a clergyman; he

was interested in the community in which he lived; and among other things he persuaded a man to give liberally of his funds to establish in that community a library; it was in a small community noted simply because it was the center of a large lumber district. After this friend had been dead two years it was my privilege one day to stand in that library by the side of the librarian, and there came in at the door a small boy, barefooted and bareheaded, because he carried a soft straw hat in his hand, clad in an undershirt and a pair of overalls, and under his arm was a book. He walked up to the librarian, left his book, handed in a card, received another and went out. I turned to the librarian and asked, "Is that boy the exception?" And she said, "Oh, no, he is the rule." And I said to myself, "If this friend of mine has been called of God sooner than seemed for us the time for him to go, surely a man that has made opportunity for boys like that has not lived in vain." Now it is given to some of you librarians perhaps to direct these young people who are seeking to know more, who are looking for opportunities that are new for them. How are you going to direct them? What are you going to offer to them? Are you going to offer them the popular novel of the day, or are you going, little by little and step by step, to open to them the wonderful treasures that have come down to us in the printed book on the back of which is "Thackeray" or "Dickens" or "Longfellow" or "Lowell"? The boy of ten or twelve years old, mark my word, is just as susceptible to the wonderful story of Tiny Tim, or the story of the old Colonel Newcome, or the wisdom of the "Biglow papers," and to the beauty of the verse that flowed from our great American poet Longfellow, as he is to this cheap trash. It is for you people to shape that boy, to direct his mind. The state of Rhode Island is striving to instill into the minds of its boys the knowledge that equal opportunity comes to every American boy, that equal results can come to no American boy save as that boy makes equal use of opportunity. And as you go back to your homes, as you undertake to open the stores of the wonderful storehouses that are in your charge, may I ask of you simply

this: will you try to open for these young fellows the thought that American liberty, American ideals, American future, American possibility are only bounded by the use which the boy makes of opportunity. Opportunity is what our country lives for, and it is for the people with work like yours—whether it is being done in the library or the public schools, in the home or in the private life—to make the future of our country by inspiring in the minds of these young people the high ideals that make for purity, for manliness, for godliness. (*Applause.*)

The PRESIDENT: Governor Utter, your words only add to the obligations which we owe to those who have received us in Rhode Island so warmly, and we cannot let you go without expressing publicly our appreciation.

The program for to-day has more of a literary than technical flavor. We thought that we would like to see some of those men who had written books, as we have seen men who read books, and as we have begun with a word from the governor of the state, it is quite natural that we should be followed by the president of the state's great university, Dr. W. H. P. Faunce, the head of Brown University.

Dr. W. H. FAUNCE gave an address on

THE LIBRARY AS A FACTOR IN MODERN CIVILIZATION

(See p. 18.)

The PRESIDENT: The next speaker ought to be introduced to you as The Man Without a Name; but if I call him "The Virginian" I think you will recognize him. (*Applause.*)

Mr. OWEN WISTER read a paper on

SUBJECTS FIT FOR FICTION

(See p. 20.)

The PRESIDENT: The only disappointment that we feel, Mr. Wister, is that you did not tell us why you didn't fit the name to your hero. (*Laughter.*)

Because of the absence of Dr. Canfield I am somewhat embarrassed as to the way in which I should introduce the next speaker, Mr. Brander Matthews. Dr. Canfield and myself conspired to get an invitation to Pro-

fessor Matthews, to have him accept the invitation; he did accept it, and he came here expecting to find both conspirators, but one has gone. Dr. Canfield has fled, and now, in introducing Mr. Matthews, I can only place myself, as the remaining conspirator, at his mercy and leave him to do what he wishes with me and with you. Professor Brander Matthews. (*Applause.*)

BRANDER MATTHEWS: I am extremely glad that your president has stated that I am not a volunteer to-day. I was pressed for service. I came down to Narragansett Pier, as I have done off and on for nearly a score of years, expecting to rest, but Dr. Canfield said it was my duty to come here and speak on the Fourth of July afternoon, and I promptly accepted because I had an ulterior purpose; and then when I met your president and said that I thought this was an excellent opportunity to explain to you the advantages of simplified spelling, he said he thought you would rather have a patriotic Fourth of July speech.

As far as simplified spelling is concerned, I will say that there are some of our circulars still available here, and a full set will be sent to any library on application to The Simplified Spelling Board, No. 1 Madison Avenue, New York City. Now I close that subject.

Mr. MATTHEWS then read a paper on

THE INFLUENCE OF IMMIGRATION ON AMERICAN DEVELOPMENT*

President HILL: Professor Matthews, in behalf of the American Library Association I thank you for allowing yourself to be impressed into service. (*Applause.*)

After the audience had joined in singing "The star spangled banner" E. C. HOVEY read the

REPORT OF THE COMMITTEE ON WAYS AND MEANS

Your committee on ways and means begs leave to report as follows:

Its duties divided into two separate features, each having to do with an increase in the income of the American Library Associa-

*This paper could not be supplied for publication.

tion. The first has reference to an increase in membership. Your committee reports that it has issued a circular, addressed to libraries, their trustees, librarians and assistants, setting forth the past work of the Association and calling attention to other fields of usefulness awaiting development, asking finally for a more general support from those engaged in library administration. When your committee assumed its duties in September, 1905, there were on the membership roster exactly 1500 names. Of these, however, 426 were delinquent, not having paid their dues. To-day the Association counts 1677 fully paid members. These figures represent an increase in membership of 603 and in income of approximately \$1300. Personal effort, through visits or correspondence on the part of the chairman, of your committee, with the earnest co-operation of the publicity committee, has brought about this result. Your committee is firmly convinced that continued effort on the part of the American Library Association, through its officers and individual members, would result in a startling increase in membership. We take this occasion to urge all libraries, whose funds will permit of such disbursement, to be annual subscribing members of the Association, firmly convinced that such expenditure is no more than a just return for the benefit received. Not less than 500 libraries in the United States should be enrolled among us. Circulars but open the way to personal appeal. Each librarian should consider it to be her duty, not to the Association, but to her library, to see to it that the Association received its support through the annual payment of \$5. It is not conceivable that the trustees of any considerable number of libraries will decline such assistance, if only the librarians will place the matter properly before them. We have to-day 70 library memberships. We can easily have 230 one year from to-day if we but half try. As to individual memberships, a like gratifying result can be reached. Such membership to-day is 1828. The members of the American Library Association should see to it that the Handbook for 1907 shows a total enrolment of not less than 3000 members.

The other duty assigned to your committee

was the raising of a fund which should warrant your executive board in establishing permanent headquarters, where much valuable work, heretofore impossible of accomplishment, might be carried on. Your committee reports that it has received, either in cash or pledges, the following sums from the following sources:

Montreal.....	\$1000
Boston.....	3000
New York.....	200
Brooklyn.....	450
Chicago.....	100
Philadelphia.....	900
Pittsburg.....	250
St. Louis.....	50

Amounting to.....\$5950

From this total there should be deducted the sum of \$600 properly chargeable against this fund, leaving the net sum of \$5350 available for the purpose indicated.

Your committee is of the distinct opinion that the American Library Association should begin to help itself now that the public has so generously subscribed to the fund.

There is no reason why the American Library Association should not be self-supporting or largely so. It is much easier to raise money for those who have shown a willingness and earnest desire to help themselves. Several plans looking toward this end will be submitted for your consideration during the conference, and it is hoped that the members will give serious attention thereto and bring to their fulfilment the same earnestness and energy of action which they develop in their professional work.

In closing this work, the committee desires to place on record its sincere thanks for the hearty co-operation which has come to its members from individual members of the Association.

WAYS AND MEANS COMMITTEE,
By E. C. HOVEY, *Chairman*.

E. C. HOVEY: Before I take my seat I would like to say a few words, speaking personally. I have made out a statement showing all that needs to be done for us to have 3000 members one year from now. Of course the burden will be heavier on states like New York and Massachusetts than it will on

some of the other states whose membership in the American Library Association is still small. Massachusetts needs to add to the membership of the Association 150 members, and she will do it. New York needs to add to its membership 240 members. And I desire to say here that this is the first time in the history of the Association, unless it might have been during its early days, when New York had more members in the American Library Association than Massachusetts. For instance, if the state of Iowa will contribute 20 new members, and other states in like proportion, we shall have the 3000 members which we desire. Now are we willing to do this? Are we willing to sacrifice a little time in order that we may have a membership that will count?

Let me put this before you in a few words, because they are very important. To-day we are giving you three publications for your two dollars. We have out of that two dollars 80 cents left for administrative purposes. That is due to the fact that we are giving our members the Proceedings which are paid for by a very small membership. Increase our membership to 3000 and the cost of the Proceedings, instead of being 84½ cents, as they were last year, will be reduced to 50 cents, leaving in the treasury of the American Library Association 34½ cents for each member for the general administrative expenses of the Association. So that if we get together 3000 members one year from to-day, we shall pay our expenses liberally and shall have from \$2500 to \$3000 to apply to the sustaining of headquarters. There is the situation, fellow members, in a few words, and I hope—going back as I do 16 years to the time when I attended my first Association meeting, and remembering how we then raised a sum of money which has been bearing interest ever since—I do hope that I may hear from a few people here saying that they will pledge their states, their libraries, their library members, either to money or to new members, so that we may go away from here and feel that the work that has been done this year will be increased all through the next year. I trust, Mr. President, that you

will permit the meeting to respond for a short time at least to this appeal, which is very close to the hearts of the ways and means committee.

The PRESIDENT: Before asking for response I will merely say that the report will be accepted in the usual form.

C. A. NELSON: I wish, sir, to aid the fund for the American Library Association by putting into its treasury one dollar for every year of my service since I began library work. (*Applause.*)

Miss HITCHLER: The ladies will never follow that example. (*Laughter.*)

The PRESIDENT: Then rise above it.

LOUIS N. WILSON: I would like to pledge Clark University Library, of Worcester, Mass., for membership at \$5 a year, and I want to say that when I get home I intend to call my staff together for a general discussion of this meeting and try and find out what they got out of it and what criticisms they have to offer, and I am also going to try to get each member of the staff to join the Association. I will also say, with Mr. Nelson, that I will give one dollar for every year that I have been a librarian, to this fund. (*Applause.*)

Mr. SOULE: I want to speak as a member of the Publishing Board, to suggest to the librarians present a reason why they should pay more this year than ever before. Heretofore we have been very willing to give our two dollars membership fee knowing that the return we got was the annual conference, the inspiration and fellowship that we got here. In the future we hope to have also a headquarters, to continue that work from year to year right through the year, to maintain a place to which you can report your troubles and difficulties with the assurance that they will be answered; a place where interest will be taken in all that you are doing during the year; and it seems to me that you individually can well afford to urge your fellows to join the Association and that you can put before your trustees not only the advantage but the necessity of taking library membership.

Mr. RANCK: I think the members here present would be much interested to hear a word

or two from Mr. Hovey with reference to the plans for headquarters. The report said very little about that. A knowledge on the part of members of what can be done and what is expected to be done at the headquarters is essential to the success of this work, so far as getting libraries to join is concerned. The library which I represent has joined the American Library Association, and we expect to have a full share of the libraries of Michigan and of the individual librarians from Michigan, and more too, added to the membership of this Association during the coming year. But I should be glad if Mr. Hovey would say a word about the work to be done by headquarters. From our own point of view I will say that during the past year there have been single days and single weeks when inquiries that have come to our library have required the writing of from four to ten letters. On one day as many as four letters were written about matters relating to the general work of the Association or to the work of libraries in general. Such letters should come from a general headquarters, and to that extent a permanent headquarters would be an advantage and a saving to the libraries throughout the country and at the same time would give a unity to the whole library movement.

Mr. HOVEY: This is not within the purview of the committee on ways and means. There is a committee on permanent headquarters and above them is the same body from whom we get our being, namely, the executive board, who form the plans.

The PRESIDENT: The president would say that the executive board has the matter of the work to be carried on at headquarters under consideration, and has been waiting for this good report from the ways and means committee, because without the ways and means we cannot go very far.

C. W. ANDREWS: It might be well for those members of the Association who have not followed the discussion on the question of permanent headquarters, to know that there is in print, in the Proceedings of the St. Louis Conference,* the plan of the perman-

ent headquarters committee, which outlines some eight different lines of activity which that committee, not composed of enthusiasts, but rather of men who would look at propositions calmly, thought possible with moderate means.

The PRESIDENT: That report was made to the Council, I think, and not to the Association.

It will now be as interesting to hear the report of a committee whose relations are somewhat close to that of the committee on ways and means, a committee which has done so much this year to make the work of the Association known throughout the country. I ask for the report of the committee on publicity, Mr. John C. Dana, chairman.

Mr. DANA: This report has very little—almost nothing—to say about the reasons for publicity. We do not attempt to argue the question as to whether or no it is wise for the librarians of this country to make known to the people at large the fact that there are public libraries and college and university libraries, and to make known also the purposes for which they exist. I would say, however, that the report just made by Mr. Hovey seems to fit, as your president has just said, very admirably with our report, for the work that Mr. Hovey and his committee wishes to do—that of raising money—depends, of course, almost entirely on the general public interest in library work. That public interest is born only of knowledge, and the general idea of your publicity committee is not simply to advertise libraries, but to let the people at large know what libraries are, what they are trying to do, in order that, as the result of that knowledge, they may have an interest and a corresponding sympathy in their work and a willingness to help them.

Your committee was first named last August. It was first constituted in October; but in its present form, consisting of myself as chairman, Mr. Wright and Mr. Ranck, it was not formed until March of the present year. Consequently as a committee we have had only a few months to work. During that time the report shows what we have attempted to do.

*Papers and proceedings, St. Louis Conference, 1904, p. 249-250.

Mr. DANA read the

REPORT OF THE COMMITTEE ON PUBLICITY

The committee have written to librarians, editors and others several hundred personal letters.

They have helped to plan and put through the press nine reprints of Portland Conference papers.

They have distributed to journals 1600 of these reprints, most of them accompanied by typewritten notes.

They have sent out 900 copies of different library news letters to several hundred different journals and papers. They have compiled a list of the newspapers and literary and educational journals, 100 in number, which they thought most ready to print library news. This list they have sent to 232 libraries and asked those libraries to send to the papers on the list copies of their last annual reports. From these librarians they received a total of 79 replies, of which 56 were favorable and 22 unfavorable. This means that about 4000 library reports have, on the suggestion of this committee, gone to newspapers and journals.

They have prepared a list of reprints of the Portland Conference and distributed to libraries, newspapers and individuals 1400 copies of the same.

They have sent to 66 librarians a request that they establish a column or department of general library news in some of the leading papers in their respective cities and states. To this they received a few favorable replies.

They have sent a second letter to the same persons requesting information about all the library news columns already established. The replies to this and other queries show that about 16 newspapers and journals now print with considerable regularity items of library news. Their names are as follows:

New York State
Albany Argus
New York Evening Post

New England
Boston Evening Transcript
Providence Journal
Lewiston (Me.) Journal
Springfield Republican

Missouri
St. Joseph News-Press
St. Joseph Star
Sedalia Democrat

Kansas
Topeka Daily Capital

New Jersey
Newark Evening News

Iowa
Des Moines Mail and Times

Michigan
Grand Rapids Herald
Grand Rapids Evening Press
Grand Rapids Daily News
Traverse City Eagle

They have compiled a revised list, in three parts, of newspapers and journals to which they think it best to send reports and news items. These three parts cover respectively the East, the middle West, and the far West and South. A copy of this list is appended hereto and made a part of this report.

They have sent to 34 of the persons who take part in this Conference asking for copies of their papers or reports or abstracts thereof, or outlines of meetings they are to conduct, for use in reporting the meeting itself. In answer to this, 25 people, prior to the meeting, sent in papers, reports or abstracts.

They sent to 300 librarians a circular letter about the Portland reprints, saying that they had been published and that very few copies had been purchased.

They sent to 300 librarians and assistants a request that each send to his or her local paper at least one letter or report about the Conference from the Conference itself.

To this they received (June 28) 50 replies, of which 47 are favorable.

They arranged with Dr. G. E. Wire to report the Conference for the Associated Press, finding the Associated Press most courteous and ready to aid the Association in every way in its power. They sent to all who take part in this Conference—over a hundred—a second letter June 28, asking them to hand copies of their papers or reports or abstracts thereof at once to Dr. G. E. Wire.

They sent to the Associated Press, June 26, notes on this meeting and a number of papers and abstracts and reports.

They sent on June 27 a note of reminder

to the 47 people who promised to send letters from the Conference to their home papers.

The committee recommend:

1. That the work it has been doing be continued at the central office or headquarters of the Association.
2. That this work cover the following, among other, things:

- a. Acquire, advertise and distribute, in part free, not less than 24 reprints of papers read at this meeting. These reprints to be without covers, and each to be accompanied by a sheet of information about the other reprints, the Association in general and especially its publications.
- b. Advertise widely the Association's publications of every kind.
- c. Establish centers throughout the country, usually by an agreement with an individual librarian, for the distribution of library news. Urge library commissions to become such centers; and if they publish bulletins to have full news departments and ask librarians to contribute thereto.
- d. Gather and distribute, first to certain journals, next to the centers mentioned, library news.
- e. Establish general and local library news columns and departments in newspapers and magazines. In doing this make it plain that library news in a given city or town need not be confined to news of the local library. This point the committee has found it difficult to make clear, even to those willing to try to establish library departments in local papers. Subscribe for 10 copies of *Library Journal* and *Public Libraries* and mail direct to editorial writers on important papers.
- f. Publish at an early date a library newsletter, after the usual style of such publications, and send same to selected papers in each state marked released for publication on specified dates.
- g. Prepare news notes for the publishers of ready-printed parts of country papers.
- h. Secure articles by special request from individuals, topics to be chosen by the central office or the writers, and offer same at appropriate times to the journals for which they seem especially adapted.
- i. Urge the Publishing Board so to change the name of the *A. L. A. Booklist* that it will indicate plainly its purpose.
- j. Urge the Publishing Board to change the form of the *Booklist* by doubling the size of its page, and to include in it all official news of the Association.

- k. Keep a complete record of all library news columns which appear with fair regularity throughout the country.
3. That those who prepare material for the press avoid library technique for the most part and place stress on books, journals and writers.
4. That librarians remember that in many towns more could be made in the local press of the resources of periodical literature. Many reading rooms are looked after by people who know little of the riches that pass through their hands. More references could be made to the wealth of technical and scientific information which comes to us in this way.
5. That we remember that a few of the great libraries of the country are of national importance and in any town can be occasionally be written up in the local press—for example, the Congressional, the New York, the Boston, the Harvard, and in the West the Crerar and the Wisconsin Historical.
6. That more general library news be printed, if possible, in the bulletins of library commissions.
7. That the *A. L. A. Booklist* print occasionally lists of topics suitable for discussion in the public press like

The Publishing Board, its activities.

Education for librarianship to-day.

The "A. L. A. catalog": distribution to date, future plans.

The *A. L. A. Booklist*.

The State Library Commissions and the League thereof.

The state libraries and their association.

The price-of-books question.

The quality of bookmaking.

Bookbinding.

The Library of Congress.

Work with schools.

The public school teachers' working knowledge of books.

The library assistants' working knowledge of books.

The catalog and printed catalog cards.

The old-fashioned librarian and the new.

The growth of medical libraries.

Libraries and museums.

The college student's working knowledge of books.

The volume of proceedings of the A. L. A.

8. That every library which prints an annual

report be urged to send copies thereof to newspapers and journals, to as many and of such a character as the size, importance and location of each library make advisable.

9. That all library associations be urged to devote some of their energies and a part of their income to making known in their respective states or cities the existence, work and purpose of libraries.

9a.

That the library schools add to their courses one on how to prepare material relating to the library for the press.

10. That those who are sensitive about publicity and have a little instinctive aversion to it, remind themselves that shyness is as often the child of a conceit that does not dare as of a conceit that is unduly proud; and also that taxes are paid by people who wish to know how they are spent and like to know what librarians are doing with their share of the public funds; and also that the librarian is as much in duty bound to make known to his public the value and utility of the library he is building as is the author to publish the book he is inspired to write.

10a.

That publicity for the library and library affairs in general may be so managed as to have little reference to the local librarian himself.

J. C. DANA,
S. H. RANCK,
PURD B. WRIGHT.

Report accepted and its recommendations adopted.

The PRESIDENT: The chair would state that the committee on permanent headquarters has no additional report to make. Dr. Putnam, the chairman, is not here; but I would ask a member of the committee, Mr. Andrews, to say a word for that committee.

COMMITTEE ON PERMANENT HEADQUARTERS

Mr. ANDREWS: The committee on permanent headquarters considers its function as advisory on the general policy of the headquarters, on the projects to be carried out and not on the details in which they are to be

carried out. Therefore, its chief report is the one to which I have already alluded, which is in print. The committee has seen in the years since then only added reasons for its conclusions there stated as to the necessity of many of these activities, and I think that its members are most heartily in favor of the establishment of headquarters as soon as the executive board feel that it will be safe financially to do so. The distribution of power between the three committees, of ways and means, of permanent headquarters, and of the executive board of the Association, may not be plain to the Association at large, but it is very plain to the members of the committees, and, therefore, unless a man happens to be a member of all, as I do, he is careful not to trench on the field of his colleagues. I can speak, therefore, perhaps, a little more freely than the chairman. We have made no formal report because we have nothing new to propose. Anybody who has any suggestion for the work of the Association headquarters should send the suggestion to Dr. Putnam, the chairman, who will secure the opinion of his committee on its desirability and will ask the executive board to carry it out if they can.

ADVANCE PRINTING OF CONFERENCE PAPERS

Mr. DANA: I would like to make a motion of considerable importance, and perhaps you may feel that there are not enough of us here to pass upon it without more consideration than we can give it now. But the publicity committee has found in the course of its work, and especially since we came here, that we have been very much hampered in what we would like to do by the fact that we could not get, in sufficient time, advance copies of papers that are to be presented here. If we could have had in type two weeks ago all the papers that have been read here they could and would have been sent over the country, partly by ourselves and partly by the Associated Press, and printed in a large number of newspapers; not all of them, of course, in full, some of them not at all, but not a few of them would have received respectful consideration by papers in the larger cities in the West. Now I want to suggest

that hereafter papers be received and passed upon by the executive board at least two weeks before the date of the meeting; that they then, in accordance with the wishes of the executive board or the headquarters people, be put into type and distributed through the country, as may seem fit. I will therefore make the motion that hereafter papers that are to be presented at meetings of this Association shall be placed in the hands of the executive board at least two weeks before the date of the meeting.

Mr. LOUIS N. WILSON: I second the motion.

Miss AHERN: I am very glad indeed to hear Mr. Dana make that motion. There has always been considerable trouble in finding out before meetings what was to be and what was not to be on the program. I know, from my connection with the National Educational Association, that no paper may be read before that association that is not only not in the hands of the secretary's department, but is not also accompanied by an abstract for the use of the Associated Press. There seems to be no good reason why this precedent should not be followed by the American Library Association, and I should like to ask if it be possible to have this matter referred to the Council with the request or with the intention of having a by-law added to the constitution to the effect that no paper be read before the Association whose author is not present and does not read the paper. That is also one of the rules of the National Educational Association.

Mr. ANDREWS: I wish I could think that Mr. Dana's motion was something more than a pious wish. I have had some experience as secretary of a society in trying to get papers before they were read, for the proceedings. I think that we ought to have some such lever as he proposes, but in its exact wording I am afraid it is rather peremptory and demands decidedly too long a time. I do not see why he mentions two weeks. If papers are in the hands of the secretary at the beginning of the conference it would seem to me a reasonable provision. The two weeks before a conference meets might change many a man's ideas on a subject, and I think several speakers might re-

fuse an invitation to address us if they had to present their address in writing two weeks before the convention met.

Mr. DANA: To have the papers here only at the time of the conference would not produce the effect we desire. We need these papers in order that news may be sent about the country as the executive board sees fit. It does not necessarily follow that every paper that is presented will be sent out by the executive board, nor will it be necessary for the executive board to send out any paper whose author does not wish to have it sent out; and I do not think there would be any difficulty about allowing an author, after he has turned in his paper, to make any changes that the rapid march of events during the last two weeks before the Association meeting seems to him to demand.

Mr. HENRY J. CARR: I am heartily in accord with the point Mr. Dana desires to obtain. It does seem to me, knowing the spirit of our constitution, our method of working, that that is a matter that should be relegated to the Council for decisive action in the shape of a by-law; that our vote should be in the nature of a recommendation to the Council and not an action to bind the Association.

The PRESIDENT: The chair would like to state from experience that we ought to creep before we walk; that this year we have a program on a little different plan, and we have attempted to get abstracts from all the writers. We did not succeed except in part, and it was with some difficulty that we got these in time for inclusion in the program. The start has been made and it will be easier another year to carry on the work. I would ask whether the same end would not be reached if, instead of making this compulsory, the matter be referred to the Council as the expressed wish of the Association, and that the Council take it up as Mr. Carr has suggested?

Mr. DANA: If it is true that when we say we want a thing done it is just the same as saying that we would like to have the Council think of it, then we might just as well say we would like to have the Council think of it, and I think Mr. Carr is right about it. We cannot say in this meeting that we want

to have anything done. We direct the Council to do something and the Council take it, no matter how we may direct them, as a recommendation. That is the way we have arranged the thing and it seems to work in most cases very well. I will, in accordance with Mr. Carr's suggestion, change my motion to this: "That the Association recommends that the Council secure the passage of a by-law, which shall say that papers to be presented at this Association must be in the hands of the executive board at least two weeks before the date of the meeting."

Now I do not go on to make exceptions of persons whom we ask to deliver informal addresses like those we heard this afternoon. I take it that the executive board and the Council are people of ordinary good sense, and it is not necessary to lumber up the by-law or my motion with any exceptions of that sort. As the matter now stands, it is a recommendation of this meeting to the Council to see that a by-law is passed, providing that papers shall be in the hands of the executive board at least two weeks before the date of the meeting at which they are to be presented.

Motion accepted by seconder as amended and carried.

HENRY J. CARR read the

REPORT OF COMMITTEE ON AMERICAN LIBRARY ASSOCIATION EXHIBIT AT JAMESTOWN EX- POSITION

This special committee, at the outset of its term, had some correspondence with certain heads of departments engaged in organizing the exposition, in an advisory way relative to sizes and form of printed matter intended for distribution to visitors there. Judging by the instances of that nature which have thus far been sent out for publicity purposes, however, it cannot be said that the recommendations of the committee had much effect.

The committee, when together at Atlantic City in March last, discussed the various phases and possibilities of an exhibit in behalf of library interests. There has also been considerable correspondence between the chairman and the members, and with some other persons, by way of gathering suggestions.

Mr. William Henry Sargeant, librarian of the Norfolk (Va.) Public Library, urged that a collection and exhibit of "Virginiana" be made, including both early books about Virginia, books by Virginians, and books published in Virginia. Mr. John P. Kennedy, librarian of the State Library of Virginia, expresses great willingness to aid in the preparation and making of such an exhibit; and the committee is unanimous in the opinion that any exhibit of that kind (that is to say, books, prints, etc., which though kept in libraries are historical more than bibliographical), had better be committed entirely to the state library.

The agreed recommendations of this committee touching any exhibit to be made by the American Library Association (if such may be decided upon, and funds provided for meeting the expense thereof), are as follows:

1. *Books.* In one corner a small number of books of different kinds—say 50 altogether. No children's books here, but technical books to be included. All books to have a simple book-plate, and be pocketed for Browne charging system; also labelled on outside. Classification by D. C. and E. C. (half and half), with Cutter numbers from two-figure table. Fiction without call numbers, and biography with plain Cutter numbers. Shelves to be labelled.

2. *Desk.* By this corner a simple desk, with charging tray for Browne system, and the ordinary equipments of clips, etc. If this room is to be unguarded, whole desk could be covered with showcase top.

3. *Children's corner.* Second corner with low case for children's books, with careful selection; arrangements like that of books for adults. Low table and small chairs near, with picture books. Bulletin for children, on wall near by.

4. *Wall space.* Work with schools. Lists of school room libraries, and clipped accounts of work.

5. *Wall space.* "Making the library known." Selected "Information for borrowers," from several libraries. Selected copies of library bulletins. Selected copies of library lists, mimeographed and written, showing different ways of telling people of books. Picture bulletin with reading list. Social library notices, invitations, and signs meant to help readers. Newspaper clippings, showing notes of library.

6. *Wall space.* "Some American libraries." Selection of photographs of interiors and exteriors.

7. *Table*, with selection of good library reports, samples of *Library Journal*, *Public Libraries*, A. L. A. publications, the "A. L. A. catalog," and other library "helps." If these must be guarded, lock in a showcase, from which they can be had for examination on application.

8. *Standing newspaper rack*.

9. *Periodical rack*.

The whole space should be made to look as informal and inviting as possible. In gathering material, other things will doubtless come up. The intention of this plan is to suggest the public library as an *active* educational agency, rather than merely a depository of books and a user of mechanical devices.

There should also be included, as a further feature, some characteristic cases of travelling libraries from those put forth by the Seaboard Air Line Railroad under the direction of Mrs. Heard, and from the State Library of Virginia, both of which are understood to be typical of such work and instructive in kind. Graphic charts that would catch the attention of casual visitors, and small pamphlets on prominent library topics that those interested can carry home, might be added to good purpose.

It is possible that the necessary furniture may be loaned as a business matter by manufacturers of such specialties; and perhaps the desired books themselves contributed by publishers and others. If so, the chief item of any other cost would be that of installation through the personal visit of some one; and more or less oversight, or attendance, during the period of the exposition.

It is not yet known how much space can be had for placing a library exhibit as recommended above; nor whether the exposition authorities, or others, would make appropriations towards the expense.

It is further recommended that the executive board again appoint a special committee on the proposed library exhibit; one or more of whom should be situated as near the exposition as possible. The members of the committee now reporting are so distant and scattered that it is hardly practicable for them to do this work. The committee recommend also the adoption of a resolution in favor of the suggested collection and ex-

hibition of "Virginiana" by the State Library of Virginia.

HENRY J. CARR,
ISABEL ELY LORD.

The resolution recommended is as follows:

"Resolved, That the Council of the A. L. A. cordially commends the proposed collection and exhibition, by the State Library of Virginia, at the Jamestown Exposition of 1907, of 'Virginiana' to include both early books and printed matter about Virginia, books by Virginians, and books published in that state."

Accepted.

W. R. EASTMAN read the

REPORT OF COMMITTEE ON LIBRARY ADMINISTRATION

(See p. 146.)

Mr. Andrews, first vice-president, took the chair.

Voted, That the report be accepted and referred to the Council with recommendation for adoption.

Adjourned.

FIFTH SESSION

(BALL ROOM, MATHEWSON HOUSE, THURSDAY AFTERNOON, JULY 5)

The meeting was called to order by President HILL at 3 o'clock.

ADELAIDE R. HASSE read the

REPORT OF COMMITTEE ON PUBLIC DOCUMENTS

(See p. 140.)

Accepted and recommendations referred to executive board.

Miss HASSE: It has occurred to me since writing this report, in talking to some of the librarians here, that instead of a committee reporting regularly on public documents, it might be advisable to provide on our programs, among the various sections, a permanent place for the discussion of public documents, an opportunity which is not given after the reading of a general report at a general session. If such provision were made, questions could be brought up by the

people most concerned, difficulties that are met in daily work, for there is really no provision on a general program for such discussion. (*Applause.*)

W. L. POST: I suppose, as acting Superintendent of Public Documents, I take a more vital interest in this question than probably any one else in the room. There should be at least 487 librarians in this country, who also take a lively interest in public documents, as that number receive gratuitously from the United States Government a very valuable collection of state papers. I want to emphasize one point, which I was requested to emphasize to you by the congressional joint committee on printing, in a conversation a few days ago with the secretary of the joint committee, of which Senator Platt is the chairman. The question of distributing public documents came up and the matter of redistribution of government publications was referred to. I was forced to admit that the librarians of the country, not only designated depositories but other libraries, were abusing the privilege of receiving government publications. For instance, government depositories are to receive everything printed for the executive departments for distribution, and it is the endeavor of the Public Printer and of the Superintendent of Documents to furnish these libraries with everything printed that comes under this head; but the libraries do not wish to retain everything that is sent them under this head. Yet when we send out circulars asking if they will allow us to discriminate for them, or if they will send us lists so that we may know what they want, they refuse absolutely to do this, thinking, no doubt, that the franking privilege costs Uncle Sam absolutely nothing. I should like to say that it costs us 5 cents a pound to send or take back public documents. So when you request us to send you everything, and then you look it over and request the Superintendent of Documents to send you franks and sacks for the return of what you don't want, you are causing great expense to the government. If you will furnish the Superintendent of Documents with lists of those publications you find most desirable (omitting the sheep set, which we will not allow you to break), we

will be glad to see that you do not get superfluous matter. But if you continue to demand everything I am afraid that the committee on printing, in this age of reform, will cut down your privileges and that you won't get as much as you are getting now. I only give this as a warning.

One word more, and that is this: I heartily approve Miss Hasse's suggestion that there be made possible some discussion of public documents during these conferences. I hope the matter will receive attention.

The PRESIDENT: The subject chosen for the present session is one of the greatest importance to librarians throughout the country — library architecture. The program committee has secured speakers who represent different phases of the subject. The consulting architect is to be heard, the librarian is to be heard, the architect as an individual and as a member of an architectural commission presents his views, and we are to hear from one of our old members who has given the subject more thought and attention probably than any other member. We will now take up this subject.

RAYMOND F. ALMIRALL read a paper on

DESIGN AND CONSTRUCTION OF BRANCH LIBRARY BUILDINGS

(*See p. 46.*)

CHARLES C. SOULE read a paper on

THE NEED OF AN AMERICAN LIBRARY ASSOCIATION COLLECTION OF LIBRARY PLANS

(*See p. 45.*)

BERNARD R. GREEN read a paper on

LIBRARY BUILDINGS AND BOOK STACKS

(*See p. 52.*)

W. H. BRETT read a paper on

LIBRARY ARCHITECTURE FROM THE LIBRARIAN'S POINT OF VIEW

(*See p. 49.*)

Prof. A. D. F. HAMLIN read a paper on

THE VIEWS OF A CONSULTING ARCHITECT

(*See p. 57.*)

Mr. WILLIAM ABBATT: There may have been a use actually made of the prism form of light in library practice, but I have never seen it. In commercial matters it is very widely used, and it seems to me it would solve many of the problems of light for library use, and meet to some extent the criticisms or suggestions of Mr. Green. It solves the question of shade also, because the light coming through the prism light, as it is called, is mellowed and the glare of the sun is taken away.

Mr. DUDLEY: Mr. Soule has been so long known as the author of the Ten Commandments of library architecture that nobody was surprised at the valuable paper which he read here to-day. The American Library Association, as some of you may have been told, was formed thirty years ago. It has had committees working on nearly every subject of activity in the line of library economy except architecture. The papers read this morning are worth more than all that has been said on that subject at other conferences. I believe that we should take up the matter of library architecture in a thorough and systematic manner through a committee, following the suggestions made by Mr. Soule, and I therefore move that the executive board be requested to appoint a committee of five on architecture.

Dr. E. C. RICHARDSON read the

REPORT OF COMMITTEE ON INTERNATIONAL RELATIONS

This committee is the lineal successor of last year's committee on international federation and was appointed at the suggestion of the chairman of that committee, Dr. Putnam. It consists of Cyrus Adler, J. S. Billings, W. C. Lane, Herbert Putnam and E. C. Richardson, chairman. The committee last year reported that the overtures as to the practicability of some formal international co-operation or federation had resulted in pleasant communications, but not in any practicable scheme for formal union, and that no definite suggestions for international co-operation had been made save as to matters of a possible co-operation in the indexing of

periodicals, and uniformity of treatment in regard to cataloging rules.

As a matter of fact, enterprises in both of these suggested lines were then and are still going on, and I have the honor to report for the committee this year progress both as to international cataloging rules and on the "International catalogue of scientific literature."

International Catalog Rules

A special report will be made on this subject by the A. L. A. committee to the Publishing Board. It will be enough to say here that the English rules and the advance American rules have been worked over together carefully by each committee, and have been brought into accord at a great number of points, so that there remain less than a half dozen points of positive disagreement at the present time. It is hoped that an edition of rules will be printed in the near future and that this will contain not more than four cases which differ so far that both rules need be printed.

Great skepticism was expressed by the officials of the Gesamtkatalog last year over the possibility of any understanding between Germans, English, and Americans in this matter of rules, but discussion with the very representatives who expressed this skepticism last year has brought out the fact that a certain amount of approaching in this regard is not inconceivable, even with continental libraries.

International Catalogue of Scientific Literature

The matter of the International Catalogue of Scientific Literature, although in no sense an A. L. A. enterprise, has always been steadily kept in sight by this Association, and particularly through Dr. Adler, who is connected with the enterprise, and who is a member of this committee. He reports regarding the state of the enterprise and its new lease of life for five years as follows:

The most important recent event connected with the International Catalogue of Scientific Literature was the meeting of the First International Convention in London on July 25 and 26, 1905.

In the International Convention is vested the absolute control of the catalogue, and at this meeting, among other questions considered, were whether to continue the publication beyond the first period of five years, and also to decide as to the value and efficiency of the classification schedules used during the first period and what improvements, if any, were needed in them.

As to the first question it was resolved:

"That in view of the success already

Voted.

achieved by the International Catalogue of Scientific Literature and its great importance to scientific works, it is imperative to continue the publication of the catalogue at least for a further period of five years."

The growing appreciation shown for the work among scientific investigators has fully demonstrated the need of this index to scientific literature, and the success of the undertaking seems now assured, as sufficient guaranteed subscriptions have been made to support it for the second period, that is from 1906 through 1910.

The catalogue may be said to have passed the experimental stage, and to have become the standard international reference work to general scientific literature.

The zoological section of the catalogue has absorbed the *Zoölogical Record*, and beginning with the index to the literature of 1906 this old and famous year book will be published in connection with the zoological volume of the International Catalogue. This consolidation of interests is a cause for mutual congratulation.

The staff in charge of the *Zoölogical Record* will be able to eliminate the expense and labor connected with the publication and distribution of this year book and save also to a large extent the trouble of collecting and classifying the necessary data. The various Regional Bureaus will prepare the references and submit them for approval to experts of the Zoölogical Society of London, who in the future as in the past will be in charge of the *Zoölogical Record*. The International Catalogue will by this method gain the services and advice of some of the foremost zoölogists of the world.

The classification schedules, which are the vital and essential means by which a vast literature is rendered instantly available to specialists, naturally received full consideration by the convention, who by the advice of the makers of the catalogue authorized many minor and some important changes and additions to be made. These changes will go into effect with the cataloguing of the literature of 1906.

After an experience of over five years the original schedules have proved their worth and the wisdom of their framers, but experience has pointed out many unfilled needs and the necessary changes will be made.

Since the beginning of the undertaking in 1901, 57 volumes of the catalogue have been published. Some idea of the amount of scientific work being done may be gained by the fact that from the Smithsonian Institution are now being sent to the London Central Bureau to be incorporated in the catalogue about 25,000 references each year.

Some members of the committee, and a good many other librarians, have expressed themselves to the chairman of this committee as greatly wishing that the index might be compiled and issued in a form more useful to libraries. It is not universally felt that the confidence of Dr. Adler and the makers of the index in its essential practicability is wholly justified, although the present accomplishment and more splendid possibilities of usefulness are very generally recognized, and the wish to have its scope extended to historical and other learned periodicals very widely expressed. The thing to be desired is that all learned periodicals should, after due study of the experience of this index, be indexed in one consistent method under one central organization.

It is not felt, in view of the responses last year, that any attempt at organized federation with foreign associations is practicable, but it is felt that we may properly urge the appointment of committees of foreign associations similar to this committee, and that by the selection for these committees of members who may be by way of visiting and comparing notes, some valuable methods of co-operation may be developed.

It is suggested by Mr. Lane, and many will agree, that the most important single matter with which this Association should concern itself internationally and at once is some effort to secure from some German source the printing of cards for German publications in such form that they may be of use to and obtained by American libraries.

By far the most interesting and far reaching matter which has come to the attention of the committee during past years is the overture of the German Government to the United States Government in behalf of a proposition to take part in the direct international lending of manuscripts and printed documents, according to a suggestion made by the Royal Prussian Academy of Sciences. This proposition is in effect to extend to American libraries the same system of exchange which now exists between various European nations. It contemplates mutual loan, under proper conditions and safeguards, at the expense of the borrowers, of such manuscripts or documents as may properly be

loaned. This proposition was submitted by the Department of State to the Librarian of Congress for an expression of views, and he reported, expressing appreciation of the value of the proposed system and indicating the willingness of the Library of Congress to act as intermediary exchange, under certain circumstances, when the exchange would not be better made direct, and to furnish such information as would facilitate the exchange for those institutions which are prepared to undertake it. He also agreed to communicate the undertaking to the American Library Association at this meeting and has done so by transmitting a copy of the correspondence to this committee.

It is a matter of extreme congratulation that this beginning should have been made in a matter which has been recognized at our meetings, and is generally recognized among scholars and in institutions of learning, as one of great possibilities of scientific profit.

It must be confessed that we in America are more by way of getting than of giving in such exchanges; but, on the other hand, the increase of manuscript collections in this country has been rapid in recent years, and there are now many thousands of manuscripts in this country which might be wanted by a European scholar, and might suitably be loaned, so that some reciprocity at least can be made.

It is suggested that in the acceptance of this report the Association should express its gratification that the proposition to extend the system of exchange of manuscripts and printed documents to American libraries has been made, and should express also its hope that the American government will see fit to further in every practicable way the adequate inception and operation of the system.

E. C. RICHARDSON,
For the committee.
Report accepted.

W. C. LANE: I should like to move that the Association express, through the Librarian of Congress and the Department of State, to the German Government its appreciation of the offer which has been so generously made.

The PRESIDENT: Under the rules the mo-

tion will be submitted to the committee on resolutions for formal draft, but I will put it as made by Mr. Lane.

Voted.

H. E. LEGLER read the

REPORT OF COMMITTEE ON LIBRARY TRAINING

(See p. 175.)

Report accepted.

Mr. ANDREWS, first vice-president, took the chair.

Mr. LANE: May I make a motion in connection with the report of the committee on international relations? I, for one, should like very much to see some definite steps taken toward realizing the suggestion which was made in that report—the possibility, that is, of some German Government department or library being induced to do for current German books what the Library of Congress does for current books here. It would be a useful step in the development of German libraries; but what interests us mainly, of course, is the advantage it would be to American libraries if, when we import German books, we could import cards to catalog them by. I move that the executive board be requested to take up in whatever seems to it to be the proper way the matter of inducing the German Government to print cards for current German publications.

Dr. RICHARDSON: Would you accept as amendment that the executive board instruct the committee on international relations or the corresponding committee, if appointed for another year, that it make a special effort to have this done?

Amendment accepted and motion carried.

Adjourned.

SIXTH SESSION

(BALL ROOM, MATHEWSON HOUSE, FRIDAY MORNING, JULY 6)

President HILL called the meeting to order at 9.30 o'clock.

PERMANENT HEADQUARTERS

President HILL: You will be pleased to know, I think, of the decision of the execu-

tive board, as reported to the Council last evening, to the effect that American Library Association headquarters will be opened as soon after the 1st of September as it is possible to secure adequate quarters, and that Mr. E. C. Hovey has been selected to be in charge of the headquarters. (*Applause.*)

A. L. BAILEY read a summary of the report of the tellers, giving results of

ELECTION OF OFFICERS

Total vote cast, 384.

President: C. W. Andrews, 353; (scattering, 5).

1st vice-president: E. H. Anderson, 348; (scattering, 7).

2d vice-president: Katharine L. Sharp, 345; (Mary W. Plummer, 1).

Treasurer: George F. Bowerman, 240; (Drew B. Hall, 107; T. L. Montgomery, 5).

Recorder: Helen E. Haines, 324; (Josephine A. Rathbone, 5).

Trustee of Endowment Fund: D. P. Corey, 345.

A. L. A. Council: Alice S. Tyler, 297; Purd B. Wright, 284; Herbert Putnam, 277; George S. Godard, 241; T. W. Koch, 207. (H. G. Wadlin, S. H. Ranck and Isabel Ely Lord received from 117 to 194 votes each.)

The *PRESIDENT:* At the moment I will only congratulate Mr. Andrews upon his election to the highest office in the gift of the Association and at the same time congratulate the Association upon the excellence of its choice. (*Applause.*)

C. W. ANDREWS: Mr. President, when I shall take over the commission which you lay down I shall do so with pleasure, as coming from a personal friend, and with pride in being the last to fill the roll of presidents; and I hope that I may be able to show to the Association my appreciation of the honor. To you, ladies and gentlemen, I can only say, with all sincerity and earnestness, simply the words I thank you. To this Association I owe many of my warmest friends and many of my most pleasant acquaintances, much of my professional advancement, and a great deal of my professional knowledge. Therefore I should be most ungrateful if I did not try in some way to show my appreciation of what it has been to me. At the same time

I am so conscious of my own deficiencies and inadequacy as a presiding officer that I must ask you to bear with me in the same spirit of loyalty to the Association which you have always shown. The announcement of the president as to the decision of the outgoing board, which will surely be ratified by the incoming board, to begin the work to which we have been looking forward so long and with such hope—the opening of permanent headquarters—I would like to impress upon you, does not mean or should not mean any diminution of your personal loyalty to each other. I hope that the headquarters will prove simply another means of bringing each of us through the year in contact with the one man or woman in the Association who can help us in our province, and that we shall feel the influence of this conference throughout the year. (*Applause.*)

PRESIDENT HILL: The program for this day is special, as has been the program of each day. We now take up the subject of "The library in relation to special classes of readers."

Miss EMMA R. NEISSER read a paper on

BOOKS FOR THE BLIND

(*See p. 78.*)

Mr. ANDREWS, first vice-president, took the chair.

SAMUEL H. RANCK: Before plunging into discussion of libraries and books for the blind, I should like to call attention to two or three fundamental principles which it seems to me we should keep in mind in all our work, because we will then understand perhaps more clearly the reasons for the public library taking up work for the blind. I like to think of the public library as an institution for the dissemination of ideas and ideals rather than for the mere circulation of books or the reading of magazines. In its dissemination of ideas and ideals the library establishes lecture courses, exhibitions of prints, pictures, and so on, and it appeals to the intelligence of the community in various ways other than through the printed book.

As a public institution the public library should endeavor to reach every class in the

community, because all classes are citizens. It should endeavor to reach the professional, industrial, racial or national classes and it should endeavor to interest them. And here I should like to say that I do not like the term "advertising" as applied to libraries. I rather prefer the phrase "interesting the public," because if we can have public interest in our work that is what we want.

In interesting the public we can work through special classes, and the blind are a special class. In working with the blind the library will soon discover that there are a considerable number of difficulties to be considered. One is the cost of books in embossed print. Another is the fact that so relatively few of the people in the city can read any one style of embossed print. There are five or six different styles of embossed print. In the city of Grand Rapids we have on our list some 20 blind persons. Of that number only six or seven can read any style of embossed print and only three or four any one style of embossed print. For instance, we have the New York point and the American Braille, the English Braille, the continental Braille, the Moon type and the Boston line letter, and the library must consider, first, which of these or which two or three of these it is going to use, or which are adapted to the readers in that particular community.

Another difficulty is the fact that the great majority of persons who are blind become so late in life. Years ago the majority of blind persons became blind in infancy. That does not mean that they were born blind, but in the first days or weeks of infancy, through neglect and ignorance, the sight of the child was destroyed. Through the extension of knowledge and the passage of laws, the number of blind in this country who become blind in infancy has been reduced to a very small percentage, so that now the average age of persons who become blind is, in some of the states at least, in the neighborhood of 40 years. This brings the difficulty of teaching persons who become blind so late in life how to read embossed print, and that brings us back again to the difficulty of having five or six different styles of embossed print to select from.

If a library should decide to establish a department of books for the blind, to purchase books or do any sort of work for the blind, it seems to me that there is one fundamental principle which should be ever kept in mind, and that is that libraries should help to disseminate ideas among the blind, not because of sympathy or because they are unfortunate, but simply because they are citizens.

Miss Neisser refers to the recent enactment of laws by the United States Congress permitting books to be sent through the mails free of postage to blind readers. In some cities a new difficulty has come in the way. Many of these books in this country—this is not true of books published in England to so great an extent—are so heavy that the letter carriers in a large city will not deliver them, and it becomes necessary for the blind citizens to go or to send to the post-office to get them, and in some cases that means a journey of three, four, five or six miles, and they are no better off than they were before when obliged to go to the library. Another difficulty is that blind persons are often unable to go about the city. In many cases it is necessary, for this reason, to provide guides.

A few weeks ago in Grand Rapids we invited all blind persons to meet at the library, to talk over with the library staff and one of the officers of the board of library commissioners the whole matter of work for the blind as related to that particular city. All these points were discussed thoroughly and fully, and as a result of that conference, and in deference to the wishes of the blind there represented, a series of readings were instituted for blind persons every Tuesday afternoon. The matter to be read is selected by the blind themselves, and the reader is provided by the library, and we are looking forward later on to some better solution of the question of providing books.

This matter of assembling the blind at a library and reading to them has been, in certain quarters, criticised most severely, especially on the part of the schools for the blind. There is a strong feeling that it is a dangerous thing to bring blind persons together in this way, as I have learned in talking with the principals of different institu-

tions for the blind; and the chief argument they use against it, especially as regards young persons, is the danger that the library may become in this way a matrimonial bureau. They argue that it is a crime against the state to permit two blind persons to marry. And this is another matter that has to be considered.

Last August, at Saginaw, Mich., there was held a conference of workers for the blind, and as a result of this conference there was formed the American Association of Workers for the Blind. This includes members of various organizations of the blind, and it also includes the principals and teachers in schools for the blind, and all others who are interested in this work. As a result of this conference the following resolution was adopted, which expressed the feeling of that conference with reference to the work of public libraries for the blind:

"Resolved by the conference of workers for the adult blind, at Saginaw assembled, that it is the sense of this convention that the public libraries of the country may more profitably expend effort and money in the sending out of embossed books and home teachers who are blind, rather than in the establishment and maintenance of reading rooms with sighted readers for the blind in the library."

You will notice that the sentiment of that conference was to the effect that the public library should provide teachers for the blind, should teach people who become blind late in life how to read, rather than to have public readings with sighted readers.

The other morning, at this A. L. A. conference, a number of persons who are interested in work for the blind met, and as a result of that meeting there was drawn up a request which will be presented to the executive board asking for a full and adequate study of this whole subject to be presented to this Association one year hence. The idea was that there are so many divergent views on this matter and so many difficulties that those interested would like this Association to appoint a committee to study and offer recommendations upon this whole perplexing and important subject. (*Applause.*)

Miss E. J. GIFFIN: The greatest question is the size and the prices of the books; they

are so very expensive and also so very cumbersome. I have here a few of the foreign books which are much more easily handled and much less expensive. I do not think we have such books in this country that you could get for 20 cents or 40 cents. Here is one from the British and Foreign Blind Institution, and I wish to call special attention to the paper and binding. This is sulphite paper; it is very light, and the binding is simply straw board and silk cloth. All of these wear well and give a light, easily handled volume. Any one who is familiar with books for the blind has seen our immense books, larger than a dictionary and, when wrapped, often weighing almost ten pounds. They are also very troublesome to read, being so large that the blind person has to lean clear over in order to read the top of the page. Then, besides, our books cost prohibitively, and that is a great drawback to all libraries. Now the British and Foreign Blind Institution, at Great Portland street, London, with their up-to-date machinery and apparatus for drying embossed pages, can make an ordinary book, 70 plates, 50 copies, for about \$80. The blind are employed in making these books. Also in France, the blind emboss the plates from which the books are made. In Edinburgh the Braille Printing and Publishing Co. has a new process which is called the brailleotype. It is a machine driven by electric power which can emboss one thousand sheets an hour, each sheet having four pages. The embossing does not damp the paper, the sheets can be bound immediately, and the copy can be set up by blind people, thus giving them employment. If a mistake is made or a line omitted it can be easily and quickly remedied. For every sheet turned out by the older method the new machine will turn out 1500. They also publish a weekly paper, the price of which is one penny. And I am happy to say that there is a similar movement on foot here now; a generous lady who does not wish her name known has promised to furnish a fund for the publication of an up-to-date magazine that shall be sent free to the blind. There will be short and long stories and essays and departments for music and book reviews. If any librarian or any person who knows of a blind person, even

though they do not yet read, will send the name to Mr. Walter G. Holmes, care of Paul Block, Flatiron Building, New York City, as soon as the magazine is ready the person named will receive it.

I wish we might have many more books printed. The blind who have attended the schools have read, of course, almost everything that is in the school libraries. They want new books. Then those who have lost their sight late in life; for instance, the last person that I helped to read is a graduate of Harvard. Naturally he has read all that everybody else has read and we have nothing to offer him. What I hoped very much might result from the resolutions which were drawn up rather hastily the other day was that we might in some way arrange to have several librarians put on the committee with the school educators who decide on the printing of books for the blind. This is done by the Government, which gives \$10,000 annually to the American Printing House at Louisville, and I hope that we may have an equal number of librarians appointed on the committee for selecting the books.

ASA D. DICKINSON: I should like very much to make a special plea for the need of co-operation, combination and organization in library work for the blind. Those are three long words, but three very good ones, and words which seem to be most necessary in this work. Mr. Ranck has told us something of his experience in Grand Rapids, and his experience, I think, is typical of many more places of the same size. A public library becomes interested in work for the blind and perhaps \$200 are appropriated; the field is canvassed, and then perhaps, as Mr. Ranck has told us, 20 blind people are discovered who are interested. Then it is found that perhaps a third of the number have become blind early in life and have gone to a blind school and been taught to read; the others not having been taught to read, the books are of no value to them without home teaching. Of the remainder, then, we have a dozen people; they have been taught, if they are young, some one or other of the several point systems, it is impossible to tell which, their use being nearly equally divided throughout the country. Well,

our twenty books—the twenty titles that we can buy with our \$200, in the present expensive state of the market for blind books and the bulky way in which they are printed—our twenty books in perhaps three secure frames, are placed before our readers, and then it is found that of those books only a very small proportion, two or three probably, can be read by any one of the very small proportion of readers. When those books have been read by all who are able to do so, they are thrust up in the attic or down in the cellar, and that is the end of them—except when the librarian thinks of the mistake he made and the money he squandered.

I wish very much that something could be done to enable us to exchange such books throughout the country—that there could be some national organization or some two or three central organizations which could provide the books for our use in this way. The possession of the books is but a fraction of library work for the blind; we must hunt out the people and interest them; and, above all, teach them; and I should like to make a plea for co-operation among libraries in this work for the blind. I have been told that Miss Neisser, of Philadelphia, and Mr. Hodges, of Cincinnati, who are foremost in the work in their libraries, have more books than they know what to do with, and I would suggest, in the present absence of any national organization—we have a few state libraries which furnish books for the blind, but they are all too few—that any small city taking up library work for the blind would do better to expend the greater part of its money in home teaching and to borrow the books if possible, and as long as they hold out, from Miss Neisser and Mr. Hodges. (*Laughter.*) Then perhaps in time we could make some arrangement whereby each state should contribute a certain quota of books to a general store, and when in one locality the books bought there have outlived their usefulness, they can be passed on to some other community to which they are fresh, where they may have a new lease of life. What seems to me the thing most necessary for us to do now is to emphasize the need in this work for co-operation, combination and organization. (*Applause.*)

The secretary read the following letter

from B. B. HUNTOON, superintendent of the American Printing House for the Blind:

LOUISVILLE, Ky., June 18, 1906.

To the American Library Association:

DEAR FRIENDS: In the name and on behalf of the reading blind of our country, I thank you for what so many of your members have done in establishing departments for the blind in 36 of the libraries in our land.

No greater boon has been conferred on the blind in the last 20 years than this.

It is a joy and a comfort to those whose hours of darkness are many, far greater than can be told in words.

And the establishment of such a department is so simple, especially since Congress has given free transportation for loaned books, that I earnestly hope that there may be soon not a state without one or more such departments in its libraries.

Books for the blind are large, owing to the great size of the type required, and costly owing to the small size of each edition. Cooper's "Pilot," Thackeray's "Henry Esmond," and "Scott's "Ivanhoe," all embossed in 1896, have had a sale of respectively 65, 48 and 78 copies.

In poetry the record is better. Selections from Longfellow, Whittier and Holmes, embossed in 1883 and '84, have had a sale respectively of 330, 224 and 220 copies.

In books for children, Hans Andersen's "Fairy tales," embossed in 1884, has had a sale of 224 copies, and Kipling's "Jungle book" of 1894 of 128 copies, and "Robinson Crusoe" of 1898 of 46 copies.

These figures show why books for the blind can be printed only as a benefaction.

Owing to the wisdom of the government in providing for the printing of educational books, and of the munificent generosity of the New York State Library in expending, during the past six years, over \$5000 for embossing books not specially educational, the list of titles is not inconsiderable.

The practical result of the working of the department for the blind, as shown in the reports of the various libraries, is eminently satisfactory.

It is a vindication of the broad, progressive spirit that characterizes the American librarian, which has led to the cultivation of new fields from which have come noble harvests.

I acknowledge with admiration what you have already done, and am

Gratefully yours,

B. B. HUNTOON.

The CHAIRMAN: The chair has one or two questions which he would like to put for the

Association generally—one to Miss Giffin in regard to comparative prices of these books.

MISS GIFFIN: The American Printing House for the Blind, at Louisville, prices De Foe's "Robinson Crusoe," in 2 volumes, at \$6; the same at the British and Foreign Blind Institution, in 3 volumes, which makes it much more convenient to handle, is 6 shillings and sixpence, or \$2.44; Charles Dickens' "Christmas carol" (Louisville), 1 volume, \$2.50; the same at the British and Foreign, in 2 volumes, 5 shillings; Drummond, "The greatest thing in the world," 1 volume (Louisville), 75 cents; the same, 1 volume (British), 1 shilling and 8 pence. "Undine," 1 volume (Louisville), \$2.50; the same 2 volumes (British), 7 shillings, or \$1.68. Both of these institutions receive aid, ours through the government and the British through contributions. I think we should all be willing to have the books printed on less expensive paper and to use a simpler binding, and not have to pay so much for them.

PRESIDENT ANDREWS: The other question was, Miss Neisser, whether the provision of the recent law permits free transportation between libraries? That is to say, whether Mr. Dickinson's proposition would throw any burden either on the receiving or the distributing library?

MISS NEISSER: We have already been sending under this law books to several libraries for the use of the blind. We sent to blind persons in care of libraries in Pennsylvania and in Connecticut and there has never been any trouble about it.

MR. RANCK: There is one more point that the American Association of Workers for the Blind is very much interested in, and I think it will interest this audience also, and that is, that they have a committee, in connection with a committee in Europe, at work to obtain a uniform system of embossed print, and it seems to me that anything that this Association can do to aid in that attempt would simplify matters very much, not only in this country but throughout the world. (Applause.)

H. H. BALLARD: May I suggest the use of the phonograph for blind persons? It is possible now to procure blank records at the

rate of 10 cents or less, and any person can prepare a record very easily that will be listened to by a blind person for from two to four minutes. A phonograph, which can be procured for five dollars, can be kept in the library and loaned to a blind person, with the records. This is a very practical plan where you have not the printed books and cannot go to great expense. I have tried it in one or two cases and know that it will work.

Mr. DICKINSON: I think a few dollars, say ten dollars, spent in purchasing plaster casts would be very enlightening to the blind clientele of a library. I have had personal experience of the appreciation of plaster casts by one or two blind persons who have come in contact with them, and it would be a mode of enlightenment which would perhaps reconcile Mr. Ranck to the lesser joy of giving them a little simple recreation.

C. S. GREENE: The trouble seems to be, in this matter of giving books to the blind, in the small number of blind persons to be found in any one place. It seems to me that we ought to enlarge the unit to the state library. In California the state library undertakes to supply books for the blind throughout the state. It has been doing this not much over a year; last year it sent out 93 books to the blind and it has already 139 blind readers, with about 542 books. We have lately offered to the libraries throughout the state to supply small collections of these books if they will undertake to see that the blind in their neighborhoods are induced to read those books.

Mr. BOSTWICK: The New York Public Library, which has a very large collection of books for the blind, is circulating its books in three states—New York, Connecticut and New Jersey—and any library or any blind individual who wishes to take out books from the New York library may do so, taking advantage of the free postage act. We shall be glad to respond to any demand that may be made.

Miss ALICE S. TYLER: The Iowa commission has been circulating these books in Iowa with the aid of the state institution for the blind. We have not undertaken the problem of teaching, but it certainly is practi-

able to circulate books for the blind from a state center, by means of the travelling library system.

Miss GIFFIN: California is doing the same good work. They not only loan books to individuals, but they will send a travelling library to any little town that will promise to circulate the books. The great need is to get more books. If we could have more books I am sure more states would take up the work.

President ANDREWS: It seems to the chair that the new headquarters has one line of work very plainly marked out for it, in correlating and making known these various agencies which are at work on the lines referred to by the speakers.

Miss M. E. HAWLEY: It may be of interest to know that there is an international organization of blind students. It was recently brought to my attention by a circular sent me from Switzerland, and its object is to assist students who are pursuing higher courses of study. Any student who has taken a university course or is intending to take a course in a university or any higher institution of learning, is eligible to membership. One object of this association is to procure a circulating library in different languages, and to promote acquaintance among students of different nationalities, and familiarity with the different modern languages. The only type spoken of is Braille. The headquarters is in Geneva, and the secretary issues from there every year a report and a list of the best publications that have been issued during the year in all the different languages. The present membership consists of about 38 members scattered all over the countries of Europe; I did not see in the list any from the United States.

President HILL resumed the chair.

Mr. Bostwick gave a summary of Dr. J. H. CANFIELD's paper on

BOOKS FOR THE FOREIGN POPULATION

(See p. 65.)

Mr. BOSTWICK read a paper on the same subject.

(See p. 67.)

Miss J. M. CAMPBELL read a paper on the same subject.

(See p. 70.)

Miss L. E. STEARNS: I think something should be said with reference to the small library as regards this subject. Take a small community, and there may be just a handful of foreign-speaking people. You want to do something for them. If they are Germans you want to buy German books. You find these are expensive and only a few of the older people read them; the young do not ask for them. After they have been read by the older people there is constantly a cry for more German books, which you can hardly afford to purchase. In one of the Western states a number of libraries have combined, recognizing this need and realizing that funds are small. This could be done, of course, without the aid of a commission, but through a commission each of these libraries has bought one travelling library, paying about \$35 for 35 or 40 books. These are purchased at wholesale by the commission, made up in travelling libraries, and sent to these smaller communities for six months at a time. Then each library in turn is sent back to headquarters, to be exchanged in return for another library purchased by another community, and in that way enough varied German reading is available for twenty years.

The secretary presented the

REPORT OF COUNCIL

(See Transactions of Council.)

The PRESIDENT: The resolutions of Dr. Canfield and Miss Campbell will be referred to the Council for consideration.

HARRISON W. CRAVER read a paper on

SUPPLY AND USE OF TECHNOLOGICAL BOOKS

(See p. 72.)

W. E. FOSTER: Several months ago the president of the Association requested me to take part in this discussion. As the subject appeals strongly to my interest I consented. But after making several appointments with Miss Garvin, who is at the head of the In-

dustrial Department in our library, for the purpose of comparing notes, it seemed entirely inappropriate, Mr. President, that I personally should present the results of her experience in that field, and the president agreed to substitute her name for mine.

Miss ETHEL GARVIN read a paper on

USE OF INDUSTRIAL COLLECTIONS AT THE PROVIDENCE PUBLIC LIBRARY

(See p. 76.)

Miss ISABEL E. LORD: The president asked me to say a few words about the working out of this problem in our library, which is neither a large one as compared with the Carnegie of Pittsburgh, nor a small one, as that word is ordinarily used. We have 85,000 volumes in the library, 25,000 of which are in the reference departments. The latter are four, two general, one for art and one for what we call applied science. It is only of the applied science reference room that I mean to speak. First, as to the practical side. We do not intend this department primarily for trained people, for engineers, graduates of advanced schools, but for the untrained worker or for those of very little training. In order to make it as easy as possible for the men to use we chose as the room which we were to open a year ago last December the one easiest to get into, the one nearest the front door. In this room the equipment is that of reference books, about 500, not of course what are ordinarily termed reference books, but almost entirely books that are duplicated in the circulating department; bound periodicals, of which we have 66 files, more or less complete, including transactions; 115 current trade periodicals, covering various subjects; a collection of labor union papers, of about 50, are now received regularly; a collection of over 600 trade catalogs, which are, of course, of great value; and a collection of cuts of machines and mechanical devices, which are bound separately and may be used by any one who is interested in a particular subject that can be thus illustrated. We circulate no book from this room, except under extraordinary circumstances, but send people across the hall to the circulating department. This is a disadvantage, but it

has also the advantage of making the reference room as such more quiet, and there would be no space there, in any case, to put a circulating collection.

As to making this room known, it is very difficult to do this in a great community like Brooklyn, where our own limited area is only five city wards. We have no local press, for 25 or 30 city newspapers are read in that neighborhood, so we have to use other means. A printed notice of the room has been sent out very widely to the factories, the labor unions, through the churches, etc., telling what the room is, what it is for, and how to get there. Then the newspapers sometimes, of course, give us notices, and the head of the room visits the factories of the neighborhood and has completed a most interesting industrial chart of the five wards, showing where the factories are located, the work they do, the number of men employed, etc., while several times we have been able to get some member of a labor union to speak before his union upon what they could find in the library. One thing that we have tried to do is to make this department known through publication; and we have begun with the very practical and easy subject of electricity. We have issued a little list, of which there are 50 copies here, of something over 230 titles of general books on electricity, each one annotated. In our work with untrained workers we have found the greatest difficulty is that men choose a book from the title without knowing just what it is, whether it is for elementary or advanced use. The notes given here are meant to show how useful each book would be to any untrained person. We hope the notes are practical, and hope to go on publishing further lists of that sort.

Miss CORA STEWART read a paper on

LIBRARIES IN RELATION TO SETTLEMENT WORK

(See p. 82.)

Miss LINDA EASTMAN: My discussion of this subject is based largely on local conditions. In Cleveland there are three social settlements and two other institutions which, in all but the residence feature, are doing settlement work. In each of three of these

institutions the public library has, almost from their beginning, operated a station or branch, the settlement furnishing room, heat, light and janitor service. The other two institutions are located two and three blocks respectively from the main library and one of the larger branches, and co-operation with them has for the most part taken the form of furnishing books for clubs and classes, and in the helpful interchange of information between the settlement workers and the librarians.

In our settlement libraries by far the larger part of the work done is with the children, who, I regret to say, by their very numbers, keep away many adults who would use these libraries more were there larger quarters with separate rooms for adults. This need is recognized, the settlements are endeavoring to help to meet it and we believe sooner or later larger and better quarters for these libraries will result. The librarians in charge of these branches endeavor to identify themselves with the work of the settlement as far as possible, in some cases becoming residents. In no other department of the library do the workers gain so intimate a knowledge of their readers, nor is it anywhere else so greatly needed. It is here that we study at closest range our foreign population and the needs which Dr. Canfield has set forth cannot be urged too strongly.

It is, as Miss Stewart said, in the settlements that the problem of the girl is the most insistent. In our Italian settlement it is not at all startling to have a young girl return a copy of the "Red" or "Blue" fairy book with the statement that she wants no more books because she is going to be married. It is a far cry from the Lang fairy books to the books on domestic economy with which we hope to improve conditions of home life; but even these girls have already made great advance on a long line of forebears, not one of whom could read a word.

It is in the settlement libraries even more than elsewhere that the greatest hope lies in the children and in catching them young enough. I believe that in these libraries, through the story hour and in the book selection and suggestion, there should be spe-

cially emphasized the homely virtues of truth, honesty and morality, and the principles of good citizenship.

Miss ANNE WALLACE presented the

REPORT OF COMMITTEE ON RESOLUTIONS

The members of the American Library Association desire to record their acceptance of the free public library as an integral part of the American system of free public education. The public library continuing the work of education exerts its influence through all later years, and adds information, recreation, and general culture which are so necessary for that highest form of effective citizenship in which both men and women join.

The members of the American Library Association also desire to place on record their appreciation of the opportunities which have contributed so largely to the success of this, the 28th annual meeting of the Association.

The general program has emphasized the free public library as a factor in the educational growth of our modern cities and section meetings have been devoted to affiliated activities.

The location has been an ideal one, and the elements of earth, air, and sky have been conducive to our welfare.

The soft salt air, the blossoming hedges, the tangle of roses, the music of many birds, the rich foliage, the low, gray-roofed cottages, the restful roads through sun and shade have become a part of our life, and this sojourn in the state of Rhode Island will long be remembered.

We extend the thanks of the Association to His Excellency Governor George H. Utter, and to Lieutenant-Governor Frederick H. Jackson, to the Honorable Rowland G. Hazard, to Dr. Nathan C. Schaeffer, president of the National Education Association, to President W. H. P. Faunce, to Professor Brander Matthews, to Professor A. D. F. Hamlin, to Mr. Raymond F. Almirall, to Mr. Owen Wister, and to Mr. Robert Welsh for their generous and helpful participation in the sessions of this meeting. We recognize with keenest

appreciation the courtesy of the general and auxiliary committees manifest in the arrangements which have added so much to our enjoyment, and of the proprietor of the Mathewson in giving the use of rooms for special meetings. We express our sense of obligation to our officers who have so successfully planned and administered each detail of this conference. We rejoice in the inspiration which we have all experienced here; and we close the session with high hope and new courage for all the future.

JAMES H. CANFIELD.

ANNE WALLACE.

KATHARINE L. SHARP.

Adopted.

The PRESIDENT: It would appear that we have come to the end of our work. Whatever success has attended this convention is due to three causes: first, the efficient services of the secretary, the treasurer, recorder, chairman of the ways and means committee and the travel committee; second, to the large attendance which we have had and the patience of the members who have been present; and, third, to the complete arrangements made by the local committee. I have attended a number of conventions, I have had to do with the secretary's office and with the travel committee; but never before have I seen the work of the local committee so well planned and so perfectly executed. (*Applause.*)

In laying down the gavel I feel a responsibility to the Association greater than ever before. Dr. Poole used to say that there was only one position in the American Library Association higher than that of president, namely, that of an ex-president. To that honored position I am now elevated. I declare, therefore, the 28th Conference of the American Library Association adjourned without day.

Adjourned.

COLLEGE AND REFERENCE SECTION

TWO sessions of the College and Reference Section were held in connection with the Narragansett Pier Conference, the chairman, J. T. Gerould, librarian of the University of Missouri, presiding. In the absence of the secretary of the section, Miss Fanny Borden was appointed secretary *pro tem*.

FIRST SESSION

The first session was held on Monday afternoon at three o'clock in the Solarium of the Mathewson House.

The chairman, J. T. GEROULD, read a paper on

CO-OPERATION IN LIBRARY STATISTICS *

The questions most frequently asked by the progressive librarian are: Is this method the best? Is our practice in this particular the most effective? These questions may be answered, 1, by personal experience; 2, by experience of others. It is suggested that a co-operative report be prepared, presenting information regarding all college libraries of the country, bringing out facts regarding cost, character and equipment of buildings, number and character of books, amount and allotment of funds, powers and functions of librarian, and data regarding staff, methods, privileges to readers, salaries, etc. This suggestion is referred to the section, in the hope that a committee may be appointed to consider the plan and report next year on the feasibility of undertaking it.

Discussion followed on the suggestion in Mr. Gerould's paper that the section appoint a committee to compile a report on statistics concerning college libraries including, in addition to regular statistics, information about policy and management. Mr. Johnston suggested that the new commissioner of education would probably be willing to collect such statistics in his report. Mr. Briggs answered that the reports appeared in print so late that they would not answer the need of librarians for up-to-date information. Mr. Wilson (Clark University) suggested that a committee should submit to the commissioner

an outline of what is desired and that future action should be based upon his reply.

Mr. Bishop stated that the annual reports of college librarians are seldom published and that statistics are not readily obtained as in public libraries.

The question was asked whether such a report was not recently compiled for the libraries of the middle West. Mr. Gerould answered that questions were sent out from the library school of the University of Illinois with such a report in view, but too few replies were received to be of value.

Mr. Severance said that it would be impossible to get the information desired unless the librarians knew in advance the plan of the report so that statistics might be kept with the questions in mind. It was moved by Mr. Severance and voted by the section that a committee be appointed by the chair to investigate the proposed plan and report at the next meeting of the section.

It was voted that nominations for officers for next year be made by a committee to be appointed by the chair to report at the next meeting.

Mr. Jones (University of Maine) moved that a committee of three be appointed to consider the advisability of a more definite organization of college librarians. A brief discussion followed on the desirability of separate organizations for college and reference librarians. The motion was passed 33 to 18 in favor of the appointment of a committee.

Miss ISADORE G. MUDGE read a paper on

THE STIMULATION OF GENERAL READING *

covering the following points:

Not enough general reading is done by the average college student. The encouragement to such reading that may be given by a progressive, well-organized college library presupposes, first and most important, a capable and enthusiastic reference librarian, and includes careful expenditure of the book fund for general literature, specializing each year

*Abstract; received too late for publication in full.

*Abstract; received too late for publication in full.

in a few subjects of timely interest; displaying new books and books sent on approval; keeping a collection of current dealer's catalogs available for the students' examination and use; and systematic co-operation with college literary clubs and provision for special lists and book reserves. These means persistently employed help in improving the quality and quantity of general reading.

Miss Etta M. Newell, of Dartmouth, opened the discussion of the paper. She said that all methods of stimulation of general reading in the college library must be based on free access to books, attractive surroundings and strong personal influence. She described the methods used at Dartmouth. The discussion was continued by Mr. Burnet from his experience at the University of Georgia.

Mr. Wilson said that the question had been approached from the librarian's point of view, that it would be interesting to have the student's point of view. He asked that in the investigation of the student's point of view about to be undertaken at Clark University librarians give their help, that it may prove as effective as possible. He said that college students could never become real students until they had free access to the shelves. Mr. Keogh said that much of the use of the library depended upon the co-operation of the librarian and the instructors, especially in connection with English courses. A brief discussion followed on vacation privileges in college libraries.

Mr. W. C. Lane emphasized the importance of a selected collection of books on open shelves where the size of the library makes free access impracticable. The Harvard library has not room for a large open shelf collection, but it is supplemented by the Harvard Union Library of attractive reading selected by a student committee with Mr. Lane as chairman. He spoke of the great importance of comfortable quarters in influencing men to read.

Mr. T. W. Koch read a paper on

STUDENT CIRCULATION IN A UNIVERSITY LIBRARY *

which presented the following points:

In 1856 the privilege of borrowing books

from the library of the University of Michigan was withdrawn from the students; in February, 1906, this privilege was restored. In time the debarment from home use of books and the lack of open reference shelves resulted in great and constant congestion at the delivery desk in the reading room. This was partly met by installing an open-shelf reference room, and later a set of questions was sent to leading college librarians asking their views on home use of books by undergraduates. The answers were strongly favorable to such use; and these have been borne out by the results of the change granting this privilege. It has cost almost nothing in additional service, has not interfered with the use of the library by the faculty, is valued by the students and approved by the professors.

Discussion of the paper was opened by Mr. Jones (University of Maine), who talked on several questions of detail not covered in Mr. Koch's paper: How many books shall be reserved? How many books may a student draw? What shall be the time limit? Shall circulation be allowed in department libraries? How shall faculty use of books be controlled? He spoke also on the obligations of a college library to those outside the college community, especially the duty of a state university library to be of service throughout the state. The discussion was continued by Mr. Keogh, who described the practice at Yale. Of the library of over 500,000 volumes all may be circulated except reference books and books of special value on account of age, etc., not more than 1/2 of 1% restricted. Books on the reserved shelves in connection with class work (the number varies from 500 to several thousand) may be drawn out only overnight. The library proper is a circulating library. The plan of selecting certain books for undergraduates has been followed from the beginning. The number is now kept at 25,000. From 600 to 1000 are added annually and an equal number withdrawn. There is free access to these books to all students, undergraduates may take out four volumes at a time for three weeks each. Permission is given for access to the shelves in the main library with slight formality.

*Abstract; received too late for publication in full.

Miss Lettie M. Crafts (University of Minnesota) continued the discussion. After ten years' experience in a college library which is a strictly reference library, she believed that the plan was not justified. The excuse for non-circulation is the proximity of the public library, but she believed that results would be better with circulation.

The chairman appointed the following committees:

On nominations: Mr. Little, Mr. Andrews, Miss Olive Jones,

On statistics: Mr. Koch, Mr. Wilson, Mr. Canfield.

On proposal to organize college librarians more closely: Mr. Jones, Mr. Lane, Mr. James.

The meeting adjourned on motion.

SECOND SESSION

The second session was held in the Solarium of the Mathewson House on Thursday morning, July 5, at 9.30 o'clock.

Mr. Little reported for the nominating committee the following nominations for officers for 1907: For chairman, T. W. Koch (University of Michigan); for secretary, P. L. Windsor (University of Texas). The report was accepted and adopted.

Mr. Koch reported for the committee on co-operative library statistics that the committee had decided to undertake the work of sending a circular to representative libraries and would present statistics at the next meeting. The report was adopted.

Mr. Jones reported for the committee on the proposal for separate organization for college libraries that in the opinion of the committee the forming of such an organization was inexpedient. A brief discussion followed on the original intention of the section. The report of the committee was adopted.

Mr. Nelson offered a resolution that the section should include all librarians of educational institutions and all persons interested in reference work. The resolution was adopted after discussion.

Miss BERTHA E. BLAKELY presented the plan and description of

THE NEW LIBRARY BUILDING OF MT. HOLYOKE COLLEGE

(See p. 62.)

Discussion followed on the best material for the floor of a reading room and on the cost of various new library buildings per cubic foot of contents. The figures quoted varied from .18 to .50.

Mr. Louis N. Wilson presented and described the plan of the Clark University Library.

Concrete block construction was discussed for libraries.

F. W. SCHENK read a paper on

THE ADMINISTRATION OF LAW LIBRARIES *

He added an appeal that all librarians in charge of law libraries join the newly formed association of law librarians.

Dr. B. C. Steiner opened the discussion of Mr. Schenk's paper. He would make two rather than three divisions of law libraries exclusive of law departments in general libraries: 1, Libraries of law schools in which the entire time of the professors is not given to instruction and ordinary county bar libraries; 2, Large city and state law libraries and the libraries of large law schools in which the entire time of the professors is given to instruction.

Libraries of the first class should have a small collection carefully selected. Libraries of the second class should include everything. In those of the first class the users go directly to the shelves. In those of the second they are dependent on runners. The classification of those in the first class should be methodical; that of those in the second class an arrangement fitted for the quickest service by runners. He agreed with Mr. Schenk's classification in general, but would include place for international law, jurisprudence and constitutional and legal history.

The great need is that law students should be trained in the knowledge of aids in the use of libraries.

Brief discussion followed on the selection of law books for general libraries.

The meeting adjourned on motion.

*Not received for publication.

CATALOG SECTION

TWO sessions of the Catalog Section of the American Library Association were held in connection with the Narragansett Pier Conference, Miss Theresa Hitchler, chairman, presiding.

FIRST SESSION

The first session, devoted to "Advanced problems," was held in the ball room of the Mathewson House, Saturday evening, June 30. The chairman brought the topic of the evening's conference, "Subject headings," before the meeting by a few preliminary remarks, pointing to the increasing prominence accorded to problems of cataloging by reason of the great increase in size of the present-day library and the consequent growth and complexity of the present-day catalog. She then introduced the speakers of the evening, WILLIAM WARNER BISHOP, who read a paper on

SUBJECT HEADINGS IN DICTIONARY CATALOGS

(See p. 113.)

and

ADELAIDE R. HASSE, who read a paper on

SUBJECT HEADINGS FOR STATE DOCUMENTS

(See p. 123.)

After the reading of the papers, Miss Hitchler declared the meeting open for general discussion. Mr. Hanson, of the Library of Congress, responded, calling the attention of the members to the length of time that had elapsed since the American Library Association had given its attention to the question of subject headings. He stated that in the main he agreed with Mr. Bishop's point of view. He emphasized the importance of definition of subject headings and added the suggestion that such definitions as were adopted be placed in the public catalogs of libraries as well as in their official records.

He differed from Mr. Bishop as to the importance of form entries, stating that he had

become increasingly conservative in his views as to their usefulness. On the other hand, he agreed with the speaker's solution of the problem of place under subject *vs.* subject under place; namely, the subordination of geographical position to subject in the arts and sciences, but the subordination of subject to place in historical lines, as, travel, economics, etc. In this connection, Mr. Hanson called the attention of the members to a pamphlet just issued by the Library of Congress, entitled "A preliminary list of subject subdivisions under names of countries . . . and of subject headings with country subdivisions." In this list, the headings in which place is subordinated to subject are indicated by black faced type.

In opposition to Mr. Bishop's restriction of the use of the national adjective to the subjects of language and literature, Mr. Hanson interposed a plea for its general usefulness in other classes, as, for instance, in the fine arts. He would, however, place the adjective after the subject, not before, *i.e.*, *Porcelain, French*, not *French porcelain*. In closing, he suggested a modification of Mr. Bishop's chronological arrangement of cards under subject, proposing a modified chronological method, namely, a division of subject by appropriate periods of say thirty years, a hundred years, or what not, and an alphabetical arrangement under these periods, by author.

Mr. Finney, of Michigan, followed Mr. Hanson's remarks with a prayer that the general public might in some manner be instilled with the cataloger's love of definiteness and so be led to make known its wants to the desk assistant in a way to be understood. He cited the instance of a woman who asked for a book on Greece when she really wanted to know the number of inches around the waist of the Venus of Milo.

Miss Hitchler then waived the restrictions that bind a presiding officer and entered the debate. Referring to Mr. Bishop's paper, she stated that while definition was of course

necessary in every official list of subject headings, she did not follow Mr. Bishop in his insistence on a card-tray for the purpose, that an interleaved copy of the A. L. A. list was adequate for all practical purposes and was also more convenient. She also differed from the speaker of the evening in his abandonment of place entries in subjects covering the arts and sciences, advocating instead the double entry system; for example, she would use *Texas. Geology* and *Geology*, not relying merely on a cross reference from *Texas. Geology* to *Geology. Texas*. She said that she had found, in public libraries at least, a necessity for gathering together all material relating to a country, in the arts and sciences as well as in other subjects under the name of that country. She referred to Mr. Cutter's advocacy of this system of double entry.

In closing, she referred to a matter already touched upon, namely, the use of a single subject card answering to several author entries, in the case of works published in various editions, by the use of the note on this single subject card: "For other editions of this work see author cards." This method, she stated, proved a labor-saving device in a large system like the Brooklyn Public Library where many branches naturally include many editions of a single work.

Mr. Biscoe expressed a wish that the Library of Congress would print on cards for distribution such definitions as Mr. Hanson indicated were in use in the public catalog of that library. Mr. Hanson replied that about 1000 such definitions were in use and that these could be printed for distribution if a demand for them was felt.

Miss Nina Browne stated that the American Library Association Publishing Board would gladly receive any suggestions for the new edition of its list of subject headings. Mr. Gardner M. Jones, of Salem, pointed out a practical difficulty to be met in the matter of a new edition of this list, namely, the conflict of the American Library Association headings with those printed on the Library of Congress cards. The use of these cards by an increasingly large number of libraries brings forward this question.

Miss Hitchler then closed the discussion

by remarking that the indications seemed to point to co-operation between the American Library Association Publishing Board and the Library of Congress. The meeting then adjourned.

SECOND SESSION

The second session of the Catalog Section, devoted to "Elementary problems," was held Wednesday morning, July 4, in the ball room of the Mathewson. The meeting was called to order and a nominating committee appointed by the chair to report a ticket of officers for the ensuing year. The committee consisted of Mr. Biscoe, Mr. Osborn and Miss Grace E. Tobey.

Miss AGNES VAN VALKENBURGH read a paper on

COMMON SENSE IN CATALOGING SMALL LIBRARIES

(See p. 127.)

The meeting was then opened for general discussion.

One member asked how the printed Library of Congress cards could be made consistent with written cards already in a catalog, to which Miss Van Valkenburgh replied that since the Library of Congress cards could not be made consistent in all particulars with the written ones they were better left unchanged and filed intact in their appropriate places among the written cards. Miss Hitchler added that in the Brooklyn Public Library she likewise did not attempt to be consistent in this matter except as to headings for purposes of filing.

Miss Robbins, of Simmons College, Boston, asked what, in the matter of headings, was the best practice in entering the names of "much married" women. Miss Van Valkenburgh recommended entering under the maiden name if the author had written under that name. Miss Hitchler followed the same rule, but added to the author heading the phrase "(afterwards Mrs. —)" if the room on the card permitted without rewriting the card.

The next question raised for discussion was the advisability of analyzing for the catalog

of a library collections of essays already indexed in the American Library Association or other index. Miss Hitchler spoke in the negative. Miss Van Valkenburgh agreed with the chairman and advised keeping the indexes near the catalog. Mr. Biscoe said that small libraries were troubled in using printed indexes by the fact that such indexes invariably referred to a great number of volumes not on their shelves. This difficulty was met by the suggestion that the index be checked up by entering the call number of such volumes as the library possessed in the margin of the contents, *i.e.*, the table of works analyzed.

A member asked if anyone present had tried the cumulative plan in printing catalogs. Miss Van Valkenburgh said her experience had been interesting, that she had intended cumulating her bulletins every two years, but that the printer had declared it cheaper to begin all over again. Mr. Wilson, of Clark University Library, said that the difficulty usually was with the printer, that he was himself experimenting in this matter, and hoped later to be able to report something definite to the American Library Association. Miss Mann, of Pittsburgh, said that the Carnegie library had successfully employed the method; that by using proofs from slugs kept by its printer for a period of years, it was saved the work of composition, though not, of course, of revision. Mr. Davis, of Laconia, N. H., stated that he was issuing a quarterly bulletin, wherein he prints lists that later can be cumulated and form the catalog of his library, for these lists are entries for the books he is reclassifying, and since he is going over the whole library class by class, the cumulated result will be a classed catalog.

Mr. Stevens, of the Homestead (Pa.) Carnegie Library, turned the attention of the meeting to what he termed the increasing technicality of catalogs, and made a plea for greater simplicity. Miss Hitchler pointed out that this danger of making a catalog too technical, and therefore difficult to use, would be avoided if the cataloger would keep in mind the point of view of the general reader. This done and each new borrower given a few hints as to the use of the catalog, most

difficulties vanish. Miss Williams, of the Malden (Mass.) Library, suggested that the reference librarian was useful in making the connection between the public and the catalog, and Miss Hitchler added that the cataloger herself should be in close touch with the reference department as well as with the public. Miss Bragg, of Worcester (Mass.) Public Library, suggested that the difficulty was being solved by the schools where the children were being taught how to use a catalog, to which Miss Hitchler replied that if difficulty existed it was not with the children, but with the adults. Miss Van Valkenburgh interposed, "How lovely for the next generation of librarians!"

Miss Hitchler then called on Mr. Foss, of the Somerville Public Library. He said he had never been a cataloger, but that since he had heard Miss Van Valkenburgh's paper he felt that some day he might aspire to be one. Cataloging he conceived as the art of conveying wisdom from one who has it to one who has it not, in a simple manner.

The chairman then emphasized the necessity of not being hidebound in adherence to rules. The catalogers of small libraries, she stated, sometimes followed printed rules to the letter out of fear of adverse criticism from other librarians. Her advice was, "Adapt and do not be afraid." A member offered as an adaptation, the introduction into the catalog of a form of reference card intended to guide young readers from one field of reading to a better one. For example, under Henty, he places a reference: "If you have read these books, read Cooper," and under Cooper: "If you have read these books, read Parkman."

Mr. Hensel, of Columbus, Ohio, suggested that entries for references worked out in the reference department be introduced into the catalog. Miss Van Valkenburgh objected to having such material in the public catalog. Miss Hitchler, on the contrary, favored such use of all material once found. She suggested the use of colored cards to indicate the temporary character of the entries.

Miss Elliott, of the Wisconsin Library School, reverted to the subject of making an intelligent explanation of the use of the cata-

log to each new borrower to start him on the right road. Mr. Merrill closed the discussion by pointing out that after all the catalog was made for the average person and the average person could use it.

The nominating committee then announced

the names of the candidates: for chairman, Mr. William Warner Bishop, of Princeton University; for secretary, Miss Van Valkenburgh. They were unanimously elected. The meeting then adjourned.

EDITH P. BUCKNAM, *Secretary*.

TRUSTEES' SECTION

A MEETING of the Trustees' Section of the American Library Association was held on the afternoon of Monday, July 2, in the ball room of the Mathewson House. The chairman, Washington T. Porter, called the meeting together at 3 o'clock.

Dr. JAMES H. CANFIELD read a paper on

THE BASIS OF TAXATION FOR PUBLIC LIBRARIES

(See p. 36.)

W. I. FLETCHER: Theoretically the address we have just listened to is well nigh if not quite perfect; but certain thoughts which I had previously on this subject are raised anew in my mind in connection with the words "and more" which Dr. Canfield used when he spoke of the public library as doing what the public school does, "and more." I have never been willing to have public library taxation stated as justifiable on so nearly the same ground as public school taxation, as Dr. Canfield has stated it. Go to-day into the homes where you will find books from the public library. How many of those books in any fair sense can be said to represent the education of the people? Possibly a great many, but how large a proportion of the whole? They represent several things and these come in under the "and more." They represent, in one sense, taxation for economic benefits. The public library provides books by which a man becomes better acquainted with his trade. That, of course, is education in a sense, but a great deal of it is not quite what we should include in education. Then there is the great number of books taken out and read for recreation. It is not true, as some allege, that a very large share of money raised by taxation for the library goes to pay the expense of circulating recreative reading, be-

cause there is so great a difference in the proportion of that reading and the proportion of taxation that goes to that reading that it almost renders the criticism nugatory. However, I like to feel that the community is justified in paying out money raised by taxation for recreative reading on the same ground that it spends money to support parks. I would like to see a little more stress laid upon the recreative value of the library. Recreative reading is one of the best things we can possibly furnish if it is as good as most of the recreative reading we do furnish. And another thing that comes under the words "and more" is that vague thing which we call culture. Our schools are often said to exist for the culture of the community, but there is a line between education and culture, and the library stands for something higher in standing for culture than the schools do in standing for education. I like to feel that it is in this æsthetic element, in this cultural element, different from what we expect our schools to furnish, that public money spent for the public library finds its real and highest justification.

Mr. ARTHUR E. BOSTWICK read a paper on

THE WHOLE DUTY OF A LIBRARY TRUSTEE— FROM A LIBRARIAN'S STANDPOINT

(See p. 40.)

The CHAIRMAN: Finding that Dr. Wire was occupying both the position of trustee and librarian, I have asked him to respond to this, and speak on

THE WHOLE DUTY OF A LIBRARY TRUSTEE— FROM A TRUSTEE'S STANDPOINT

Dr. G. E. WIRE: I think I am one of the few who are both a librarian and a trustee;

that is, I am most of the time a librarian and part of the time a trustee. As Mr. Bostwick has said, the main idea seems to be to pick out a good man or woman for a librarian and supply all the money that can be raised and let them do the rest. That is rather the ideal conception of a trustee from a librarian's standpoint, and in a great many cases it is also the idea of the trustee. But it should vary according to the circumstances in the case. You will all recognize that there are some types of libraries where the trustees must do a good share of the work. In a great many of our New England libraries the librarians are getting but very little money — perhaps \$50 or \$100 a year — and naturally they have not the requisite technical skill to administer the library properly, and the trustees have to do, and in many cases do, quite an amount of the librarian's work. Of course I do not mean that the trustees discharge or charge books or catalog them or make out bulletins; but they look after many details. As a trustee I consider it the duty to look after the broad general management of the library, if it is possible, and let the librarian, if competent, do the rest. There are but few trustees who have the technical knowledge to understand many of the details of library administration. The newly appointed trustee has to go through a certain amount of technical education before he knows what he is there for, and until he has been educated he is liable to do more harm than good. But I have in mind many trustees who are doing, as we all know, the very best work, are informing themselves concerning library matters, have pleasant and cordial relations with their librarians, and are, as Mr. Bostwick has said, really ideal trustees.

The trustee is directly responsible to the public, and is the one who is held responsible by the public in many cases if the library is not carried on aright, and properly so. He may have an incompetent librarian, or a librarian or a regime which has got into a rut and is not easily changed. In that case the public should be a little merciful to the trustees and give them time to get out of the rut. But there are one or two things that the trustee should know, perhaps in some cases a

little better than he does know them. What we term the philanthropic side of library work, what we call the "library spirit," he should understand. Some trustees are used to large business enterprises and they want to run the library much as they run a shop. But it is, to all intents and purposes, an educational institution; it cannot be run on a time schedule, with fines for non-attendance and all that sort of thing; the employees are supposed to be of a superior grade of intelligence and are not to be held to the hard-and-fast rules of the shop. Some trustees might well consider that library employees are expected to give more than a few dollars' worth of time a week to the library; they are supposed to put into their work, as do the teachers, a certain amount of devotion and personal work which as librarians we know about, which they are often not given credit for; they frequently have to work over hours, and if, by reason of sickness or other causes beyond their control, they should be absent, that should not be laid up against them. They should not be considered as shop workers. But I am happy to say that from my observations, particularly on the librarian's side, trustees throughout the country are coming more and more to the position of ideal trustees.

The CHAIRMAN: I take pleasure in presenting to you the Hon. David A. Boody, president of the board of trustees of the Brooklyn Public Library; and I will ask Mr. Boody to say something to us on the subject of the

CARNEGIE DONATIONS

Mr. BOODY: Criticism is frequently heard of Mr. Carnegie's donations, indicating that it was still a debatable question whether it were wise on the part of Mr. Carnegie to give or wise on the part of the public to accept his donations with the conditions attached. Just a word in reference to that point. Is it a good thing for a man to defend his country when his country is assailed? Is it an honorable thing for him to place his life between his country and her assailer? We know that when men do these things they are honored, we know that we carry a grateful remembrance of such deeds in our

hearts, and we know that over their graves monuments rise. But, you may say, what is the special relation between the giving of money and defending a nation's life? It seems to me it is nearer than we may think at the first glance. These ideas that give to men a conception of duty come from the work of libraries, from the books which are read, from such acts as those of Mr. Carnegie, in establishing all over this land these schools of thought, these inspiring sources of action.

Many questions are asked concerning the character of public donations—their effect is feared on the person who receives them, that it may take from him that energy necessary to the establishment of character and to the success of business. But think of the peculiar character of Mr. Carnegie's donation. It never weakens a hungry man to give him food; it never impoverishes an intellect to give it intellectual food. If there be a kind of donation in all the world that should be free from such criticism as we hear bestowed upon the act of giving generally, it is this kind of donation. This kind of giving is for the purpose of helping men to help themselves. There is a fear in this land that wealth in some form or other will destroy the character of our people. It is no more dishonorable to be a rich man than it is to be governor or President, providing always that the same degree of honor and integrity has been pursued in the one case as in the other, and I beg you to remember that this country affords opportunities for great distinction and for winning great prizes. Men with integrity and intelligence and push can hardly fail to become rich men. The point is, how will they use their money? Will they allow it to destroy ideals of American citizenship or will they carry back this wealth to the people and thus enrich all of the inhabitants?

C. W. ANDREWS read a paper by MELVIL DEWEY on

THE IDEAL RELATIONS BETWEEN TRUSTEES AND LIBRARIAN

(See p. 44.)

The chairman introduced Miss M. E. AHERN, to speak on

WHAT AN EDITOR THINKS OF TRUSTEES—OF SOME TRUSTEES

MISS AHERN: There are trustees and trustees. I like the word "trustee," one to whom a trust has been given or with whom a trust lies. A little clearer vision on the part of some of the trustees as to just what constitutes the trust might produce better results for the library, for the community, for the librarian and for the trustee himself. Oftentimes the thought of the trustee is that his trust lies altogether in bricks and stone, in providing for the physical comfort of the community, in providing a suitable dwelling, to seeing that the plumbing and the lighting and the heating and the furnishings and the fittings are what they should be, and that there are books on the shelves, and that then his trust is carried out, forgetting that there remains with him also a duty to see that the people for whom all these things have been prepared are made acquainted with the provision that has been made for them. Trustees should be men and women in the community who have demonstrated by their own lives and by their own business accumulations that they have the ability to conduct business on proper lines, who can differentiate between things that are essential and those that are non-essential, who have pride in their community and a love for their own people.

A number of librarians have suggested that in these remarks I should say something in their behalf, and I have invariably replied, "If you have a trustee who comes to the American Library Association Conference there isn't much need of saying anything for you, because he is there to see and hear, and if he is of the material that he should be he will see and hear, and if he doesn't see and hear, nothing that I or you or anybody can say will help him much. The thing that needs to be said needs to be said in your home town." But I would refer briefly to the matter of sending the librarian to the annual meetings of either the American Library Association or the library association in his home state. I do not know that I can put it any more strongly than by repeating again what a business man said as he talked to me and to a librarian, that when he sends

his engincer over into another state to see the machinery of a large factory, to hear how a new plant is working, to get pointers for his own work, he does not expect that engincer to pay his own way, but he expects to send him at the expense of the factory, and expects to use the information received on this visit in furthering the interests of his own business. I think any trustee who is a business man will agree with that point of view and will see its application to the library.

H. T. KELLY: We have all been entertained and benefited by the papers read to-day, and I would like to make a suggestion to the officers of this section. I arrived here when the meeting started, after 27 hours of steady travel, and I find that the Trustees' Section gets simply one meeting during the whole

Conference. Now would it not be possible to have a second afternoon during future conferences, devoted to discussion of the papers which have been read at the first meeting of the Trustees' Section? There are many things that occurred to me before I arrived here, there are more that have occurred to me since I have heard these papers, and I think we should all derive a great deal of benefit from opportunity for general discussion. I throw out this suggestion because I think one of the great benefits to be derived here is not simply to hear the papers, but to discuss them also.

Officers were elected as follows: Washington T. Porter, chairman; Thomas L. Montgomery, secretary.

Adjourned.

CHILDREN'S LIBRARIANS' SECTION

THE Children's Librarians' Section was represented at the second general session of the American Library Association Conference on Monday morning, July 2, when papers were read on

THE CHILDREN'S LIBRARY A MORAL FORCE

by CLARA W. HUNT.

(See p. 97.)

and

THE PROBLEM OF THE GIRL

by LUTIE E. STEARNS.

(See p. 103.)

A meeting of the section was held on the morning of Thursday, July 5, in the ball room of the Mathewson House, the chairman, Mrs. Arabelle H. Jackson, presiding. The meeting was called to order at 10 o'clock by Mrs. Jackson, who said:

It is three years since the Children's Librarians' Section has had a meeting. Two years ago, at the St. Louis Conference, there were no section meetings, and a year ago at Portland the section had only a business meeting for the election of officers. While the

section has been glad during these years to have its papers presented in the general sessions of the American Library Association, we are very glad of this opportunity to have a regular section meeting again, because we feel that some questions in regard to children's work can be discussed to a little better advantage in a section meeting, where we take it for granted that all those present are interested in the particular subject.

A paper on

THE BEGINNINGS OF A LITERATURE FOR CHILDREN

by CAROLINE BURNITE

(See p. 107.)

was read by J. I. Wyer, Jr.

The CHAIRMAN: Miss Burnite has prepared and had printed a list of early children's books, some of which she has mentioned, and I am sure this list will be of great interest to all who are interested in children's work. The paper is now open for discussion, and we should be glad to hear from Charles S. Greene, the librarian of the Oakland Public Library.

C. S. GREENE: I am glad to appear before an audience of children's librarians, though not because the West has anything particular to boast of in that line. We are still in some of the inchoate stages of evolution, and we are glad to imitate the methods that have been wrought out by our Eastern friends. This list is a most suggestive one for us. We have not, of course, made any special historical study of the bibliography of children's books. We have simply taken them as we could get children to read them and have made the best use of them that we could. We have, however, used a good many books that are found on this list, and the list will be of great value to us in making more complete our lists of books in the historical section. One thing that struck me about Miss Burnite's paper quite specially was the strong spiritual note through it all, the ethical bearing of it. It shows that in children's library work, as in a great deal of other work connected with libraries and with books, the spiritual, the ethical, even the religious basis is the seed from which it sprang. The first of our modern literature sprang from religious motive. The monks through the Middle Ages preserved all that was best in the ancient literature and added to it from strong religious motive; our drama sprang from the religious drama first, the church was the foundation of that; and even the latest literature we have developed, and that is the books for the children, have the same origin. In the same way the first books that were printed for blind people were religious books, printed by tract societies in order that the blind people might consider their latter end. And so in this paper Miss Burnite has treated the child not as a lump of clay to be moulded, not as a blank sheet of paper to be written upon, but as a creature, compact of spirituality, of imagination, of impulses—in short, as a living soul.

Miss HEWINS: Miss Burnite's paper has given us all a great deal to think of. There is one author whom she has omitted, probably because it is very hard now to find her stories in print; but they are very well worth reprinting. At just about the time when

Peter Parley was beginning, or perhaps even a little before, Lydia Maria Child began to publish her *Juvenile Miscellany* in Boston. For seven or eight years it appeared; sometimes it was published every month and sometimes every two or three months. I have nearly all the numbers. And Mrs. Child was writing in it stories for children which are remarkable for their simplicity, for their clear English, their absence of didacticism and their knowledge of children and of what they like. She wrote also sometimes little historical and biographical articles, lives of famous musicians and famous dwarfs, and she had contributions from people like Mrs. Sigourney and others who were well known at the time, and she had also translations from the German. Indeed, the first translations from the German that I know of in children's books are in that *Juvenile Miscellany*. The first mention of a Christmas tree that I know appears there. Then later the stories were collected in book form. One of them was called "Flowers for children," and there was a favorite tale of mine called "Laraboo," which was in the "Flowers for children," and which I found a few years ago back in the *Juvenile Miscellany* about in 1830. It was a tale of an African woman who was seized, with her child, by a hostile tribe, and, going across a desert, a sandstorm overtook them. The child before that had been thrown away into the desert. She escaped into the sandstorm and found an oasis, a little cave where there was a panther, and she and the panther became friends and remained friends for some time, and at last the panther was accidentally shot just as they were getting to a village. I remember reading that most thrilling tale to some of my staff a year or two ago, and one of them said immediately, "Why, that is Balzac's 'Passion in the desert.'" It appeared in the *Juvenile Miscellany* just about the year that Balzac first published that story—about 1830. Mrs. Child had evidently read it in French, had seized upon it as something that would interest children, and had changed it a little. And it remains one of the most interesting, delightful and thrilling stories for children, I think, that has ever been written.

We have in our children's room pictures of famous places, and just now I am reading to children of the seventh and eighth grades—those who choose to come—some stories about the faces that are mentioned in the pictures, and one of them is Windsor Castle. I read to the small audience the other day Grace Greenwood's story about King James I. of Scotland and Lady Jane Beaufort, and later Mrs. Child's story of the "Royal rosebud," the little daughter of Edward IV., and the style of these stories delighted the children so much that you could have heard a pin drop in that room for the hour while I was reading. So that I am sure it would be a good thing if those stories of Grace Greenwood and Mrs. Child could be reprinted for the use of children.

H. H. BALLARD: I was interested to see in this list one book of Mrs. Ewing. There is a book by Mrs. Ewing's mother, "Parables from nature," by Mrs. Alfred Gatty, which was published, I think, in the "fifties" or perhaps the early "sixties," which is of great interest and of great value to young persons, and is of interest from a library standpoint as showing the fountain of literary beauty and strength from which Mrs. Ewing, Mrs. Gatty's daughter, drew her inspiration. Mrs. Gatty was for many years the editor of *Aunt Judy's Magazine*, published in England, which contains a larger proportion of literature excellent for young persons than any other young persons' magazine ever published, not excepting *St. Nicholas*. If the old files of that magazine can be obtained by any library that library will secure a great treasure because it contains the beginnings of Mrs. Ewing's writings as well as the flower and fruit of Mrs. Gatty's ripe scholarship and intelligence and sympathy with young persons.

Mrs. JACKSON read a

REPORT ON LIBRARY WORK WITH CHILDREN

(See p. 89.)

S. H. RANCK: This admirable report I feel is one of the most important reports on this work that has ever been presented to a meeting of librarians. There is only one

thing in the report that I should like to refer to, and that is the reference to disorder and lawlessness in libraries or branch libraries in good residential sections of the city. In the city of Baltimore, where I was engaged in library work for many years, we had the greatest trouble on account of lawlessness and disorder in the branch library that was in the best residential section of the city, and I have found that to be the case, not only in that city, but in a number of other cities. The boys who created the trouble came from the homes of well-to-do people, where there seemed to be no, or, apparently, very little discipline and they thought that they were better than other people, that they had more rights than other people, and that they were laws unto themselves, and as a result the library suffered from a great deal of disorder and lawlessness in that particular branch.

Now I should like to say a word or two with reference to Miss Hunt's paper, presented the other morning. It seems to me that one of the most important features was not sufficiently emphasized in that excellent paper, and that is the personality of the children's librarian. To my mind, the personality of the children's librarian is of equal importance with the books that are in the library. We all know that in the history of the world the great movements and the great things that have been done have been due very largely to the personality of a few men or a few women who stood back of the idea, who stood for an idea. Frances Willard stands for an idea, and it was her personality, in my judgment—more perhaps, or just as much as the idea itself—which was the cause of the great movement that swept over the world and for which she stood. And so, from Plato to Phillips Brooks, the great moral teachers of the world and the great men and women who have influenced the world have done that largely through their own personality, and in all work with children it seems to me that we should emphasize the personality of the children's librarian first of all. I will go further and say that, in my judgment, the public library movement to-day is weakest in that one point, in the fact that

we do not get into our work enough personality, and that we should constantly endeavor to put in our work, not only with children but with adults, a greater amount of personality and personal force. The selection of books, the character of the books is vital and is important; but we must not forget that the personality of the men and women in the library who are coming in contact with the people should ever be kept in mind, and the children's librarian, most of all, has the opportunity to make the personality of her work and of herself felt in a way which is impossible or which is not so possible in the other departments as it is in the children's department.

In closing, I should like to urge upon librarians in general the importance of regulating the work of the children's librarian especially so that her time is not absorbed in details and routine, so that she may have plenty of time to do personal work. If the children's librarian feels that so many books must be disposed of or a great amount of routine work must be done every day, this personal work cannot be done; but it should be thoroughly understood and imbued in the minds of every one about the library that when the opportunity for personal work is present the library gives all the time that is necessary to do that work not only freely but gladly. (*Applause.*)

H. H. BALLARD: As was evident in this report to which we have listened this morning, the question of fines seems to have caused us all a good deal of trouble. I think there is no doubt that fines are of little value unless they are regularly collected. The primary reason that it is difficult to collect fines from the children's room is that the children do not like to report to their parents that fines are due on their books, and if a memorandum is given to a child to carry home it is apt to be carelessly or intentionally lost. We have found in our library the same condition which was reported from several libraries, that there was a large accumulation of back fines and no method had yet been devised by which those back fines can easily be collected. We have, however, now solved that problem, and within the last three

weeks all of the fines running back for the past year, some five or six hundred of which had accumulated, have been collected, with the exception of perhaps 25 or 30. It was done in this way: the question arose, Has the public library a legal right to collect its fines? If so, Is it desirable to do so? The question was submitted to lawyers and we found that the right—in our city at least—was undoubtedly in the hands of the trustees. We therefore went to the district attorney and got him to sign, as district attorney, a simple statement to this effect. We then prepared a printed notice stating that a fine was due, that the library was authorized to collect this fine by entering suit if necessary, but to avoid trouble and to reinstate the offender in library privileges this notice was sent. These notices were sent out by registered mail, at a cost of ten cents, giving practically the service of a trained messenger, and bringing back formal receipt certifying that the notice had been delivered. As a result of this process we recovered within two or three weeks about 75 or 80 per cent. of all back fines.

Among methods of influencing children to read there is the method of meeting large groups of children personally in their school room. I had the privilege of speaking a while ago to 500 children at once, and there is great economy in this arrangement. In your children's room you may have but a few at a time, and it is somewhat difficult, even in the reception room or lecture room of a library, to accommodate large numbers of children. Moreover, in the school room they are in their quiet seats, they are comfortably seated, and they are under the discipline of the school, so that you have perfect attention. You then can speak to anywhere from 30 to 500 children at once, according to your opportunities. And the best plan which I have ever found to interest children in a given book is to take the book to the school and read from it, closing with the statement that the rest of the story may be found in the book at the library. I have found that there has never been a single occasion in which a book has been in that way partly read to a school or class of

children that it has not happened that within three or four days there has not been anywhere from six to a hundred calls for that book at the library.

With regard to the care of books, there is one suggestion, and that is that it is quite important for the librarian in charge to manifest in the presence of the children that respect and regard for books which he would like to encourage in them. If the librarian throws out books to the children in a careless manner, and receives them and throws them back on some table as if they were so much merchandise, it will be difficult to instill into the children that reverence and care for books which they ought to manifest.

C. W. SMITH: I can only speak in a general way, for a moment, about the feeling that I have regarding children's work. I presume you have heard it over and over already. It seems to me that it is the one work of the library where we can see results, where we can see the work of our hands as we do it day by day and year by year. It is almost the only work that gives us real encouragement to go on with the detail, the everlasting round of duty, maintaining the public library and hoping for its influence on humanity. And so it certainly is worth doing well. It must be done well, it must not be wronged or belittled in any way. We can afford to make mistakes with grown-up people; perhaps we cannot hurt them very much, perhaps we cannot do them very much good. We have an axiom that we cannot help an adult very much about his reading; but a child we are certainly forming like clay in the hands of the potter.

W. H. SARGENT: In asking me to take a part in the discussion of this subject Mrs. Jackson expressed the opinion that my reasons for the organization of a children's room in my library might be of some help to others. Recognizing the fact that the expansion of ideas of library management would make the children's room inevitable in planning our building, I made due provision for such a room and fully equipped it for the purpose, though I did not expect to put it in operation immediately.

The extremely valuable paper by Miss Hunt which we listened to last Monday covered the ground so fully, so satisfactorily that there is really little more left to be said on the subject. When I first put my hand to the plough of my present profession library schools, children's rooms, decimal and expansive systems, dictionary catalogs, with or without Cutter's rules, had not seen the light of day. The dear, slim old "Poole's index" was in existence, but it was but the shadow of a shade of its present lordly proportions. We charged books in ledgers in those days, and when I drew up a draft of a slip system of charging my board turned it down because they thought that it would be disagreeable for the ladies to take their gloves off to sign the slips. So, you see, from the present standpoint I am not much of a librarian, whatever may be my age and experience. One thing is certain, and that is that I have not the honor to be a children's librarian and that I surely do not propose to attempt to instruct experts, like those around me, in their duties and responsibilities; but, at the risk of repeating ideas already expressed, I will state in a few words not how you *ought to*, but how you *have* made the children's library, not only a moral force, but, in fact, a very strong one—one whose effect will last for years to come.

Beginning at the root of matters, the strongest original moral force in a children's library is the idea of ownership—ownership of the room, of the books, of the librarian and of the librarian's willing services. Having this as a basis, how have you built on it? You have used the very greatest care in the selection of books to purchase; you have made constant endeavor to induce the children to read instructive and elevating works in place of or in addition to those taken out merely for amusement; orally you have directed their attention to ideas in nature, in art and in literature such as enlarge their mental scope, and you have probably, nay certainly, discussed with them simple ethical questions such as cannot fail to elevate their moral condition, avoiding, however, allusions to purely religious matters, the treatment of which properly appertains to other agencies.

All of these things you have done in a careful and pleasant way so as to interest the children. Again, the reference work of the children's library, under your fostering care, has exerted a strong moral influence, based as it is on the certainty that if information is desired on any subject the children can get it from or through their own librarian, who belongs to them specially, and who shows that she is delighted to help them in every way that is possible.

Of course there are other means, and numerous, which, through the operation of children's libraries have exerted and always will exert a strong moral influence over the little ones. Standing here to-day and gazing upon the ardent, earnest faces of those who are engaged in this most important work, I may be excused if I assert positively that you, one and all, have in the past (as you will do also in the future) exercised each and

every one of these moral influences to the very best of your power and ability.

The CHAIRMAN: The most encouraging feature in the children's librarian's work this morning is the fact that we have with us in the Children's Librarians' Section representatives of libraries from the West, the South and the East, showing that the interest in work with children is as broad as our country. The work, while perhaps it is the newest work in the library, is certainly progressing, and we are very glad to have had the privilege of hearing these speakers from the ends of our country.

Adjourned.

[Officers of the section for the ensuing year were elected as follows: Miss Alice Jordan, Boston Public Library, chairman; Miss H. H. Stanley, Brookline Public Library, secretary; members of advisory committee, George F. Bowerman, Edwin H. Anderson.]

SMALL LIBRARIES: ROUND TABLE MEETINGS

TWO round table meetings for those interested in the work of small libraries were held at the Mathewson House in connection with the Narragansett Pier Conference. The first, held on Saturday evening, June 30, was in charge of Miss Frances L. Rathbone. The second, on Thursday evening, July 6, was in charge of Miss Mary E. Downey.

FIRST MEETING

The first round table meeting was devoted to one general topic, "How the small library can increase its efficiency by outside aids," considered in four subdivisions. The meeting was called to order at 8.30 by Miss Frances Rathbone, who said: "A library of 30,000 volumes cannot specialize in any line, and in that sense a library of that size needs to turn often to the outside aids that we are to discuss this evening. In any sense, indeed, we are told that in the East all libraries under 5000 are considered small. In the West we are told that libraries from 200 or 2000 volumes are considered small, and that the East does not know what a small library is. So if

that is the case perhaps we had best carry on this meeting for the advantage of libraries of from 500 to 2000 volumes, and then all who represent larger libraries may take advantage of the points they can gain from it. What we want is to see how far the work done by the commissions and the state associations and the large libraries is really helping the very small library, for the small library needs help most.

We are to discuss this evening the small library in its relation to outside aids. The next round table meeting is to take the small library in relation to inside aids. As the outside aids we are going to consider the state library commission, the state library association, the larger library, and the library's own public; and throughout our discussion we are to keep the point of view of the small library. Miss Stearns will begin by telling us

WHAT THE STATE LIBRARY COMMISSION CAN DO FOR THE SMALL LIBRARY

Miss L. E. STEARNS: The whole spirit that should characterize state library commission

work should be absolutely the spirit of helpfulness. There should be nothing dogmatic about it, there should be nothing domineering about it, and state library commission workers should always keep in mind the difference between counsel and interference. The state library commission worker should always put herself in the place of the librarian of the little library; she should always imagine that she is in charge of the library that she is visiting, that she has the same problems, the same big task, and the same little mite of money with which to run the library.

In the matter of organizing the library, the ideal commission worker would have the wisdom of a Dewey, the patience of a Cutter, the tact of a Putnam, untiring energy, unvarying enthusiasm, a love and sympathy for human kind, adaptability, resourcefulness, a sense of humor and uncommon commonsense. We know of a library organizer who went to a little place where they had the enormous sum of \$50 on which to run the library for a year, and this organizer, with her head full of all the apparatus which she had seen in a large library, expended at once \$27.50 upon supplies, leaving the distracted board and librarian with less than half the money which was to run that library for the rest of the year. That is where adaptability and resourcefulness come in—to be able to utilize everything, to get along without a perforating stamp, and so on.

The financial side of state aid is a delicate thing to handle, because along with such state aid usually goes the element of supervision. There are several states that give a hundred dollars' worth of books to any community that establishes a library. The hundred dollars' worth of books are given, the books are read by that generation, and oftentimes they stand on the shelves waiting for another generation to read them. In other states, however, instead of giving books as a permanent donation to the library, the commission says to a little community: "If you will organize a library we will send you a hundred books every year, in the form of one or two travelling libraries, these books to be read, enjoyed by your people, and then

passed on to some other community to be read and enjoyed there." In that way it is possible to keep up interest in the library, because the popularity of any library depends upon frequent exchange of books, so that one great means by which commissions may aid libraries is in constantly sending that library fresh, wholesome literature instead of just sending them a hundred books at the beginning and then letting nature take its course.

In the matter of printed aids and guides, the commissions nowadays are relieved from their former responsibilities in preparing book lists, through the kindness of the Publishing Board of the A. L. A., which issues the very excellent *A. L. A. Booklist*. One commission subscribes for 500 copies a month of that list, and sees that every library in the state secures a copy.

Commission bulletins are very helpful aids for the purpose of exchanging library information in a state, and making the libraries feel that they are part of the state organization.

In the matter of frequent visits for counsel and suggestion, when a librarian confesses that every time after the commission's library visitor leaves her, she goes to bed with a severe sick headache, then we realize that there is something wrong with the visitor. As I said in the beginning, the visitor should always recognize a difference between counsel and interference. The visit should be of a most friendly nature in every way, and the visitor should put herself in the place of the librarian and be in complete sympathy with the one whom she visits.

Round table meetings are capital aids for little groups of library workers, for places along the trolley lines, where a number of people can come together and discuss problems of an afternoon or a day. They are a capital thing for the librarians who cannot afford the money or the time in which to attend the larger state and A. L. A. gatherings. A distinction should be made between a round table meeting and an institute; they are oftentimes regarded as synonymous, but an institute should be longer than a round table meeting. A round table meeting is a matter

of a day, an institute is supposed to be a series of meetings for a number of days, and always, under the strict interpretation of the word, ending with an examination. A summer school is an important aid, where a young woman can go to brush up on her technical knowledge, to get a survey of the wider field, to find out her mistakes and errors and be inspired to go back and do better work in her library.

The state library commissions may help small libraries a great deal in letting them know where they can secure travelling exhibits of different kinds, lantern slides, etc. Permanent exhibits can be secured in this way as well. Then, in the securing of legislation, the state library commission, as a state body, under authority of the state, may help very largely in having a pernicious one-mill tax removed, which oftentimes prevents a town having any library at all. The commission being at the state capitol, the people connected with it can use their influence in having restrictions removed and adequate appropriations made for libraries.

In conclusion, I want to pay my personal tribute to the librarians of the little libraries, in their endeavors to reach out and help every man, woman and child in every community. When we go to Washington we admire the great Congressional Library, we admire the Boston Public Library, and the great libraries that are being put up all through the country through the beneficence of "St. Andrew;" but there is many a little library that is much more of a monument to the endeavor, oftentimes to the heroic and self-sacrificing endeavor, of the fine librarian in charge of it.

The spirit of the state library commissions of this country is such that they intend to "keep everlastingly at it" until every man, woman and child in America has access through the public library, travelling library, or some form of library, to good books, for it is the motto of the state library commissions that "It is after all not the few great libraries of the world, but the thousand small libraries that may do most for the people." (*Applause.*)

Miss JULIA E. ELLIOTT: If the library visitor comes in friendliness and makes the suggestions that occur to her, they will be taken

in the right spirit if offered in the right spirit; but I should like to emphasize one point, and that is this: the library visitor, I think, bears too much in mind the technical side of the work. She goes to a library with the idea of seeing all its faults and of helping to correct them, but she forgets that many times the librarian is struggling with other difficulties than library records. The most helpful thing that the library organizer can do is to interest the people of a community. The untrained librarian perhaps has not the power of seeing her opportunities, and as the result she is unable to grasp those opportunities to make her library a real force in the community. While I do not wish to say that accurate records, library technique, are in any way unimportant, I do think that the other is far more important, and that is what the library visitor should start out to do — placing her emphasis upon helping the librarian from the inspirational side. It is quite within the province of the visitor to do some of the things that the librarian of the little library is not capable of doing, such as getting school children interested. It is not every untrained worker or even every trained worker who can go into the schoolroom and talk to the children, or who can go to the women's club and talk to the women of the club, or who can go to a business men's organization and talk to them, and these seem legitimate ways in which the friendly visitor can help the librarian of the small library in interesting the people of the town in the library.

Then there is another thing that in this busy world we are too apt to do, and that is make our visits too short. Perhaps we stop between trains in some small town, and expect in an hour or an hour and a half to do all that (if we stop to think) would require a couple of weeks or maybe months to accomplish. We should give enough time to the small libraries, not only to see the librarian, but to see the directors of the library and become acquainted with the people of the town and get them interested.

Miss CLARA F. BALDWIN: One of the most useful departments for commission work in reference to the small library — and I have in mind the library of less than two or three

thousand volumes, where the librarian ordinarily has from \$15 a month up to \$35 a month perhaps—is the work of the summer schools. The summer schools have been looked at somewhat askance, I think, by some librarians, as furnishing a short cut to library methods for people who might take fuller courses, but in the newer states where the commissions have been at work but a few years it seems to me that this criticism does not hold. Of the students who attend these schools, the large majority come from the small libraries that we are speaking of. The inspiration librarians get from association with co-workers, with people who have similar problems, is very helpful, and the summer school gives an opportunity for the interchange of experience and develops a feeling of unity among library workers throughout the state.

W. R. EASTMAN: In New York a library is not small if it is over 500 volumes, and the librarian who gets \$15 a month gets more than 60 librarians in New York receive. And there are a great many who cannot even consider the summer school. The commission officers must be in perfect sympathy with them, understanding exactly where they stand and what work they have to do, and encouraging them and helping them as friend to friend. That is the first thing for a commission to do.

Miss MERICA HOAGLAND: In the Indiana commission we have tried recently the experiment of giving five dollars' worth of supplies to the libraries that receive \$500 or less in annual income, for we have found that the very first purchase of supplies is a bugbear to the library board that knows absolutely nothing of the Dewey system and all that it entails. Therefore the offer of this first five dollars insures the organization of the library with some of the tools we should like to have placed in it.

Another new development is that of having library school students—that is, one-year students from the library schools—take part of their apprentice work in the small libraries of the state, so that in Wisconsin and Indiana and other states, the small library situation is being helped out by the library school

students going into these small libraries, giving their work free of charge as apprentice work, and helping the small library.

The CHAIRMAN: How long do the students give this assistance?

Miss HOAGLAND: For three weeks; the work of two students for three weeks each makes six weeks' service to the library.

Miss EDITH A. PHELPS: A question with our library is the matter of subscription books. Can the commission reach that? For instance, almost every little town has a small library and they have bought, say, Warner's library, or the "Historian's history of the world." They have those and practically nothing else, because the rest of their collection consists of a hundred volumes or so, given by townspeople, and there is no money for more.

The CHAIRMAN: It is often true that in the country the people who are least able to spend money for books buy these expensive sets of books instead of the books they could really use, and the libraries suffer in the same way.

ROBERT P. BLISS: Those of us who are connected with libraries and come in contact with other library workers, do not realize the deadly influence there is in isolation. One of the most helpful things that a commission or a state organization can do for the small libraries is to devise ways and means of bringing together the librarians of the little libraries who do not come in contact with other workers, because there is a feeling of encouragement that comes from just bringing them together and letting them talk with each other.

Miss KATHERINE McDONALD: I think Miss Phelps has brought out one of the most important duties of commission work, and that is the assistance that a commission may give in the selection of books. In the Wisconsin commission we feel more and more that it is one of the most important services that the commission does for the small public library. It saves money, it helps the development of the community, and its aid is the most far-reaching. Our *A. L. A. Booklist* has been of great assistance, but there must be some one who is willing to check that list and help the small libraries make their first collection; not

only that, but they need help in building up their collection of old books as well as of new ones.

The CHAIRMAN: The next topic which will be opened by Miss Stearns is

WHAT THE STATE LIBRARY ASSOCIATION SHOULD
DO FOR THE SMALL LIBRARY

MISS STEARNS: I want to say one word in reference to the subscription book difficulty that Miss Phelps referred to. I know of one little library in a lumber town that had an income of \$150 a year, and one of the trustees was induced by a wily book agent to subscribe for a certain monumental historical work on the seven-dollars-a-month-for-the-rest-of-your-life plan, and upon being asked why he did it this trustee said it was because he was proud to have the name of his public library placed upon the list of subscribers to so monumental a work. (*Laughter.*) That was his one and only reason for buying a work which not a soul in the community would ever look at.

There are many state library associations located in states without commissions that can do a great deal of library commission work, first by sending some volunteer to help a little town to start right, then looking after that town and making friendly visits to the library. Thus much commission work can be done by the state library associations, if they study what state library commissions are doing and try to adapt it to their own field.

I am opposed to having just one central place, one permanent place, of meeting for a state library association—particularly in a large state. Perhaps the association always meets off in the southwest corner of the state, because it happens to be near a river or a lake, and 'way off in the western part of the state there are many people who cannot attend that meeting. If an association has an attractive place where its members like to go every year, they should not be selfish about it. They should at least have quarterly meetings every few months for the people who cannot attend from other sections.

Travelling exhibits of books or pictures may be prepared by a state library association

to interest the people. I have been greatly interested in what they have been doing in Texas. The Texas Library Association arranged a lecture circuit, and sent to Chicago for some of the best University men, and had them go about from library to library, thus dividing up the expense and giving the lectures under the auspices of the libraries. A state library association may also publish a bulletin containing information and inspiring articles on library work.

If you take the outline of the work commonly done by state library commissions and apply it to state library associations, you will find before you a vast field of work to be done in addition to having a purely social meeting once a year. Of course, the chief work of the state library associations in the West, South and Southwest should be that of securing library commissions to continue the work. That should be the primary endeavor of associations in states where there are no existing library commissions.

The character of the state library association meetings, I think, should be of a very different character in states where there are commissions. They should be less elementary. I should not turn over the work of an association to the commission to manage. I believe in having a division of interest for both.

MISS ANNE WALLACE: One phase that particularly strikes me is the preparatory work. The idea of not having a state association meet in a permanent place has its advantages, because by meeting in different parts of the state each small library has to take its share in making out a program. The press work and all of the preliminary work required, I think, is almost the best part of an association meeting. I remember at the Portland Conference—and, by the way, the Portland Conference Proceedings are a boon to me and to any member of a small library. I can recommend it to all. We bought ten copies last year, and now we have had them bound. I do not think we will ever find a number as good as that Portland number for this work we are now speaking of—a remark of Mr. Dana in which he says the best work of an association is the association itself. There is

one thing that our state associations are losing sight of, and that is the book selection. I remember when I was much younger and first came to the A. L. A. meetings how delighted I was by the book discussions that were brought out; and I remember particularly hearing Miss Helen Haines get up and talk about novels — flimsy novels you might call them to-day, novels that you wouldn't dare speak of perhaps in this big Association meeting, but novels in which we are all interested because Mrs. Tom, Dick or Harry had written to us and asked us to select ten novels for such-and-such a club. I think that if we could have book discussions it would revive a great deal of that interest. We hear much of the commercial librarian; she is an organizer and demonstrator and everything else but a booklover; but I should like to see in our state association meetings that interest in books revived.

The CHAIRMAN: We will now hear from Miss Bertha S. Wildman about

ASSISTANTS' MEETINGS

Miss WILDMAN: I submit the following:

Outline for starting a series of assistants' meetings

1. Divide the state into several local centers, and hold a series of five or six meetings each year in each local center.
2. Let the library that is to hold the meeting issue the invitations, sending one to every library in each local center.
3. Let the invitation state that a meeting is to be held under the auspices of the state library association; that it will be of interest chiefly to assistants; that one delegate preferably an assistant is invited (if there is only the librarian she will be the delegate); that the delegate shall be chosen by the staff, not appointed by the librarian.
4. Let an assistant, or if there is no assistant, the librarian of the library where the meeting is to be held be chairman of the meeting.
5. All of the staff of the library at which the meeting is to be held are privileged to attend the meeting or choose their delegates. The librarian may be invited to be present.
6. Make up the programs of topics of interest and value to assistants, but at each meeting have presented by an assistant a paper on some country or person attracting attention from whatever cause, also have a talk on

the late books, preferably non-fiction, followed by discussion.

7. Appoint a permanent program committee to whom suggestions shall be sent by assistants. Let this committee consist of the president of the state library association, the chairman of the meeting to be, and two assistants appointed at the annual meeting. Then if before the meeting is called to order the name and official position of each person in attendance is read, this can be understood to stand for introductions all around.

8. Refreshments, if served, should be so slight as to debar no library from volunteering as hostess and to be no serious tax on the library that entertains.

PROGRAM FOR JUNE, 1906

From three to five p.m.

Talk—A. L. A. Meetings—Does it pay an assistant to go.....	10 min.
Discussion.....	10 "
Paper—Ibsen.....	10 "
Discussion—Current books.....	15 "
Paper—Why an assistant?.....	10 "
Discussion.....	15 "

SOCIAL HOUR

There are four reasons why these meetings should be of help to assistants. First, assistants have less opportunity than others in library work of widening their outlook. By coming together and discussing ways and means of meeting the problems that come up, the assistants find out what others are doing; they learn to know what may be the foundation principle which governs their own line of work; they get out of the rut which comes to us all if we do not see any work but our own; and, if rightly conducted, above all they gain that *esprit de corps* which we call the library spirit. Second, these meetings teach the assistants executive ability to a great extent. If the assistant plans the meeting, conducts it, or even speaks at a meeting, she acquires a certain amount of self-confidence which is invaluable. She learns to have opinions of her own which she can formulate, and she gains the assurance to stand by her decisions. She acquires the courage to stand before a number of people and talk. I have heard it said that assistants lack initiative. In having a series of these meetings, where they take full charge, they will learn to gain this initiative and the self-assurance they need.

My third point grows directly out of this. Assistants all the time are having opportunities to step higher. The executive ability they have gained should prepare them to take more and more responsible positions in the future, positions which demand this ability to plan and carry out prescribed programs of work. Many an assistant may have the ability hidden within her, ability which a little practice may bring forth.

Fourth, the social intercourse which means so much to us all may be promoted very strongly by just such meetings. Some may think that they can get this social feeling by going around from library to library and talking in groups of twos or threes. This, however, does not do the good that a larger meeting may do. In few libraries may the assistants stop for this social intercourse. When large numbers meet the social feeling created is much more intense, provided the one at the head for the time being has the necessary social leadership.

In order to get at some concerted plan by which these meetings might be conducted to bring out all these ideas, the opinions of different assistants attending such meetings have been requested and the objections and disappointments learned. Then these were worked over and the plan submitted was agreed upon and discussed to see if these objections had been met. By looking over this outline you will see that the fundamental idea was to leave the meeting with the assistants themselves, but that it should remain closely affiliated with the state association. Not only were the practical questions of library economy and training to be brought up in each meeting, but a wider outlook on the affairs of the outside world was to be encouraged. Assistants meet the public much more often than librarians do. If they are to give satisfactory assistance to the general public they certainly need help in acquiring the broader culture which will enable them to meet all classes of people. These embryonic plans for assistants' meetings are made with the idea that they shall keep close to the state association and in time lead to a movement whereby an assistant's section may be represented with the other sections at our A. L. A. meetings.

Mr. H. H. BALLARD: It is very important to bear in mind the sacredness of the individual. The library visitor going to the small library can learn a great deal from that librarian as well as teach her something. Librarians in small libraries, particularly women who have devoted years of earnest thought to their work, have learned by experience that which no library association, no state commission, can teach them. They have met individual difficulties and have overcome them in individual ways, and if the library commission visitor, in conversation with these women, can learn some of the methods which they have devised to meet difficulties and carry the news of that to workers in some other town, it will come as a blessed gospel in many cases.

After many conventions of this character, after several state conventions, and after quite a number of limited, small conventions, I have mingled with the librarians of the smallest libraries and noted their conversation with one another and the universal complaint has been that while the addresses which they have heard have been most illuminating and interesting, and while the discussions have been strong and worth hearing, they have gone over their heads; problems which they have already solved have been untouched, problems which they have been unable to solve have been left without attention. The same thing is true in regard to the assistants in libraries, and I think there is a duty which the librarians in charge of public libraries owe to their own assistants. It is a very good thing in every library where there are several assistants to have meetings of the assistants themselves in that library, to begin with, a small circle. It is an excellent plan for the librarian to show confidence in his assistants by throwing certain responsibilities upon them, giving them a positive share in the administration of the library when possible, or at least to let them understand why this thing is done and that is not done. In our library, for illustration, I asked each of our assistants—and many of them were quite inexperienced at the time—to take upon themselves the responsibility of selecting ten books, to be purchased by the library, up to the limit of

ten dollars a volume. The result of that simple experiment was wonderful. The tone of the entire staff was raised, and if I could only have shown you the one hundred books selected by the ten young ladies in the library you would agree with me that the choice was a surprising revelation of the capabilities of judgment manifested by those young women.

Miss MARY E. DOWNEY: I should like to mention the good that the state association does to the assistants by meeting in different towns. Salaries are often so small and a staff so small that few persons from one library can go to the association meetings, and if the association comes to the town occasionally, say once in several years, it gives assistants an opportunity to attend the meeting. It also gives a wonderful impetus to the library's work through the whole year; you are able to get more things, your board has a great deal of pride, and they will do almost anything you ask them to through that year, so that the library may be swept and garnished before the meeting.

The CHAIRMAN: The next topic is what the large library can do for the small library. We will take, first, library classes, and, second, inter-library loans. This is taking a practical illustration from the work of the Newark Library, and Miss Roberts, the assistant in the reference department of that library, will discuss both topics.

WHAT THE LARGE LIBRARY CAN DO FOR THE SMALL LIBRARY

Miss KATE L. ROBERTS: The New Jersey library class is very simple in plan. We send out a circular every fall, giving facts as to teacher, date, outline of the course and the price. We send these to the libraries within easy travelling distance of the Newark library. The answers that come in give us a clue as to how many we may expect in the class, and that always assures us of the payment of the lecturer. The class then begins, and the idea is to give an academic course of ten lessons, and only one course a winter if possible. We had one winter a course

under Miss Rathbone, of Pratt, on reference books, which was very delightful. We had 33 in the class, representing 15 different libraries. Next winter we had Miss Hitchler, of Brooklyn, on cataloging, with a class of 23, representing 12 libraries. The idea is to make this course very useful to the small librarian and yet broad enough to be helpful to the rest of us who are so fortunate as to be working in the larger institutions. This class accomplishes many very good results. We come together in a very informal way, we sit about the table and discuss informally as the topics come up. Our teachers have conducted the class in the most delightful way, and we get acquainted with each other in the way which has been suggested by some of the speakers tonight.

We have an examination and we receive a certificate. The certificate probably does not mean so much as library school graduates are accustomed to, but it shows that we have taken a course of lectures and shows our percentage: it is signed by Mr. Dana, showing that it has been given under the auspices of the library, and it is signed by the secretary as well. This class work has appeared to me as a sort of library school extension work.

As to inter-library loans, through the courtesy of the inter-library loan the smaller libraries are able to do more than otherwise for their own members, and the library service of the whole state is improved. The Newark Public Library furnishes blanks to librarians in the state, but will lend books beyond the state as well. The library using the form stands responsible for the books borrowed. The restrictions are: no new books, no fiction, no books in demand by the Newark public, no books already owned by the library making the request.

In 1905, 582 books were borrowed by 22 different New Jersey libraries.

The good points of the system are these:

1. Small libraries realize a spirit of helpfulness in the larger ones, and are encouraged to be more useful to their own members through these loans. It stimulates them.

2. People from the smaller communities come in contact with a larger library spirit and appreciate the library movement as never before.

3. Those who find there is a way to get books generally want them more than ever, and go to their own small library with demands.

4. The inter-library loan stimulates the users to demand better library conditions in their own communities.

5. It makes the larger libraries centers for much activity and puts valuable reference collections into wider use.

6. The requests through the loans have aided the small libraries in their purchase lists of books.

The CHAIRMAN: We will now go to our final topic, and Mr. Peck will tell us

WHAT ITS OWN PUBLIC CAN DO FOR A SMALL LIBRARY

Mr. A. L. PECK: There is an old adage which says, "Woe to him who follows the king," but how much more would they have said, "Woe to him who follows all these queens." (*Laughter.*)

I would like to call your attention to one fact, that we are possibly somewhat timid in making the public acquainted with our needs. We are generally very grateful for what we have received, and sometimes positive of what we want; and of what we have not we often think we had better keep still. I believe this is a mistaken idea. I believe it is our duty to speak much more of those books which we would like to have, which we ought to have and which we have not. For instance, a man comes into a small library and asks for a valuable work of reference. If you simply tell him that you have it not, he will say, possibly, "This is the first time that I was ever in this institution, and I am a taxpayer, and what good is this library to me?" It is better to say to him, "We would like to have this book, and we will make the trustees acquainted with your inquiry." In the state of New York we do not need even to say this very often. We have a great

state library which has become the public library of the state, and if there is any book that we have not we need only say, "If you will give me the time we will have this book here within 36 hours." We then simply write to the state library. Last year my own institution had the loan of 268 books from the state library. If supervision is worth having, I believe the supervision of the state of New York is worth having because it is backed up by deeds.

In the matter of reference books, sometimes it happens that a school teacher will come and ask the librarian of a small library to provide for the library a history of pedagogics or education, and the librarian will be greatly puzzled as to who is going to read that book. Then the best thing to do is to inform the trustees that there are teachers who want to study that subject, and the money will be provided. In one library request was made for a certain Bible commentary, and the librarian said, "This is a small library; we cannot buy Bible commentaries, but if you wish to have them here, let each church donate a commentary or part of one," and in time the different Sunday schools of the town bought commentaries for that library. And here it comes to the point: we as librarians cannot afford to have anybody go from our library disgruntled and say that the library isn't worth anything. We must make an effort. If we have three hundred books, know those three hundred books. If we wish to do service to the public we must know what is in the books.

The next point is this: if clubs are going to take up study topics, foreign travel, and so on, and wish to have pictorial books, tell these clubs beforehand, "We shall be very glad to do all we can for you with what we have, but we shall be more glad if you will provide for us what we have not and what you need." Let them share the responsibility. Don't be afraid to stand before your people and tell them, "Yes, verily, we are poor, but we are rich in enthusiasm, in willingness to have, we are willing that the right book shall go at the right time into the right hands."

Adjourned.

SECOND MEETING

The second round table meeting was called to order by Miss Mary E. Downey, in charge on the evening of Thursday, July 5.

Miss DOWNEY: Libraries are comparatively large or small. To those in our largest cities the libraries of middle sized cities would be considered small, and so on down the line. The library having a building costing from ten to twenty thousand dollars, with a maintenance fund of from one to two thousand dollars, looks with pride to its larger sister, with a building costing from fifty to one hundred thousand dollars, with a maintenance fund of from five to ten thousand dollars, and with a circulation of over fifty thousand. This is the class of small library most largely represented here to-night, and with which our discussions will largely deal, in the hope that the ideas presented may be adapted above and below this scale.

We shall begin our discussion this evening with a consideration of the staff, opened by Miss Bessie S. Smith.

LIBRARY STAFF

Miss SMITH: The subject of staff is one so intricate and so individual that it must be governed by each librarian individually, yet what some of us have found to result in good work may perhaps be useful to some of you, for we are all adaptors to a certain degree.

First, as to the hours of the librarian. The trustees put upon the librarian responsibility and expect results. It seems to me that in expecting those results they should give her her own individual freedom. They should not require that she be at the library a certain definite number of hours, but I feel very strongly that the librarian should be found at the library at certain times. There are people who would come to the library to speak on matters of business if they knew that the librarian was sure to be there, and I think the librarian ought always to be found at the library at regular times. Let her be punctual also; punctuality may be one of my hobbies, but the day begun five minutes late is never right, and five minutes of tardiness are never made up.

It has been also found that the librarian's number of hours should average the same as those which the assistants are required to give. The *librarian* should not be *required*; her own conscience should teach her voluntarily to give the same number of hours in the library; but those hours, I repeat, should not be required definitely, at a definite time. Sometimes the best work of the librarian is done away from the library.

The social life of the librarian and her duties to this, I think, is one of the most difficult phases of our work which we have to meet. Librarians have very little time, and they often feel that social life should not be demanded of them, but the business man feels that he must join business clubs and social clubs for the sake of his business which, consciously or unconsciously, he helps in that way. Now we librarians—some of us at least—believe in advertising our library. Why should not we advertise it in this way? I believe that the librarian should be identified with all educational organizations in her town, and also with the club work. Let me cite an example. I am specially interested in civics, and the civics division of the women's club in my city is a very active division. Last year the members of this division distributed some 12,000 packages of seeds free to the public school children. The question arose as to the most central point from which these seeds should be distributed. As I was much interested in this work, one of the club members came to me and said, "Now, if we propose this will you let us come to the library and send the packages out from the basement?" This I very gladly consented to, and it brought to the library for a week about twenty of the most prominent women of the town and many teachers. They already knew the library, but their feeling was, of course, more kindly afterwards, and it brought a great many children to the library who had not come before.

Then the librarian's duty to herself. This is really the most difficult subject. In talking not long ago with a leading librarian she said, "I believe librarians read too much," and I was forced to emphatically differ with her. It seems to me that perhaps librarians read magazines and have the review habit too

much, but real reading I do not think is done sufficiently by them. I feel that we ought, all of us, to read more, for while I do not want a librarian to be a brown and dusty bookworm, still the ideal librarian is one who understands books and knows how to read. The greatest duty which the librarian nowadays owes to herself is to read carefully. If you can read but one book a month, do it, and know what is in that book.

As to the time and hours of assistants, I find that the average number of hours now required of assistants is about seven and a half a day, some libraries requiring only seven. The smaller the salary the less number of hours should be required. As to changes of time on schedule, I believe that assistants should be allowed to change their schedule at various and sundry times when they want to.

Staff meetings is a moot subject. Personally I believe in them thoroughly. There seem to be two kinds of staff meetings conducted among librarians, one where only administrative problems are discussed, and one—such as the New York Public Library carries on—where both administrative problems and class room work are dealt with. The latter seems the ideal. The librarian should discuss with her staff her plans for the future after they are formulated. If there is to be some radical change in the library administration the plans should be well and carefully formulated before they are brought before the staff. But two heads are better than one, and discussion brings out a great many points from which the librarian may receive help. Why should not the librarian acknowledge such help? I always tell my trustees when some good idea has come to me from my assistants, and I have never found that I have lost their respect by so doing. In all the reports of large libraries to which we turn so eagerly every year credit is given to heads of departments for their good work and good ideas. Why should not the same hold true of individual assistants in the library? You get better work out of the assistants if you discuss *en masse* in staff meetings the different plans for the library.

As to class room work, I will tell you of my own experience. About three years ago

it seemed to me that perhaps my assistants were reading a great deal but not consecutively, and I made a very short little reading course and asked them to hand in to me written reviews and criticisms of the books listed. They worked so hard and I found that it was so difficult for them, that the next year I decided to have no staff meetings, and simply announced the decision. I was surprised and much gratified one day to find on my desk a petition signed by all the members of my staff—not very many at that time, I think about seven—asking me if the staff meetings might not be continued, they had been so much helped by them. So now we have staff meetings, consisting of discussion for a few moments of the administrative problems of the library, and then current-event work and book work. I assign to each one certain subjects to be reported on and find we get a very great deal of good out of it. To my mind the same idea holds good with assistants that applies to the librarian; they need to read, and they ought to read more and more all the time.

As to apprentices, I mention them because they are the staff of the future. In my own library, after the apprentices have been in the library a little while, I require that they come into the staff meetings and assign to them subjects just as I do to the assistants. Voluntary help, it seems to me, should be treated exactly the same as paid help.

MISS MARILLA WAITE FREEMAN: We have had a staff class in the Louisville library during the past year. This class began with a few talks on the order department of the library, followed by several on cataloging, and it was then turned over to me for a short course on reference work. We had about 20 meetings on the subject of reference books. These meetings were held weekly, from half past 8 to half past 9 in the morning, and I gave informal talks on a few of the best reference books in each class of the Decimal classification. Each talk was followed by practical questions, problems and tests, and the ground was covered with some degree of thoroughness; there was informal discussion, and questions were freely asked. The class entered into this work very enthusiastically. Perhaps the only original feature of

the course, if it is an original feature, was at the end of the year, when instead of giving an examination, which seemed formidable to the class, I asked of them instead a list of the first 35 reference books which they would choose in organizing a small public library, and I got some very acceptable lists. Then I asked each member of the class to write a specimen examination paper, giving ten questions which she thought would fairly cover the work of the course, and I received some very good papers indeed. At the last meeting I took these examination papers which the girls themselves had written, and asked questions from the different papers, of the different members of the class, selecting, as it were, an examination from the examination questions which the girls themselves had made up. In this way we avoided the formidable experience of a written examination which is dreaded by every one, and yet covered the ground quite thoroughly, and I knew quite as much to my satisfaction what the girls in the class were capable of doing as if I had given them a written examination. Next year we hope to take up in the same way the different classes of the Decimal classification, taking at each talk, say, a dozen of the best books in each class and talking about them informally. The object, of course, in both cases is to familiarize the members of our staff, in the circulation and reference departments especially, with a number of books which they know personally and are able to guide people to with intelligence.

Miss ELIZABETH L. FOOTE: I would like to ask Miss Smith when her staff meetings are held—whether they are during library hours or at other times?

Miss SMITH: The problem in my library as to that is not a very difficult one, because our reference room adjoins the loan desk, and one assistant always stays by the door and can watch the loan desk. We meet for an hour and a half every Thursday morning. I cannot say I believe in having staff meetings before the library opens, as it makes the hours for the assistants too long, and since it is all for the benefit of the library indirectly why should not the meeting be held in library hours? Last

year I tried allowing my girls 15 minutes a day for a certain amount of reading. I did not allow them to read where they could be seen in the library. I do not approve of that at all; it gives an entirely wrong impression of the library to the observer. But they could take their books up to the staff room and read for 15 minutes, and they really did a great deal of reading in that way.

Miss MARY L. DAVIS: May I ask Miss Freeman whether this work is required on the part of the staff, or is it volunteered, and is the time set aside for study, or is study required out of library hours?

Miss FREEMAN: The work is voluntary. That is, in forming this class, only such members of the staff were to come into it as chose to do so; but they came in with the understanding that the study which they do on the problems given them must be done on their own time. It did not seem practicable for us to give them library time for study. The library opens at 9 o'clock in the morning; we come from half past 8 to 9, before the library opens, and then continue our class work for half an hour after the library has opened; but there are enough members of the staff, outside of the class, to keep things going until we finish the class work.

PURD B. WRIGHT read a paper on

LIBRARY ADVERTISING

(See p. 86.)

Miss ANNA L. MORSE: About two years ago, in Youngstown, we printed some cards, giving an invitation to people to come to the library; then on the back of this card is a list of popular magazines to be found in the library. These cards we distributed through the stores; for two or three days there was a card put in every parcel that went out from the leading stores. We also put them in the banks, and they were given to the steel plants and the other industrial concerns, so that a copy might be put into the pay envelope for all the English-speaking employes. We have also put into the schools a bulletin, not so much a bulletin of books, as an advertisement of the library, urging boys and girls to

come to the library, and giving a schedule of the library hours for the children.

Miss ELLA M. McLONEY: I should like to ask Mr. Wright if he considers it of any value to keep a standing card advertising the library in the daily papers, and also cards or bulletins or an advertisement of some sort in the hotels and other public places?

Mr. WRIGHT: It is a question of the community you want to serve. We placed bulletins or cards in the hotels and other prominent places. The little box that I spoke of seems to serve the purpose with us, except in the larger places, the stations and the hotels. In our branch library we tried to reach the laboring men. It is located in the packing district. We had hanging cards printed which were hung in the several departments of the packing houses, and we called attention to our smoking room and chess and checker tables. We tried a long time to get the men interested in the library, but were never very successful. It takes a settlement worker to do that. In that same neighborhood we are doing very effective work with the children through the schools.

From our children's room, with about 4000 books in that department, including reference books, during the year just closed we circulated in the neighborhood of 50,000 volumes. Street car advertising has been effective.

Miss BESSIE S. SMITH: There is one point I would like to bring out from bitter experience. We sent out between three and four thousand cards of invitation to the railroad men and the machine shops in our town. We felt that the railroad men were not using our smoking room enough. In one shop in particular where there were several hundred men employed, the superintendent became much interested, and the result was that he sent around a man to speak to the other men and explain what the library was trying to do. The result was that we were overwhelmed by such a demand for industrial and railroad books that our supply was completely exhausted. Therefore I believe that the first thing necessary in advertising a library is to get the books you are going to advertise.

Miss Katharine McDonald read a paper by Miss JULIA HOPKINS on

CIRCULATION *

The question of circulation is perhaps the one nearest the heart of the librarian of a public library, and certainly is the one which presents the most difficult problems and the greatest number of them. I mean to present what is called the extension side of the work.

Extension work means not merely the employment of methods to increase the number of books circulated, but all the means exerted to make the influence of the library permeate through every part of the town in which it is located, reaching out even beyond its borders.

I shall treat this under two heads: 1, Outside aids; 2, Inside aids.

The small library has an advantage over the large one in that it is not hampered by distances. We all agree that the thing to be aimed at and worked for is not merely to send books *out* to the people, but to bring people *in* to the library. You have a beautiful library building (if you haven't one, you are doing your best to get Mr. Carnegie to give you one); you have given great thought and care to the selection of its furniture and pictures and all the interior decorations; you have selected most carefully its books. And is all this to count for nothing? Is your beautiful building to be only a central office from which to send out small collections to various points in the town? Are the people to have no benefit from the entire collection of books, but be forced to depend on *your* selection for them?

I have often heard librarians of small libraries try to excuse themselves for not having deposit stations and various other outside activities, seeming to think that they were being unfavorably criticised as not doing broad and progressive work. My own feeling is that this state of things should be reversed, and that the deposit station in a small town needs an apology. There should be no station established without a good and sufficient reason for it. If it is utterly impossible to reach the people in a certain district from the library itself, then by all means have a deposit station. But unless there is such excuse for it, the establishment of a station seems a con-

fession of weakness and failure on the part of the librarian to make her library the center of attraction which it should be.

Moreover the establishment of deposit stations not only fails to do the best thing for the people whom it serves, but it weakens and hurts the service you render to others. A large library, with the funds at its disposal, can afford to duplicate its books, some of them a great many times. This is impossible for the small library; and consequently if several stations are kept well supplied, the central collection of books becomes so depleted that it ceases to be the source of attraction it ought to be, and thus actual harm is wrought.

For the maintenance of Sunday-school libraries by the small library there seems to be no good excuse whatever. Strict impartiality shown to all sects demands that if a Sunday-school library is sent to the church of one denomination, other denominations must be equally favored. As the smallest town is likely to have four or five denominations represented, that means that 200 and more of your best books are taken off from your shelves where they might be reached by every one every day in the week, and put in a place where they are accessible to a limited number of people and that on but one day in the week.

A good general principle on which to base outside extension work is this — any method which gives better service to the people than can be given at the library.

Under this rule would come the work with schools. Every teacher knows the children in her room individually as the librarian, or even the children's librarian, never can; and so through the teacher there is a better chance of each child's getting the right book at the right time. Therefore the sending of small collections of books to school rooms for distribution by the teachers seems a perfectly legitimate outside agency for even the smallest library.

In towns large enough to support a paid fire department, a shelf of books sent to each station will give pleasure to the men who are tied down to hours of forced inactivity with very little to relieve the tedium.

In every town, also, there are individuals who cannot be served directly at the library —

invalids, farmers, etc. For them some method of delivery is necessary — a house to house delivery for those in town, and perhaps some arrangement with merchants or milkmen for sending out books on their wagons to those in the country. These isolated cases are exceptions to the rule, and do not make any great demand on the time of the librarian.

But the time and energy expended in the manipulation of a number of deposit stations in selecting the books, managing the exchanges, visiting, checking up, taking statistics, etc., if put into devising ways and means of attracting people to the library would work very surprising results; and when once a librarian is filled with the purpose of drawing people to the library she will find her mind fairly swamped with ideas as to the means by which to accomplish it. Talks by townspeople on subjects of general interest, exhibits of various kinds (especially exhibits of the art work and manual training work done in the public schools, which will attract parents from all over the town), continual articles and notices in the newspapers, book lists, etc., are some of the well-known methods used to bring people to the library.

Every individual librarian must work out her own methods to suit the peculiar nature and needs of her town. But whatever is undertaken, do not be afraid to abandon it if it prove unsuccessful. Many librarians, especially those in charge of small libraries, seem to feel it a necessity to adopt the methods of other libraries and stick to them even when they do not work successfully, seeming to feel that the fault must lie with themselves and that an abandonment of the schemes would amount to an acknowledgment of failure. This may be true; but in all probability the plan is one not at all adapted to the situation and cannot from the nature of the case succeed.

Turning to the other side of our topic, the inside aids, the first thing to be accomplished is the doing away with all unnecessary red tape. Having attracted people to the library, it should be the aim to throw it open to them as freely as possible. Have as slight a system of registration as you can get along with, doing away entirely with guarantors. Set no limit to the number of non-fiction books:

drawn at a time, and if your collection of fiction warrants it do not limit that either. Allow readers to renew a non-fiction book as often as desired, unless another reader asks for the same book; and allow them to return a book on the same day that they draw it, if they so desire. In fact, do away with every possible rule, only retaining those that serve to protect the general public from the individual.

Above all, see that your rules mete out absolutely impartial service to all readers alike. The public library can be no respecter of persons. Do away with reserve postals, except for books of non-fiction wanted for some particular purpose. The reserve postal system gives an unfair advantage to the person who can afford to pay. Do not advertise the time when new books are to go into circulation. This differentiates in favor of the few who may be at leisure to come to the library at that hour. Put the new books out without saying anything about it, and have a list of them in the paper shortly afterward. This gives all people alike a fair chance at them.

The extension of influence within the library must be by subtler means than those used without. It is comparatively simple to attract people to the building, and it is easy to make such rules and regulations as will throw things open to them freely; but to hold them, to interest them, to *please* them—that is the hard thing and the thing that counts. For, after all, to accomplish in library work, one must give pleasure.

Of late years the educational side of library work has been pushed forward to such an extent that the other sides are in danger of being forgotten. Not that I would decry the value of a library as an educational factor. We must have books in our libraries that serve as tools for teachers and tradespeople. But that is not the main thing. The great thing is to open to as many people as possible the delights that may come from the reading of the great books of the world.

Do not be afraid of a high fiction percentage. If you can get people to enjoy the best fiction you are doing a big thing for them. See that your fiction is carefully selected, and then do not be afraid to have people read it. Never recommend a book because of its literary merit or its educational value, but sim-

ply and solely for its power to bring pleasure to the person concerned. The average person resents being "improved." And while it is the aim of the librarian to lead to higher things continually, yet it must never be forgotten that the leading must be done through the medium of enjoyment. A book read for the sake of improvement or because one feels that it is a book one ought to read, fails to accomplish much for the inner soul; the same book read from cover to cover with absorption and keen delight cannot help but arouse and stimulate.

This then should be the heart purpose of every librarian—to bring to people the keen enjoyment of great books.

This kind of extension work does not get into an annual report. It does not show in your circulation statistics. When you have led a girl whose delight was in the stories of Castle or King or Hawkins to really enjoy the novels of Hugo and Eliot, and perhaps even Meredith and Balzac, you have probably lowered your statistics of circulation two-thirds, so far as that particular girl is concerned, but your heart may justly rejoice over that decrease.

If a librarian can do this—if she can make her library so attractive that all classes are drawn toward it in a perfectly natural way as the center of the city life, if she can give it an atmosphere of open-hearted and courteous welcome, if she can make the people feel that it is their individual pleasure and enjoyment that she is working for, she is doing the largest and truest and best kind of extension work. And this is within the province of the smallest library.

Miss McLONEY: The point suggested by this paper, intimating that the taking of books from the central library for deposit stations in home libraries or other outside work, is a weakening of the work of the main library, is really a vital point. It is a point which is very apt to be insisted upon by trustees when any extension work of the sort is suggested by the librarian. But there are ways of obviating, to a very considerable extent, the difficulty which arises in cases of this kind. I come, as you know, from a city in the Middle West in which about 80,000 people are scattered over an area of 54 square miles. It

is absolutely impossible for all the people of that city to use the main library, and the book fund and the general maintenance fund have not been sufficient to establish branch libraries, with the exception of one small branch which is open one day each week. We have recently, however, tried the experiment of establishing two deposit stations in opposite parts of the city. One afternoon in each week we send out from 100 to 150 volumes, and during the few weeks that we have been trying this experiment the average issue of books during the four hours that the deposit stations are open has been over one hundred volumes. Of course, we cannot leave the returned books there, because we must have them for use in the main library. So before the attendant leaves the station in the evening she repacks the books that have not been issued and those that have been returned, and they are brought back the next day, so that really they do not interfere at all with the resources of the main library. Of course this must necessarily refer only to the circulation of the general books. If any one wishes to do research work they must come to the main library. But we have found this plan so far very satisfactory.

I would like to speak also of the question of reserve postal cards. In my judgment there is nothing else that is such a convenience to people in a city where there are no branch libraries as reserve postal cards. In many cases the payment of one penny for the postal card will save the cost of carfare, and people who want some definite thing are saved a fruitless errand to the main library, which sometimes must be repeated week after week or month after month until the discouragement becomes so great that the matter is given up entirely, and the patron who would have been glad to use the library if he had known he would find the specific book that was wanted will cease to come. Also it seems to me entirely illogical to restrict the use of these reserve postal cards to non-fiction books. As librarians, no matter what our opinion of the value of such reading may be, we cannot help knowing that 50 per cent. of the reading at the average public library is adult fiction. And I see no reason why the fiction reader, to whom we concede the right to have his fiction, should not also have the

right to secure the book that he may want just as easily as any non-fiction book.

MISS FRANCES L. RATHBONE: Of course we all believe that the person who goes to the main library reaps a great advantage over the person who draws from the deposit station or through any other means. But often in a comparatively small town there are sections of the city that do not use the library simply because it is inconvenient, and to cultivate the reading habit and develop the library habit it seems to me that, to begin with at least, books must be brought near to the people in these sections, and if that can be done through deposit stations in the drug stores, or through the schools, or through a factory, or through travelling libraries, or through the Sunday schools, it is a good thing. If later on it can be given up, very well; or if it proves a failure stop it. But many even of the smaller towns need to arouse an interest right in a given locality.

THE CHAIRMAN: Will you pardon the chair saying a word here, because this part of the program is the nearest to my own heart? After an experience in deposit station and branch and school work, in the smallest library I know in the country doing this work, I should like to say just a word, or ask a few questions. When you go home to the libraries of the sizes we are discussing this evening, I wish you would go over your fiction shelves and look at the cards in the books and notice when the books have gone out last, and if they have not been out in a reasonable time I wish you would take them off your shelves. Why do you leave those books on the shelves? If you have open shelves, and I suppose most of you do, why should your assistants put up those books day after day? There are people on the outskirts of your town, far away from the library, who have never read these books — some of them the best books in the library. Aren't there people lying in your jails month after month with nothing to read? If they are given an opportunity to go to a box of old books or to get some newspapers that have been clipped they will grasp at them eagerly. Have you a pest house, some place in your town perhaps off across the river where somebody has been lying for a week or two, the time so monotonous, and with nothing to

read? Have you factories off in some part of the town, packing houses or the like, where the men work from morning till night, and when they hear of the public library only ask, "How much does it cost to use it?" You never in the world could get those people started to come to the beautiful library building in the center of the town; you must take the books to them. Indeed, I wish that instead of putting \$50,000 into our one beautiful library building, we might have one central building, not costing so much, but where administrative work and the technical work with the books could be done, and then might have saved five or eight or ten thousand dollars for each of three or four little buildings, put around in geographical distribution through the town, where the people might come, near their homes, when they are tired, after their day's work, and get their books. I like the schoolhouse idea. Our towns are full of them. Every little distance around a town is dotted with a schoolhouse. Why couldn't it be so with the library?

MISS LINDA M. CLATWORTHY read a paper on

REFERENCE WORK *

Our seer and prophet, Mr. Dewey, has defined reference work in its most modern conception, as "systematic aid to readers," and further illumines the way by saying that "the rapid development of reference work comes from recognition of the library as an educational force." I might add that, in the smaller libraries especially, only by further developing and *reporting* on our reference work, will the library's definite place as part of the educational system be fully established and recognized in the community.

In scanning the statistics and other records in many recent library reports I have found very meagre and inadequate report of this reference or educational work of the library. Though the educational work is surely going on in all libraries, yet the old definition of "hall use" still confines very many in their report to mere statistics of volumes handled. Statistics at their best tell only part of the tale, and they seem especially meagre in reporting on reference work.

As my definition of reference work I would take "systematic aid to students of the community," and let the words "*systematic aid*" be my text, for I believe it needs emphasizing.

For systematic aid to students the *resources* of the library are the *first* consideration. They are its *entire book collection*, which in a small library can be open to the public, with all the auxiliaries of pictures, maps, stereopticon, lecture hall and museum. Effective reference work in the popular library is built directly on the foundation work of the classifier and cataloger. It is not good economy to put money into the reference assistant first and neglect the organization of the library's reference material.

The second essential to systematic aid is to know the students of the community and to study their needs in order that we may know how best to serve them in books and in method.

There are some classes of students common to all in small or large communities, and these are our reference patrons, our field for systematic reference work. First, there are the schools (teachers and pupils), including those in grade schools, and high schools, sometimes normal school or business colleges, technical or industrial school or even a college or university. Then there are the study clubs, including high school societies, debating clubs and woman's literary, musical and art clubs. Then there are the church people, the Sunday school teachers and Bible students, the leaders of meetings who need illumination on Biblical and ethical topics; the ministers, who as intellectual and moral leaders in the community need access to the best thought of the time on religious and social questions, as well as definite criticism and expository material on the Bible. There are other professional men and women, as the doctors and lawyers, for whom there are often provided subscription libraries in the community apart from, or as a department of, the public library; farmers and industrial workers, mechanics, and skilled workmen of all kinds for whom, as a class, the possibilities of books for help in their trade has been of comparatively recent acceptance.

The text-books of the correspondence

*Condensed.

schools and other manuals for the skilled laborers in the various trades are now available to the library, and the library can offer considerable help to the working men of the community, encouraging them to do better work and to advance in their trades.

Inventors, designers and draftsmen, civil and mechanical engineers, chemists and architects are a more select class in each industrial community, who are often trained in the technical schools. Their material is in the more advanced technical and scientific books and periodicals, by means of which they keep abreast of the new developments in their specialties or get the information about related arts and sciences, which is so necessary even in specialist's work.

These are the leading classes of students which can be considered and planned for as a whole in probably each library community.

Those who want a definite bit of information and want it quickly and directly, may be turned over at once to the information desk, which is located at the loan desk or in the reference room. Here digests of the latest and best information in all lines of thought and activity are to be found and the information clerk gives quick service, with no machinery visible to the questioner.

But, as knowledge alone is not all of education, so the information bureau of the library does not do its reference work and does not entitle it to rank as an educational institution.

We want to encourage the casual questioner to use us more. From the ranks of the casual questioner are to be attracted the students, we hope. By systematizing the reference work for the regular students, we should be freed to devote more attention to the casual user and attract him to more continuous interest and deeper study. Some of us have not gotten this far in our reference work. Some of us still have our signs out and need to advertise to make the library the center for schools and clubs. But I think many of our libraries, particularly those in the more settled East, are old enough by this time to have many steady students. I query how best to serve these in method, both for their own intellectual growth and for the

freeing of our time for the beginners. Two methods appear: 1. To induce more *self-help* in the library on the part of the advanced students and those who should cultivate efficiency and discrimination in the use of books as well as read the books themselves; 2. To seek more *co-operation* at the right point with schools, program committees and leaders, at the source of the reference calls, so that we may be better prepared in advance for them and serve them more effectively.

Self-help in the library is of course dependent on access to shelves, classification, catalog, and plenty of printed guides and explanations. With the schools and many individual students it can go much deeper. Self-help in the selection of reference material in debate, for instance in critical selection of authorities and sources, in sorting and weighing evidence from the mass of published material, is of as much value to the student as the writing of the expression of his own opinion, which results from this preliminary work. The very contradiction of two authorities forces some thought and selective judgment on the part of the inquirer. There are educative results just in going to the shelves and looking over all the books gathered under the trust or labor problem or current philosophy.

Training in the use of books and the library has begun in our schools from the university down. Definite instruction is already offered in some schools. Just how this instruction is to come without loading for a considerable time another extra burden upon the already overtaxed librarian is a question. My own experience and feeling is that with the public schools, our only duty lies in teaching the principals and teachers and leaving it to them to apply the instruction at the right time in their school work.

Courses to the teachers would differ in each library, being dependent on local conditions. Much excellent work is being done in this line. I can refer libraries interested to the very suggestive pamphlet just issued by the National Educational Association committee on "Instruction in library administration in normal schools."

The other method which may be taken to

systematize reference work is to seek co-operation at the right point with schools, program committees and leaders at the source of the reference calls. One library reports that letters are sent to the clubs in the summer asking them to file a copy of their program. Another library states with grateful appreciation that some clubs have sent to the library an outline of their program. Why do not all the clubs and study classes, which expect to find their reference material at the library send as a matter of course to the library several copies of their program? The librarian should be in the closest touch with the program committees from the beginning. Invite the program committees to meet at the library, lay out a few general books for them to use in planning the program and introduce the leaders to catalogs, reference books and bibliographies after the parts of the program are assigned.

The preparation of lengthy reference lists for club women and separate indexes to reference material should be unnecessary. It is time better put into the catalog for the benefit of all the people all the time.

If reserves are kept for the high school students, why should not the librarian have conferences with the high school teachers at the beginning of the year and know just what calls are coming so as not to conflict with other students.

If all the church missionary societies are studying Africa this winter, the library may buy up the long list of books recommended, sending the ministers a list of them, and let it be known that they are on a reserve shelf in a room where they may serve the most people quickly. When all the Sunday schools pursuing the international system of lessons are studying the life of Christ it helps to be sure that the library has good reference material, such as commentaries and lives of Christ, and to let the superintendents know the names and location of these to give to their teachers.

So, this preparedness can be assured in place after place, as study centers which will stimulate interest in a special subject come to the attention of the librarian.

As for the industrial worker, he comes by

himself on his own account, but the librarian can know the industries and trades represented in her community and be in a measure prepared for him in book buying, shelf arrangement and cataloging.

It has been my experience that men are naturally independent in the library. They have definite wants and if the book is in they can usually find it. A man goes to the catalog naturally as he does to his business files, and scorns to ask questions until he has exhausted his own power of search with the tools the library has provided.

To summarize, if we consider reference work as systematic aid to students, for which the whole resources of the library are to be made available, with the librarian as guide and helper, not a mere encyclopedia in her own right; if we consider catalog and classification the foundation of reference work; if we teach the use of the library on every occasion; if we seek to co-operate with the student classes of the community; we will bring about effective reference service.

MISS BEATRICE WINSER read a paper on

METHODS OF SIMPLIFYING ROUTINE WORK

After many weary years most of us are agreed that it makes very little difference whether or no the different parts of the imprint are separated by one centimetre of space or by two, whether we capitalize North American Indian or write it with a small "i." We are occupied with weightier matters and our problems to-day are how to get as many people as possible to use libraries and how to deliver books into their hands in the shortest possible time.

Some of the methods noted have been used, perhaps, by many, others may be new, and still others just as useful may suggest themselves.

For the sake of convenience I have listed under the several departments of a library's activities a few of the changes in routine work which I am presenting to your attention.

Order department

Have order slips padded, every third sheet being good manila paper; use two sheets of

carbon paper and get three impressions of your order, one for use in library, one to send to the agent, and one with which to order Library of Congress cards. This is a great time saver.

By the old method the order clerk alphabetized once a month order cards for typewriter, sometimes in two or three alphabets, if the library has more than one agent. The typewriter must write the orders in duplicate, lists and order cards must then be compared by order clerk before sending, and then re-alphabetized for filing in one alphabet. This consumes much time, and the typewriter is sometimes not available. By the new method the work is all done by order clerk, order cards are kept at library and alphabetized once, duplicate being sent to agents alphabetized or not, as seems best. Duplicates sent to Library of Congress must be alphabetized.

Cataloging department

Do not use Cutter numbers for fiction. It saves assigning of numbers for shelf listing. Give up the accession book. This saves more than half time of one person. Order clerk, when checking books from bill, should stamp accession number on first page after title page and write date of bill after it in abbreviated form, thus, 199,999 (3/06) 100 S.

Keep record of accessions in blank book, print if desired or written. Give month and date and class number, making proper entries under each. Then separate gifts, pamphlets, periodicals and books bought.

Write on shelf list card in addition to regulation items, author, title, accession number, volume number, copy number, the cost of book and the date.

Under the old method, if a book is lost the shelf lister turns to the class number in the shelf list and notes the accession number, then the accession book is consulted and the price obtained. Under the new method the shelf lister turns to the shelf list and finds price for every copy of the book in the library.

We are all familiar with the many arguments for and against novel reading. It is a crime for a public library to purvey ephem-

eral novels, says one; it is the duty of a public library to provide recreative reading for the tired laboring man and the weary brain worker, says another. It is not our business to spend the public money for trashy novels, says a third; and the fourth retorts, it is the public money and why should not the public have the books they want? We go on our way and buy as wisely as we may, satisfying as many as we can. If you ask what this has to do with my subject, I hasten to say that in Newark we have devised for ourselves a system whereby every novel bought is on trial for one year and is then added or not as seems best.

The plan is simple. Mark the book pocket of each novel with the month and year when it is to be returned to the cataloging department. The book pocket of a book placed in circulation in June, 1906, is marked "June, 1907" and returns to the department at that time. It is then passed upon, and if deemed worth adding to the library's collection, receives a new pocket not dated and is returned to the shelves.

A book not thought worth adding is stamped "W" on the pocket and the book slip and returned to the shelves where it circulates until it wears out. At the same time the shelf list is also stamped with a "W," which means that the book is not to be replaced when it wears out. This saves much time and thought when making replacements, as a book marked "W" is not considered at all.

As soon as all the copies of a book marked "W" are worn out, the shelf list card is removed from the shelf list and the cards are taken out of the catalog. The shelf list card is saved so that that book may be given another chance for consideration whenever the "1000 best novel" list is revised and for the sake of knowing that such and such a title was once in the library.

Buy all catalog cards, if possible, from the Library of Congress. Don't allow yourself to be misled by those who counsel against them because the fulness of imprint, etc., is confusing to the public. Cross off everything that confuses you and you may be sure that the public, whose intelligence we are inclined to underestimate, will derive as much com-

fort from the catalog as you do. We have heard for years of the wastefulness of effort and money in the duplication in hundreds of libraries of work common to all. A central bureau where this work might be done economically and well has long been advocated, and now the Library of Congress is able to undertake one of the most vexing and troublesome features of our work by supplying us with the cards for nearly all the books we buy.

Use imprint only on author cards. I would advise adding volume and date on subject and title cards merely for convenience. This, however, is not essential at all. Don't write accession number on author cards; it is never needed. The shelf list is sufficient.

Don't use red ink for subject headings. It wastes time both in writing cards by hand or by typewriter, and affects the eye unpleasantly. It means nothing to the public unless told that it does; and if the staff needs it to distinguish the subject from the title, you should get a new staff.

Delivery department

Change time limit on all books except seven-day books to one month instead of two weeks. This means fewer overdue books; effects saving in fine postals for which no charges are made; saves renewal postals, and practically saves one half time of one person in sending both fine and renewal postals. The month limit pleases the public immensely, and although the loss in statistics may affect some libraries, the gain to the people—who, as they often tell us in Newark, can now really read a book—ought to affect them still more. If librarians have a mission it is not gathering statistics, but making the library useful. In Newark we found, as we expected, that when this time limit change was made our circulation seemingly dropped off, but, like bread upon the waters, it "returned after many days." For the two months following the change of time limit from 14 days to one month, the circulation increased 3400. The next month it decreased 2000, the next three months it increased over a thousand each month. The

circulation for 1905 was 511,284, an increase of 39,740 over the circulation of 1904.

Don't have special cards for teachers or students or any other class, but let everybody have the same right. Make your record directly on the book card if you wish to allow any one to keep a book beyond the regular period. It saves much time not to have to look up special cards or to make special records of privileges granted to certain people.

A useful time saver is found in the strip of gummed paper known as the Denison election sticker. Whenever a borrower moves it is necessary to erase his old address from both application and registration book. By pasting over the old address in both places the little gummed strip of paper on which is written the new address, you may save time and trouble.

Don't keep a book in which to enter lost cards. File a pink slip in front of the borrower's application, write on it the borrower's name and number with the item "card lost," and date and any fine due. When a new card is given, look up application to get name and address and then destroy the pink slip.

Don't require a guarantor except in the case of minors. Consider as responsible every one whose name appears in the directory. Trust people and you will make the library more popular. If a name is not in the directory invite the person to wait three days. Then send a postal which says "Your reader's card is now ready and may be obtained by presenting this postal at the library." This makes the post office do the work which in many libraries is done by messengers. If the postal is presented it shows that person lives at address given and that is all we wish to know and all our messenger discovers for us.

Some small libraries stamp the date of return on book cards as well as on the borrower's cards. The only reason for doing this is that the librarian may know how long any given book has actually been out. It takes time and does not prove that the book has been read.

Adjourned.

PROPRIETARY LIBRARIES: ROUND TABLE MEETING

A ROUND TABLE meeting for those interested in proprietary (shareholders' and subscription) libraries was held in connection with the Narragansett Pier Conference, on the evening of Thursday, July 5, at the Atlantic House, at 8.30 o'clock. Charles K. Bolton, librarian of the Boston Athenæum, presided as chairman.

In opening the meeting, Mr. BOLTON said:

In these days of public libraries the proprietary library is an ancient force for culture amid the multitude of counter currents of present educational forces. If this ancient force is to continue with vitality there must be some individuality of aim, some differentiation of purpose which shall justify it in the eyes of its supporters.

In the past the proprietary library has appealed successfully to two classes of the people—to those in new or sparsely settled districts where a chosen few were willing to subscribe money for books, and again to those in cities of wealth who, with public libraries at hand, still preferred the privacy or other advantages of a collection of books under corporate administration. The sparsely settled districts of the South and West are rapidly coming under the sway of state library laws. But are the literary and wealthy classes of our cities more drawn to public libraries to-day than they were twenty-five years ago? Mrs. Stone's paper this evening will no doubt discuss the point with discrimination.

The preference for the proprietary library is rooted in traits of character too deep to be swept lightly aside. It rests on the segregation of people of like tastes—a stronger and more fundamental force than the love for learning itself or the desire to educate the people to safeguard the state; therefore the saying that "birds of a feather flock together." The prompting to organize sons and daughters of every imaginable parent of by-gone days is widespread; and it is as much social as it is patriotic.

The proprietor of a library which is owned

largely by educated people feels nearer to the officers who shape its policy than the taxpayer does to his trustee. Therefore he believes that he comes nearer to having a part in shaping its course, and so willingly pays for what he might in a large measure obtain at the public institution without a fee.

In the selection of books for our public libraries the drift to-day is undeniably paternalistic. The public library, through trustees, librarian and staff, is a mentor, sometimes a persuasive guide, not unfrequently a benevolent tyrant. Most of us do not oppose this drift; we do not say that it is bad for the state. But it gives circulating and proprietary libraries their opportunity, for they exercise greater freedom in the purchase of fiction, as well as in the selection of works which cannot pass rigid censorship. Whether these advantages are after all real and worth while Mr. Swift in his paper will no doubt tell us, for he knows the library movement as a literary man in a literary city knows it, and he is a library worker of varied experience.

Although you may not grant a larger place in the future to proprietary libraries, you will recognize, I am sure, their work as well done in the past. Many of the best known names and the most widely adopted devices in library history are associated with social and proprietary libraries. Of this Mr. Fletcher, himself a literary index to their history, will treat in his paper.

W. I. FLETCHER read a paper on

THE PROPRIETARY LIBRARY IN RELATION TO THE PUBLIC LIBRARY MOVEMENT

In speaking of the "proprietary library" one must have it understood what is meant by the term. It is quite common to speak of "semi-public" libraries, meaning those which are to some extent open to the public, but are not entitled to be called free public libraries. This designation of "semi-public" may be applied to a great variety of institutions. I

suppose college, university and school libraries would properly come under that heading. Of the semi-public libraries, which then are to be called "proprietary"? There are first those belonging to clubs; but perhaps these would hardly be called even semi-public. Then there are those owned by corporations or stock companies and used by the shareholders. Of this class the Boston Athenæum is probably the most characteristic example. Most such libraries are recognized as semi-public for two reasons: (1) their regular constituency constitutes a considerable public by itself, and (2) they generally make it possible for a share of the general public to use their books at least on the premises.

Then we have the association library, of which the best known examples are the "mercantile" libraries once found in nearly every city, but now almost extinct under that name, that of New York City being one notable example of persistence. The Mercantile Library flourished in Boston alongside of the Athenæum, but found it impossible to maintain itself as against the Public Library when that was fairly started.

Another class of semi-public libraries are those known as Institute Libraries, often as Young Men's Institutes. These were very common a generation ago in the smaller cities and larger towns, being nearly identical in character and methods with the "mercantile" libraries of the larger cities. The field occupied and the methods employed by the Young Men's Institutes were those now pertaining to the Young Men's Christian Association, except that the Institutes gave more attention to the library and less to other means of culture. But the Young Men's Christian Association libraries of to-day constitute a large and important section of the semi-public libraries.

There is still another class of libraries, which should be counted as semi-public, namely, those public libraries which, while freely used by the public and in most cases subsidized by the city or town, remain the property of a corporation or association and are managed by it. The City Library of Springfield is perhaps the most notable example of this kind of library in Massa-

chusetts. The Berkshire Athenæum of Pittsfield, the Westfield Athenæum, the public libraries of Amherst, Easthampton, and many other towns are of this sort. These libraries generally have a governing board made up in part of representatives of the city or town, the appropriation of public money being supposed to carry with it the right of representation on the board of management.

All these varieties of libraries shading off from the club library to the free public library, in which the actual ownership is not vested in the city or town, but in the corporation or society, might properly enough be brought under the term proprietary libraries. But as the last of the class mentioned comprise libraries commonly included as "free public," I shall restrict the term "proprietary libraries" to those the use of which is not free to the public but is enjoyed only by the shareholders or members or by those specially introduced by them—that is, to those libraries whose use, as well as ownership, is mainly restricted to the "proprietors."

The relations of these proprietary libraries to the public library of the last fifty years may be properly indicated as three—the historically antecedent, the parental, the concurrent. As to the first of these relations little need be said. This is not the place for a historical sketch of the proprietary library movement in itself. Beginning with the inception by Benjamin Franklin and his associates, in 1732, of what later became the Philadelphia Library Co, "mother of all the subscription libraries in North America," as Franklin called it, this movement made considerable progress before the Revolution, was checked by that era of uncertainty and poverty, and then spread with remarkable rapidity over nearly the whole country in the years from 1785-1820.

The extent of that growth is realized by few who have not looked into the matter. It would seem that few towns of any size in the northern part of the country failed to organize a public library of this sort during that period, while the Southern states were not far behind in the matter, and many of even the smallest towns were included. It is evident that a most valuable and interesting

chapter of library history remains unwritten, and it is to be hoped that it will be fairly well covered in the series of library histories now being issued by the Library of Congress.

But I have proposed to treat in the second place of the parental relations of the proprietary library to the free public library of to-day. Without a larger opportunity for research than I have had one must be cautious in tracing these relations, for the *post hoc propter hoc* fallacy is very apt to lead one astray when inquiring into such matters.

It certainly is true that many of our free public libraries are the direct outgrowth of antecedent proprietary ones. There are cases of all degrees of parenthood. At one extreme we have a proprietary library with a good collection of books, a building of its own and endowments for maintenance, all turned over to the town or city on condition of continued support as a free library. At the other end of the scale we behold a small and struggling library association welcoming the opportunity to turn over its few books to the free library which is being started by a popular movement and thus to terminate its own existence. Between these extremes there are cases as various as they are numerous. Take them all in all, it would have to be admitted that a very large share of all the free public libraries were the direct outgrowth of the proprietary ones; and a moment's thought will convince one that in this way the free library system of to-day is vastly indebted to those who, often very persistently and in the face of difficulties, and at serious financial cost to themselves, laid these foundations.

But apart from this direct contribution of foundations for the free library structure, the proprietary libraries have done much to prepare the way for the modern system. The breadth and catholicity of view displayed by the founders of these early institutions, the public spirit animating their actions, are very apparent in the constitutions and other documents of these libraries. The address to the public, printed in the *Connecticut Courant*, of Hartford, March 1, 1774, in behalf of a proposed subscription library, began as follows: "The utility of public libraries, con-

sisting of well chosen books under proper regulation, and their smiling aspect on the interests of Society, Virtue and Religion are too manifest to be denied." This passage, so far in its spirit from that of narrow or personal advantage, will be found to be the keynote of the whole subscription library movement, which was thus closely akin in motive and aim to the free library movement of a hundred years later.

This public aspect of the subscription libraries was recognized by legislation which in most of the states exempted them and their buildings from taxation, and appears also in the fact that they were often the recipients of endowment funds given with a view to forward public interests.

Perhaps it was one important contribution of the subscription library to the library movement that it demonstrated the need of something more than it could supply. Most of these subscription libraries, it must be confessed, died out; only a minority endured until they could be merged in a nascent free library. But those that perished had in the first place created some public interest in the movement and then proved disappointing as a means of meeting the real needs of their communities. In these various ways the proprietary libraries were vitally related to the public library movement.

The remaining division of my subject is the concurrent existence of the proprietary library alongside of the free public. Generally speaking the proprietary libraries have "gone out of business" on, or soon after, the advent of the free public library, in most cases, as has already been said, forming its nucleus and foundation.

Those which have survived and bid fair to live permanently are mostly in large cities, notable examples being the Athenæum and the Boston Society Library in Boston, the Athenæum in Providence, the Mercantile Library and Society Library in New York, and the Philadelphia Library Company. Some of these institutions flourish but feebly under the shadow of the powerful and growing free library, while others seem to have found a place and mission of their own and are even regarded by their friends as having gained

rather than lost by the competition. In 1861 the Boston Athenæum seemed to be suffering seriously from the rivalry of the public library. Its shares, with a par value of \$300, sold as low as \$49, in at least one instance within my memory. But that was the low water mark, the tide soon turned, interest in the special advantages of the Athenæum increased rapidly, and the selling price of the shares rose until in 1866 it was above \$150, and if I am not misinformed has since reached the par value of \$300; and it should be noted that when this stock was issued at that price most of those who took it did so to aid in the foundation, and but few would have considered a share really worth that amount, while the prices paid recently represent an estimate of their real value to the owner. The price of shares must be taken as a sure index of the estimate placed upon the institution by a portion of the public. But in this library and in others in various parts of the country one will find every evidence of vigorous life, efficient and up-to-date administration, and a large and well pleased *clientèle*.

Where the proprietary libraries languish in the race, it may be for one of several reasons, as, *e.g.*, a lack of independent resources in the way of endowments, a meagre population, or one lacking in the scholarly and leisure elements, or in wealth, a failure to adjust the administration to new conditions, resulting in making the library unattractive and inefficient as compared with the free public library where modern ideas and methods are apt to prevail.

One may well believe that with the growth of our cities and large towns in population, in wealth, and in culture, that which has proved true of the Boston Athenæum will be true of proprietary libraries in general, and that they will enter on a future of enlarged prosperity and usefulness. I may naturally be expected to indicate somewhat more particularly what is the substantial basis of prosperity and usefulness of these proprietary libraries alongside of the free public libraries. It is certainly not difficult to believe that in a well-conducted library of this kind privileges and conveniences can be afforded to patrons that cannot be given to the general public in the free library. Apparently it is hopeless for any other library

to rival the public in the number of volumes. On the other hand, the number of borrowers and the consequent difficulty in getting a desired book goes far to offset the superiority in number of works purchased.

Again, the public library is for all, and must attempt to meet all demands, while the proprietary library, with its smaller and select constituency, is likely to have a smaller range of demands to meet, and may excel in some branches of literature.

When one undertakes to enumerate the special privileges that the proprietor has in a proprietary library, one is likely to find it difficult to make any extended list that is not paralleled in the free library practice of to-day. With the rather rigid rules and mechanical methods which were thought, a generation ago, to be essential to free library management, the public libraries compared much more unfavorably, in point of freedom of access and use, with the proprietary libraries than they do now. And one thing that has kept the latter behind in the race has been the slowness with which they have waked up to the modern library spirit and method.

There will always be those who object to proprietary libraries, as to private schools, on political and social grounds, charging against both a tendency to foster class distinctions in the community.

Dr. Gilman, of Cambridge, has made a fine plea for the private school in a democracy in which he speaks of the strong movement made in Massachusetts some 20 years ago to discredit private school education, and indicates that there has been a reaction and that the private schools of the state now educate at least one-fifth of all the pupils.

Only under socialism could it be fairly claimed that education should be the same for all. As Dr. Gilman shows, if the state allows people of means to dress better than those who are poor, it will also allow them to provide themselves either individually or collectively with such education and such opportunities of culture as may suit them best. Unless the American people come to care less and less for the things of the spirit, it cannot be otherwise than that those who have means will combine in associations of one sort or

another in which they can secure intellectual advantages not open to all. As nothing of this kind that they can engage in is more likely to be in the end a public benefit than the establishment and maintenance of a public or semi-public library, we may well hope that such libraries will be increasingly prominent among the cultural institutions of the land.

When the librarians of America first met in council in 1853, I believe there was not among them one representing a free public library. Jewett, Poole, Lloyd Smith, Guild, and the others were from semi-public institutions. But they were the pioneers in the modern library movement. It is certainly incumbent now on those having in charge such libraries to see to it that all the facilities and more, all the freedom and more, all the "atmosphere" and more, of the free libraries are present in theirs, and to develop to the utmost the possibilities within their reach of making their libraries do some public service beyond that rendered by the free libraries. Such libraries should be, as they usually have been, favorite resorts of writers and of earnest readers, schools of the individual rather than of the crowd, ministering to the many by helping the few who will lead. Such a distinction is within their reach, and no one need be such a leveller in the interest of an abstract notion of equality as to do other than rejoice when the free public library has by its side a sister institution so well calculated to aid in forwarding the cause of human enlightenment.

LINDSAY SWIFT followed with a paper on

PROPRIETARY LIBRARIES AND PUBLIC LIBRARIES

There are a few simple considerations on this topic which it may be worth while to look at briefly, and in a generous spirit. Most of us are public librarians and feel that, in a way, we have the missionary spirit, and that we carry the evangel of good literature to the uttermost parts of the constituency which we try to serve. Some of us, I think, make too serious a matter of this good purpose, and some perhaps take it too lightly. But allied to us, though hardly of us, is another body of workers, as faithful and diligent as ourselves,

whose interests are somewhat different from ours. They seem, in a measure, remote from the bustle and worry of our more or less vexatious problems, and possibly we think of them as not imbued with our professional zeal. They go their way, more silently than we, and we do not often hear of their troubles and contentions, though I am sure that they have them. I have sometimes thought that looking at us from a little distance our problems do not seem to them of consuming importance or value, and I for one shall not quarrel with them if they do cherish this opinion.

Now it is with me, though I am pretty sure it is not with all of you, a matter of great indifference whether a library is public or private, or proprietary, provided that people can find what they want there. That is what a library is for—to find the books one needs, whether for pleasure or profit, ready to hand. Since, so far as I can discover, most people read for pleasure and mental satisfaction, with a modicum of serious purpose, that library which is the best purveyor is the library for me. Do I seem to speak selfishly? If so, believe me, I do not intend it. But I do believe that everything in this world, to be worth having, must be striven for, and less and less do I care for these provisions, national or civic, which deaden individual effort. To me proprietary libraries seem admirable examples of the results of enterprise, persistence and self-denial applied to a most worthy purpose, and carried on, in a business way, from generation to generation.

We ought, I think, still to cherish some regard for those by whose prudence, generosity and foresight such institutions as colleges, museums and libraries are year by year privately encouraged. Fortunate indeed are those institutions which are in the keeping of honorable men and women, and free from the lowering influence of politics, and the interference of the secondrate. Still more fortunate, in the case of proprietary libraries, are those trustees, librarians and subscribers who are rid, in a large measure, of the embarrassments attendant on trying to suit the caprices and necessities of the whole mass of citizens, and their sometimes unworthy representatives. These happy institutions, having

a fairly homogeneous body of constituents, can do practically as they please. With a full responsibility, and a due sense of it, and guided by scholarly and refined instincts, the managers of these institutions will naturally buy the best books, and generally speaking, the books they want to buy, under the assurance that their patrons, having similar refinements and culture, will approve the selections. There are "kickers" everywhere, and it is well that there are, but in the main a harmony of tastes secures better results than are possible when it is necessary to consult the prejudice and narrowness of religious or social restrictions, such as public librarians have to contend with, and which they meet, I am sorry to say, too often in an evasive, and sometimes in a dishonest way. The problem of the purchase or non-purchase of vulgarizing, half-baked literature does not present itself forcibly when, as in the case of proprietary libraries, the patrons simply do not wish to read this sort of books. The self-sustained library is also a well-manned garrison against the encroachments of cheap journalism, yellow or otherwise. From this intrusion the good Lord has spared the proprietary library. What nobody cares to read, nobody, because he can't have it, will cry aloud for.

I do not suppose that proprietary libraries run wholly without friction, because nothing human does that. Trustees are doubtless, in these favored places, prone to regard themselves of considerable relative importance, but I fancy that the proprietors and stockholders have a standing in court, not always possessed, or if possessed, wisely used by a general public. The opportunity for appeal or direct redress, in case of a real or fancied abuse, might, I should suppose, be more open, when the trustees and the patrons have closer affiliations. It might even be possible to abuse them personally—always a refreshment to the soul of the dissatisfied.

But the proprietary trustees are spared one sore affliction. The newspaper attack falls harmless upon them. Now if a public library decides—and wrongfully, as I shall always believe—that it does not want to buy that great imaginative work, "The cesspool," by the celebrated author of "Hell broke loose,"

the watchful press sends forth its emissaries, who at once begin to beat their breasts, and tear their hair, at the same time emitting doleful sounds, to the great confusion and annoyance of the high-souled officials within our gates, who won't let the public have what they themselves probably read with considerable gusto. I sympathize deeply with these expressions of discontent, for I try to make them myself whenever there is a good chance. At the same time I am glad that there are other institutions which do not have these troubles to solve, and can do exactly as they please with their own money, and manage their own affairs without the assistance of popular advice or the intrusion of newspapers, who really care nothing about the matter in dispute beyond the sensation they try to create.

We are perfectly well aware that there is another side to this whole question. Proprietary libraries, like all institutions secure in their safe isolation, independent of competition and criticism, have a tendency to gather rust. Moths do corrupt them to some extent, and their very security is their chief menace. They fall into settled habits and wax fat with complacency and self-satisfaction. With all the restrictions and hampering elements confronting them, public libraries are fortunately in the main currents—they profit by public criticism and even by abuse. Competition urges them forward, however slowly, and they have the necessary and wholesome stimulation of responsibility to the general opinion. To stand still is failure with us.

Notwithstanding this and other factors encouraging to the welfare of our public libraries, there is a true place for the other sort. If the populace has its coarse and unending pleasures and tastes—and rightly has them—so too has the more retired and less boisterous portion of the community its peculiar privileges. Seclusion and an agreeable atmosphere are essential to the growth of those accustomed to such prerogatives from their birth. The secluded miss something—they miss, in truth, a great deal, withdrawn as they are from the fierce whirl of life. But they also gain something. Let them never forget, in their enjoyment, that the highest results of

civilization — refinement, culture, sensibility of mind and soul — are built on the terrible foundations of human suffering and sacrifice, and on the waste and unfruitful labor of the many. Let the fortunate, if such they really are, be not forgetful of that of which they are the mere superstructure. If we have the poor always with us, so too have we always the rich. Both are problems and often a curse to the average of humanity. The pleasures of both rich and poor are of so ridiculous and unintelligible a character to sensible men and women that we really ought to applaud any attempt on the part of these unfortunate classes to improve themselves by rational delights. If the proprietary library seems to be an aristocratic institution, let it go at that. It is relatively harmless as compared to more serious causes of separation of class from mass. Furthermore, it would be a mistake to think that the proprietors of these libraries are all highly prosperous; many of them doubtless deny themselves other extravagances to obtain the modest privilege of getting books to read in a place and in a manner which suit their fancy.

And what shall we say lastly of the librarians of these highly blessed libraries? We may have our differing opinions as to whether such libraries ought to exist at all, but since they do exist, I am sure that we who serve the larger public and who sometimes grow weary of the utter commonplaceness of the task, the bustle to provide for inferior mental appetites, the unprogressive character of some of our work, may find something to envy, without malice, in the opportunities open to these associates of ours who are not obliged to consider the circulation of books, how it grows, or to explain and too often prevaricate over our failure to provide the public with some of the books it ought not to want, but does want most consumedly. The proprietary librarian lives in an atmosphere of literature and not of bustle. His nostrils are assailed with the comforting odors of old volumes, and his eye rests affectionately and intelligently on their venerable backs, while we, to our disadvantage, put them out of sight in cold and forbidding stacks. He is still a scholar

and a gentleman — a true shepherd of his slightly and commendable flock in sheep and goat.

It was a sad day when some years ago the cry went forth that the librarian must henceforth be a business man and not a scholar. Never was there a greater delusion. Economical, watchful, conversant with all movements of the day, not a mere book-worm, the modern librarian must surely be, but for business, in its real sense, what pray does he know about it? What does he have to do with the rise and fall of the market, the grave uncertainties of a venture, the bitter competition, the danger of bankruptcy or financial dishonor? No, my dear colleagues, that is not "business" in which there is a sure income on one side, and no risks and speculations on the other. I am a pretty indifferent sort of a librarian, but I know something of the difference between the methods of the commercial world and the prudence of keeping within your appropriation. The proprietary librarian fortunately is not called upon to assume the complicated role of a high-class janitor, caterer, and department store manager; he may still walk in the fear of God and not of a board of aldermen, loving, knowing and cherishing his books, courteous and helpful to his constituents. I am glad that he still holds his gentle sway in our midst, though my vision tells me that the weariness and solitudes of our own contact with a more real life is the nobler task because it is not along the primrose path. We are sharers of the common lot, and in that lot we find our satisfactions. Yet we should be churls indeed if we were not glad at heart that to some of us is vouchsafed the dignity of maintaining the scholar's lofty standard in the ministration of their books.

Mrs. ALICE H. STONE read a paper on

THE PROPRIETARY LIBRARY'S EXCUSE FOR BEING

To put the last word first, the fact that the proprietary library does exist here and there, and is still appreciated and enjoyed in spite of the more recent but tremendous growth and overshadowing of the public library, proves that it has reason for existing.

Had it been really supplanted by the public library, we should know it only as a tradition. I believe that when the Boston Public Library was opened the trustees of the Athenæum felt that there could hardly be room in the city for two libraries, and that their days were probably numbered. Salem has the same story to tell, but its Athenæum still lives on, quiet and modest though it may be. And I have a strong conviction that every community of reasonable size not only needs a public library, but has room and would be the better for a proprietary one as well.

We are very justly proud in this country of the great progress in the public library movement, both in regard to numbers and efficiency. As an adjunct to our educational system it cannot be too highly rated—in its special work with children, its co-operation with the schools, its readiness to assist club, classes and individual students in any kind of research, in the many lists daily given to the public to suggest interesting matter on current events or special lines of industry.

In the face of such far-reaching usefulness to intimate that the increasing work of the public library may be simultaneous with a decadence of the art of reading sounds like rank heresy; but the very wideness of its scope is at the same time its limitation. The throng of readers and borrowers of books bring together a number of people so large that they necessarily make their own restrictions; partial or entire restriction from access to the books—restriction of space or quiet since one is often so uncomfortably aware of the crowd of human beings in a reading room as to be unable really to read. Now to read for instruction, for information, for amusement, is well and good; but beyond that is something better still: to read for the pure happiness of intellectual stimulation, of increasing appreciation of delicacy of style and beauty and dignity of diction. For those who have some clear idea of what literature really is, for the lovers of reading, how disheartening to stand in a line of people waiting for a chance to thrust over the counter a list of titles selected—of necessity—more or less at random, only to re-

ceive, perhaps, something not wanted at all. These are the people who turn with relief to the quiet and freedom of the proprietary library.

The perception of literary excellence and delicacy of style is not a gift which is given to every one; but it is latent in many who are unaware of it and is being deadened in many for lack of opportunity to exercise it. In the peaceful atmosphere of the proprietary library, with free access to all the books, with quiet corners in which to sit unmolested, browsing at will, what chances one may have of the real pleasure of reading and the genuine formation of taste.

We do well to be proud of the privileges the public library freely gives, particularly to the poor and uneducated. The very rich may have large libraries of their own and buy what they please; but there should also be considered the interests of that larger but more or less overlooked class, the well-to-do. For people reasonably prosperous, refined and cultivated there is room for and need of something less crowded, restricted and business like than the public library, if there is to be preserved among us the real art of reading.

It is to be hoped that the proprietary library will more and more be found in cities and towns already possessing a free library in no way conflicting with its purposes, but extending its own definite influence for good on the mind and taste of the community.

At the close of the papers discussion followed. Mr. E. M. Barton spoke informally of the 1853 conference, pointing out that that was the age of proprietary libraries.

Mr. Richard Bliss spoke on the proprietary library as a force for culture, not simply as a literary club, and Mr. J. L. Harrison followed in the same vein.

Mr. W. D. Johnston spoke on the need of proprietary libraries and their rights to greater recognition, both historically and for their influential and intelligent constituency. There was further general discussion and expression of the feeling that meetings of this character should be continued at future conferences, with a clear definition of the limits of the term "proprietary."

TRANSACTIONS OF COUNCIL AND EXECUTIVE BOARD

MEETINGS of the Council of the American Library Association were held in connection with the Narragansett Pier Conference on June 29, June 30, and July 5, in all three sessions being held. Meetings of the executive board were held June 29, July 4, and July 5, and of the new executive board on July 6. Of the 31 members of Council, 24 were present at some or all of the sessions, as follows: Mary E. Ahern, C. W. Andrews, A. E. Bostwick, J. H. Canfeld, C. R. Dudley, Linda A. Eastman, Caroline H. Garland, Helen E. Haines, W. E. Henry, Frank P. Hill, N. D. C. Hodges, A. H. Hopkins, G. M. Jones, W. C. Kimball, G. T. Little, W. T. Peoples, E. C. Richardson, Lutie E. Stearns, John Thomson, R. G. Thwaites, H. M. Utley, Anne Wallace, H. C. Wellman, J. I. Wyer, Jr. The members of the executive board served as *ex-officio* members and officers of the Council. They included the vice-president, Frank P. Hill; first vice-president, C. W. Andrews; second vice-president, Caroline H. Garland; secretary, J. I. Wyer, Jr.; recorder, Helen E. Haines; treasurer, G. M. Jones; ex-president E. C. Richardson.

PROCEEDINGS OF COUNCIL

Nominations. — Nominations for officers for the ensuing year were adopted on report of a nominating committee (H. M. Utley, Anne Wallace, H. C. Wellman) appointed after discussion and informal ballot at the first meeting of the Council. The nominations were as follows: president, C. W. Andrews; 1st vice-president, E. H. Anderson; 2d vice-president, Katharine L. Sharp; secretary, no nomination, as present three-year term is as yet unexpired; treasurer, George F. Bowerman; recorder, Helen E. Haines; trustee of endowment fund, D. P. Corey. Councillors: George S. Godard, Isabel E. Lord, Herbert Putnam, Samuel H. Ranck, H. G. Wadlin. The nominations were later announced in general session (*see* Proceedings, p. 181), with the statement that the ticket would also include any names sent in on nominations signed by five members of the Association.

Committee on nominations. — It was *Voted*, That the incoming president appoint a committee at a suitable season to report nominations at the next annual meeting of the Coun-

cil, and that the same committee report an amendment to by-law 3, governing the selection of vice-presidents.

Resignation of treasurer. — It was *Voted*, That the Council extends a hearty vote of thanks to the retiring treasurer, Gardner M. Jones, and expresses its deep appreciation of his devoted and untiring services for nine years in behalf of the Association; and requests that this motion be suitably prepared in writing and placed in full upon the records.

Place of next meeting. — Invitations for the meeting of 1907 were received from Asheville, N. C., Atlantic City, N. J., and Richmond, Va. Representatives from both Asheville and Richmond were heard, and assured the Association of a cordial welcome. It was *Voted*, That the invitation from Asheville be accepted, if suitable arrangements can be made with the railroads. It was also *Voted*, That the cordial invitations presented from Richmond, Va., be acknowledged with thanks, and with sincere appreciation of the kindly interest and warm fellowship they evince in the welfare of the Association.

Invitations for 1908. — Invitations for 1908 were received from Minneapolis, Minn.; Ottawa, Can.; Saratoga Springs, N. Y.; and Winona Lake, Ind. An invitation from Seattle, Wash., for 1909, was also presented. It was *Voted*, That these invitations be received and placed on file for later consideration.

Amendment to by-laws. — It was *Voted*, That the amendment to the by-laws recommended by the treasurer and presented on behalf of the executive board be adopted, as follows:

Amend by-law 1 by inserting the following sentence: "Members whose dues are unpaid at the close of the annual conference and who shall continue such delinquency for one month after notice of the same has been sent by the treasurer shall be dropped from membership."

A. L. A. entrance fee. — A letter from the California Library Association was read, protesting against the adoption of an entrance fee of \$1, making A. L. A. dues \$3 for the first year of membership and \$2 per year thereafter, instead of \$2 per year as heretofore. It was *Voted*, That the treasurer report at the spring meeting of Council on the subject of the A. L. A. entrance fee adopted at the meeting of Council at Atlantic City, in March, 1906.

Permanent headquarters. — The executive board, through the secretary, reported the ac-

tion taken by it, in accord with the instructions of the Council, in establishing permanent headquarters, in charge of Mr. E. C. Hovey. The report was received and ordered placed on file.

Endowment fund income.—On recommendation of the trustees of the endowment fund and with the approval of the Publishing Board, it was *Voted*, That the income in the hands of the trustees of the endowment fund be paid to the treasurer of the A. L. A.; that the treasurer be directed to apply that income to the permanent headquarters fund; and that the action of the Council at Atlantic City on March 10, 1906, directing other disposition of this fund, be hereby rescinded.

Report on Copyright Conference.—Mr. Bostwick presented the following

REPORT OF THE DELEGATES APPOINTED TO REPRESENT THE ASSOCIATION AT THE COPYRIGHT CONFERENCES

At the date of the Portland conference of the A. L. A. last year one session of the conference on copyright had already been held, and it was reported upon by your delegates. At a meeting of the Council the executive board was requested "to take measures for the representation of the Association at future conferences on the revision of the copyright laws, and in behalf of the Association to protest against the inclusion in the copyright law of the provision prohibiting importation of copyrighted works into the United States without written consent of author or copyright proprietor, or to secure some modification of the same." Acting on these instructions the board requested the undersigned to continue as official representatives of the Association, and as such they have attended the two remaining sessions of the conference, namely, at New York, Nov. 1-4, 1905, and in Washington, March 13-16, 1906. They were also represented at the hearing in Washington before the Senate and House Committees on Patents, beginning June 6, 1906. In the interval between these two conferences they also had an informal meeting with the representatives of the American Publishers' Copyright League and attended a conference between these representatives and our executive board. As a result of these conferences and of the consequent correspondence and action of our executive board, as reported to the Council at its meeting in Atlantic City on March 10, the provisions of the proposed revision and consolidation of the copyright laws as embodied in the final draft prepared in the copyright office and now before Congress as Senate Bill 6330, have been worded as follows so

far as they affect the interests of libraries in the United States:

"Section 30—That during the existence of the American copyright in any book the importation into the United States of any foreign edition or editions thereof (although authorized by the author or proprietor) not printed from type set within the limits of the United States, or from plates made therefrom, or any plates of the same not made from type set within the limits of the United States, or any editions thereof produced by lithographic process, not wholly performed within the limits of the United States, in accordance with the requirements of section thirteen of this act, shall be and is hereby prohibited: PROVIDED, HOWEVER, That such prohibition shall not apply—

"(a) To works in raised characters for the use of the blind;

"(b) To a foreign newspaper or magazine, although containing matter copyrighted in the United States printed or reprinted by authority of the copyright proprietor, unless such newspaper or magazine contains also copyright matter printed or reprinted without such authorization;

"(c) To the authorized edition of a book in a foreign language or languages, of which only a translation into English has been copyrighted in this country;

"(d) To books in a foreign language or languages, published without the limits of the United States, but deposited and registered for an ad interim copyright under the provisions of this Act, in which case the importation of copies of an authorized foreign edition shall be permitted during the ad interim term of two years, or until such time within this period as an edition shall have been produced from type set within the limits of the United States, or from plates therefrom, or by a lithographic process performed therein as above provided;

"(e) To any book published abroad with the authorization of the author or copyright proprietor when imported under the circumstances stated in one of the four subdivisions following, that is to say:

"(1) When imported, not more than one copy at one time, for use and not for sale, under permission given by the proprietor of the American copyright;

"(2) When imported, not more than one copy at one time, by the authority or for the use of the United States;

"(3) When specially imported, for use and not for sale, not more than one copy of any such book in any one invoice, in good faith, by or for any society or institution incorporated for educational, literary, philosophical, scientific or religious purposes, or for the encouragement of the fine arts, or for any college, academy, school or seminary of learning, or for any state school, college, university or free public library in the United States; but such privilege of importation without the consent of the American copyright proprietor shall not extend to a foreign reprint of a book by an American author copyrighted in the United States unless copies of the American edition cannot be supplied by the American publisher or copyright proprietor;

"(4) When such books form parts of libraries or collections purchased en bloc for the use of societies, institutions or libraries designated in the foregoing paragraph; or form parts of libraries or of the personal baggage belonging to persons arriving from foreign countries, and are not intended for sale."

These provisions represent important modifications of the proposed law as it would have been approved by the conference if your delegates had not protested. As at first proposed by the various associations representing the different copyright interests, the law prohibited the importation into this country, with or without the payment of duty, of all books

that have been granted copyright in the United States, no matter what their origin, unless the proposed importer could secure the consent of the holder of the copyright. The present draft permits such importation by libraries and kindred institutions with the single exception of foreign reprints of American books, and it permits even these to be imported when copies of the American edition cannot be obtained here.

The privileges enjoyed by libraries under the present law are lessened in the proposed law only in two respects: the limitation of importation to one copy at a time instead of two, and the prohibition of importation of foreign reprints of American in-print copyright books without the consent of the copyright proprietor.

In consenting to these changes in the existing law your delegates acted under the conviction that it would be impossible to induce the conference to agree upon a complete retention of the existing privileges, and that these privileges were so slightly reduced by the proposed changes that it would have been bad policy on the part of your representatives to risk the disagreement of the conference by holding out against them altogether, especially as the representatives of other interests in the conference had shown themselves willing to meet us considerably more than half way.

No more sessions of the copyright conference are to be held, but in view of the fact that the bill cannot pass until the next session of Congress, we would respectfully recommend that a committee be appointed to watch its progress and take whatever action may be necessary in the interests of this Association.

FRANK P. HILL,

ARTHUR E. BOSTWICK,

Delegates.

It was *Voted*, That the report be accepted and the recommendations of the committee adopted, and that the thanks of the Council be extended to the delegates for their successful efforts.

Delegates on Copyright Bill.—It was *Voted*, That the delegates appointed to represent the Association at the Copyright Conferences (Frank P. Hill, A. E. Bostwick) be continued as a committee, to watch the progress of the copyright bill and take whatever action may be necessary in the interests of this Association.

Papers read at conferences.—The recommendation made by the general association, in connection with the report of the publicity committee (see *Proceedings*, p. 218), that papers to be read at conferences be printed in advance, was discussed. It was *Voted*, to amend the proper by-law by providing that

abstracts of papers to be presented at Association conferences shall be in the hands of the program committee at least two weeks before the conference.

Receipt for customs entry.—In accord with the recommendation of the committee on bookbuying (see p. 193), it was *Voted*, That the executive board prepare and present to the Secretary of the Treasury, on behalf of the Council, a resolution setting forth the recommendation of the committee on bookbuying regarding the customs receipt required for purpose of customs entry.

A. L. A. district meetings.—It was *Voted*, That a committee of three be appointed by the chair to consider the advisability of holding district meetings of the A. L. A., said committee to report at the last session of the Council at this meeting. The committee was appointed as Miss Stearns, Miss Wallace, C. W. Smith. It presented the following report:

To the Council of the American Library Association:

The committee appointed to consider the desirability of holding district meetings of the American Library Association would respectfully report that it deems it advisable and necessary to hold such meetings, if the Association is to be of the greatest good to the greatest number. There is one section of the country, the Southwest, for example, that has never been visited by the A. L. A. as an organization or officially by any of its members. The libraries in this section are passing through the critical formative period, when help is of such great value and would be gratefully received. For lack of such assistance as the A. L. A. could give one section of the country—the Pacific coast—organized a district association some time since, while an effort was made to organize another in the southern states during the past winter, and there is a growing feeling for district organization in other sections.

As your committee feels that the organization of such associations would tend to lessen the effectiveness of the A. L. A., your committee would recommend that the executive board be requested to make a trial of a district meeting of the A. L. A., during the coming year, in the southwestern part of the country, in co-operation with the Texas Library Association and the public libraries of Oklahoma, Louisiana, Arkansas, Arizona, New Mexico, Nevada, and Southern California, the meeting to be presided over by a member of the executive board, Council, or appointee exclusive of any member of the A. L. A. in the district.

LUTIE E. STEARNS, *Chairman.*
ANNE WALLACE,
C. W. SMITH.

It was *Voted*, That the report and recommendations of the committee be referred to the executive board with power to act.

Discussion on public documents.—The chairman of the committee on public documents submitted the following recommendation:

"Your committee on public documents respectfully suggests the expediency of substituting for the present committee a Public Documents Section, in order that those librarians whose interests on this subject could neither be anticipated nor handled in a committee report, may be furthered by more direct means than is possible in such a report. The desirability of some such arrangement was only brought to the attention of your committee yesterday, and there has not therefore been time to consult all the members of the committee. Of those members present at this conference Mr. Henry, Dr. Whitten, and Mr. Koch have been consulted and have expressed themselves in favor of such a change.

"ADELAIDE R. HASSE, *Chairman*."

It was *Voted*, That the recommendation of the public documents committee be referred to the executive board, with the suggestion to the program committee that a round table meeting on public documents would perhaps be more effective and satisfactory.

Law Librarians' Section.—The matter of establishing a Law Librarians' Section was brought up in letters read by Mr. Thomson and the secretary from law librarians interested in the plan, and it was *Voted*, That the secretary be instructed to inform the persons interested of the course to be pursued in application for establishment of a section.

"*A. L. A. catalog*" *supplement.*—It was *Voted*, That the matter of a five-yearly supplement to the "*A. L. A. catalog*" be referred to the Publishing Board for action, with the approval of the Council.

Library post.—Letters were read from Dr. Canfield and Mr. W. Scott, urging that the A. L. A. should take direct action favoring the library post bill at present pending in Congress. There was general discussion of the present bill, and of the possibility of framing a substitute which might be better adapted to library needs. It was *Voted*, That a committee of the A. L. A. be appointed by the executive board to take up the matter of a library post and prepare a bill on the subject, with the co-operation, if desired, of the other associations interested in the matter.

Exhibit by Virginia State Library at Jamestown Exposition.—It was *Voted*, That the resolution commending the proposed bibliographical exhibition to be made by the Vir-

ginia State Library at the Jamestown Exposition, as submitted by the A. L. A. committee on Jamestown exhibit (*see Proceedings*, p. 219), be endorsed.

Social Education Congress.—Mr. Andrews read a letter from Mr. James P. Munroe, of Boston, calling the attention of the A. L. A. to the Social Education Congress, to be held in Boston on Nov. 30, Dec. 1 and 2, 1906, and suggesting that the president of the A. L. A. appoint a committee of three or five librarians in or near Boston to co-operate with the officers of the Social Education Congress in carrying out their plans. It was *Voted*, That the Council express its interest in and sympathy with the plans of the Social Education Congress, and refer the appointment of an advisory committee to the executive board with power.

Commercial advertising.—The matter of solicitation of advertising and issue of printed matter by local committees without previous approval by the executive board was discussed, on recommendation of the executive board. It was *Voted*, That the action taken by the Council at the Niagara Falls Conference in regard to commercial advertising and publications of local committee be reaffirmed; that the committee there appointed to frame a by-law covering this subject be revived; and that the secretary be requested to co-operate with the local committee and call its attention to such a by-law.

TRANSACTIONS OF EXECUTIVE BOARD

Non-library membership.—Upon motion of the treasurer 37 names of persons not engaged in library work were voted into membership.

Contemporaneous annual reports.—It was ordered that the reports of all officers, committees or boards having to do with finances and statistics shall cover the calendar year, with brief supplementary reports to the date of the annual conference.

Committee on cataloging rules.—The board affirmed the appointment by the Publishing Board of a committee on cataloging rules and established it as a special committee of the A. L. A., constituted as follows: J. C. M. Hanson, Alice B. Kroeger, A. H. Hopkins, E. C. Richardson, T. F. Currier, Nina E. Browne, W. S. Biscoe.

Assistant secretaries.—Edwin M. Jenks and Clara A. Mulliken were appointed to act as assistant secretaries for the Narragansett Pier Conference.

Library organization directory.—A communication was presented from Mr. A. H.

Hopkins asking that arrangements be made to print a list of all state library associations and commissions and local library clubs, with addresses of their officers. It was *Voted*, to request the editor of the *A. L. A. Booklist* to print a standing list of such names and addresses, supplementing and correcting the list printed annually in the Association handbook.

Permanent headquarters.—The matter of permanent headquarters received a large share of attention. Mr. C. C. Soule, representing the Publishing Board and trustees of the endowment fund, urged the early establishment of headquarters. He promised on behalf of the Publishing Board willingness to remove its office to any place selected; that the Publishing Board would pay not more than \$500 per annum toward the rent; that the board would relinquish the grant of the available interest of the endowment fund voted to it by the Council at Atlantic City; and that the board would contribute a limited use of the services of its employees on the general business of the Association, especially in answering questions and correspondence regarding technical library matters. A written report on the matter of permanent headquarters was submitted by Mr. E. C. Hovey, who added assurances that there was no reason why headquarters could not be established by Sept. 1. Mr. Hovey also presented personally his views regarding the headquarters and his own connection with the Association. The following communication was received from the Publishing Board: "The Publishing Board thinks it essential in establishing itself at the A. L. A. headquarters to have the use of two rooms besides storage for its publications. It also asks part time of a stenographer. In return it is ready to give assistance and advice in correspondence through its secretary and editor, and to contribute for the present \$500 a year toward rent; but it thinks that it should eventually be relieved from this charge." The treasurer stated that \$2800 had been paid in to the treasury from pledges secured by Mr. Hovey, and there had been about \$1000 expenses for salary and travelling expenses, leaving a net sum of \$1800 in the treasurer's hands. It was *Voted*, That from the report of E. C. Hovey, chairman of the ways and means committee, the executive board finds \$6300 in hand and available during the next year for the establishment of headquarters, and that in the opinion of the board the first year's budget should not exceed \$5000. It was also *Voted*, That the executive board appoint Mr. E. C. Hovey "in charge" of A. L. A. headquarters at a salary of \$2500 per annum, to date from opening of headquarters, provided the arrangement can be terminated

on reasonable notice if conditions prove unsatisfactory to the executive board or to the appointee. It was also *Voted*, to continue the present arrangement with Mr. Hovey as to salary from Aug. 1, 1906, to date of establishment of headquarters. It was later *Voted* That permanent headquarters be established in Boston at as early a date as possible. Also, *Voted*, That Mr. Hovey be instructed to draw up a statement covering such of the general activities approved by and included in the report of the committee on permanent headquarters submitted to the St. Louis Conference in 1904, which it seems practicable to undertake within a year, this statement to include under each head details of organization and administration; and that in addition Mr. Hovey submit a suggested budget for one year, including a sufficient item for furnishing headquarters, the total budget not to exceed \$5000.

Proceedings.—A letter from Mr. Hovey was read, recommending, among other things, the withdrawal of the free publications now furnished to members of the Association, and the use of every effort by the present members and officers of the Association to increase membership among libraries; also to relinquish for a year or two free distribution of the Proceedings, furnishing them at cost price to such members as are willing to pay for them. After discussion the executive board disapproved the recommendation as to abridgment of the Proceedings, and *Voted*, That no change in the present method of printing the Proceedings would be desirable. There was discussion of the manner of distributing the Proceedings, during which it was suggested, 1, that only one copy be sent to a single family; 2, that every member be required to ask for a copy of the Proceedings before it should be sent to him; 3, that the treasurer prepare a list of those members who would naturally receive duplicate copies because of library membership or other membership in same family, and ask them for specific orders before sending the Proceedings. It was *Voted*, That the manner of the distribution of the Proceedings be referred to the new executive board.

Resignation of Miss Doren.—The resignation of Electra C. Doren from the Publishing Board was presented and accepted with regret.

Receipt for customs entry.—The first vice-president (E. H. Anderson) and the secretary were instructed to prepare a memorial to be presented to the proper officer in the U. S. Treasury Department praying for the abolition of the receipt for purpose of customs entry.

Acting treasurer.—In the absence until September of the treasurer-elect, Mr. G. F.

Bowerman, it was *Voted*, That the board request Mr. G. M. Jones to act as treasurer until such time as the treasurer-elect shall be able to assume the duties of the office.

Discussion of public documents.—In accord with the recommendation of the Council, the secretary was instructed to inform the chairman of the public documents committee that the program committee is ready at any time to give favorable consideration to a request for a round table meeting on public documents, or as the chief topic on the general program for 1907 is to be "Use of books," a general session on public documents will be possible if the committee desires.

Appointments to committees, etc., were made as follows:

Finance.—C. H. Hastings, B. C. Steiner, D. B. Hall.

Library administration (continued).—W. R. Eastman, Cornelia Marvin, H. C. Wellman; continued without specific instructions for new work, but with authority to promulgate the recommendations made in its report to the Association at Narragansett Pier.

Public documents (continued).—A. R. Hasse, Johnson Brigham, W. E. Henry, J. P. Kennedy, T. W. Koch, H. H. Langton, Charles McCarthy, T. M. Owen, George W. Scott, Mary L. Sutliff, R. H. Whitten. Acting on the recommendation contained in the report of this committee, the secretary was instructed to state to the chairman that the constitution makes no provision for standing committees except such as are named therein, and that all committees are appointed annually.

Co-operation with the N. E. A. (continued).—J. H. Canfield, M. E. Ahern, Melvil Dewey, Martin Hensel. Electra C. Doren having declined to serve again on this committee, the secretary was instructed to secure recommendations from the chairman for a fifth person and communicate the name to the members of the executive board by correspondence.

Library training (continued).—Mary W. Plummer, H. E. Legler, J. C. Dana, W. C. Kimball, A. S. Root, Grace D. Rose, Isabel E. Lord, Eleanor Roper.

Publishing Board.—W. C. Lane, C. C. Soule, each for three years (to succeed themselves); H. C. Wellman, for term expiring 1908 (to succeed E. C. Doren).

International relations (continued).—E. C. Richardson, Cyrus Adler, J. S. Billings, Herbert Putnam, W. C. Lane.

Bookbuying (continued).—A. E. Bostwick, J. C. Dana, B. C. Steiner. The board appropriated \$200 for the use of the committee on bookbuying for the coming year, from conference to conference. The secretary was instructed to state to the chairman of the committee, in pursuance of the recommendations contained in the report of the committee presented at Narragansett Pier, that there are no standing committees of the Association save those named in the constitution, and that all committees are appointed annually.

Publicity (continued).—J. C. Dana, S. H. Renck, Purd B. Wright. Reappointed until headquarters are established and satisfactory assurances can be given that the work of the committee can be cared for in the offices of the Association, after which time the committee, as named above, will be continued as an advisory committee.

Travel.—F. W. Faxon, E. C. Hovey, Mrs. Annie S. Ross, with power to appoint two additional members.

Title-pages to periodicals (continued).—W. I. Fletcher, Ernst Lemcke, A. E. Bostwick.

Bookbindings and book papers.—A. L. Bailey, W. P. Cutter, G. E. Wire.

Program.—C. W. Andrews, H. E. Haines, J. I. Wyer.

Library architecture.—C. R. Dudley, W. R. Eastman, C. C. Soule, John Thomson, F. P. Hill.

Library work with the blind.—N. D. C. Hodges, Emma R. Neisser, Etta J. Giffin, Asa D. Dickinson, B. C. Steiner.

Conduct of headquarters.—D. P. Corey, G. M. Jones, C. C. Soule.

Library post.—J. H. Canfield, chairman, with power to appoint two others.

Gifts and bequests.—D. B. Hall, unless arrangements can be made to compile this report at headquarters. The executive board passed a vote expressing its satisfaction with the report presented by Mr. Hall at Narragansett Pier and instructed the secretary to convey to him its thanks on behalf of the Association.

Commercial advertising.—President, secretary, H. C. Wellman. This committee, appointed at Niagara Falls, was revived and again charged with the duty of drafting a by-law covering the whole question of the relations of the Association to publishers and advertising.

Registrar.—Miss Nina E. Browne was re-appointed registrar for the ensuing year.

J. I. WYER, JR., Secretary.

LEAGUE OF LIBRARY COMMISSIONS

FIRST SESSION

THE third annual meeting of the League of Library Commissions was held at Narragansett Pier, the first session being at 2 p.m. July 2, in the ball room of the Atlantic House.

Mr. Henry E. Legler, president of the League, welcomed those who were in attendance, representing 16 state library commissions, and also many others not directly connected with commission work, but who are interested in library extension.

A paper was read by Miss Alice S. Tyler on "What form of organization is most desirable for a small town making a library beginning," in which were discussed the advantages and disadvantages of certain plans of starting a public library in a small town, it being assumed that a small town shall be understood to be one with not more than 1000 inhabitants. Such a movement is usually along "the plane of least resistance" and is likely to be one of the following: the enlargement of the meagre school library for public use; a church reading room; a woman's club or town federation library; a temporary library association or subscription library; a travelling library center or station; or a free public library, supported by municipal tax. The serious factor in all these methods, except the last one mentioned, is that they are dependent on the spasmodic and irregular support resulting from the labors of the finance committee or the entertainment committee with fairs, suppers, entertainments, rummage sales, etc.

The value of a library association, which may serve as the medium for systematic and well-directed effort in working for a municipal tax, providing a book fund, and creating favorable sentiment was discussed. The helpful relation of the state library commission to the local movement and the great value of the travelling library sent by the commission, which materially strengthens any one of the local methods adopted for providing a public collection of books for the community, were also discussed. The value

of the reading room in a small town was emphasized, where it is possible to secure a librarian with the personal qualities that will make of it a stimulating center for the young people. The ultimate end of the effort to establish a public library in the small town should be to secure a municipal tax as provided by state law, but this will be such a small amount as to make it necessary that the friends of the institution shall provide by other methods for a larger book fund.

The paper was discussed by Mr. Eastman of the Library Extension Department of the New York State Library, Mr. Bliss of the Pennsylvania Library Commission and others.

"County systems of libraries" was the subject of a paper by Miss Merica Hoagland, in which she considered the growth of the idea of providing books for the use of residents outside the limits of the towns and cities, and the consequent legislation. The provisions of some of the county library laws were discussed and also the plan of making a large city library the center for a county system with branches, as was done in the case of the Cincinnati Public Library.

Miss Edna D. Bullock discussed "What the commission can do for the schools" by informally talking of the school library situation in Nebraska. With 10,000 teachers in 6660 school districts scattered over 76,000 square miles of territory, the commission found much pioneer work to be done. Many districts had no libraries five years ago, and even now many are without so much as an English dictionary or the most elementary sort of an encyclopædia. With one-third of the teaching corps annually recruited from the average rural and village schools, it was apparent that the schools would first have to get books, and then learn to use them. Accordingly, a graded list of books for school libraries was printed and distributed to county and city superintendents for the teachers under their jurisdiction, and county superintendents, institutes, summer schools, teachers' associations, and many public schools were visited in the interests of a wider use of

good books by teachers and pupils in the schools and in the homes. Instruction in the use of books was given to teachers. Programs and circulars for the celebration of Library day in the schools were prepared and distributed to all the schools, and also many other circulars and letters.

The results amply justify the time and money expended. Thousands of dollars are now being voluntarily raised and spent on school libraries every year, while the character of the books purchased has greatly improved.

"Selection of books for travelling libraries" was the subject of a paper by Miss Katherine I. MacDonald, in which the experiences of the Wisconsin Library Commission were used as a basis for observations and conclusions as to the kinds of books most desirable for the miscellaneous library sent to an average community. The practical value of this paper and the suggestions which were fruitful for discussion, led to a motion that owing to the lateness of the hour the discussion be taken up at the adjourned meeting at 10.30 the following morning.

Before adjournment the president named a nominating committee to report to the adjourned meeting on officers for the ensuing year, the committee consisting of Miss Bullock, chairman; Mrs. Howe and Miss Hoagland.

SECOND SESSION

The adjourned meeting of the League of Library Commissions was held at 10.30 a.m. July 3, in the ball room of the Atlantic House with a good attendance. The discussion of Miss MacDonald's paper on "Selection of books for travelling libraries" was taken up, those taking part in the discussion being Miss Reynolds of the Indiana Library Commission, Mr. Eastman of the New York State Library, Mr. Galbreath of the Ohio State Library, Miss Askew of the New Jersey Library Commission, Miss Stearns, and others. The questions of fixed groups of books for general reading and general collections which are drawn upon for flexible groups on special subjects were discussed, as well as the use of foreign books. It was recognized that readable, one-volume books on popular non-fiction subjects were in great demand and that books for foreign readers on American customs, institutions and history were much needed. Miss Campbell of the Passaic (N. J.) Public Library told of foreign books and their selection in the Passaic library and Miss Stearns spoke of their value in the Wisconsin travelling libraries.

"State examinations and state certificates for librarians" was the subject discussed in a paper by Miss Clara F. Baldwin. The fact that the standards of teaching have been greatly raised by state examination of teachers was suggested as a reason for the question, Why may not the state exercise supervision over libraries in a similar way? Many difficulties were mentioned, such as the nature of the examinations, the grading of certificates, whether requirements should be on the basis of the size of the library to be served, whether examinations for assistants and administrative positions should differ, etc.

Discussion on this subject emphasized the fact that there are many difficulties in the way of working out a feasible plan; it was moved by Mr. Galbreath that a committee of three be appointed by the incoming president to consider the advisability of recommending to the next meeting of the League some plan for state examination and grading of librarians.

Miss Anne Wallace presented a paper on "Library commission possibilities in the Southeast," in which she told of what had been accomplished by the Georgia Library Commission without any appropriation for salaries or expenses in library extension, not only in the state of Georgia, but in the neighboring states of North Carolina, Tennessee and Alabama. A hopeful outlook was given regarding the prospects for future work and the valuable aid of the Carnegie Library of Atlanta and the Southern Library School in the work that had been accomplished was acknowledged. The reorganization of the Georgia Library Commission and encouraging prospects for a state appropriation have led to the selection of an organizer.

Owing to the brief time remaining for the meeting the reading of the report of the executive board was dispensed with. During

the year the organization of the League has been perfected and the following active membership has been secured: California State Library, Connecticut Public Library Committee, Delaware State Library Commission, Idaho Free Library Commission, Indiana Public Library Commission, Iowa Library Commission, Michigan State Board of Library Commissioners, Minnesota Public Library Commission, Nebraska Public Library Commission, New Jersey Public Library Commission, New York State Library, Oregon Library Commission, Vermont Board of Library Commissioners, Virginia State Library, Washington State Library Commission, Wisconsin Free Library Commission. The meeting of the executive board in Indianapolis in December, 1905, was largely given to the final consideration of constitution, the matter of publications to be secured and recommended, and the program for this meeting.

The report of the publication committee was read by Miss Baldwin in the absence of the chairman, Miss Marvin. The "Library commission yearbook" has been printed and other material including a tract on travelling libraries and a pamphlet on small library

buildings, is nearly ready for publication. The committee recommended that the pamphlet on small library buildings should be issued as soon as possible; that a list of children's books supplementing the "Suggestive list" be provided at the earliest possible date; that a selected list of books in foreign languages suitable for small libraries be issued as speedily as practicable; that leaflets for newspaper use in pushing local campaigns for public libraries be issued at once; that the Yearbook for 1907 contain comparative commission library laws and an article on library administration; that the League co-operate with the publicity committee of the A. L. A. in furnishing material for press notices which may be used in papers throughout the states.

The report of the nominating committee was made, with the following officers recommended for the ensuing year: President, Miss Alice S. Tyler, Iowa; vice-president, Mr. J. P. Kennedy, Virginia; secretary-treasurer, Miss Clara F. Baldwin, Minnesota. Upon motion the president was instructed to cast the ballot for the election of these officers.

Adjourned.

Alice S. Tyler, *Secretary*.

NATIONAL ASSOCIATION OF STATE LIBRARIES

THE annual meeting of the National Association of State Libraries was held in connection with the A. L. A. Conference, two sessions being held, on Saturday, June 30, and Monday, July 2. Officers were elected as follows: President, J. L. Gillis; 1st vice-president, T. L. Montgomery; 2d vice-presi-

dent, H. O. Brigham; secretary-treasurer, Miss M. M. Oakley.

[NOTE.—Owing to the loss, in the mail, of the full report of proceedings of the Association, the "Proceedings and addresses" could not be prepared for publication in time to be included in this volume of A. L. A. Proceedings.]

BIBLIOGRAPHICAL SOCIETY OF AMERICA

THE Bibliographical Society of America held a meeting in connection with the Narragansett Pier Conference on July 2, 1906, and meetings of the Council of the society were held on June 30 and July 2. Officers were elected as follows: President,

William C. Lane; 1st vice-president, Reuben G. Thwaites; 2d vice-president, E. C. Richardson; secretary, W. D. Johnston; treasurer, Carl B. Roden; librarian, Wilberforce Eames; councillor, C. Alex. Nelson. About 50 members were in attendance at the meeting.

NARRAGANSETT TO NANTUCKET: CONFERENCE DAYS AND POST CONFERENCE TRIP

COMPILED FROM VARIOUS AUTHORITIES

THE WEEK AT NARRAGANSETT PIER

"Let Fido chase his tail all day,
Let Kitty play at tag,
She has no time to throw away,
She has no tail to wag"—

SO she had supposed; but a week's respite from time schedule and delivery desk, a week in which the model book-supporter and the electric dust-chute alike faded into obscurity and became as though they were not, taught her otherwise. For the librarian, too, can play. Though she may work harder than "adamant" at home, in Conference week there is a delightful response to the calls of Frivolity, which does much toward clearing the atmosphere of all adamant-severities.

At Narragansett Pier, upon the hard, white beach, along the fringe of rocks that break the sandy stretches of the beautiful Rhode Island shore, upon the broad piazzas of the Mathewson, the Gladstone, the Metatoxet, even in the most unpromising spots of quaint Narragansett, did the librarians disport themselves, and prove that even the best and fullest program cannot crowd out the thousand and one unprofessional interests of friendly meeting, of greeting old friends in a new place, that make for the pleasantest memories that accrue to the A. L. A. gatherings.

This is not the place to speak of the sessions themselves, of the pleasure and satisfaction derived from listening on succeeding days to such speakers as Dr. Faunce, Dr. Schaeffer, and Owen Wister, unless it be to say that all left the sessions refreshed and interested, and awake to every new impression that the Narragansett world might have in store for them.

One of the chief features of the meeting was the special gatherings by which people with common affiliations—dwellers in the same state, graduates of the same school, members of the same association—were

given an opportunity to get together and compare notes or retail experiences. Among others, the states of Minnesota, Vermont and Connecticut, and the New York State, Illinois, Pratt, Drexel, and Wisconsin summer library schools were represented by special dinners or receptions, and the Southern librarians held a *conversazione* and afternoon tea. Indeed, at the Mathewson, the headquarters hotel, there was the atmosphere of an informal reception throughout the whole week, and in the corridors, the parlors, and on the piazza there were always to be seen groups of animated talkers who preferred to sit at their ease rather than to indulge in pastimes of a more arduous character.

The delightful ball room and orchestra offered an opportunity to the more frivolously minded to enjoy almost nightly dancing, and proved that whether or not librarians have become more proficient in their profession, they at least possess aptitude in the gentle art of the two-step and the waltz.

Opportunities for pleasure out of doors were numerous—drives, walks, trolley trips, and, last but not most important, bathing. There was nothing more popular than this, and either by the grace of God or grace of the program committee, there was always time for a delightful surf dip between the end of the morning session and the hour for dinner. For at Narragansett it is time and not tide that decides the bathing hour, and from twelve to one natives and guests alike pursue the path that leads to the bathing houses and the beach. Even on Sundays, it was told, the churches arrange their services so that the congregation shall be able to get from their pews to the bathing beach and change their Sunday clothes for their bathing suits, within the proper hour.—proving, by the way, that there are a few New Englanders less trammelled by Puritanical tradition than was that scion of the Adams family, the ill-

starred hero of Miss Pinneo's "true story," with whose adventures the librarians became acquainted on the Sunday evening that they spent at Narragansett.

To find wild roses growing within two feet of the breaking surf, it would seem that one must go to Peter's Never-Never land; but you will find them just as readily in Narragansett. Their fragrance was ever present during the delightful walks along the beach and rocks that edged the sea, again through the sand dunes and the long meadow grass that flanked the beach, and then in the far back country where there were a hundred beckoning roads and landmarks full of local or even historic interest that proved an un-failing bait to those possessing the "Bae-deker mind." The five-mile drive to Point Judith was particularly delightful, as was the long trolley trip to Providence. But perhaps the most charming of all the trips was the visit to the beautiful little village of Peace Dale, so appropriately named, a reminder that in the early days of its history the whole of Rhode Island itself was known to the Indians as Aquidneck, or the Isle of Peace. At Peace Dale the visitors saw the beautiful church, passed the old mill and mill ponds, were pioneered through the grounds of the Hazard homestead, and visited the Peace Dale Public Library, the gift of Rowland G. Hazard to the town—a charming building, well equipped for the excellent work that it has carried on. Here they were most cordially received and shown everything, from the assembly hall, with its fine collection of antlers and deer's heads, down to the basement, adorned at the moment with the fancy costumes that had been used in the entertainment last given there.

Though the weather was disappointing on the day of the Fourth, in the evening it was fine, and the fireworks, set off, as they were, directly over the sea, made a wonderful display. The moon, approaching to the full, half hidden by black clouds, remnants of the passing storm, and the glow of the rockets, whose fire seemed to drop into the shadowy waters, made a picture never to be forgotten, and marked the end of a Fourth of July that had been unusually interesting to all. But all things end, and just as the bathing

beach had become an accustomed haunt and the rocks familiar friends, came the time for packing up and the rush for certificates and return tickets. The last evening at the Pier ended in gayety—dancing and a full moon proved too inviting to make sleep before midnight tolerable; and the next day the departing clans carried back with them the memory of that last night as a fitting close to the delightful Conference of 1906.

PROVIDENCE DAY

Narragansett Pier was so attractive that it required a strong sense of duty on the part of many librarians to take them off for a day in the city. But here did virtue receive its reward in the very doing! For there were none of the unpleasantnesses associated with the thought of the city in summer, and there was pleasure of sorts strewn all through the day. And perhaps what gave most pleasure of all to "dealers in things" was the delightful sense of the ease with which the whole matter was managed, the ordered smoothness of all arrangements.

Tuesday, July 3, was set down on the program as "Providence day." First came a trolley trip to Saundertown on special cars—and who is there can resist the thrill of superiority brought by anything "special"? Then the steamer *Warwick*—which was special, too!—carried the visitors up the beautiful bay to the city wharves. The Providence committee offered apologies, on the way to the boat, for the non-arrival of the special (!) maps of Providence ordered for the occasion, but even this slight flaw was not to mar the perfect ordering of the day, for the maps came in time for distribution on the boat. The sheet contained, besides a plan of the city, historical matter, and a list of the settlements, islands, lights, and so forth, to be passed on the sail up the bay. This reading matter gave intellectual occupation to many on board, the excitement of trying to fit names to places proving almost too much for several.

At Providence the party, numbering some five hundred, scattered, some seeking one library Mecca, some another. (For every library may be a Mecca to the devout librarian.) A buffet luncheon in Sayles Hall, on

the Brown University campus, was served from twelve to two, so that there was ample space, as well as ample refreshment for all.

But the choicest "feature" of the local committee's work was the magic way in which, whenever a librarian desired to go to any of the libraries of the city, a special trolley car appeared at once and whirled him or her away to it. Of an inspector on one of the cars a librarian asked, "How do you know librarians when you see them, so as to let them on?" The inspector smiled loftily and replied, evasively, "Oh, I guess we don't make many mistakes!" Presently as the special car approached a plain ordinary car the questioner continued, "Those people are not librarians, are they?" "No," said the inspector, laconically, "they're paying their nickels!"

The Brown University Library, crowded into a quarter of the space it needs, the Historical Society Library, where old portraits and historical relics preside gravely over solemn rows of books, the beautiful John Carter Brown Library, with its priceless collection and its atmosphere of scholarly leisure, the Athenæum, tempting one to stay and browse, the State Library, in its pleasant quarters in the towering white capitol, the Public Library, with so many specialties that every one desired to see, that the librarian and his assistants must have been worn out answering questions—all were duly visited by all the truly conscientious of the party. And who in the A. L. A. is not conscientious?

At four—all too soon—the *Warwick* bore the party away again, stopping this time at Rocky Point for a Real Rhode Island Clambake. Although it was early for dinner, there seemed to be but one mind in the five hundred, who, with dinner tickets in hand, flocked straight to the clambake pavilion. There was time to linger a little outside, to see the clams, piled on red-hot stones, being covered with wet seaweed; but the moment the gates were opened none stayed to look in any other direction. The long tables, parallel with the sea, gave those seated on the inner side the view out through the open side of the pavilion over the shining water, but the contents of the tables attracted more attention

than the view. Pilot bread, Boston brown bread, salad and pickles were soon supplemented by huge bowls of steaming clam chowder. It is supposed to be after several plates of such that the poet produced the immortal stanza:

"You cannot choose in life your lot,
You cannot right all wrongs.
The clam loves not the chowder hot—
But that's where he belongs!"

After the chowder came the principal dish—the "baked" clams—which had been steaming in the seaweed, and now appeared accompanied by drawn butter. Big pans came in full only to disappear empty a few moments later, replaced by other pans. One hundred and thirty-four clams is said to be the record individual consumption for the occasion. What appeared to be a full brass band discoursed gay music to hearten the attack, and nobly did every one respond. After infinite clams there appeared clam fritters in large quantities and then two kinds of fish, with baked sweet potatoes. A few became disheartened at this point, and at the soft shell crabs that followed more ceased to be interested. Then arrived lobster, so good that it *must* be eaten. When watermelon appeared next there were sighs of relief because there *couldn't* be any more, but before the coffee was served ice cream! There were some who said the flavor was ptomaine. Who wonders that a member of the Council renamed Rocky Point—Royal Gorge?

A few brave souls, after this, went on merry-go-round, shoot the chute, scenic railway, and the like, but the majority wisely refused the invitations of the barkers. To the boat again and a pleasant sail to Saundertown, and in the cabin actually cake walking by the undaunted! The special trolleys whirled the pilgrims homeward through the dim night and brought to Narragansett Pier the whole party, tired, perhaps, but enriched by a delightful, and to most a unique, experience.

The hospitality, the thoughtfulness, the efficiency and the originality of our hosts are hard to put into words, and the pleasure of those who profited by them was even greater. All hail, Providence!

THE NANTUCKET POST CONFERENCE TRIP

For a day and a half the librarians travelled from Narragansett Pier to Nantucket, exemplifying in their journey the sad story of the "Ten little Indian boys." For they set out from the Pier at noon on Friday, July 6, some three hundred strong, and they reached the "island home" of Nantucket on Saturday night as a party of fifty, less one. All along the way there were leave-takings, as singly or in groups people left for home, for vacation outings, or for return to work.

From the Pier by trolley to Saunderstown, and from there by steamer, the three hundred reached Newport, in the beauty of a perfect summer afternoon. Here carriages were waiting for a long drive about the town and past the line of villas and palaces, whose identification is the glory of the Newport guide. A stop was made at the Redwood Library, where the visitors were welcomed by Mr. Bliss, and studied with interest the quaint and timeworn fittings and interesting contents of this historic old library. The drive ended at Easton's Beach, where a shore dinner was served—modelled upon the historic Rocky Point clambake, but tamer, less enthralling than that memorable Orgy. After the watermelon had put its gentle quietus upon chowder, baked clams, clam fritters, blue fish, sweet potatoes and "fixin's," the party scattered, some to take the famous Cliff Walk, in the sunset glow, some to return to Narragansett Pier for their homeward journey, and some to wander about Newport, or rest at the Aquidneck House. This quiet old hotel was headquarters for the night, and from it at eight-thirty on Saturday morning the pilgrims set out, to go by trolley to Fall River. It was a delightful spin—flying along green fields and woods, through a luxuriant countryside, until the increasing number of great mills showed the outskirts of the mill city.

At Fall River the library was visited, in its new and monumental building, and there was time for a short walk about town before the second relay of special trolley cars bore the party to New Bedford. Here dinner, at the Mansion House, was the first order of the

afternoon, and then came a visit to the Free Public Library, housed in an old-fashioned city building, but full of the atmosphere of books and of kindly service. Mr. Tripp and his assistants received the visitors, who later made their way to the rooms of the Old Dartmouth Historical Society, where they hung absorbed over the quaint and curious relics and implements of the whaling days, until it was time to hasten to the wharf for the Nantucket boat.

It had been "a misty, moisty morning," and early in the afternoon a persistent drizzling rain set in, so that the charms of the four hours' voyage were considerably mitigated. The *Gay Head* was late in leaving New Bedford; she carried an amazing cargo of freight, furniture, and summer colonists for Wood's Hole and Cottage City; she was damp and chilly without and close and stuffy within; and it was a tired and bedraggled A. L. A. party that finally reached Nantucket, nearly two hours late, and were driven through a heavy rain to the light, good cheer and comfort of the Sea Cliff Inn, where dinner was waiting and rooms were ready for all.

The Conference had not been wearying, but at Nantucket rest was all pervasive. Two days of fog and intermittent rain, with a Sunday thrown in, followed the arrival of the A. L. A. party. Its members wrote letters, visited, walked, drove, looked over the curio and antique shops, and went to church. There are four churches in the town and at each one on Sunday morning was read the general notice that a company of representative librarians was within its borders and would be given a reception at the Nantucket Athenæum the next day, and the townspeople generally were invited to attend and make the occasion one of hospitality and interest. In response to this cordial invitation most of the librarians and many of the townspeople met informally at the Athenæum Monday forenoon. The people of that island town may well be proud of this well-selected, well-arranged, and well-cared-for library containing about twenty thousand volumes, and of the dignified wide-columned building which shelters it. To the regret of all present, the librarian, Miss Barnard, who had served for nearly forty years,

was not able to be present, being ill at home. Later in the day a note of appreciation of her work and regret for her illness was signed by all the librarians and sent to her at her home. The whole reception was most pleasant, trustees and their friends greeting cordially the visitors. An address of welcome was made, to which ex-President Carr responded, and remarks followed by other of the Nantucketers and by Miss Ahern, Mr. Bliss and others of the library party.

The next day was fair and sunny, and in divers carriages and at different times most of the party took the drive to Siasconset, usually called Sconset. This narrow-streeted collection of little houses, ranging in their names from "Wild Rose Arbor" to "The Captain's Gig"—and placed well up on a shrub- and vine-grown cliff—well rewards a drive across the open moor; and one may wander on beyond the queer little village to the lighthouse on Sankoty Head, or may scramble down the cliff and walk on the sandy stretch of beach below. In the midst of all that is old and queer and quaint, one suddenly comes upon the latest of modern inventions in the form of a Marconi wireless tower, which, if sentient, might well wonder to find itself standing thus in strange company. Beside the ride to Sconset one may also go to the Surfside or Monomoy, where the best view of the town of Nantucket is to be had, showing the open bay with the houses clustering along the curve of the shore, the church steeples rising here and there, the lighthouse on the seaward point, and on the hill inland the old windmill, lifting uselessly its broad, short arms. As one lingers over this view he does not wonder that Nantucket has long been beloved of artists who never weary of her form and color. Inland from the marshes lie the moors, with their clumps of scrubby pines and stretches of bayberry and wild rose. Great purple patches show where large beds of the delicate little *polygala polygama*—new to many of the visitors—are growing. Soft sagey greens of unusual varieties of the beach pea range themselves against the vivid yellow greens of the marsh grass, while over and around all are the varying blues of sea and sky.

An invitation to the exhibition of the Cof-fin school was accepted by most for Wednesday afternoon, and the results of the manual training, basketry and needlework compelled admiration and in many cases the opening of pocketbooks. Indeed, the island is not lacking in expedients for the relief of overfull purses, and the visitor may acquire a large variety of souvenirs, varying from post-cards to antique sideboards.

Each of the four days brought its share of pleasant things. A glorious twenty-one mile sail, out at sea, "along towards Tuckernuck," will long be remembered; the Historical Society was most interesting, with its fine collection of early Nantucket relics, including the "marine camels" that were for some time a mystery to the visitors; the Maria Mitchell memorial house more than repaid a visit; and there were, besides, the Unitarian church belfry, inviting a long climb and a fine view, the ancient overgrown burying ground, the Oldest House, and many another quaint and curious landmark.

One evening all gathered in the parlor of the pleasant Sea Cliff Inn and listened to Miss Hartwell read a detailed and interesting account of the Yellowstone trip of the year before, and looked over the photographs taken by Mr. Faxon and others. Re-traveling thus that wonderful journey, one could not fail to be impressed with the inestimable value these conference trips have been to those of us who have taken them. One who has followed the meetings of the A. L. A. for the last dozen or more years has seen under unusually good conditions a really large part of our country and has in addition made lasting friendships which have enriched and broadened and sweetened life.

Quaint is the adjective usually applied to Nantucket. Dignified and self-respecting, it is, too, with its fine brick mansion houses, its tree-shaded Main street, its ample schools and churches. These date from the days of flourishing whale fisheries, when big ships crowded the docks and the activities of large and prosperous business gave employment to many people. Now all this is changed. The big whalers are a thing of the past, the whaling industry having been pushed aside by the

introduction of steam vessels on the sea and the competitive products of petroleum in the market; so that now along the shore are moored only little white-sailed sloops and cat-boats, and at the wharves great excursion steamers come and go.

To-day the summer boarder possesses the island. He comes early and he stays late, for the climate is singularly soft and mild, having nothing of that sub-Arctic quality frequently felt along the north shore. He finds still water or surf bathing, fresh and salt-water fishing, and, best of all, unlimited sailing.

All these pleasures the librarians tested, returning with red noses and whetted appetites. They took the drives, they bought antique candlesticks, they ate broiled live lobster for supper, they danced, they walked, they rowed, they sailed. And on Thursday morning when their time was up they reluctantly took the steamer for home, cheering themselves with the consciousness that they had scored their usual record of making the most of many good times, and finding expression for

their emotions in the epic hereto appended, which celebrates and is dedicated to

THE A. L. A. AT NANTUCKET

A for the A. L. A., forty-nine strong,
 B for the Baggage they toted along,
 C for the Clambake they had down the Bay,
 D for the Drive, through the long summer day.
 E for the Evening Star shimmering bright,
 F for the Fog that shut it from sight,
 G for the Gay Head that bore us o'er sea,
 H for the Heave of the waves wild and free,
 I for the Inn, the best on the Isle,
 J for the Jetties, in length near a mile,
 K for the Kurfew that sounded at nine,
 L for the Lightships that roll on the brine.
 M for Maria's Memorial Dwelling,
 N for Nantucket, of which we are telling,
 O for the Oil that comes from the Whale,
 P for the "Pound rounds" that never are stale.
 Q for the Quaintness pervading it all,
 R for the Roses on every stone wall,
 S stands for 'Sconset, where bluefish are caught,
 T for the Trades at the Coffin School taught.
 U for Ubiquitous — Faxon yclept,
 V for the Vanes, on each cottage porch kept.
 W for the Windmill, that every one saw,
 X — its Xtreme Age, which filled us with awe.
 Y for the Yearning we felt to remain,
 Z for the Zest with which we'll come again.

OFFICERS AND COMMITTEES

SERVING IN 1905-6 AND DURING THE NARRAGANSETT PIER CONFERENCE

President: Frank P. Hill, Chief Librarian, Brooklyn (N. Y.) Public Library.

First vice-president: Clement W. Andrews, Librarian, John Crerar Library, Chicago.

Second vice-president: Caroline H. Garland, Librarian, Dover (N. H.) Public Library.

Secretary: J. I. Wyer, Jr., Reference Librarian, New York State Library.

Treasurer: Gardner M. Jones, Librarian, Salem (Mass.) Public Library.

Recorder: Helen E. Haines, Managing Editor *Library Journal*, New York City.

Assistant secretary: E. C. Hovey, 10½ Beacon st., Boston.

Registrar: Nina E. Browne, A. L. A. Pub. Board, 10½ Beacon st., Boston.

*A. L. A. Council:** Mary E. Ahern, A. E. Bostwick, Johnson Brigham, J. H. Canfield, G. H. Clark, Gratia A. Countryman, F. M. Crunden, Melvil Dewey, C. R. Dudley, Linda A. Eastman, W. E. Henry, N. D. C. Hodges, A. H. Hopkins, Mary F. Isom, W. C. Kimball, G. T. Little, W. T. Peoples, E. C. Richardson, J. C. Rowell, Lutie E. Stearns, John Thomson, R. G. Thwaites, H. M. Utley, Anne Wallace, H. C. Wellman.

Trustees of the Endowment Fund: C. C.

Soule, Alexander Maitland, Deloraine P. Corey.

Executive Board: The president, ex-president (E. C. Richardson), vice-presidents, secretary, treasurer, recorder.

Publishing Board: W. C. Lane (chairman), C. C. Soule (treasurer), Melvil Dewey, Electra C. Doren, Henry E. Legler, Nina E. Browne (secretary).

COMMITTEES

Finance: Sam Walter Foss, Drew B. Hall, Theodosia McCurdy.

Library administration: W. R. Eastman, Cornelia Marvin, H. C. Wellman.

Public documents: Adelaide R. Hasse, Johnson Brigham, W. E. Henry, Charles McCarthy, J. P. Kennedy, Robert H. Whitten, H. H. Langton, Mary Sutcliffe, Thomas M. Owen, G. W. Scott, Theodore W. Koch.

Co-operation with Library Department of National Educational Association: J. H. Canfield, Mary E. Ahern, Melvil Dewey, Electra C. Doren, Martin Hensel.

Library Training: Mary W. Plummer, H. E. Legler, Isabel Ely Lord, A. S. Root, Eleanor Roper, Grace D. Rose, J. C. Dana, W. C. Kimball.

International Relations: Ernest C. Richardson, Cyrus Adler, W. C. Lane, Herbert Putnam, J. S. Billings.

*Includes, in addition, members of the Executive Board.

Book Buying: A. E. Bostwick, J. C. Dana, B. C. Steiner.

Title-pages and Indexes to Periodicals: W. I. Fletcher, Ernest Lemcke, A. E. Bostwick.

Gifts and Bequests: Drew B. Hall.

Bookbinding and Book Papers: G. F. Bowerman, W. P. Cutter, A. L. Bailey.

Index to Prose Fiction: Josephine A. Rathbone, Beatrice Winsor.

Permanent Headquarters: Herbert Putnam, C. W. Andrews, James Bain, Jr., J. S. Billings, R. R. Bowker, F. M. Crunden, Melvil Dewey, A. H. Hopkins, W. C. Lane, J. I. Wyer, Jr.

Ways and Means: E. C. Hovey, C. W. Andrews, J. L. Gillis, A. H. Hopkins, Anne Wallace, Herbert Putnam.

Program: Frank P. Hill, J. I. Wyer, Jr., Helen E. Haines.

Travel: F. W. Faxon, E. C. Hovey, C. B. Roden.

SECTIONS AND SECTION OFFICERS

Catalog Section: Chairman, Theresa Hitchler; secretary, Gertrude Forstall.

College and Reference Section: Chairman, J. T. Gerould; secretary, Alice E. Sanborn.

Library Work with Children: Chairman, Arabelle H. Jackson; secretary, Florence J. Heaton.

Trustees: Chairman, W. T. Porter; secretary, T. L. Montgomery.

EXECUTIVE OFFICES AMERICAN LIBRARY ASSOCIATION, 34 NEWBURY ST., BOSTON

A. L. A. OFFICES

A. L. A. PUBLISHING BOARD OFFICES

THE LIBRARY JOURNAL

VOL. 31

SEPTEMBER, 1906

No. 9

THE printed Proceedings of the A. L. A. Narragansett Pier Conference, published as the August number of the JOURNAL as well as in separate form, exceeding 300 pages, emphasize as well as record the usefulness and effectiveness of that large and hard-worked gathering, which included representatives from no less than 37 states, Canada, and England. It is difficult to say which part is the most important, the papers, the committee reports, the general discussions, or the record of special interests and meetings; and the conscientious librarian who was not able to be among the 900 will do well to give as much time as practicable during the balance of the calendar year to making the contents of this volume part of his professional equipment. It is much to be regretted that the minutes of the meeting of the National Association of State Libraries were lost in the mails and could not be included in the volume. It is a matter of pride to the American Library Association that its Proceedings are issued more fully and promptly after an annual meeting than is the case perhaps with any like body, and it was impracticable to delay publication until these important though ancillary proceedings could be replaced. The Proceedings, with the growth of the Association and related organizations, have come to be so voluminous as to make it questionable whether they can be in future issued as a regular number of the JOURNAL, despite the advantage that they are then bound up in the volumes of a permanent periodical and so not lost sight of; and there is indeed further question whether as time goes on it will be practicable to print a comprehensive instead of selective record of papers and proceedings. To those who joined in the American Library Association at its first conference thirty years ago, the present record is the more surprising, in view of the opinion freely expressed at that time that while librarians might usefully come together once in a while for conference, and print a periodical of an occasional character, there could scarcely be enough to talk about to justify either frequency or regularity in either meetings or publication.

ONE of the most important steps at the conference was the definite though still somewhat provisional arrangement for official headquarters for the Association. While the money raised for this purpose did not justify launching forth on the larger plan originally outlined, with New York as a center, it was felt that much could be gained and a fair trial made by removing the publication work not from Boston, but to better headquarters in that city of library history, and securing the larger part of a house which would also give facilities for other features of a national headquarters more ample than could be obtained within the financial limitations in New York. The choice made seems to be an excellent one, and now that Mr. Hovey has been definitely appointed to enter upon the continuing development of permanent work, it is to be hoped that this initiative step may prove the first of a "forward movement" of real importance. The choice of Asheville as a meeting-place for next year marked the desire of the Association to respond to the call of the South for missionary work in that direction, and the new headquarters should be a base of operations for all such extension work, including the new and promising idea of holding meetings under the auspices of the Association in parts of the country, such as the Southwest, where it will scarcely be practicable for many years to hold a conference.

WHAT seems an unjust stricture upon the representatives of the A. L. A. at the Copyright Conferences appeared recently in the "Librarian" column of the *Evening Post*. Noting the considerable number of libraries that have allowed Mr. W. P. Cutter to use their names in his protest against the book-importation compromise embodied in the copyright bill now before Congress, the writer remarks that either these libraries do not know what is good for them or else the Association has not been properly represented in the conferences. It is, of course, evident that a considerable number of the members of the A. L. A. do not approve the course of the delegates, but it

must also be evident that the delegates have spared no pains to ascertain the wishes of the majority and to take no step except in consonance with those wishes. Their course was unanimously approved by the executive board last year, and the Council has twice (at Atlantic City and at Narragansett Pier) voted down proposals to restrict or negative their action. Under these circumstances the dilemma proposed by "Librarian" will scarcely hold, and its implication seems an unnecessary attempt to discredit the work of men who have spared neither time, labor, nor expense in their efforts to draft copyright legislation satisfactory to all the conflicting interests that have to do with the making and distribution of books.

THE change of place for the New York Library Association's annual "library week" from the Lake Placid Club in the Adirondacks to Twilight Park in the Catskills continues to the association and its co-workers the advantages of that associated effort which has produced such remarkable results under Mr. Dewey's leadership at Lake Placid—and indeed Mr. Charles Wingate's summer colony at Twilight Park was a precursor, though on a lesser scale, of the Lake Placid Club development. It gives also an added advantage, in furnishing a location more central, and more readily and cheaply accessible to those who desire a working outing less strenuous than the national conference and only less profitable professionally. While the attendance at Lake Placid has been very large, nearly equalling last year that at the national conference held at the same place a dozen years ago, it has been confined to comparatively few libraries, and has reached only a small percentage of the small libraries of New York state. It is hoped that one of the results of the change of base will be to bring librarians from smaller libraries in all parts of the state, *via* the several lines of railroad which reach the great water way of the Hudson and connect with the steamers that navigate that historic and picturesque river. The cost of attendance at the meeting will be so small to libraries in a large section of the state that trustees should be willing to regard it as a desirable invest-

ment. The charm of the environment and the interest of the program should bring to this year's "library week" an added number of participants.

AN unfortunate precedent has been set by Brooklyn for other municipalities in respect to its proposed new central library. For this building a site has been secured on the beautiful plaza forming the entrance to Prospect Park and dignified also by the great memorial arch—a site which calls for the most worthy efforts of the best architect that can be secured, and involves danger that any work other than the best may be a disfigurement to a noble place instead of a further adornment. Twenty-five thousand dollars had been appropriated by the city for the preliminary study of the site, and it is expected that possibly two millions may be expended on the building. As the board of trustees of the Brooklyn Public Library, though in part appointed by the mayor, is not technically a division of the municipality, it was decided that the city appropriations must be spent under the direction of a city official, and the President of the Borough of Brooklyn was appointed by the Board of Estimate and Apportionment to direct the expenditure, although it was provided that the plans should be subject to approval by the board of trustees. It was naturally expected that there would be either a competition for or the most careful selection of an architect. To the surprise of all concerned, however, the borough president, Mr. Coler, took upon himself to appoint at once, before the preliminary studies or program had been worked out, a local architect, who had been the designer of two of the Carnegie branches, one of them perhaps the least satisfactory in the general estimation of those buildings. He stated that he did not consider the endorsement of the board necessary, but he obtained the nominal approval of a bare majority of the special committee. The board of trustees has passed a vote of regret and protest. President Coler was elected to his office on the Municipal Ownership ticket at the last election, and his action is a serious blow to the administration of great enterprises by municipalities. From the library point of view it is certainly to be severely criticised.

THE WORK OF A LIBRARY TRUSTEE.*—I: FROM THE TRUSTEE'S POINT OF VIEW

BY JOHN PATTON, *President of the Board of Library Commissioners, Grand Rapids, Mich.*

THE popular idea of the work of a library trustee is that of one who devotes a certain amount of time each month to matters of business arising in connection with the administration of a public library. On the theory, probably, that the busiest men have the most time at their command, those usually selected for this position are men who are fully engrossed with their own occupations, yet, with public spirit, are willing to give time and labor for the general good. It is a work without pecuniary remuneration, and still an important service which can be made of great value to the community. One who has a proper conception of its duties will not be satisfied with simply attending stated meetings of committees or monthly meetings of the board. He can and will, in many ways, lend efficient aid to advance the work of the library and make it what it should be—an institution of the highest educational value in the community.

To my mind, one of the chief causes of friction among trustees is the failure to recognize and define the exact place of the librarian. The librarian should be the official head of the library, and responsible to the board, and his jurisdiction should not be needlessly invaded. Every attempt on the part of employees to secure favors from, or make complaints to trustees, as individuals, should be severely frowned upon. A fit librarian should be able to handle such matters and bring them to the attention of the board in the proper way. Merit and efficiency, not personal favoritism, should be the standards in selecting librarians and employees, if the work is to be successful. A library, of all places, should be the one where a "pull" does not count, and the abuse of patronage is one of the chief causes of the disorganization of libraries. A trustee should be governed in selecting employees by one rule, *viz.*, to get the best person to be had for the money.

When, as sometimes happens, librarians are selected because they are the sole support of widowed mothers, or assistants are chosen because they can make the library the vestibule to a college course, the service invariably suffers. The library is not a charitable institution, and the money annually appropriated for its maintenance is not to be devoted to "first aid to the injured."

A trustee must, therefore, be one who can withstand pressure and importunity, and have a regard for efficient service and not sentiment in selecting assistants. All promotions should be made on the recommendation of the librarian, who, if competent, will know the needs of the library and, from actual contact and experience, the abilities of subordinates much better than individual members of the board. Examinations and a proper civil service system should be the guarantee to every employee that honest, deserving work will receive suitable recognition and a just reward.

As harmony is all-essential to the operation of a successful board, trustees should, at times, agree to disagree. Differences should be settled in the board meetings. It is a great mistake to embroil the library or hamper its work by personal interviews or acrimonious cards in the newspapers. Much strife and many heartburnings and misunderstandings may be saved by frank talks and concessions in the board meetings.

The ideal trustee is therefore a broad man, who realizes that he is administering an institution which is supported by general taxation, in which all the people participate and have rights, and he should not be insistent in exploiting certain views or doctrines, either of politics or religion, or social questions. He is a trustee for all the people, and his aim should be to bring the advantages of his institution to as many as possible. He should be sufficiently familiar with details of library work to know whether it is well done, and should keep abreast of recent developments in the administration of libraries. He stands be-

*Papers read before Michigan Library Association.

tween the institution and the community, and ought constantly to plan for its enlargement and usefulness, and he can by bringing it to the notice of citizens who are not familiar with it do much to enhance its value and popularity.

There are generous people in every town who can be induced to become benefactors of the library if they are properly approached. The trustee should have the library's interests constantly in mind, and by suggestions, not as a mendicant but as a friend, by pointing out the opportunity and privilege which is offered to those who would serve, many gifts can be obtained. The librarian is too much occupied with necessary duties to do this, but here is a fertile field for the trustee whose heart is warm with the enthusiasm he ought to have. By systematic effort a city or town may be so educated as to regard the library as a personal possession, and when it becomes "*our library*"—as it must be to fulfil its mission—it is easy to get help.

The trustee can do much toward inspiring a proper library spirit; he ought to be so familiar with the work that he can intelligently follow it; he should be a constant visitor to the building, and it ought not to be necessary to identify him when he visits the institution. When an employee does a good thing he should not hesitate to utter the word of praise which often means so much, and, on the other hand, poor work and glaring imperfections should not be glossed over. He should stand for fair wages and good work, and should not be niggardly or give them grudgingly. His city or town is entitled to good work, and it is his business to see that it gets it.

Judicious advertising is an important thing in library management, and in this the trustee can play a leading part. He should be alert, and embrace every opportunity that is legitimate to interest people in the books and attract them to the building. Too often the patrons of libraries are confined to school teachers, school children, and the professions. Many times a man who has accumulated a private library, a book lover perhaps, who has been the easy prey of book agents with *de luxe* editions, does not know that he can get fuller, better, and more recent information at the public library than in any private collection of

books bought in a haphazard way. The trustee can be of service in showing him how much better and less expensively he can be served on all questions in the public library, and after the reference librarian has furnished him a list of references on some subject he is investigating he usually realizes this and becomes a regular visitor.

Working men who are not patrons of the library should be made to feel that it is theirs, and a trustee can do no better work than to advocate the purchase of books in their languages, and elementary works on trades and occupations, which will profit and interest them.

It is an interesting question how far the trustee should go in directing the purchase of new books. He should approve all selections, of course, and one of the prime qualifications of the librarian should be a knowledge of books sufficient to make proper recommendations for purchase. While trustees are, as a rule, chosen more for business qualities than for literary attainments, their suggestions may at times be fruitful. No hard and fast rule can be laid down, for much depends on the composition of the board and the ability of the librarian.

One of the most important duties of library trustees consists in defining the general policy of the library. Its attitude toward the general public, as well as its features of specialization, should be determined by the board, and not by the librarian. The trustee, as directly representing the people of his community, is supposed to know its needs and be answerable for all matters of policy. He should, by his regular attendance at all meetings, make it impossible for him to be successfully charged with being a mere figurehead. Owing to recent revelations in financial corporations the word "trustee" has now somewhat recovered its original meaning, and one who, from indolence or lack of time, cannot fulfil a trust which includes such solemn duties as the selection of the counsellors and companions of our children and the development of those agencies which will mould their lives for good or ill, will best serve his town by resigning and making way for some one who will measure up to the position. In such a work indifference and neglect should not be tolerated.

The successful modern library is so extended in its ramifications that its development and influence are only measured by the amounts communities are willing to be taxed for in order to maintain it. A trustee should be indefatigable in creating a public sentiment which will not be satisfied with inadequate appropriations or miserly support. He should be willing, and able, to defend its interests on all occasions, and eager to make personal sac-

rifices to promote its growth and prosperity. His attitude toward the public must at all times be one of fairness, and he will find it of advantage to be patient and a good listener. There are troublesome questions for him to solve, and he cannot avoid misunderstandings or the criticism inseparable from public office, but he has also the joy of serving in a great work which has rewards for all who appreciate its opportunities.

II: FROM THE LIBRARIAN'S POINT OF VIEW

BY HENRY M. UTLEY, *Librarian Detroit (Mich.) Public Library*

It may be thought presumptuous for a librarian to describe the qualities that should be conspicuous in the trustee. He has no voice in the selection of trustees and therefore has no opportunity to enforce his views. Here is where the trustee has an advantage, for he has all to say on the qualification of the librarian. Nevertheless, there are some points for legitimate discussion, without presuming to venture far.

The most important quality in a library trustee is the "saving grace of sense." This appears to be that co-ordination of the faculties of the mind which enables one to see things in their varying relations and to change one's viewpoint to a station outside the range of immediate vision. It is necessary for all of us at times to modify our ideas and conduct under the influence of the best judgment of others. This does not signify weakness or lack of stability, but only a proper recognition of the fact that others have eyes as well as we. The man who is always right while everybody else is wrong is a hard proposition on a library board, as elsewhere. The person who is useful on any committee or board or organization where he must act in co-operation with others, is the one who approaches a discussion with a mind open and free to accept any argument and consider it frankly and fairly upon its merits.

The library trustee should, of course, have some obvious fitness in the way of mental endowments and training. The position calls

for a person of education, refinement and a natural inclination towards literary associations. College training is not necessary, though desirable. There should at least have been opportunities for that degree of mental equipment which is found in the high schools and academies. There should above all have been the disposition to make the most of such opportunities. The taste which shows itself in the fitness for a library trustee is that which keeps its possessor informed in the best literature of the day and the current thought of the world in various lines of mental activity. The man who holds himself in touch with the best minds, however absorbed he may be in his own business or professional affairs, is the man who finds time to read more or less outside the daily newspaper and the current magazine. Books will have attractions for him. He will know something of them and their contents. The conscientious library trustee will wish to keep himself informed of what goes on in the book publishing world, and so be able to judge intelligently of the merits of works which may be presented for his consideration.

The matter of book selection is one of the most serious problems of the library. The trustee will not wish to leave this wholly to the librarian, though naturally he may rely confidently upon the judgment of that official, whose business it is to know and to advise him intelligently. But the trustee should know for himself. He should be so familiar

with the contents of the library that he can say in what departments it needs strengthening, and when a book on a given topic is offered for his consideration whether it is likely to meet a want, or whether, in view of what the library already has, it is worth while. In other words, he should be an earnest student not merely of literature in general, but of the contents of his own library.

But the library has a business side also. Its proper management calls for good judgment in financial affairs and that degree of practical sense and knowledge of things which makes the dollar do its utmost. A trustee may lack the quality of scholarship essential to the selection of books for the shelves and still be very useful at the business end of the library. There are purchases of various sorts to be made, including books and supplies. The library building must be cared for, insured and kept in repair. There are furnishings required from time to time. In short, there are many matters of a promiscuous character which call for the wisdom and experience of a man of affairs. And when it comes to lobbying with the powers which hold the purse strings, for liberal appropriations to keep the institution up to the high water mark of efficiency and popular usefulness, one such may be of more real practical service than a half score of dilettante scholars unskilled in the art of influencing their fellow-men.

The library trustee should not be so busy with his own private affairs that he can give little or no time or thought to those of the library. This is probably one of the most common grounds of complaint against trustees. A man may have an honest regard for the library and feel that it is a kind of work which he would enjoy. He is flattered at the suggestion of his name for such a position and believes that he can give it the needed attention. He does not realize that to discharge his duties fully requires a really considerable portion of his time. Unless he does actually give the necessary amount of time he will not become deeply interested in the work of the library. Without this active interest he is sure to shirk his duties. No one has a right to assume a public position unless he is willing to make all necessary sacrifices

to perform his work in good faith. Many perhaps do not understand at the outset the amount of sacrifice involved. A little trial will show whether he is able to give it the needed attention. When he sees that he is not keeping himself in touch with his colleagues in the current of progress, when his interest begins to wane, if indeed it ever had much strength; when he feels that he cannot afford to neglect his own business for the sake of the public, then he should frankly say so and step aside to make place for some one else. Unfortunately, this seems to be a hard thing to do. The incumbent is disposed to hang on, perhaps in the hope or expectation that the situation may change, and that by and by he may be able to do better. There appears to be great disinclination to let go of any office, however perfunctorily its duties may be discharged.

Only a little worse than the trustee who is so busy that he can give no time is the one who has nothing to do and gives his whole time to the library. If such an one is not gifted with extraordinary good sense he is likely to become a bore to the librarian and all the busy library workers. If he makes himself at home about the library he is in danger of getting under foot, of hindering the assistants in their work, of taking up their time, of interfering in ways which they cannot comfortably resent, and of making a nuisance of himself generally. He is likely to be even a more serious trial to the librarian. The latter must show him proper respect, and this is not always easy, when valuable time is frittered away, and too many suggestions without merit are freely volunteered. The librarian will welcome suggestions from his trustees. But the advice which is given by the idle trustee who takes note of all the petty details is quite as likely to be good for nothing as otherwise. At least it is in the field where the librarian is or ought to be supreme.

And this suggests the meddlesome trustee. There are some people so constituted mentally that they consider themselves endowed with superior wisdom. When such a person is clothed with official authority he is likely to assume that his directions are to be obeyed. Such a dictatorial attitude is fatal to the harmonious working of the library. The other trustees are justified in combining against one

of their number so afflicted and squelching him without mercy. It not infrequently happens that the trustee given over to this kind of conceit shows a disposition to usurp the powers and duties of his fellow trustees, in which case there will surely be lack of harmony until he has been taught a useful lesson in a way which he will not forget.

There are persons who sometimes get on library boards with an idea that an important perquisite of the position is the patronage thereof. There is a sort of political flavor in this idea. Fortunately, the day when political debts were paid with the gift of public office is nearly gone. Civil service has come into vogue, and it is now thought to be rather bad form to sneer at it. Any person who would aspire to an appointment as a library trustee might naturally be presumed to be above any such low view of it. But there is a world of selfishness in human nature still. Library boards generally prescribe civil service regulations nowadays, and so the tenure of positions in the library is such that library workers understand that they are holding their places upon merit and not upon "pull," and "influence" becomes of little importance.

In the selection of library trustees there have sometimes been considerations, not reflecting necessarily upon the character of candidates, but nevertheless unworthy. It is really of no consequence whether a trustee is a Catholic or a Lutheran, a German or an Irishman, a Roosevelt Republican or a Bryan Democrat. Too often these distinctions are insisted upon and some special class of citizens which considers itself strong in the community insists upon being recognized. This is usually controlled by unwritten law, but I have in mind a case in which the charter of a public library of a town of considerable size requires that clergymen representing certain leading religious denominations must be chosen. This is a bad case of clericalism. It was doubtless intended to preserve the peace and to keep out of the library literature not strictly orthodox. While a clergyman is usually an educated man and superior intellectually to the average of his flock, it is exceedingly bad policy to give a board of trustees any denominational caste. It is also bad to insist upon a representative of any partic-

ular nationality or class of citizens. Regard should be had first and foremost to the fitness of the candidate, and public attention should not be diverted from this by inconsequential considerations of any sort.

There is such a thing as strangling a library with red tape. Obviously some system of rules and regulations is necessary. But there is danger of going too far in this direction. A public library should be as free and convenient to the people as possible. It should be easy, not difficult, to make use of its books. The fewer the restraints the better. The library is maintained and the books are bought with the money provided from the public purse. The establishment belongs to the people, and they have rights therein which no board of trustees has authority in justice to curtail. The restrictions should be as few as is consistent with the proper conservation of the property and the enforcement of equal and exact justice to all. Certainly the spirit of any regulations should be a cordial invitation to the people to make the freest use of their own and a pledge of fairness to all and special favors to none. I mention this point because I have sometimes noted among trustees a disposition to carry technicalities to the extreme and a tendency to legislate in the direction of restrictions rather than of opening wide the bars. There is in some men a personal idiosyncrasy of narrowness and limitation. These men are technical upon small points and would run everything in narrow grooves. It is an unfortunate characteristic for any library trustee, for it tends to hamper the usefulness of the library and to discredit it in the minds of many who would be otherwise inclined to use it.

The trustees should allow the librarian much freedom. Let him give his heart and mind to the promotion of the best interests of the library and of the public in relation thereto. Leave him free to work out his ideas along lines which seem to him to promise good results. Do not chill his enthusiasm by throwing cold water on the plans to which he has given much thought and which appear to him feasible. Above all, do not curtail his initiative by laying down such rules and regulations as will make it absolutely impossible for him to act without the formal approval of

the entire board. The trustees should have such confidence in the wisdom and honesty of their librarian and in his unselfishness and earnestness of purpose that they are willing to trust him to do the right thing in the right way. Hold him responsible for results. Support him cordially in his efforts to produce results. There should be the fullest and frankest confidence and co-operation between trustees and librarian. They should not work at cross purposes in the slightest degree. The librarian should take the trustees into his confidence and they in turn should rely upon, trust and uphold him. This is not to say that they are bound to follow his lead blindly. But he is the leader; to him is given the responsibility of directing. All suggestions of trustees he will consider with favorable predisposition. Naturally if the suggestion is a good one, he will wish to take advantage of it. A little frank discussion will throw light upon phases of the suggestion which will aid both librarian and trustee in reaching a correct conclusion. Frankness, good will and unbiassed judgment go a long way in accomplishing good results. Equally, suggestions by the librarian are to be considered by trustees upon their merits, with a predisposition to regard them favorably. It is to be presumed that he has not made them without careful thought and a knowledge of their bearings, based upon experience and a superior opportunity for correct judgment.

A library trustee should not serve too long. Generally the term of office is three or five years. If a man has exceptionally good qualifications and has proved himself a useful member, a second term will not be out of order. But beyond that it is not wise to go. There is danger that he will get into a rut and that from long service and familiarity he

will become indifferent. The best there is in him can be brought out in the early years of his service. He is likely to come on the board with some ideas and some enthusiasm and when he has exhausted these he is likely to have exhausted his usefulness.

In the organization of the trustees simplicity should be the rule. It is not wise to multiply offices or committees beyond the actual necessities of the case. There must be a secretary to keep the record of the business transacted. In some cases the librarian is made secretary. There can be no objection to this and in some respects it is a convenience. The librarian is not a member of the board, but this need not prevent the board from making him their secretary, if they see fit to do so. The minutes are kept in the office of the board and the making of them is a merely clerical duty. The librarian should attend the meetings of the board to keep himself informed of their plans and purposes and to furnish information which any member may require. If the trustees wish to discuss the librarian himself, a gentle hint only is necessary to secure his absence. It is not wise to have too many committees. With a board of trustees of the usual number three committees will give everybody a chance. This naturally divides the work into book selection, or literary side; the appointment and practical handling of employees, or the administrative side; and the finances, or the business side. The specific distribution of duties is easily adjusted.

I have heard it said of the library trustee that he should be, not like the hare which outruns all, nor yet like the tortoise which lags behind, but like the bell wether of the flock which leads the lambs into nourishing and succulent pasture.

BROWN UNIVERSITY LIBRARY

IN THE HARRIS ALCOVE

ACROSS the dreamy college green it looks,
Beneath old dreamy, silence-haunted trees.
Here would I anchor by this isle of books
And gather apples of Hesperides!

J. RUSSELL HAYES.

BUILDING UP A PUBLIC DOCUMENT COLLECTION

BY ADELAIDE R. HASSE, *Chief Document Department, New York Public Library*

THE document department of the New York Public Library is now just eight and one-half years old. It is still very much in the process of being built up. Eleven years ago no library had, to my knowledge, specialized in public documents. The simple fact that many libraries had been for a long time more or less willing recipients of federal documents ought hardly to establish on their part any claim to specialization. At the time mentioned the Los Angeles Public Library had segregated its collection of public documents, which was composed almost entirely of American federal and California state documents, and the librarian had permitted me to give a large part of my time to the arrangement and shelf-listing of this collection. It was at this time that the first "List of publications" of the Department of Agriculture, afterwards published as "Library bulletin 9," was begun. Here, too, was conceived the plan which has developed into classification and notation of federal documents now in use in the office of the Superintendent of Documents. The next step in the recognition of a library of public documents was that provision in the Richardson bill of 1895, which established the library of the Superintendent of Documents. The first effort to carry that provision into effect was made in May, 1895. There was then created out of chaos the library of American federal documents. At the close of the last fiscal year this library amounted to 75,000 pieces. In June, 1897, the New York Public Library established its Department of Public Documents, and in October, 1900, the Library of Congress appointed its first chief of the Document Department.

There is no means of knowing the number of documents in the New York Public Library at the time of the establishment of its Document Department. The aggregate additions from June 1, 1897, to Dec. 31, 1905, have been 185,000 pieces. Ten thousand volumes would probably have covered the collection as it existed before that time. On June 1,

1897, the collection comprised a file of federal congressional documents, then numbering about 3000 volumes, a fair file of American state documents, a broken file of French and British federal documents, and of American federal and state departmental reports, a comparatively very good file of colonial documents, a file of collections of treaties, and a very fragmentary file of statutes. In addition there were the great British, French, German, Spanish and Portuguese series of calendars and reprints of state papers. This collection differed materially from that of the Los Angeles Public Library and that of the Superintendent of Documents, first in that the latter were both, so to speak, local collections, and secondly in that they were collections in the sense of having been prepared with intent to specialize. The collection of the New York Public Library, on the other hand, might have been more properly described as an accumulation of public documents, in that there had hitherto been no intent towards specialization. Even then, however, it was far more general in scope, and far more valuable, in the sense of being more representative, than either of the two mentioned document libraries.

The record of the entire collection on June 1, 1897, was preserved in three places, namely, in the two printed catalogs, one supplementing the other, and on cards in the catalog as it then existed. There were no shelf lists. The obvious thing to be done first was to separate the document cards from the general catalog. This still left the most valuable part of the collection unrepresented in the departmental catalog. Next a set of the printed catalogs was cut up, the individual entries were mounted on regulation cards, and the document entries being turned over to the document department were amalgamated with the written cards. The arrangement of the catalog, which was confined to author entries, had been the now generally discarded one of graduated entries under departments. This was reversed into the one alphabet arrangement

regardless of rank of office. The rearrangement was effected in the days before the inverted *vs.* non-inverted bubble had begun to agitate the fraternity, and was made according to the inverted entry plan. The plan has proved itself to be simple, sane and natural for permanent bodies, in the large majority of cases, but awkward and unsatisfactory for temporary or special bodies in the majority of cases. With the collection growing at a rate which made it impossible for the staff assigned to this work to keep pace with the accessions, it seemed far more expedient to secure some sort of orderly record than to add to our harassment by quibbling over moot questions. Therefore the general rule to invert was followed in all cases, while we were perfectly aware of its defects in some cases.

The official catalog, which on June 30, 1898, numbered 30,000 cards, now numbers 431,520 cards. The arrangement had been the traditional dictionary scheme. The cards, with the exception of inversions, and a few minor variations, were of the traditional form. The record of serials, including journals, legislative documents and statutes, was confined to a single card. In every respect we were observing the proprieties. As the catalog grew both in bulk and in scope, I came to realize that the proprieties had not been adequately proportioned. The first extension of their provision which I made was in the case of serials. Public document serials are divided

into two classes, those dependent on the fiscal year and those dependent on the legislative period. A tabulated card was devised for each of these series. It is no uncommon thing to find in the official catalog five, six or even ten cards for a single serial. These tabulated cards serve merely to provide a space for every addition to the series, spaces for additions not in the library being left blank. When the volumes of a series have any bibliographical value a card is made for each volume, and it may then happen that there are 20, 30, or more cards for a series.

Soon after this we began to feel the need of supplementing our broken files of state serials with the record of these files as contained in the collected documents. A tabulated card was devised to meet this want. This card is meant to show in what volume of the collected documents any volume of a series may be found. The card is used only in the official catalog, and is attached to the card bearing the record of the separate serials. The defect here was that the double record could not very well be duplicated in the public catalog. Very recently I designed a card which will combine the record of separate serials with the record of the same serial in the collected documents, and which will give the shelf mark of each report, whether the library has it only in one or in both of these forms.

The several cards mentioned are as follows:

Card used for all legislative journals and documents of all governments:

Maine.

House

Journal.		Augusta, 1855.		8°	
SESS.	DATE	SESS.	DATE	SESS.	DATE
34	1855 (1st prtd.)				
35	lack				
36	1857				
37	lack				
38	not published				
39	1860				

[In some cases it is necessary to modify this card to provide for a volume number, or parliamentary number; this is effected by adding an additional column, which may be readily done.]

Combination card, tabulated to show in what volume of collected documents any volume of a series may be found:

Maine. Railroad Commissioners

NO.	YEAR	LOCATION		NO.	YEAR	LOCATION		NO.	YEAR	LOCATION	
		Sep. Issue	Coll. Docs.			Sep. Issue	Coll. Docs.			Sep. Issue	Coll. Docs.
				27	188 $\frac{1}{2}$		Me. 144				
				28	188 $\frac{1}{2}$	lack	" 148				
				29	188 $\frac{3}{4}$		" 151				
				30	188 $\frac{1}{2}$		" 155				

The latter card is intended for the public as well as for the official catalog. Though designed in the first instance for American state documents, it can be used for city documents in the separate or the collected form, and for foreign documents as well as for American federal documents.

Contrary to other departmental catalogs in the library the official catalog of documents contains both subject and author entries. The subject catalog contains no scientific or historical matter. It duplicates the public catalog only where public economics is concerned, and was intended to show primarily the serials which governments issue illustrating their own activity, rather than to show what the library contained on a given subject. This latter purpose was very well fulfilled by the public catalog. The headings selected corresponded at first to those of the public catalog. While these headings serve perfectly for a general dictionary catalog, it was early borne in upon me that they did not answer my purpose. My material demanded a record which should disclose for instance the degree of uniformity and of minuteness with which various governments publish their revenue or expenditure accounts, their estimates or appropriations, their assessments, valuations and to what point of development the various systems of maintenance or regulation may have arrived in the several states. I read, I listened to learned discussions, I reflected and I experimented with my material. I think I have

a scheme now which in the main answers my purpose. It is applied, in part, in the analysis of state documents, the preparation of which was announced at the Portland conference.

Not only were the subject headings unsatisfactory. The simple alphabetical arrangement of the author catalog proved itself to be unsuited to my purpose. As representing my subject it was incoherent, vacant and meaningless. It began nowhere and led to nothing. What I needed was an arrangement which would assemble and co-ordinate and not separate divisions of government. I proceeded to construct such an arrangement. It is just being carried into effect. The independent governments are arranged alphabetically. Each is followed first by the local political jurisdictions, then by the municipalities, then by the extraterritorial jurisdictions. Another departure is that the arrangement under each country is made to conform to the political changes of that country. Thus in France the documents published by the Assemblée Nationale and the ministries of the third republic are preceded by those of the Corps Legislatif and the ministries of the second empire, these again by those of the Assemblée Nationale and the ministries of the second republic, and so on until the national constitutional assembly of 1789 is reached. From here on backwards in point of date the arrangement is by regnal periods. In place of the parliament and the ministries we have

here the crown and the council of state. The arbitrary division of statutes is retained under each regnal period, and is classified according to the various promulgations in vogue under different reigns, as decrees, ordinances, edicts, in addition to collected statutes and codes.

The adopted arrangement of conforming to political changes of government affects extraterritorial jurisdictions as well as the central government. The merging of governments is twofold, from independence to dependence and *vice versa*. An example of the former is Hawaii. Titles of the kingdom of Hawaii are filed under Hawaii in the general alphabetical arrangement, those of the territory of Hawaii are filed among those of the American states. An example of the other merging, from dependence to independence, is Mexico. In this class of governmental succession my rule is to preserve the continuity under the final independent government. Thus the documents of Mexico are divided into those of Mexico, a Spanish province, Mexico, the empire, and Mexico, the republic.

You will ask what disposition I have made of international material under this country arrangement. I am glad of the question. For six or seven years I blindly followed custom as to entry for treaties and international tribunals. Then I decided that the rule to enter single treaties under all contracting parties as author, and to duplicate this process under subject, was not only cumbersome but was wasteful as well. As soon as I could I abandoned the rule in my own catalog. In place of it I adopted the general heading international law. I am aware that this is comparatively a subject heading. But the very nature of the material, being international, seemed to me to reason against the assignment of any one or more nations as author. Here again is a very large body of literature which demands synthetic, coherent treatment instead of the analytic and incoherent treatment which the current rules provide. Under the heading of international law I chose my own classification. Up to date it is confined to treaties, collected, regional sub-arrangement; treaties, single, chronological sub-arrangement; and arbitration tribunals, chronological sub-arrangement by date of treaty authorizing tribunal.

Parallel with the growth of the catalog, and its natural precursor, was the growth of the collection. As the increase in the collection was sudden and was not likely to be spontaneous, it may be suspected that it was due to an artificial impetus. As soon as the catalog was in fair working order, a careful canvass of it was made, and a general alarm, so to speak, was sent out to state and federal bodies whose files had been allowed to lapse. Next a canvass of the catalog was made for the records of those bodies representing the subjects which it was intended to build up, *viz.*, public economics, including statistics and taxation, and of those interests over which government exercises regulative jurisdiction, as railroads, insurance, banking, trade and commerce, etc. Various sources which might contribute titles as yet not in the library on these subjects were examined, and a systematic effort was made to secure such titles, with, however, varying success. No record of any title, which, for one reason or another, is not in the library, is ever destroyed. It is retained in its proper place in the catalog, easily identifiable, and serves two purposes, *viz.*, that of keeping me informed of weak places in the collection and of acting as a sort of reserve order list. These titles are gathered from a variety of sources, principally, however, from library and dealers' catalogs. All catalogs of old book dealers are read item by item, items referring to public documents being copied, with price and name and catalog number of dealer offering. This information is filed in the catalog exactly where the entry for the item would be filed, if the item were in the library. Regional bibliographies are examined, and any contribution they may contain to the subject of public documents is noted in the catalog.

After having put the machinery in motion which, it was intended, should renew lapsed files of state and federal documents and inaugurate new files, city documents were taken up. A canvass was made of all American cities having upwards of 25,000 population, and a list of "wants," including the collected documents, charters, ordinances and financial documents, was sent to each. In European countries the cities of each country approximating the rank in the country addressed, which cities of upwards of 25,000 do in the United

States, were appealed to for corresponding material. We soon learned that unless appeals were periodically renewed files would regularly lapse. To facilitate this renewal we opened what we term a date record, a record showing the date on which each recurring report of a series falls due, somewhat on the plan of a borrowers' record in a public library.

This is the machinery which has resulted in the collection as it exists to-day, which is far from approaching completion, and in the present catalog which, likewise, I am very sensible, is far from approaching perfection.

AMERICAN LIBRARY ASSOCIATION HEADQUARTERS

IN accordance with the action taken at the Narragansett Pier Conference establishing the long-discussed A. L. A. headquarters, offices of the Association were opened at 34 Newbury street, Boston, in August. The illustrations shown elsewhere do not represent all of the space that has been secured. They do, however, give a very good idea of the working offices of both the Publishing Board and the Association. The room on the left of the front door has been set aside for the A. L. A. offices. Here will be carried on what may be called the business activities incidental to carrying out the purposes for which the Association determined to open central offices. In the rear on this same floor is a large room, intended to be used as an exhibition room for a museum of library appliances, forms, systems, etc. Immediately above this room is an apartment of equal size which will be used as a reception and committee room. Here will be found the architectural plans and photographs which it is proposed to collect. Other uses will be made of this room as expediency suggests. A room directly over the front door and occupying the entire width of the house is the working office of the Publishing Board.

These new A. L. A. offices are in the immediate vicinity of the Public Library, the Academy of Arts and Sciences, the Natural History Society, the Art Museum and the Institute of Technology. They are removed by but a single block from a line of electric cars which will take one to any part of Boston or its suburbs. They could not be more centrally located, having the convenience of being near to transportation with none of its accompanying nuisances.

A short statement of what it is hoped to accomplish through the establishment of central administrative offices may not be out of place at this time.

In its report made to the Association at the St. Louis conference in 1904, the committee on permanent headquarters suggested the following activities which might be carried on, adding, however, the words, "to undertake all the activities suggested would require a yearly income of at least \$50,000."

1. "The concentration of the administrative work of the Association, including that of the Publishing Board."

It is intended that the entire administrative work of the Association shall be done in these new offices, including all the bookkeeping heretofore carried on by the treasurer, the Publishing Board, the trustees of the Endowment Fund and the treasurer of the Publishing Board. Acting in connection with the several committees on publicity, library architecture and travel, it is intended that the administrative officer in charge of these offices shall do the work assigned to these several committees besides all work, excepting the program alone, incident to the preparation for each yearly conference. Further than the above it will be the province of the administrative officer to take such steps as may be necessary to increase interest and membership in the A. L. A. and to secure independent funds for carrying on the work. It is proposed to ask the hearty co-operation of many librarians in carrying forward the above mentioned items of publicity, membership and library architecture.

2. "The collection of exhibits of library plans, appliances, systems, etc. These should be deposited in three or four centers of population, provided suitable custody can be secured, and carefully kept up to date by the Association."

To accomplish this result in the shortest time possible will require earnest help on the part of all librarians, who should deem it a pleasure as well as a duty to forward to the offices at as early a date as possible everything bearing on the administrative side of the library under his charge. Short annotations of any feature which may be peculiar to a library and notes calling attention to the conditions surrounding the same would be of the greatest value. There should always be included in each collection a copy of the latest annual report, which should be replaced at once when it becomes out of date. This latter point can be covered if those who read these lines will at once place the American Library Association, 34 Newbury street, Boston, on their mailing list.

Regarding the architectural plans, it may be said that the advisory committee, having that matter in hand, have promptly started on a campaign to build up a valuable collection.

Already plans have been promised which augur well for the success of the enterprise. Architects who have been seen are hearty in their endorsements and promise valuable assistance. The committee will issue a circular which, reinforced by personal effort, may well be counted on to bring about the desired result. It may be well to impress upon the mind of every librarian that he should always consider that a request for information from the administrative offices should receive immediate attention, as the offices will make no demands on any librarian which are not justified by the development of library progress. This suggestion has special reference to the points covered by article 2. It is a pleasure to report that the exhibit of library forms and systems has had promised a most valuable collection as a nucleus, Miss Nina E. Browne having expressed the intention of contributing all the papers, pamphlets, etc., which, in her usual careful and methodical way, she has been collecting for many years, confident that the time would come when they would be found of service. It is with pleasure that a valuable addition to this exhibit can be recorded, Mr. R. R. Bowker having generously offered to deposit on loan a complete set of both *LIBRARY JOURNAL* and the "American catalogue."

3. This article refers to the collection of a professional library. As its accomplishment would entail the expenditure of a considerable sum of money, the executive board have deemed it wise to postpone action.
4. "The extension of the present work of the Publishing Board in the preparation of library aids."

The administrative offices should give the heartiest assistance to the Publishing Board in carrying on and extending the admirable and valuable work of the Board. This help will come largely as a result of the publicity work which it is intended to carry on. As a result of such co-operation it is confidently hoped that sales of publications will increase largely.

5. "The furnishing of expert advice on library matters, such as plans, organizations, regulations, and selection of books, including the formation of a repertory of the sources of information and counsel on these subjects."

This article is covered to a large extent by article 2, which provides for a collection of library appliances, forms and systems. When this collection is made and properly classified and indexed a long step ahead will have been made. It is further proposed, however, when funds will permit, to have connected with the administrative offices one or more assistants whose experience in library work will qualify

them to give the advice and assistance which this article has particular reference to.

6. "The establishment of an office which shall register and give information in regard to both candidates for library positions and vacancies."

This article covers a very important and necessary field of operation. If properly conducted, it will prove to be of invaluable assistance to all of those who make use of its opportunities. This work should be conducted on an absolutely confidential basis, the records being open to few. During the past year not a few applications have reached the office from those who desired to better existing conditions, and it is possible to make this article one of the most active and valuable activities. The executive board deems it wiser to postpone action on this article for the present.

- 7 and 8. These articles have to do with the exchange of duplicates between libraries and the facilitation, through clerical assistance, of inter-library loans. The accomplishment of these objects requires but little more than systematized clerical work and correspondence. It would mean, however, the employment of additional assistants. Such expense, for the moment at least, is not warranted by income in sight. Something, however, might be done in preparation of this activity against the time when funds will be available.

The above statement covers the eight activities to which the committee on permanent headquarters specifically referred. The report of that committee is given in full in the volume of St. Louis Conference Proceedings (p. 249). As will be seen, most of the suggestions of that committee can receive considerable impetus through a judicious and systematic use of such clerical force as may be at the service of the administrative offices. Work has been started with two assistants only, one connected directly with the Publishing Board, the other finding her place in the A. L. A. offices.

A year of earnest work should accomplish very much along the lines of each of the first six suggestions enumerated above. Much depends, however, upon the assistance and sympathy of those for whose benefit this important step has been taken by the Association. Let every library worker in the country pledge his active loyalty to the A. L. A. Let each one feel it to be his particular duty to "lend a hand" when asked to help in the common cause. United and earnest effort will produce results which will redound to the benefit of every library and library worker in the country, an end surely worth striving for.

E. C. HOVEY.

BIBLIOGRAPHICAL SOCIETY OF AMERICA

PROCEEDINGS OF MEETING HELD
JULY 2, 1906

A MEETING of the Bibliographical Society of America was held in connection with the Narragansett Pier Conference of the American Library Association in the music room of the Atwood House, July 2, 1906, at 10 a.m. Over 50 persons were present. President William C. Lane on taking the chair made a brief address of welcome and stated that no formal program had been prepared, but he hoped that in the papers on the methods and practical details of bibliographical work to be presented the members would find matter of interest and profit.

Charles Alex. Nelson, secretary, reported that after much vexatious delay caused by the printers' strike in New York City the "Proceedings and papers, vol. 1, part 1, 1904-5" had been published, and that copies had been mailed to all members of record whose dues for 1905 had been reported paid by the treasurer. He also reported to the society the doings of the Council as recorded in the proceedings of its meetings held on June 30.

In the unavoidable absence of C. B. Roden, treasurer, his report was read by the secretary, showing a balance on hand June 26, 1906, of \$793.46. The secretary stated that bills in his hands for payment would reduce this balance to about \$450.

Mr. John Thomson presented a report from the committee on list of incunabula, stating that some 5000 different titles had been collected, that the list would make a volume of 460 pages or more, at a probable cost of \$1800; and that it was proposed to issue it in two parts, as the annual publication for members for the years 1906 and 1907. That it was also proposed to print an edition of 500 copies putting a limited number on sale to cover the cost of publication. Various questions as to form of entry, size of page, etc., were asked by members and responded to in detail. Messrs. Lane, Kates and Nelson were appointed a committee to secure a guarantee fund for the publication of this "List."

On motion of Dr. E. C. Richardson, Messrs. Thomson, Little and Biscoe were appointed a committee to nominate a list of officers for the ensuing year.

Mr. W. D. Johnston, of Washington, read a paper on "The bibliographical work of Henry Carrington Bolton."

Dr. E. C. Richardson gave some personal reminiscences of Dr. Bolton illustrative of his enthusiastic zeal and his great versatility in lines of investigation and research. The secretary followed with some remarks on the genial personality and the deep interest and warmth of friendship shown by Dr. Bolton toward those drawn into close relations with him.

The committee on nominations presented their report and the following officers were elected for the year 1906-7: president, W. C. Lane; 1st vice-president, Reuben G. Thwaites; 2d vice-president, Ernest C. Richardson; secretary, W. Dawson Johnston; treasurer, Carl B. Roden; librarian, Wilberforce Eames; councillor, Charles Alex. Nelson.

Mr. Clement W. Andrews read a paper on "Union lists of periodicals." The secretary stated that a committee of the New York Library Club had been considering the publication of a new list for Greater New York, but had not yet secured financial support to warrant its compilation. Messrs. Richardson and Andrews made additional remarks on the value of and experience in editing such lists, and stated the difficulty of securing uniformity in the preparation of copy by different compilers.

Mr. Johnston said it had taken a year to get matter in shape in editing the Washington list, and suggested that definite instructions should be prepared or a good model be used.

In response to a query from Mr. B. A. Finney as to how periodicals should be marked for shelving Mr. Andrews replied: "We use a comparatively broad classification and alphabetical arrangement under that, using the Decimal classification. I am not in favor of the segregation of periodicals from the books on a subject."

Mr. Merrill stated that at the Newberry Library a tabulated decimal number from 1 to 99 was used under the alphabetical arrangement.

The president said: "At Harvard we do not mix the periodicals with the books but put them in groups; we find this plan more useful to our student workers."

Mr. Hanson presented a communication from Mr. Felix Neumann regarding the more exact cataloging of early Americana. After some discussion, on motion of Mr. Johnston, Mr. Hanson's communication was referred to a committee consisting of Messrs. Hanson, Legler, Bain, Winship and G. W. Cole, to be reported on to the Council and to the next meeting of the society.

The secretary read a short paper from Mr. Victor H. Paltsits calling attention to the very common misuse of the dignified term "Bibliography" in applying it to any list or catalog of books on a given subject, and claiming that it should be given only to exact work of a high order of merit.

The secretary also read a paper by Mr. Robert Fletcher, of the Surgeon-General's Office, giving a brief sketch of the origin and development of its library, and of the method pursued in carding and indexing books and periodicals for its great "Index-catalogue."

A privately printed paper by Mr. Philip R. Uhler, provost of the Peabody Institute of Baltimore, on the "Origin and development of the catalogue" of the Library of the Institute, was read by title.

The president exhibited some advance sheets of the "A. L. A. portrait index" and explained the method adopted for the arrangement of the entries. Mr. Solberg's new form for publication of the *Catalogue of Title Entries* was also shown, and pronounced a valuable piece of systematic bibliography.

On motion of Dr. E. C. Richardson, it was *Voted*, That a meeting of the Society be held at Providence, R. I., in December, in connection with the meeting of the American Historical Association.

The president asked for suggestions as to the next piece of work to be undertaken for publication by the society.

Dr. Richardson suggested a co-operative list of the periodicals of at least six great centers, also a bibliography of codices. Mr. W. J. James, of Wesleyan University, suggested a bibliography of early American literary periodicals. Mr. Thwaites stated that Prof. W. B. Cairns, of the University of Wisconsin, is preparing such a list, and the secretary announced that two theses on these periodicals had been written at Columbia University within the past three or four years.

The president made the suggestion that the society might connect itself with prominent and valuable bibliographical projects, issuing them with its endorsement.

The secretary explained at some length the personal interest taken by the printer in bringing out the first publication of the society in its neat and attractive form and presented the following resolution:

"*Resolved*, That the Society hereby tender to Mr. Ingalls Kimball, proprietor of the Cheltenham Press, New York City, its appreciation of the work done on Volume 1, Part 1, of its 'Proceedings and papers' in the face of difficulties arising from the late printers' strike involving delay and pecuniary loss."

The resolution was seconded with remarks of approval by Messrs. Andrews and Thwaites and was adopted unanimously.

Mr. Thwaites stated that an index to the historical material in mss. in libraries in Wisconsin had been prepared and would be printed.

Mr. Bain gave an account of the character of the work undertaken by the Champlain Society of Canada, which proposed to publish this year the first volume of the English translation of Lescarbot and a collection of documents connected with seigniorial tenure in the Province of Quebec. He had himself been invited to collate and edit a bibliography of Canada based on the mss. in the large libraries in Quebec, Montreal, Ottawa and Toronto. It was proposed to begin with A.D. 1700 and bring the record down to 1900. He referred to the new building at Ottawa for the proper housing of the Canadian archives, on which the government had expended \$100,000, which would be opened in August. He said that a card catalog has been made of all documents, and that Mr. Doughty was making important

changes in the character and method of his annual reports on the archives, in which reprints would hereafter be issued. He also spoke of a bibliography of F. Mesplets, the first printer in Montreal, which is being prepared by Mr. McLachlan of the Antiquarian Society of that city.

The secretary announced the recent publication of the "Minutes of the Common Council of the City of New York" down to 1776, in eight large octavo volumes, with a complete index occupying 326 p. of the last volume.

Adjourned at 1.15 p.m.

MEETINGS OF THE COUNCIL

A meeting of the Council of the Bibliographical Society of America was held in the parlor of the Atwood House at Narragansett Pier, June 30, 1906, at 10.15 a.m. There were present Messrs. Lane, Thwaites, Legler, Thomson, Bain and Nelson. President Lane announced the papers expected for the annual meeting on July 2. The treasurer's report was read for information. Attention was called to the fact that the life-membership fees were not reported by the treasurer as an independent fund, as required by the constitution.

The secretary brought up the question of furnishing reprints to authors of papers published by the society in its volume of "Proceedings and papers." On motion of Mr. Legler it was *Voted*, That it shall be the policy of the society to furnish to contributors reprints of their papers at the actual cost of printing and paper.

In the matter of Mr. Josephson's paper and resolution regarding a Bibliographical Institute referred to the Council at the meeting of the society held Dec. 28, 1905, the secretary reported that advance proofs of the paper were sent to all the members of the Council early in the year. After careful consideration the Council voted to report to the society that the members are unanimously of the opinion that the scheme of establishing an endowed Bibliographical Institute seems to them an impractical one, and that they see no likelihood or possibility of securing from any quarter any grant for preparatory and experimental work preliminary to establishing such an institute.

The president reported that he had had some correspondence with Dr. von Klenze regarding the bibliography of Chaucer offered by Miss Eleanor P. Hammond to the society for publication. He stated as the result that he considered the matter now in the hands of the Chicago Chapter.

At 12.30 the Council adjourned till 9 p.m. to consider at that time the report of the committee on "List of incunabula."

The Council re-assembled at 9.15 p.m. with Mr. C. S. Kates of the incunabula committee present in conference by invitation. Mr. John Thomson presented his letter to Mr. Lane regarding the "List of incunabula," and also

read a report from Miss Brinkman, his assistant in charge of the work upon the list, giving a full account of what had been done in its compilation. He also submitted a specimen (proof) page of the check list which was fully discussed; important changes were suggested which were adopted by the committee. Mr. Thomson stated that the printers' estimate of the cost of 500 copies of a volume of approximately 460 pages, covering 5000 titles, was \$1400, but with corrections and additions he was of the opinion that the probable cost would be nearer \$1800. A general discussion ensued as to whether the check list should be issued as a special publication at an extra cost to members, or in two parts as the regular publication for the years 1906 and 1907.

The consensus of opinion favored the latter plan, and the printing of 500 copies and putting a limited number on sale toward defraying the cost of publication. With this in view, on motion of Mr. Thwaites, seconded by Mr. Bain, it was *Voted*, That a special committee of three be appointed by the president, of which he shall be the chairman, to procure a guarantee fund of \$1500 or more for the publication of the "Check list of incunubula," with power to act.

Adjourned at 11.40 p.m.

A special meeting of the Council was held at 5.30 p.m., July 2, 1906. *Voted*, To hold a meeting of the society at Providence, with the American Historical Association in December.

A report from Mr. Thwaites on the cost of reprinting bibliographical lists from the *LIBRARY JOURNAL* as separates gave the prices which would be charged by that office: for a 24 page quarterly issue, 12 pages matter and 12 pages blank, the cost exclusive of paper would be \$14—if not rearranged in one alphabet, or \$20 if cumulated into one alphabet; paper would cost \$1 or \$2 more, and new material \$2-\$3 per page; making a total of about \$100 per year. Mr. Thwaites was of the opinion that the society could print an annual list at a cheaper cost.

Mr. T. L. Cole appeared before the Council in advocacy of greater exactness in giving pagination in bibliographical work, explaining his own method in compiling legal bibliographies.

On motion of Mr. Legler the question of the incorporation of the society was referred to the president and secretary, with power to act, if in their opinion such incorporation seemed desirable.

The president named the following committees: *Membership committee*, W. C. Lane, W. D. Johnston; *Publication committee*, W. Eames, V. H. Paltsits, C. A. Nelson; *Auditing committee*, W. S. Merrill, A. G. S. Josephson; *Program committee*, W. C. Lane, E. C. Richardson, W. D. Johnston; *Committee on Americana*, J. C. M. Hanson, H. E. Legler, J. Bain, G. P. Winship, G. W. Cole; *Committee on financing publication of "List of incunubula,"* W. C. Lane, C. S. Kates, C. A. Nelson.

Mr. W. D. Johnston was requested to survey the field and report on the possibility of a record of current bibliography being prepared.

Voted, That an editorial copy of "Proceedings and papers," v. 1, pt. 1, be sent to the *Zentralblatt für Bibliothekswesen*.

Adjourned at 7.15 p.m.

C: ALEX. NELSON, *Secretary*.

CATALOGING OF EARLY PRINTING IN THE UNITED STATES PRIOR TO 1800

In the latter part of this spring I sent to my superior, the Librarian of Congress, the following memorandum, which with Dr. Putnam's kind permission is given here in full:

"I beg to submit to you the following suggestions in regard to the cataloging of books, pamphlets, broadsides, newspapers, etc., printed in the United States prior to 1800, which seem to me worthy of consideration.

"At present there is no way for any reader, or any employee, of the Library to ascertain from our catalog

(1) What publications our Library has, printed by any particular early American printer (for instance, William Bradford, Benjamin Franklin, Samuel Keimer, the Ephrata Press, etc.)

(2) The names of early American printers in any particular locality (for instance Boston, New York, Philadelphia, etc.).

"I therefore beg to suggest that books, pamphlets, broadsides, newspapers, etc., which fall under this class, should be cataloged just as incunabula are, i.e., making three cards for each entry.

1. An author card.
2. A card for the printer.
3. A card for the place where the book is printed.

"Card no. 1, including subject card, does not need any commentary.

"Card no. 2 will enable anyone, be he reader or member of the library staff, to ascertain at a glance what publications of a given early American printer the Library has in its possession; for instance, Zenger, John Peter, printer in New York, 1725-1746.

Library has the following issues of his press:

Drissens, Peter van — The advisable ways of God. 1726.

A letter from a gentleman in the country. 1732.

Dickinson, Jonathan — The vanity of human institutions. 1736.

Nederduitsche Almanake voor 1742

"Card no. 3 will enable any one, be he reader or employee of the library staff, to ascertain at a glance which of the early American printers of a given place are represented by issues of their presses in this Library; for instance,

New York City, printing prior to 1800.

Library has issues of the following printers:

Bradford, William. 1693-1743.

Zenger, John Peter. 1725-1746.

Rivington, James. 1760-1802.

Holt, Elizabeth. 1784-1786.

"I hope the usefulness of these cards is too obvious to need any explanation.

"But I have in mind not only our own Library. My suggestion has a much farther reaching object in view. I do not know whether any of the libraries in the United States follow, at present, the practice which I have outlined to you.

"I would respectfully suggest to you the advisability of communicating with other leading libraries of the United States, partly to suggest the above mentioned method, and partly to ascertain whether any of them already use the plan.

"If it has not already been done, I would further suggest — if you favor my suggestion — that the matter be submitted for discussion at the next meeting of the American Library Association.

"If this suggestion were generally accepted by all the libraries in the United States, these cards should be printed and deposited in the leading libraries of our country, so that it will be possible at any time to ascertain in Washington, in Boston, in Chicago, New York, Philadelphia, etc., where copies of these books may be found.

"This suggestion might be extended to private libraries in the United States which are at present inaccessible and sometimes contain Americana which are unique and not to be found in any public library of the United States.

"Books, etc., which do not give the printer's name, but only the name of the place, should be added at the end of the place cards (card no. 3 of my suggestion); but if there is any strong reason to attribute them to a certain printer they should be added to the printer's cards, with the remark 'doubtful.'

"If my suggestion should be accepted only by this Library, there would be great practical results.

"While it cannot be the aim of the Library to buy or to have every issue of the early American printers (with some exceptions), each should be at least represented by several issues of his press.

"Now, if my plan is accepted, we can do this in a systematic way, guided by our cards, which show at a glance what we have.

"In what respect my suggestions, if generally accepted by the A. L. A., might lead to the printing of a catalog of early Americana, printed in this country, or might give the first aid to a scientific history of American printing prior to 1800, I will not discuss at present."

As the Narragansett Pier conference of the American Library Association as well as the meeting of the Bibliographical Society of America was close at hand, it seemed best to Dr. Putnam without having first communicated with other libraries, to submit the matter there for discussion, and he intrusted it to Mr. Hanson, the chief of our Catalog Division. Mr. Hanson selected the Bibliographical Society of America as the proper place, and at the only meeting of that society the matter was brought up.

Unfortunately, lack of time prevented the full reading of my memorandum and also an exhaustive discussion of my proposition. From this a misapprehension evidently resulted, which it is the purpose of this article to dispel.

The main reason for submitting the matter was first to ascertain whether anything of the sort proposed by me is already being done in any library. In the Library of Congress, for instance, as may be seen from the following statement sent by Mr. Hanson to Dr. Putnam, in connection with my recommendation, the following practice was planned:

"Provision for a special catalog or checklist of Early American imprints in the Library of Congress was made by this Division for the first time October 1, 1905, the following methods being adopted:

"The catalogers who usually handle such material have been directed to place on the back of the main entry card of every work coming within this category (the terminus ad quem varies for different places and printers, e.g., California to 1850-60) the following check mark ZA. The assistant who sorts the printed cards for distribution to various Divisions of the Library and for the stacklists and shelflists has instructions to set apart a card for ZA: the catalog of Early American imprints.

"The method is simple but has not proved entirely efficient because the occasions for applying the check are comparatively infrequent, and isolated cases pass through the hands of the catalogers unchecked through inadvertence."

There prevailed at the meeting the general opinion that my whole proposition is useless, as the work which I propose is already done, or will be done, by Mr. Charles Evans in his "American bibliography," of which vols. 1-3 are already published, and I owe it only to my colleague, Mr. W. Dawson Johnston, that a special committee was appointed to circularize libraries in regard to my proposition, and to submit a report to the next meeting of the Bibliographical Society, which will be held in December next, in Providence.

As already stated, I ascribe it only to misapprehension that my suggestion was received so coolly and met such opposition. On the other hand, I cannot understand how the objection can be made that the carrying out of my plan would be simply a duplication of Mr. Evans' work.

It is not my intention, and it would be now untimely, to go into the merits of Mr. Evans' work, but the difference between his work and my plan is so obvious, that it seems unnecessary seriously to discuss it.

For those who have not seen Mr. Evans' work, and for those who have seen it, but have had no time to examine it, I beg to say that Mr. Evans' work is a *chronological* bibliography of books, broadsides, newspapers, pamphlets, and periodicals, which is intended to give an account of what is printed in the United States prior to 1820, and is compiled for purely bibliographical reasons, while my purpose is an entirely different one.

My principal aim is to have books, broadsides, newspapers, pamphlets, and periodicals, which were printed in this country when printing was in its infancy, cataloged in such a way that the reader, the student and the employee of any library could ascertain at a glance:

1. What publications a particular library has, printed by a particular printer;
2. The names of the early American printers in a particular locality; or, as I expressed it in my memorandum to Dr. Putnam, "should be cataloged just as incunabula are."

For what else are these books but our "American incunabula?" As to how incunabula should be properly cataloged, I think there exists no serious doubt. When in 1892 the late Karl Dziatzko visited Italian libraries to collect material for a history of printing in the 15th century, he was obliged to abandon his plan on account of the defective system of cataloging incunabula. Most of the libraries visited by Dziatzko had only an alphabetic author catalog of incunabula, without index of printers, or place of publication, and by means of an alphabetic author catalog alone it was impossible in a few hours, or even days, to obtain a review of the material in these libraries which would serve his purpose.*

The same conditions that were found by

*Karl Dziatzko: an obituary, by Felix Neumann. LIBRARY JOURNAL, March, 1903.

Dziatzko in the Italian libraries prevail, if I am not mistaken, in most of our American libraries. To better these conditions, to utilize the treasures hidden away under other material, I made this suggestion, guided by a simple practical purpose, which involves as consequence a technicality in cataloging, but so immaterial that it is not worth while to argue regarding it.

And now an answer to those who said that the work which I propose will be a simple duplication of Mr. Evans' work. "Why don't you take Mr. Evans' 'American bibliography,' check it off and your work is done?" (This remark was made to Mr. Hanson by a gentleman after the meeting.)

These gentlemen are evidently acquainted with Hain's "Repertorium bibliographicum" and Panzer's "Annales typographici," the alpha and omega for those who work on incunabala. Do they really think that the great European libraries with their long experience would catalog incunabala by making an author card, an index card for the printer and for the place of publication, if "Hain" or "Panzer" would answer the purpose? By no means! Or, how would it serve a reader or a student who enters one of our libraries to find out, for instance, which publications the library has printed by William Bradford if the reference librarian refers him to Evans' "American bibliography" (if that library has a copy). And even if Mr. Evans should compile a general index to his work, would that help to indicate the facts desired?

There is only one point of contact between my suggestion and Mr. Evans' "American bibliography"; that is when I ventured the question, as a mere *ballon d'essai*, whether it might lead to the printing of a catalog of early Americana, printed in this country, or might give the basis for a scientific history of American printing prior to 1800. If my plan is carried out in the right direction, I leave it to others to decide this question.

FELIX NEUMANN,

Library of Congress.

NO HELP FOR IT

I saw Montaigne upon a stand;
He smiled a Gallic smile quite bland
And beckoned me. Had I the time
I might have stopped. But 'twas a crime
To waste upon Montaigne a look
When I'd not read the latest book.

As I sat waiting in a room,
Oppressed with some ancestral gloom,
I looked, and, lo! in binding rare
I saw Cervantes pining there,
Brooding alone in dusty nook,
Nay, friend! For me the latest book.

There's Shakespeare, Homer, Goethe, too,
And others — quite a cultured crew,
They say their wit is fresh to-day
As ever. But to read them! Nay!
It cannot be! By hook or crook.
Why, I must read the latest book.

—Life.

LABOR PAPERS, 1827-1837

THE following list of papers has been prepared by Professor John R. Commons in the course of his work in the American Bureau of Industrial Research. It includes all known periodicals published between 1827 and 1837, the primary purpose of which was to support organized labor, together with the libraries in which one or more numbers of these papers have been found. It also includes, marked (†), certain papers which are known to have been sympathetic to the interests of working men, and others which are known to have given considerable space to hostile criticism — no files of which have been located. The years given after the name are those of the first reference to the paper, or in case there is no dash, of the year it is desired to locate. The dash (-) indicates possible publication before or after the date. Papers the announcement of the publication of which has been found, but of which it is not positively known that any number was issued, are indicated by a star.

Librarians will confer a favor if they will furnish information regarding any files they may have, either of the papers in this list or of similar publications, to Professor John R. Commons, University of Wisconsin, Madison, Wisconsin. It is particularly desired to locate those papers of which no files or only incomplete files have been found.

THE ANNUAL MEETING OF GERMAN LIBRARIANS

THE July-August number of the *Zentralblatt für Bibliothekswesen* is devoted to the recent meeting of the association of German librarians (now numbering 336 members), which took place on June 7 and 8, in Berlin, Dr. Paul Schwenke in the chair. An unusually large number—162—attended, even Austria and Sweden being represented.

The chairman, in his opening address, touched on various topics of special interest to his countrymen: the founding of the German music collection at the Royal Library, Berlin, the new library building of the Heidelberg University (in the building of which "the architect unfortunately had more to say than the library expert"), library employees, insufficient salaries, interlibrary loans, the old complaint as to insufficient funds (probably to become more acute by the settlement of the rebate question), and finally the matter of the enormous increase in the price of rare books, such as incunabula and 16th century works with woodcut illustrations, brought about by foreign buyers. "It is hardly to be expected," said the speaker, "that all the means necessary for complementing our libraries will be granted by the state. . . . If we desire to attain our object we must appeal to [private] liberality. . . . We cannot expect a German Carnegie, but public-spirited people are not wanting here." Among others, he mentioned the late Albert Cohn, the bookseller, who left his property of 600,000 marks to the city of Berlin for library purposes.

Four papers were read and discussed at the meeting. Dr. Schnorr v. Carolsfeld opened the series with one on "The library courses at Munich." Library training in Germany is mainly based on the idea that a "thorough attainment in some field of knowledge is indispensable to the librarian; without an insight into the methods of scientific work the librarian remains a subordinate registrar." The speaker referred to the statement of an American librarian that what the latter's country needed was the German scientific librarian. The course of study, which he described in detail, includes practical demonstration of technical process (paper making, binding, etc.), and the illustration, by specimens, of appliances, of methods (e.g. wood engraving), etc. The resultant discussion brought out various interesting points regarding the training of librarians in Prussia and other parts of Germany. The desirability of vacation courses was urged, especially in the branches for which illustrative material is wanting in the smaller libraries. The late Dr. Dziatzko's services in this field were recalled, and his insistence on practical as well as theoretical education.

Dr. Maas surveyed the whole field of "Public documents," their importance, their availability, the want of system in their production and distribution, the necessity of a periodically issued list. Dr. Wolfstieg illustrated this paper by a description of actual conditions, as to control of issue of documents, in various states and cities in Germany and elsewhere. He found the "most complete organization, as regards production and distribution of public documents," in the United States, and referred to the New York Public Library's collection of government publications, which on Jan. 1, 1906, amounted to 185,000 pieces.

Dr. Naetebus read an interesting paper "On the libraries of the Prussian university institutions." These are mainly reference libraries, but books may be taken home during the time that the library is closed, that is, from the hour of closing at the end of the day until that of opening next morning, as well as over Sunday. In some, the less necessary books are removed from the library and stored in a less easily accessible place, which recalls the suggestion made by President Eliot, of Harvard, some years ago. The assistants are mostly students, usually unpaid; the resultant frequent change in personnel has its distinct disadvantage. "Insufficient funds" is again the cry, but different organization—implying co-operation between librarians and an agreement as to the field to be cultivated by each—is suggested as a means for attaining better results with even the present means.

"The aims of the union catalog" were elucidated by Dr. Boysen, who spoke in favor of a general author catalog, but was opposed to a subject (classed) catalog, and objected to the

introduction of bibliographical features and super-exactness and fullness. The volume form is to be preferred to slips (cards), the latter to be used only as a supplement to the former. A long discussion followed, in the course of which the whole matter was again thoroughly ventilated, and many objections raised and difficulties stated. The general opinion was that the union catalog should be extended to cover, not only Prussia, but all Germany.

After the business of the convention was over various libraries in Berlin were visited, including the Lipperheide costume library; the vacuum cleaner in operation at the university library was also examined. There was also the usual *Festessen*. The *Zentralblatt* in closing, says: "The proceedings of the seventh convention of librarians have had no positive result, but their value in clearing up and working out the questions treated must not be underestimated."

FRANK WEITENKAMPF.

A LIBRARY PROBLEM

From Chicago Tribune, Aug. 6

AN official statement by Reuben G. Thwaites, the librarian of the Wisconsin Historical Society, which has one of the richest collections in the United States, tells of the examination under a search warrant of five boxes left in a warehouse in Madison by a much esteemed student in the graduate school of the university in that city. They contained 200 volumes stamped with the name of the library of which he is the custodian, which had been stolen by the student who had the freedom of the shelves in connection with her investigations in a special field of American history.

In the decennial report of the president of the University of Chicago the librarian furnished a table showing the losses of books in each department during 10 years, the aggregate being something over 1300. In some cases the thefts were so persistent as to occasion serious inconvenience to workers who needed particular books. A few years ago a dealer in second-hand books in the city called the attention of the authorities of the institution to the offerings of a student who made frequent calls with the object of selling volumes bearing the perforated stamp of the library. An examination of some of the boxes which he was about to ship to his home revealed a good collection of books upon a special topic, which would represent a large outlay in money if he had paid cash for what he had stolen.

The Wisconsin authorities are said to be disinclined to prosecute the offender, who has just been discovered, on the ground that the

stealing was due to a mental condition induced by a great desire to obtain a library upon a particular line of her investigations, which the limited means at her disposal prevented her from acquiring. The case calls attention to a peculiarity of the mind of the book thief, which seems to be associated with a feeling that it is not theft to take a book. If the student had taken a watch and chain or a brooch or a dress, the guilt would have been unquestioned. But to steal a book is another thing and of trifling moment.

It is a source of constant anxiety to library officials and makes the administration of a collection a difficult problem. Hundreds of investigators must have access to the shelves in order to get the best results. The great majority of students are both honest and thoughtful, but now and then there comes one who feels no compunctions when a valuable map is detached from the inside cover, a rare engraving is cut out, or a costly book is taken outright. A library to be of the most service must be used freely. The slow and unsatisfactory method of signing slips for books to be brought by an attendant to be examined under more or less close surveillance pleases neither the investigator nor the library officials, who are anxious to co-operate with honest students, and thus the thief in his selfishness brings injury to many who are prevented from making the contributions to knowledge which otherwise might be made. The thief who steals a diamond from a jeweler's tray never begins to do the damage which the book thief does when he puts all patrons of a library under restraint and suspicion.

NET PRICES IN GREAT BRITAIN

At the annual meeting of the Associated Booksellers of Great Britain, held at Oxford, the following resolutions, previously passed by the Publishers' Associations, were endorsed:

"1. That second-hand copies of net books shall not be sold under the published price within six months of publication.

"2. That new copies of net books shall not be treated as dead stock within twelve months of the date of purchase, nor shall at any time afterwards be sold at a reduction without having been first offered to the publisher at cost price, or at the proposed reduced price, whichever is the lower."

A communication on the subject from "A librarian" is given in the *Academy* of July 21, which is of interest in its bearing upon the library discount question in this country. "The close time for net books," says "A librarian," "is only another step in the endeavor to injure public libraries. Previous to 1901, booksellers recognized that public libraries were amongst their best customers. Library

orders gave no trouble, as the whole of the details of the books required were given; the orders came in regularly in bulk; and from a commercial standpoint libraries required and received preferential treatment, in the matter of discount, over the occasional purchaser of single volumes. In 1901 the number of net books published was 2322 and the value £983. Last year the number had increased to 4617 and the value had risen to £1480. Side by side with this hardening of the price, a marked deterioration of the material and binding has been going on. Wherever a discount was offered and accepted on net books an opposition tradesman was found to give information to the association, with the result that the offending tradesman was threatened with a boycott. This caused an increased demand for early second-hand copies of net books. It naturally followed that the larger circulating libraries, which are treated as 'trade,' laid in a stock of new net books knowing that they could get rid of their surplus copies at a good price—usually at about cost—after they had been in circulation some two or three months. It is this system that the 'close time' has been instituted to combat.

"In the United States, the home of the net book system, the claim of the public library to consideration is recognized, and retailers are allowed to give a discount off net books to these public institutions. No librarian objects to the net book system—it is a perfectly logical one—he only objects to the refusal of publishing houses and booksellers to grant him the same terms that any other tradesman would give to a large buyer. Apart from the books which publishers are only able to put upon the market with success by the support of the larger public libraries, the public library has made markets which otherwise would be non-existent. And the more the net book system is extended, and the more cast-iron its regulations become, so much the more will the spending powers of the public libraries be restricted until the removal of the rate limitation is accomplished.

"Unless publishers and booksellers as a body come to recognize the fact that their 'best interests' are not served by antagonizing the public library, the only solution of the difficulty appears to lie in the formation of a co-operative library-booksellers' union; and if an endeavor should be made to treat this as outside the 'trade,' it would naturally undertake publishing also. As it would be able to give a safe market up to a certain point, it could offer the best terms to authors. There is no thought of a threat in this—the matter has never been discussed, or even broached before—it would be but the natural outcome of unnatural conditions. The turnover of such a co-operative society, amongst its public library members alone, would amount, in round figures, to at least £100,000 a year."

NEW YORK LIBRARY ASSOCIATION "LIBRARY WEEK"

"LIBRARY week," the annual meeting of the New York Library Association, will be held at Twilight Park, in the Catskills, during the week of Sept. 24-Oct. 1. The general meetings will be held in the auditorium of Squirrel Inn, unless the attendance prove too large for that room, in which case the meetings will be held in the Union Chapel. Delegates will be entertained at the two inns of the Park, Squirrel Inn and Twilight Rest, and their attached cottages. Rates for board and room have been fixed at from \$9.50 to \$10.50 a week, and \$1.50 to \$1.75 a day for those remaining less than a week. The railroad station and post office for Twilight Park is Haines' Falls or Corners; the place is approached directly from Catskill by the Catskill Mountain Railroad, and from Kingston and Oneonta by the Ulster & Delaware. These roads both offer a large reduction from their usual rates, amounting in the case of the former to about one-half, and in the case of the latter to a little more than one-half, for round trip tickets. The Trunk Line and the Central Passenger Associations will make the usual conference rate of one and a third fare for the round trip, on the lines covered by these associations, to the points of juncture with the roads named above. Delegates pay the full fare to those points and receive from the railroad agent a certificate entitling them to a return rate of one-third.

The scenery at Twilight Park and in the vicinity is the most beautiful and interesting in the Catskills, the atmosphere of the place delightful, and the accommodations good, though simple. For beautiful walks and drives, no place in the state is more celebrated. By the courtesy of the Park managers, delegates are offered the free use of the club's fine tennis courts and golf links.

For the program of the meeting the principal papers will be on the following subjects:

"The effect of civil service on library efficiency," Helen E. Haines.

"Problems of the small town and village libraries," Sarah B. Askew.

"The love of books as a basis for librarianship," Arthur E. Bostwick.

"Women's clubs and libraries in New York state," Anna H. Perkins.

There will be two Round Tables, one, conducted by Miss Frances D. Thomson, on "New ideas, methods and devices," and one on "The encouragements of library work," conducted by Miss Waller Bullock, to both of which it is hoped there may be contributions from all kinds of libraries and librarians. The final evening session will be one of business, as usual, and will serve also as an opportunity for impromptu discussion of "what lies uppermost." Any member wishing to have a given subject discussed is invited to submit it beforehand for

consideration to the president, and, if time allows, arrangements will be made for bringing it before the association at this meeting.

A meeting of the executive board of the American Library Association will be held at Twilight Park during the meeting.

An effort has been made to make the program representative of the interests of both large and small libraries, and of various parts of the state. The officers and a number of long-time members have been appointed a reception committee to receive and introduce newcomers, and it is earnestly hoped that no librarian in the state will fail to come through an impression that he or she would probably be isolated among strangers. The officers of the association are: Mary W. Plummer, president; Asa Wynkoop, vice-president; Mrs. Adèle B. Barnum, secretary; Edwin W. Gailard, treasurer.

American Library Association

President: C. W. Andrews, John Crerar Library, Chicago, Ill.

Secretary: J. I. Wyer, Jr., State Library, Albany, N. Y.

Treasurer: George F. Bowerman, Public Library, Washington, D. C.

ADVANCE PUBLICATION OF CONFERENCE PAPERS

I am advised by the Boston manager of the Associated Press, who did so much to further the wishes of the A. L. A. at Narragansett Pier, that much more could have been accomplished had papers been in his hands earlier. Looking forward to the Conference of 1907, he says that, if the A. L. A. desires the fullest degree of publicity, copies of every paper to be read at the conference should be in his hands at least 30 days before the conference, the Associated Press agreeing of course not to "release" any paper until authority to do so is received from the representative of the A. L. A. This is a very important matter from the standpoint of publicity, and I trust that every one who is to be on the program for 1907 will co-operate to this extent with the Associated Press, through the A. L. A. publicity committee.

E. C. HOVEY.

A. L. A. PROCEEDINGS, 1906

The American Library Association Papers and Proceedings, Narragansett Pier Conference June 30-July 6, are now ready, and have been mailed to members. The volume covers over 300 pages, being the largest yet published. Extra copies may be had at \$1 apiece, on application to the business offices of the Association, 34 Newbury st., Boston.

A. L. A. PROCEEDINGS, SURPLUS COPIES

It has been decided to offer the surplusage of the A. L. A. Proceedings at the following reduced prices, and it is hoped that those who

bers and publications are listed, and there is a full record of the district officers, districts and libraries in the districts, followed by a history of the association. Information is also given regarding other associations closely allied to the California Library Association, including the American Library Association, National Association of State Libraries, Oregon Library Association, and Washington Library Association. It is interesting to note that 56 of the 186 members of the California Association are also members of the A. L. A.

IOWA LIBRARY ASSOCIATION

President: M. H. Douglass, Iowa College Library, Grinnell.

Secretary: Mrs. A. J. Barkley, Public Library, Boone.

Treasurer: Mrs. J. M. Carpenter, Fort Dodge.

The 17th annual meeting of the Iowa Library Association will be held at Ottumwa, Oct. 10-12. The evening address on Thursday, Oct. 11, will be by Prof. S. H. Clark, of the University of Chicago, the subject being "Literature and the community." Bookbinding will be discussed by Miss Gertrude Stiles, of Chicago, and Miss Edna Lyman will speak on "The purpose of the story hour." Topics of interest to trustees will be discussed by well known Iowa library trustees, and special prominence will be given to round table discussions.

KEYSTONE STATE LIBRARY ASSOCIATION

President: Myra Poland, Osterhout Free Library, Wilkes-Barré, Pa.

Secretary-treasurer: Robert P. Bliss, State Free Library Commission, Harrisburg.

The sixth annual meeting of the Keystone State Library Association will be held Oct. 11-13, 1906, at the Park Hotel, Williamsport, Pa. Thursday evening, Oct. 11, will be devoted to an informal reception; there will be three sessions on Friday and two on Saturday. The program will include a round table for small libraries, with ten or twelve five-minute papers and brief discussion; trustees' session; round table for children's librarians; and an exposition of the work of the Pennsylvania Library Commission, with addresses by members of the commission.

OHIO LIBRARY ASSOCIATION

President: Miss Electra Doren, Cleveland.

Secretary: Miss Matilda M. Light, Public Library, Dayton.

Treasurer: Miss Grace Prince, Wittenberg College Library, Springfield.

The Ohio Library Association will hold its 12th annual meeting at Portsmouth, Oct. 23 to 26. The topics for discussion are: "The value of a free library to the public," "What it should afford to the people of the city, of the small town and of the rural districts," "What may be done in Ohio."

Library Schools and Training Classes

DREXEL INSTITUTE LIBRARY SCHOOL

GRADUATE NOTES

Miss Susan W. Randall, class of '97, assistant librarian University of Pennsylvania, was married July 2 to Mr. Henry Bacon.

Miss Sarah C. Clark, class of '04, was married in June to Dr. Charles Root Turner.

Miss Mary Krichbaum, class of '01, former assistant secretary Pennsylvania State Library Commission, was married in June to Mr. Frederick Brooks Lindsey.

Miss Mary E. Crocker, class of '05, has resigned her position as assistant in the 59th st. branch of the New York Public Library to become first assistant in the Public Library of Williamsport, Pa.

Miss Katharine S. Leiper, class of '00, has been appointed first assistant librarian in the University of Pennsylvania Library to succeed Miss Randall.

ALICE B. KROEGER, *Director.*

ILLINOIS STATE LIBRARY SCHOOL

The annual meeting of the Illinois State Library School Association was held at Naragansett Pier, R. I., on the afternoon of July 2, Ellen G. Smith, president, in the chair.

The usual routine business was transacted, and officers for the ensuing year were elected as follows on report of the nominating committee: president, Harriet E. Howe, Iowa; 1st vice-president, Joanna Hagey, Nebraska; 2d vice-president, Fanny Duren, Iowa; secretary-treasurer, Margaret Budington Plum, Iowa; executive committee: Alice Mann, Marjorie Graves, Miriam E. Cary, all from Iowa.

The association will try the plan of localizing the administration, Iowa having been chosen as headquarters for the coming year.

The association voted to appoint an advisory board to confer with and assist the officers of the school. Twenty-two members were present. The business meeting was followed by a dinner at the New Mathewson, for which 30 covers were laid. Miss Margaret Mann, of Pittsburgh, acted as toastmistress, the toasts being followed by an address from Katharine L. Sharp, director of the school, on the present condition and future prospects of the school.

FRANCES SIMPSON, *Secretary pro tem.*

NEW YORK STATE LIBRARY SCHOOL

NEW COURSES

The new courses for 1906-07 will emphasize public library work and will be in charge of instructors who have had wide experience in both large and small public libraries. With our increased appropriations it is now possible to supplement our own faculty by bringing

competent persons to Albany for whatever time may be required to prepare and present a carefully planned course of lectures and work.

Library administration (two courses)

Elementary course; junior (required)

Covers organization and conduct of small libraries, the library and the public, procedure of governing bodies, library book-keeping and accounts, reports and statistics, the librarian, the staff, and other related topics. Will be conducted by Miss Marilla W. Freeman.

Advanced course; senior (elective)

Covers topics dealing with large libraries: departmental organization, municipal systems, branch library problems, etc. Will be conducted by the director, Mr. Edwin H. Anderson.

Library seminar (required)

Both classes meeting together. Consists of mock trustees' meetings, discussion of current problems, practice in writing for newspapers, library news, library literature. Will be conducted by Miss Corinne Bacon.

Government documents: senior (required)

This course consisting of 12 lectures and abundant practice work with the indexes and principal sets, will include state and municipal as well as U. S. documents. Will be conducted by Mr. J. I. Wyer, Jr.

Children's work (required of both classes)

The course will be given every other year, and will consist of 10 lectures covering the theory, importance and methods of library work with children. It will be conducted by Miss Frances J. Olcott and Miss Clara W. Hunt.

Bibliographic practice work: senior (elective)

From 50 to 100 hours will be allowed for actual practice in compiling lists of books on topics which are referred to the New York State Library for attention. This work will be done under competent supervision.

REVISED COURSES OF STUDY

An hour value representing the time devoted to each course, including lectures, preparation and examinations, has been assigned to every subject offered in both junior and senior years. The junior course will consist of approximately 1400 hours and the senior course of 1300 hours as outlined below.

Junior schedule

Administrative

Elementary administration.....	25
American libraries.....	10
Library buildings.....	12
Library seminar.....	30
Outside lectures.....	25
Library visit.....	85

Technical

Elementary cataloging.....	283
Elementary classification.....	77

Accession work (including book-

buying).....	34
Shelf work.....	23
Loan work.....	28
Bookbinding.....	15
Printing.....	15
Notes and samples.....	50

Bibliographic

National bibliography.....	93
Elementary reference.....	123
Selection of books.....	380
Practice work.....	100

Total..... 1408

Senior schedule

Administrative

Advanced administration.....	25
Library buildings.....	40
Library seminar.....	30
Outside lectures.....	25
Library visit.....	85

Technical

Advanced cataloging.....	150
Advanced classification.....	60
Indexing.....	20
Notes and samples.....	50

Bibliographic

Subject bibliography.....	75
Original bibliography.....	200
Advanced reference.....	63
Selection of books.....	333
History of libraries.....	20
Government documents.....	45
Practice work.....	215

Total.... 1436

Of the 1436 hours listed in the above senior schedule the courses covering approximately 1200 hours and not included in the following list are required. Of the courses in the following list 100 additional hours, to be elected by senior students, are also required.

Advanced administration.....	25
Library buildings.....	40
Practice work in advanced cataloging.....	100
Indexing.....	20
Advanced reference.....	63
Bibliographic practice work.....	50-100

J. I. WYER, JR., *Vice-director.*

SIMMONS COLLEGE LIBRARY DEPARTMENT

On June 13, 1906, Simmons College conferred the degree of bachelor of science upon its first class, which numbered 32 students.

The following is a list of the graduates from the library school, with the positions they are to fill: Florence Stratton Allchin; Laura M. Bragg, librarian, Public Library, Orr's Island, Me.; Jennie Elizabeth Dunmore, assistant cataloger, University of Maine, Orono, Me.; Winnifred Sampson Farrell; Florence Gertrude Finley; Alice Gertrude Higgins, assistant, Carnegie Library, Pittsburgh; Minerva Hubbard; Harriet Gardner Parker, assistant,

Carnegie Library, Pittsburgh; Theresa Bates Walley, assistant, Boston Athenæum; Edna Florence Winn.

Five students completed the one year course open to graduates of other colleges, and will receive certificates after three months of approved experience in some library: Alice W. Chase, A.B. Mt. Holyoke; Jane Conard, A.B. Ohio Wesleyan University; Jessie L. Knowlton, A.B. Wellesley; Eva F. Magee, A.B. Syracuse University, assistant cataloger, Public Library, Cambridge, Mass.; Grace L. Todd, Ph.B., Alfred University.

MARY ESTHER ROBBINS, *Director*.

SIMMONS COLLEGE SUMMER LIBRARY CLASS

The summer library class held at Simmons College from July 10 to Aug. 18 numbered 21 students. Of these one came from Canada, one from Wisconsin, one from Missouri, one from Connecticut, two from New York state, and the remainder from Massachusetts. All were women holding library positions or under appointment for positions. Courses were given in cataloging, classification, library economy, and reference work. The work was so arranged that single courses could be taken if desired. Miss June R. Donnelly, instructor at Simmons College, and Miss Grace Child, librarian of the Public Library, Derby, Ct., were the assistants. Visits, followed by quizzes, were made to the Boston Athenæum, the Boston Public Library, the Massachusetts State Library, and the Library Bureau.

In addition to the regular class work the following lectures were given: Miss Nina E. Browne, Boston, Mass., on history and work of the A. L. A. Publishing Board; John C. Dana, Public Library, Newark, N. J., on book binding, advertising, and library administration; Miss Fuller, City Library, Springfield, Mass., on children's work; Miss Caroline Garland, Public Library, Dover, N. H., on book selection; Drew B. Hall, Millicent Library, Fairhaven, Mass., on library administration; C. B. Tillinghast, Mass. State Library, on the Massachusetts Library Commission; Louis N. Wilson, Clark University, Worcester, Mass., on library administration; Dr. G. E. Wire, Worcester County Law Association Library, on library housekeeping and sanitation.

MARY ESTHER ROBBINS, *Director*.

WISCONSIN LIBRARY SCHOOL SUMMER SESSION

The 12th annual summer school conducted by the Wisconsin Free Library Commission was held in Madison, from July 16 to Aug. 25. The school rooms, on the second floor of the new city library building, recently fitted up by the commission for its permanent school, were used by the summer school students.

Two courses of study were offered, an elementary and a supplementary course. For the elementary course of six weeks, open to

those already engaged in library work, or under definite appointment to positions, there was an attendance of 31, 18 coming from libraries in Wisconsin, three each from Iowa and Kentucky, two from Illinois, one each from Ohio, Kansas, Minnesota, Montana, and Washington.

The course included 19 lectures in cataloging, eight in classification, seven lectures and eight seminars in the study and use of reference books, and six in the care and use of public documents. Brief courses were given in the selection, ordering, and buying of books, and in accession records; while others, regarding the shelf and loan departments, children's work, and library administration were included. The instruction was given in the form of lectures, followed by practice work, which was carefully revised.

Through the courtesy of the Card Distribution Section of the Library of Congress, sets of printed cards were secured for the students, and one lesson was devoted to the ordering and use of the printed cards, and to practice in preparing them for the catalog.

The instruction was in charge of the regular faculty of the school, of which Miss Mary Emogene Hazeltine is preceptor, Miss Julia E. Elliott head instructor and Miss Zana K. Miller instructor. The faculty was assisted by Miss Julia A. Hopkins, of the Madison Public Library, who gave the lectures in classification; Miss Hannah C. Ellis, also of the Madison Public Library, who gave the lectures on children's work; Miss M. M. Oakley, of the Historical Library, who lectured on book selection, and Miss Ono M. Imhoff, of the commission, who had charge of the public document work. Special lectures were also given by Dr. Reuben G. Thwaites, of the Historical Library; Miss Alice G. Tyler, secretary of the Iowa Commission; Miss K. I. MacDonald, Miss L. E. Stearns, and Dr. Charles McCarthy, of the commission. Mr. Henry E. Legler, secretary of the commission and the director of the school, gave the lectures on administration and the history of books.

A supplementary course has been given by the Wisconsin commission every other year in connection with its summer session, the course being open to those who have completed a summer course in a library school of recognized standards, and to properly equipped students who desire the inspiration and help that the lectures offer.

The supplementary course of 1906 gave two series of lectures, on Binding and the Elements of prose fiction.

The course on binding, given by Mr. John Cotton Dana, of the Newark Free Public Library, was most helpful and stimulating. The lectures, which were open to the elementary students and all the library workers in Madison, were given every morning at nine, during the first week in August. There was an average attendance of 60. The mech-

anism of a book, the essentials of book making, the process of binding, and repairing were treated in logical sequence, and Mr. Dana also discussed at each lecture some important phase of library work, as picture collections, art in the library, bulletins, publicity, simplifying records, etc.

Following the lectures, the supplementary class of 18 students did actual book binding under Mr. Dana's direction. A binding kit containing the simple binding tools always useful in a library, and various binding materials were provided for each student at a nominal cost, and every member of the class bound several books. The binderies of Madison were visited during the week. The binding exhibition, prepared by the Newark Public Library, was displayed during the week; a loan collection of many rare and beautiful bindings was also exhibited, showing examples of the work of Cobden-Sanderson, Cockerell, and other well-known binders. There was also an exhibition of books about book binding.

The course on the Elements of prose fiction was conducted by Prof. Henry Burrowes Lathrop, of the English Department of the University of Wisconsin. The lectures dealt with the reasons for the predominance of the novel at the present day. The novel was defined with relation to other types of imaginative literature, and was shown to be but the manifestation in the field of literature, of forces working in modern times in religion, philosophy, politics, and industrial life.

The members of the class read three, in some cases four, works of modern prose fiction, and wrote reports upon them. The design of the exercises was not so much to criticise the author as to realize his object, and to understand his method. Suggestions for further reading were given. The course was so planned that those who desired could devote some time to technical work, and all of the class took advantage of the opportunity offered.

The course was successful in itself and inspired the students to a more careful and judicious reading of books. It also showed that the library as an educational institution does not do its duty if it does not encourage the deliberate reading of the best books.

During the session, the social side of life was not neglected. Several informal gatherings were planned by the faculty to bring the students together, to promote good fellowship and better acquaintance.

Reviews

BIBLIOGRAPHICAL SOCIETY OF AMERICA. Proceedings and papers. vol. 1, part 1. New York, printed for the Society, 1906. 106 p. 8vo.

This beautifully printed volume is most welcome as tangible evidence of the work of the

Bibliographical Society. The paper is heavy and of a creamy tint, the type and ink excellent, and with a few exceptions the proof-reading has been well done. The edition is limited to 300 copies, and it is provided that "copies remaining after members of record are supplied" shall be sold, to new members only, at \$2 each. The membership list as printed in the front of the book shows 145 names. It is to be hoped that the society will receive much larger support from American librarians and bibliographers as its work becomes better known.

Forty of the 146 pages are filled with the constitution and by-laws, the names of officers and committees, the list of members, an historical sketch, the proceedings of the meeting for organization at St. Louis, and of the meetings at Portland and Baltimore. These meetings have been reported in this JOURNAL, and need not detain us here.

Mr. Roden's historical sketch is a modest and clear account of the Bibliographical Society of Chicago and the successive steps by which the national society has been formed from the Chicago nucleus. With this process most readers of this paper are familiar. The Chicago Society now reappears as the Chicago Chapter of the Bibliographical Society of America.

The address of the president, W. C. Lane, holds the place of honor in the "Papers." It was read at the Baltimore meeting last December. After a resumé of the fortunes of the society, Mr. Lane outlines some of the ways in which the bibliographer works, and points out some possible lines of activity for the society. He cautions the members against attempting to run counter to any of the great bibliographical undertakings of the day or to duplicate work already in progress. He continues: "What is left in which it can render service? Three openings occur to me now, and others are likely to appear as we proceed. It can provide a medium for the publication of articles of an historical or descriptive nature. A periodical devoted to bibliography may some day be possible; in the meantime it can publish in its Proceedings contributions of a bibliographical character.

"There is at present no satisfactory record of current bibliographical work. A comprehensive, accurate, annotated and classified annual record of published bibliographies would be of the greatest service to all students; to produce and publish such a record, or to secure its publication by some competent hand, should, in my opinion, be one of the aims of this society."

Mr. Lane also mentions as possibilities the publication of a check-list of incunabula, catalogs of mediæval manuscripts, of early newspapers, of special collections, of periodicals devoted to a special subject. It may be mentioned here that the collection of material and editing of a check-list of incunabula has already been begun by a committee of the so-

ciety. To the various plans of useful work suggested by Mr. Lane might well be added the establishment of a clearing-house of information regarding bibliographical work in process of preparation. Something of the sort has been attempted in the "Notes" at the end of this volume, and this department of the society's publications might well be extended. The scientists are already doing work of this nature to some extent. Such information serves two ends: it discourages competition and duplication of work, and it secures aid and comfort to the man already engaged on a specific task.

Mr. O. G. Sonneck, of the Library of Congress, contributes a paper of 14 pages on the "Bibliography of American music." After an historical introduction, showing what has been done by the various workers in this field, he takes up in detail the various possibilities of listing American music and the literature of music in this country, calling attention to what seems a lamentable state of confusion in our existing records and our provision for their continuation. In fact he calls the "bibliography of American music a deplorable vacuum." Doubtless this is a correct judgment from the point of view of one desiring an absolutely complete bibliographical record. However, Mr. Sonneck's own labors and the works he lists in his footnotes and describes in his text hardly give us the impression that the field is absolutely untitled.

Miss Eleanor Prescott Hammond, of Chicago, follows Mr. Sonneck with a paper entitled "The need of bibliographies in literary history." This title is misleading, as the elaboration of an outline of a proposed bibliography of Chaucer is the chief matter of the article. This is offered as a model for bibliographies of other authors, but we do not observe in the outline any remarkable departure from earlier notions of literary history or bibliography.

Mr. B. A. Finney, of the University of Michigan Library, demolishes most completely the notion of the existence of the "1516" edition of Gaddesen's "Rosa Anglica," and shows that the idea of the existence of this edition arose from a misreading of the colophon of the edition of 1502. The article is a very neat piece of work.

The paper by Mr. J. Christian Bay, of the John Crerar Library, entitled "Contributions to the theory and history of botanical bibliography" is one of the best in the volume. It shows a scientific temperament and what seems a reasonable view of the province and possibilities of the bibliographer. Mr. Bay gives an outline of the history of botanical bibliography, noting with care the value of the various works he cites. He also discusses the various special branches of bibliography within the general field of botany, and the journals devoted to recording the literature of that science. It is interesting to observe that

Mr. Bay commends highly Miss Clark's catalog of the botanical portion of the Library of the Department of Agriculture and the catalog of the Natural History Department of the British Museum. The "International catalogue" of the Royal Society comes in for some sharp, and, as it seems, well-deserved criticism. It is encouraging to learn that the author of this paper is engaged on a general bibliography of botany from 1872 to the present day.

"Material in the Library of Congress for a study of United States naval history" is discussed by Charles Henry Lincoln, of that library. The paper mentions at some length the ordinary book and newspaper sources for this topic known to all historical workers, in which the Library of Congress is hardly more than usually rich. Of manuscript material for our naval history Mr. Lincoln tells us that library possesses little for the period after the Revolutionary War, and of the manuscripts he cites the most important, the Journals of the Continental Congress, are rapidly being published. Mr. Lincoln gives an interesting sketch of the various official bodies governing the navy from 1775 to 1783. He mentions also the John Paul Jones papers (a calendar of which has been published by the Library of Congress), the papers of John Barry, the log-book of the *Chesapeake* for 1807, several volumes relating to the War of 1812, some manuscripts of David Porter, and 25 volumes of Preble papers. While the article is readable, it is hardly sufficiently bibliographical to be a serious contribution to the bibliography of American naval history.

Mr. A. G. S. Josephson, of the John Crerar Library, writes "*In re* a Bibliographical Institute," discussing replies to a circular letter of inquiry sent out by him to over 400 librarians and scholars. There is little doubt that such an organization as the one he proposes would accomplish valuable results, but we may be forgiven for skepticism as to its immediate prospects, and for mild amusement over the heated discussion as to whether one million dollars is too small, or five million too large an endowment for its purposes.

An abstract of a paper by Prof. A. L. Dennis, of the University of Wisconsin, on the "European histories of the Turks in the 16th and 17th centuries" closes the "Papers," and some valuable "Bibliographical notes" end the volume. There is no index.

As an initial volume this makes a creditable showing. As the society grows older we may expect a somewhat more scientific and more useful series. The aims of the Bibliographical Society are not only praiseworthy, but extremely practical and valuable. As a member, the writer naturally hopes that its influence and power may increase. As a librarian, he joins with all other librarians in welcoming the new organization and wishing for it a prosperous career. WM. WARNER BISHOP.

Library Economy and History

GENERAL

Bulletin des Bibliothèques Populaires for July concludes M. Berthélemy's article on "Law books in public libraries" with a list of works in political and judicial law recommended for libraries.

CENSUS BULLETIN 45, statistics of cities having a population of 8000 to 25,000, just issued, contains a table presenting statistics relating to public libraries, their number, number of volumes, number added during the year, number withdrawn for home use, number withdrawn for reading room use.

Ceska Osveta in its July issue contains an article on Karel Havlicek, "propagator of popular education in Bohemia," by Dr. Arne Novak; and accounts of the reorganization of the Brunn public library, and of libraries in France. This number completes the second volume of this little periodical.

The Library largely devotes its July quarterly issue to a series of reminiscences and "appreciations" of the late Dr. Richard Garnett, opening with memorial verses by Austin Dobson, and including contributions from G. K. Fortescue, John Ballinger, H. R. Tedder, Arthur Symons, and A. W. Pollard. A fine reproduction of Collier's portrait of Dr. Garnett forms the frontispiece. Alex. Hill, of the National Home Reading Union, writes on "Responsibility for the public taste," urging the need of library censorship and of efforts to interest people in good literature. Other articles are "The Lady Dilke gift to the National Art Library," by Gilbert R. Redgrave; "On Christian captive indulgences in the British Museum, Lambeth Palace and John Rylands Library," by W. E. A. Axon; "Recent foreign literature," by Elizabeth Lee; "Patrons and professional writers under Elizabeth and James I.," by P. Sheavyn.

Library Assistant for July reports the 11th annual meeting and conference of the Library Assistants' Association, and contains a paper by Walter Powell on "Librarianship in the future," urging uniformity in library methods and practice.

Library Association Record for July contains articles on "A weak point in library administration: the absence of exact classification from British public libraries," by Edward McKnight; and "Newspapers," by Arnold G. Bart. In the August number W. J. Willcock answers the question, "What should an annual report of a public library contain?" by recommending that a librarian's narrative report of the year's work should be so composed as to render unnecessary the many elaborate tables usually appended to the report. There is a short account of some of the treas-

ures of Wells Cathedral Library, by T. W. Williams.

Library World begins its ninth year, with its July issue, with a new cover, and in an enlarged and somewhat different form, as indicated by its new title of *Library World and Book Selector*. The department of annotated lists of new books, which has always been a useful feature of this useful publication, now becomes its mainstay, and will be developed to serve, so far as possible, as a comprehensive and up-to-date guide for librarians and general book buyers. In an editorial on "The importance of book selection," the purpose in view is set forth. "The books described will be annotated by experts, and nothing will be admitted that is not worth preservation in a public library. Owing to the difficulties of obtaining access to new foreign and American books, only British publications will be dealt with at present." The book list is classified "according to the system of Subject classification" (that of Mr. J. D. Brown), and the notation is affixed to each title. The annotations are on the whole compact and useful, though there is room for improvement in the classes Language and Literature and Literary forms (fiction, poetry, etc.). Select bibliographies will also appear from time to time. The August number, in addition to the various departments, contains an article by J. D. Brown on "Open access lending departments," with illustrations; and reviews of Brown's "Subject classification" and Baker's "Manual of descriptive annotations."

LUMMIS, Charles F. Books in harness. (*In Out West*, September, p. 195-225.)

A popular general account of the development of public libraries, from the clay tablets of Nineveh to the present time. "At last books are harnessed. They are systematized to draw our train of thought farther and faster; they are even organized on an enormous scale for mental outings. While not taken away from scholars, they are fairly forced upon everybody." Statistics of the leading libraries of the world are cited from the "New international encyclopedia." The general review of the subject is followed by an extended historical and descriptive account of the Los Angeles Public Library, from its organization, Dec. 7, 1872.

UTLEY, George B. What the negro reads. (*In Critic*, July, p. 28-30.)

Notes the use of books made in the colored department of the Jacksonville (Fla.) Public Library. Standard fiction, juvenile books, American history, and literature dealing with the colored race seem most popular; books on mechanics, domestic economy, useful art, and travel are very little in demand.

Wisconsin Library Bulletin for August contains an account of "Legislative reference

work," by Charles McCarthy, chief of the Wisconsin Legislative Reference Department; and a critical note on "Evolution of library buildings" (in Wisconsin), by F. A. Hutchins.

LOCAL

Atchison, Topeka & Santa Fé R. R. libraries.

BUSSEY, S. E. Santa Fé reading rooms. (*In Out West*, August, p. 124-131. il.)

Author is the superintendent of the system of reading rooms and libraries conducted by the Atchison, Topeka & Santa Fé R. R. Co. In connection with this the company also conducts a series of musical and other entertainments. The article is interesting in pointing out methods used in getting working men interested in the library.

Brooklyn (N. Y.) P. L. A meeting of the library directors was held on July 19 in the office of the borough president of Brooklyn, Bird S. Coler, at which Mr. Coler announced the appointment of Raymond F. Almirall, of Brooklyn, as architect for the great central library building, to be erected at Prospect Park plaza. Professor A. D. F. Hamlin, of Columbia University, was appointed consulting architect. The power to appoint the architect lay altogether with the borough president, and in view of the recent appropriation by the board of estimate and apportionment of \$25,000 for preliminary plans, Mr. Coler stated that he thought it well to act quickly on the matter. It was recommended that Mr. Hill, the librarian, Mr. Almirall and Professor Hamlin, constituting a sub-committee on the central building, should be sent abroad to examine library buildings. This recommendation was approved, and the sub-committee named left early in August for a six weeks' visit to European libraries. Mr. Almirall, the newly-appointed architect, is a native of Brooklyn, and studied his profession at Cornell and at the Ecole des Beaux Arts, Paris. He has designed numerous public buildings in New York and vicinity, and was architect of the Pacific and Prospect Carnegie branches of the Brooklyn Public Library. At the Narragansett Pier conference of the American Library Association he read a paper on "Design and construction of branch library buildings."

The new Carnegie building of the Prospect branch library, at Sixth avenue and Ninth street, was formally opened on the evening of July 30. The building cost \$95,000, and is one of the largest in the branch system; it is the seventh Carnegie branch building to be completed.

California library buildings. Attractive and inexpensive library buildings are noted and illustrated in the July number of *News Notes of California Libraries*, published by the California State Library. Exterior views are given of the libraries of San Luis Obispo

(\$10,000), Bakersfield (\$8000), Visalia (\$10,000), Los Gatos (\$10,000), Selma (\$6000), La Jolla (\$780), Chico (\$10,000), Colusa (\$11,337.90), Santa Monica (\$12,500). Exteriors and floor plans are shown for the Corona Public Library (\$12,500), Palo Alto Public Library (\$11,000), Tulare Public Library (\$10,000), Watsonville Public Library (\$10,000), and Covina Public Library (\$8000).

Denver (Colo.) P. L. The contract for the construction of the library building, designed by Albert Randolph Ross, was awarded on Aug. 1 to Henry W. Schlueter, of Chicago, for \$250,000. Ground was broken on Aug. 7 and the building will be finished in 18 months.

Galesburg (Ill.) F. P. L. (32d rpt. — year ending May 31, 1906.) Added 1544; total 31,085. Issued, home use 78,240, an increase of 1410 (fict. 38,716, juv. fict. 21,066); ref. use 35,210. New cards issued 922; "live" cards 1677. Receipts \$8974.29; expenses \$7062.40 (salaries \$2379.35, books \$1405.06, periodicals \$414.33, janitor \$757.01). Summing up the work of the year Miss Hoover says:

"In making this report I have to record an uneventful year, yet one of continued prosperity. It has not been found necessary to make any radical changes in our methods of work, as those in use still continue to meet our needs. . . . The first two or three years in our new building produced a rapid increase in both the circulation of books and in the use of reference books, but from now on, I believe, under the present regulations, and until the population of the city becomes larger, we will grow much more gradually."

During the year the children's librarian visited all the rooms in grade schools and talked to the children on the use of the library, how to use the catalog, etc., also distributing lists of carefully selected books. Miss Hoover suggests the further extension of this work with class room libraries. A pleasant feature of the year was the colonial exhibit of articles of dress and furniture held at Thanksgiving.

Laconia (N. H.) P. L. (Rpt. — year ending Dec. 31, 1905; in 13th rpt. of city officers, p. 86-100.) Added 543; total 11,513. Issued 32,197. New registration 462; total registration 1577.

The library received 196 v., 2 pamphlets, and 262 numbers of the *Granite Monthly* from the estate of the late Judge Hibbard, which were received too late for record in the gifts of the year. The *Granite Monthlies* were especially valuable, as they completed the library set. In this connection Mr. Davis urges the importance of prompt binding of periodicals for reference use.

The circulation shows a gain of nearly 10 per cent., and no books were lost. Indeed, of 73,856 books issued since the new building was opened, all but one have been returned or paid for by the borrower. "This is the

more gratifying because no one claiming a temporary or permanent residence in the city has been required to furnish a guaranty or make a deposit. In almost every instance a card has been issued and a book loaned immediately. Moreover, the youngest child who can write can come to the library alone, register, and obtain a book to take home. 252 children under 12 years of age have registered and drawn books. No one of these has been known to abuse the confidence thus reposed." Delivery service by messenger has been maintained for the district known as The Weirs, to which 1056 v. were sent—a gain of 80 per cent. The experimental Sunday opening of the library for reading room use will be continued a little longer, in order to fairly judge results.

Much has been done to improve the collection and make the library more useful by adding periodicals, books on trades and useful arts, popular books, and songs and instrumental music; there are frequent exhibits of pictures and photographs; and shelving for reference books is to be placed in the study room. A separate children's room is greatly needed.

Lincoln (Neb.) City L. (Rpt., year ending May 31, 1906.) Added 4224; total 19,409. Issued, home use 119,560, of which 38,763 were juvenile. Of the adult circulation 76.3 per cent. was fiction. New cards 2139; total registration 7144. Receipts \$992.38; expenses \$9787.23.

"The growth of the library during the past year, both in patronage and books added, has been the largest in any year of its history." Work with the schools has been continued, so that families who would not otherwise be reached share library benefits. An interesting experiment was made for five days during the winter in order to ascertain what districts of the city need the library. Addresses having been noted in charging books, a city map was then dotted in black and white to show the localities most affected by the library. Improvements have been made in the children's room and a story hour begun. In the cataloging department, aside from routine work, a printed finding list has been issued.

Littleton, Mass. Reuben Hoar L. At the annual meeting of the trustees of the Reuben Hoar Library in March last Mrs. Adelia M. Parker was appointed librarian in place of Miss S. F. White, resigned.

Los Angeles (Cal.) P. L. In *Out West* for September Charles F. Lummis gives, under the title "Books in harness," an extended historical and descriptive account of the Los Angeles Public Library, with numerous illustrations. The real birth of the institution was Dec. 7, 1872, when at a public mass meeting the Los Angeles Library Association was organized. In 1889 the library received its first

municipal appropriation and was removed to the city hall building, and Miss Tessa L. Kelso was appointed librarian; it then contained just 6356 books and 132 members. With Miss Kelso's administration began its real expansion along modern ideals; "the library has never grown so fast in books, circulation, membership or scientific methods in any equal period since, as in the six years during which she raised it from 6000 to 42,000 volumes, from 12,000 to 329,000 circulation, and from 132 members to almost 20,000." In 1891 the library was made free to the public. The development of the past 15 years is reviewed, and Mr. Lummis describes the changes effected during the last year, under his own administration. At the present time, he says, the library ranks among the chief public libraries of the United States, "first in number of volumes per capita and in circulation per capita—and the field nowhere; second in circulation per volume; ninth in gross circulation, even as against cities 14 times its size and with 10 times as many books; 20th in population, or thereabout." Tabulated statistics show increases in appropriations, staff, expenditures, and activities. The new quarters to which the library removed in the spring of this year are described, with particular emphasis upon the roof garden reading room, already noted in these columns. Of this Mr. Lummis remarks that "a couple of Carnegie branches in Brooklyn have roofs and some flowers in terra cotta flower-pots; but Los Angeles has the first real roof-garden reading room in America." In the interest of accuracy it should be mentioned that the Irvington street branch of the New York Public Library had a roof garden reading room in successful operation some time before the establishment of the Los Angeles department.

One recent change in method has been the restriction of free access. Mr. Lummis says: "About eight years ago this library adopted the 'open shelf' system. The enormous loss of books by theft and mutilation within the last four or five years, exceeding in proportion that reported by any other library in the country, led to the closing of the shelves in the reference and reading rooms in June, 1906. Fiction and juvenile shelves had been closed in 1903. This is intended as temporary only, and only until a system can be put in operation by which the public shall not be deprived of the important privilege of access to the shelves on account of the few but active thieves who abuse this privilege."

Madison, Wis. Library thefts. During the last week in July the authorities of the Wisconsin State Historical Society and the state university library, both housed in the same building, discovered that valuable books and pamphlets had been stolen, the thefts extending over a period of two years. The offender was Miss Jennie H. Morrill, of Atlanta, Ga., for two years a fellow in history at the state

university, who had left Madison at the close of the university term to accept a position in the autumn as instructor in a southern college.

It is the custom of both the historical and the university libraries to take an inventory of the shelves during the quiet period immediately after commencement and just preceding the summer session. As a result of the inventory this year an unusual number of important books and pamphlets were found to be missing—particularly in the case of the historical library. Even after careful search for possible mislaid volumes, the residue of actual losses was so large as to create alarm. An analysis of the losses disclosed the fact that they were particularly heavy in rare and valuable items bearing on southern history. The number of persons working in this field, and granted access to the shelves, did not exceed three or four. This narrowed the inquiry down to a small circle. A council of war was held between the professors of history and Dr. Thwaites, superintendent of the library, and a combination of circumstances pointed strongly to Miss Morrill, who had been a graduate student at the university for two years past, and a fellow in history. She took her master's degree at the university in June last, and was engaged upon studies in southern history leading up to a doctor's degree a year or two hence. Although Miss Morrill had left town, it was known that six of her boxes were in temporary storage in a warehouse in Madison. Her keen desire to accumulate a library of American history, especially upon the south, was a fact well known to many. She had during the past year purchased numerous books at auction; but the grounds for suspicion were so convincing that her collection also contained books and pamphlets taken from the historical library that on July 28 a search warrant was sworn out, and Dr. Thwaites, with Walter M. Smith, the university librarian, made the examination of the boxes in the presence of a deputy. Evidences of theft were at once found and they multiplied as the examination proceeded. In the boxes were found about 200 books and pamphlets, many of them of great rarity and value, and about equally divided between the two libraries. While upon the historical side, southern history led all other fields, the books from the university library were of a more general character. To add to the outrage, in order to destroy identity, title-pages had been torn out, either wholly or in part, in scores of books, and in many other ways the volumes had been cruelly mutilated. As very many of those thus wantonly injured are rarities of high market value, the vicious ruin of the book, from a bibliographical point of view, is particularly saddening. Not only were 200 items from these two libraries discovered, and their identity established through marks of ownership elsewhere in the books; but some 35 or 40 other volumes were set aside as exhibiting

evidences of belonging to some out-of-town library, probably of a college.

Publicity was given to the matter in the local press, and in the press elsewhere, but it is not likely that the matter will be prosecuted further. Miss Morrill was at once communicated with by letter, by Dr. Thwaites, and in reply acknowledged the thefts, stating that at the time they were committed she was not accountable for her actions.

New York P. L. A placard setting forth the rules regarding school and special use of books has been printed for display in all places where it may be useful. It is to be posted in all the public schools, elementary and high, truant, nautical and technical; in colleges, corporate and private schools, trade and technical schools and in special schools; in teachers' agencies and the hall of the board of education. In all the public school buildings the placard will be framed and fastened to the library bulletin board now maintained in nearly every school. The regulations it sets forth are partly new and partly a liberalization of some of the former rules. They include permission that books loaned on special cards may be issued "without limit as to number;" authorization of branch librarians, at their discretion, to issue special cards to any one so desiring; issue of eight books at a time for summer or vacation use; and abolition of guarantor requirement for teachers in public or corporate schools or colleges. Announcement is also made that a school library, consisting of books approved for class use and for teachers' reference by the board of education, is on permanent exhibition at the office of the travelling libraries department, 190 Amsterdam avenue. Books for immediate and temporary use in class rooms will be loaned upon receipt of request signed by any teacher registered at a designated branch.

New York P. L. HELBIG, Richard E. *Deutsch-Amerikanisches in der New York Public Library*; reprinted from *German American Annals*, v. 4, no. 5, 1906. 12 p. O.

An account of the growth of the German-American collection during the year 1904-5.

New York State L. On Aug. 5 Governor Higgins commissioned two architects—Mr. Carrere, of Carrere & Hastings, New York City, and George L. Cary, of Buffalo—to recommend a site for the new state educational and library building, which is to cost \$4,000,000.

Northfield (Vt.) P. L. The Brown Public Library building, the gift to the town of George W. Brown, of Boston, was dedicated on Aug. 21, the exercises being held in the Methodist church.

Pasadena (Cal.) P. L. (Rpt.—year ending June 30, 1906.) Added 2685; total 25,781.

Issued, home use 135,423 (fict. 61,361, juv. 28,844). New registration 2147. Receipts \$12,653.98; expenses \$10,876.23.

"The gain in home circulation of books, 14,820 over last year, shows about the same proportionate increase as for the year previous." There was an increase of 500 v. issued in the class of useful arts, attributed to recent interesting additions, mainly of books on engineering. The circulation from the children's room was 21.3 per cent. of the whole; 1652 v. were issued to teachers on special cards. No record is kept of reading room or reference use.

Considerable additions were made to the collection of Californiana and the more important accessions to this and to the general collection are noted. Of the 625 volumes purchased in fiction, 325 were to replace worn out copies, and 297 of the 466 juvenile books were also duplicates of popular books, incapacitated through hard service. An average of nearly 1000 books per year are relegated to the worn out collection, and are variously distributed to missions, settlements, and the almshouse. The children's room received a fine oil painting of "Paul and Virginia," a bequest of the late George A. Breed.

Paterson (N. J.) F. P. L. (21st rpt.—year ending Jan. 1, 1906.) Added 4326; total 28,006. Issued, home use, 126,919; increase from previous year 16,686, equivalent to the use of every book in the library available for circulation about five and one-half times (fict. 66½ per cent., the lowest so far). New registration 2852; total cards in force 10,642. Receipts \$28,426.41 (including \$5184, balance of "Reconstruction fund"); expenses \$24,504.26 (salaries \$12,181.65, books \$5359.26, periodicals \$677.09, binding \$833.77, fuel \$563.79, light and water \$497.27 [part of year only], insurance \$1445.80).

The year has seen the completion of the Danforth Memorial Library Building, formally opened on April 29, and free to the public on May 1. (See *L. J.*, 30:306.)

"After nine months of use it is safe to say that the building is a thoroughly satisfactory and successful one. The rooms are spacious, so that, although there is often in the aggregate a large number of people in the building, yet it is seldom that any one room is overcrowded. The light is everywhere excellent. The arrangement of the rooms and the various minor facilities for doing library work are most satisfactory." The librarian further says: "The children's rooms although not very large are particularly attractive and satisfactory. The shelves in the children's reference room are nearly all empty and about \$1500 worth of books are needed here. Children to whom cards are now issued must be over 12 years of age and there are 2448 who now hold valid cards; during the year they have taken to their homes 53,892 volumes. This is con-

siderably more than a third of the total circulation from the entire library.

"The chief points to which I should like to call attention are, first, the large use made of this little collection of books—the children's library contains about 4357 volumes—second, the good character of the reading of the children—only about 64 per cent. is fiction." Nearly 9000 volumes were history and travel, constituting 16 per cent. of the whole, 2484 volumes—nearly 5 per cent.—were biography, 1675 volumes or 3 per cent. were elementary science, nearly three thousand were poetry and miscellaneous literature. He also urges the abolition of the age limit, which has shut out hundreds of children of foreigners eager to learn the story of their new home. A beginning has been made in work with the schools, but extension of this department and the establishment of branch libraries are most insistently advocated and appropriations asked. In the cataloging department 4609 volumes have been cared for, the total number to date being 28,451.

Philadelphia, Academy of Natural Sciences L. Added 849 v., 5956 pm., 235 maps, 44 photographs. Good progress was made in binding, 1697 v. having been bound and 204 additional sent to the binders. "This work places the library in a better condition than it has ever been before, although there still remain a large number of unbound volumes in the section of transactions and periodicals."

Philadelphia, Apprentices' L. Co. (86th rpt.—year ending March 31, 1906.) Added 1487; total not stated. Issued, home use 74,349 (fict. 55,485); readers in ref. dept. 6174. In the children's room the circulation was 19,384 v. as compared with 16,068 in 1904-05, and attendance 27,944 as compared with 24,610.

"The year has been singularly lacking in incidents of sufficient moment to be noted in the report, although it is doubtful whether any year since the removal of the library to its present situation has witnessed greater improvement in the quantity and quality of the work done."

Philadelphia F. L. (10th rpt.—year ending April, 1906.) Statistics of growth are given in the following way: "The number of volumes in the system last year was 274,072 and 10,602 pamphlets. This number has been increased and the volumes belonging to the library are divided amongst the several departments and branches with a total of 277,361 v. and 19,797 pamphlets. Issued, home use 683,009. Readers' cards in actual use 125,219. Reading room visitors 798,326. Receipts \$161,189.52; expenses \$160,388.24. Lecture courses have again been an important factor in library activity, both those given under the auspices of the library and the University Extension Society with 102 lectures delivered to 25,894 persons and the School Extension

series, numbering 42 with an attendance of 13,765 children. The weekly story hour in the children's room has shown direct results in the constant demand for books relating to the stories—books that were seldom in circulation a year ago." A graded plan dividing the children into two classes has been found effective, and so great has become the popularity of these story-telling hours that tickets of admission have become necessary.

The department for the blind now registers 962 readers, with a circulation of 7145 v. In this connection Mr. Thomson makes a moving appeal for a fund of \$100,000, the income from which may be used in providing books in raised types "for the 80,000 blind in perpetual darkness." The report includes records of the 84 travelling libraries used in fire, police, and telegraph stations and various other depositories; and also of the several branches, either completed or in process of building, provided for by Mr. Carnegie's gift of \$1,500,000. But each year the need becomes more insistent for a good permanent central library where growth may be unhampered by the present crowded and unsafe conditions. Mr. Thomson calls attention to a plan for securing quarters in the Pennsylvania Museum of Industrial Art which, with alterations, may be made to serve present purposes and would be convertible into a suitable building by a judicious scheme of reconstruction.

Philadelphia L. Co. Interesting early records of the library are given in the *Pennsylvania Magazine* for July, where Albert Edmunds describes "The first books imported by America's first great library, 1732." Many of the books listed in this first importation were discovered by Mr. Edmunds to be still in the possession of the library, some of them still with the original book numbers, and he asks: "Is there another library in the United States where a system of numbering has persisted for 136 years, and where the handwriting of librarians of the French and Indian war can still be traced upon the faded covers?"

Pittsfield, Mass. Berkshire Athenaeum L. (Rpt., year ending June 1, 1906; in *Quarterly Bulletin*, July, 1906.) Added 2675; total 49,869. Issued, home use 94,186. New cards issued 1202. Receipts \$12,741.77; expenses \$12,313.44.

Much space is given to the methods devised for the protection of books and means of recovery for damage by borrowers. The departments of fiction and juvenile literature were closed to the public from April 13 to May 21, in order that a thorough examination of books might be made and a weeding out and renovation effected. Since then a system of inspection, checking and registration of condition of books before delivery and upon return has been in operation. A duplicate collection of novels has met with general approval. After an enumeration of the work

devolving on each department, Mr. Ballard recommends the conversion of the art gallery into a reading room, thus setting free more space for book rooms.

Providence (R. I.) P. L. (28th rpt.—year ending Dec. 31, 1905.) Added 5036; total 119,079. Issued, home use 129,707 (fict. 38,450, juv. fict. 29,562). New registration 6932, of which only 1346 cards were issued to children under 14 years of age, as compared with 1850 in 1904; total registration 18,151. Receipts \$39,832.26; expenses \$40,496.73.

Attention is called to the slight decrease in circulation over that of 1904, the reason assigned being twofold, *viz.*, the measures rendered necessary by the large number of "missing books," and the library's inadequate supply of books in demand. These two points are discussed at length. Book thieving has reached lamentable proportions, and with the utmost vigilance the culprit has been neither detected nor stopped. From Jan. 1, 1904, to Dec. 31, 1905, the total number missing was 1796, and in the last three months of 1905 40 volumes have disappeared from the industrial library alone. Mr. Foster also makes an urgent plea for appropriations to enable the library to make larger book purchases, to extend its work with the schools, to place branch libraries, in short, to give a library service commensurate with the prosperity and needs of the city.

In summarizing the work of the various departments, reference is made to the new collection of "school duplicates" for the use of high school teachers and pupils and to the increasing work of the children's room. The systematic plan of relations with the schools has been well developed by means of visits paid to the library by 48 classes, numbering more than 2000 children, by lecture courses, and by the organization of the "Children's Library Helpers," made up of children, their parents and friends, banded together to assist the children's library financially and otherwise.

In the cataloging room 4892 volumes have been classified and 18,300 cards written, and many annotations added to cards giving the "point of view" of the book in question on disputed subjects. There have been 15 exhibits—photographic, binding, and bulletin—in the lecture room.

Rochester, N. Y. Reynolds L. (21st rpt.—year ending May 31, 1906.) Added 3169; total 58,237, of which 33,321 are in the reference department; pamphlets 5857, of which 2180 are cataloged and 3677 classed and shelved. Issued, home use 28,496; hall use 22,300. Attendance 100,909. New cards issued 1164; cards in use 2970.

During the year changes and repairs were begun "to fit the coach house for the reception of books. This will provide room for 25,000 additional volumes, at an expense of about

\$2700. The building was strengthened and both stories will be utilized. The cost will be greater than was estimated for the partial reconstruction originally contemplated, but the results are such as amply to justify the increase. The library will have a convenient building at one-fourth the cost of a new 'unit' equally commodious."

St. Louis (Mo.) P. (F.) L. (12th rpt. — year ending April 30, 1905.) Added 19,455 (including the Model Library); total 190,395. Issued, home and school use 962,538; lib. use 111,247. Total issue of books 1,073,785; periodicals 260,321. New registration 19,769; total cards in force 59,327. Receipts \$325,534.63; expenses \$264,676.44 (salaries \$36,375.56; books, binding periodicals \$18,375.69; "ordinarily the amount spent for books is much larger than this, but our purchases were necessarily curtailed on account of room").

The contrasted effects on the circulating and reference departments of the Louisiana Purchase Exposition are especially emphasized. Whereas for the two years previous to the fair the use of the reference rooms for preparatory inquiry concerning statistics of fairs, architectural study and Louisiana history had been very marked, when the fair was opened there was a discernible falling off in visitors to this department. And yet during the seven months of the fair's life, when reason and experience led one to expect a decrease in circulation also, "there was an increase of nearly 23,000 vols. drawn for home reading and a gain of nearly 40,000 in the total issue of books and periodicals."

Mr. Crunden enumerates the work of the various departments, letting figures show the immense amount of routine work involved in the ordering, preparation, circulation and care of the books in a large city library. As an indication of the growing popularity of the "open shelf" plan, he points out that a little more than half of the total number of volumes drawn by adults were selected by the readers themselves from a few thousand volumes on open shelves in collections changed from week to week.

Another item of local interest deduced from the tables of registration by wards is that the ward having the largest library registration is "three miles or more west of the library and a mile beyond the former western limit of the city."

"There is a steady growth in the juvenile department. The number of volumes drawn by visitors to the library was somewhat smaller than that of the previous year; but this was more than balanced by the increase in circulation through the schools." Miss Krug, the children's librarian, says further:

"I wish to state that in our work with the schools there seems to be a gradual, normal, healthy growth from year to year. Yet, large as the issue from the supplementary collection has been, there is still much room for devel-

opment. Every year more schools come in as borrowers, but the use of books varies greatly in different schools."

By far the most valuable gifts in books the library has ever received is the A. L. A. or model library collection, numbering over 5000 volumes, exhibited at the exposition.

Seattle (Wash.) P. L. (15th rpt., 1905.) Added 11,779, of which 11,499 were purchased; \$14,221.39 were spent for books. Total 71,326. Issued, home use 234,503, of which 179,145 were issued from the main library, 25,977 from the branches, and 33,381 from the school rooms. New registration 7231; cards in force 14,607.

An attractive report, with illustrations of the exterior and floor plans of the new building, and interiors of the branches and present temporary building. "Progress upon the new building to a point of about three-fourths completion, the establishment of two new branches, and a renewal of liberal book purchases are the salient features of 1905." The present temporary building was removed early in the year to an inconvenient site, and owing to this, and to the cramped and unsuitable quarters the use of the library has fallen off to a marked degree. The three branches (Fremont, Green Lake, and South) have a record of steady growth; the Yesler reading room, in the downtown business section, has a daily average attendance of at least 500 persons; and the school work has been carried on from a small portable building, lent by the school district, and attached to the rear of the main building, giving facilities for the display and accommodation of the entire collection of school libraries.

Notable purchases of the year were a set of Canadian public documents, and the valuable mineralogical and metallurgical collection of James P. Kimball. The Canadian documents are a nearly complete set, and "a real necessity from an historical standpoint" on account of the close interrelation of Canada, Alaska and the Pacific northwest. The Kimball collection is regarded as an invaluable addition to local sources of research, and as marking the beginning of a most valuable department of the library.

Publication of a monthly bulletin of accessions was begun in January, after a lapse of four years; "it had seemed inadvisable to print it since the burning of the library, because the accessions were at once so numerous and so largely duplicates of old stock. In that period 50,000 v. have been added." Finding lists in natural science and in useful arts have been published, and lists in other classes are in preparation, so that when completed the lists will form a printed catalog of the library.

From the school collection, 488 libraries, of from 20 to 24 volumes each, have been sent out to 425 different public school rooms. In all there are 7500 v. in the circulating school collection, besides 4000 v. for daily use in the

school rooms, of which no statistics are kept. Travelling libraries are sent to 16 fire houses, orphan asylum, industrial home, missions, Sunday schools, and parochial schools. The high school library has been made a regular deposit station, and Mr. Smith expresses the conviction that every school house should in time contain a circulating branch of the library, controlled by the library authorities.

Sedalia (Mo.) P. L. (11th rpt.—year ending April 30, 1906.) Added 1095; total 6968. Issued, home use 41,494, a decrease of 96 from last year (fict. 25,072, juv. 12,244). New registration 693; total not given. Receipts \$6070.81 (from city \$4802.63); expenses \$5146.15 (salaries \$1970, books and binding \$1119.81, interest, heating, insurance, etc., \$1146.33, paid on indebtedness \$800).

Emphasis is laid on the work in the children's room, where there have been regular story hour meetings, the display of many new pictures and bulletins, and special celebrations. On Washington's Birthday a loan exhibit of historic relics illustrating American history and customs was opened. Sunday use of the library has taxed its capacity. The librarian expresses the hope that either through the post-office or by means of travelling libraries books can be taken to country readers. To the president of the board, however, the most important event of the year has been the payment of the last dollar of indebtedness.

Swarthmore (Pa.) College L. The cornerstone of the new library building was laid on June 13 last. Dr. James H. Canfield, librarian of Columbia University, made an address, in the course of which he said: "A community which maintains a public library simply adds to its roll of citizens as many worthy names as there are worthy volumes on the shelves. A college places in its faculty all the authors found in the alcoves of its library, most tireless and efficient in instruction. The librarian of either public or institutional libraries is simply a most generous host, whose hospitality is all-embracing, who invites townsmen and students to meet the notables of the literary world, who carefully guards the list of invited guests, the permanent ones, to prevent the presence of a single unworthy names; and who sees that each friend—and all patrons of the library are the librarian's friends—meets just the guest he most desires to know, the one who will be most helpful to him in his present need. Changing the figure—the librarian and his staff constitute in the world of letters that which is the straight line in geometry—the shortest distance between two points, the book and the reader."

In the absence of Dr. William Hyde Appleton, professor of Greek at Swarthmore, his address was read by the newly-appointed librarian of the college, John Russell Hayes.

Trinity College, Hartford, Ct. (7th rpt.—year ending May 31, 1906.) Added 1770 v.,

1248 pm.; total 57,574 v., 32,446 pm. Attendance recorded is 3852 for the year.

Besides interesting tables of class attendance and the distribution of new books with average expense per volume among the various departments, a summary of gifts and reports of binding, etc., the report contains a sketch of the history and progress of the library during Mr. Carlton's seven years' librarianship. In conclusion he enumerates the pressing needs of the library in order that it may keep pace with the growth of the college during the next five years, these being a larger endowment, a new building and an increased working force.

Waco (Tex.) P. L. (6th rpt.—year ending April 20, 1906.) Added 382; total 5727. Issued, home use 29,581 (juv. 10,306), equivalent to sending out every book in the library nearly six times. Borrowers' cards in force 2455. Receipts \$4618.96; expenses \$4112.59 (salaries \$1460, books \$708.61, building and furniture \$1243.77, light, periodicals, binding, etc., \$700.21).

This is the report of the first full year in the new Carnegie building, and fittingly contains a brief sketch of the history of the library since April 21, 1898, when a library association of 36 members was formed with a property of \$36 and 36 books. Carefully compiled tables of statistics of books, circulation, classes of patrons, etc., are inserted and a general review of library activities. An urgent appeal is also made by the president of the board for larger book purchases and a course of free lectures promised.

Washington, D. C. Office of Documents. The appointment on Aug. 14 of W. L. Post as Superintendent of Documents, noted elsewhere, has been accompanied by the following changes, incidental to the reorganization of the office: chief clerk, Arthur E. Barker; chief of the bookkeeping and correspondence section, Alton P. Tisdell; chief of the cataloging and indexing section, Henry S. Parsons; chief of the library section, F. A. Crandall; chief of the stock and shipping section, W. F. Mahony.

FOREIGN

Birmingham (Eng.) F. Ls. (44th rpt.—year ending March 31, 1906.) Added 10,304; total 304,822. Issued, home use 1,109,175. Including reference use the total use of books for the year was 1,485,796. Registration not given.

During the past seven years there has been a systematic filling up of gaps in the collection of English literature in the reference library caused by the hasty restocking after the fire in 1879. These deficiencies have now been made good in the complete works of forty authors, and additions have been made to the works of 473 other authors, and, furthermore, this has been "accomplished with-

out detriment to the other classes of books." The work of arranging, mounting, cataloging, and binding of the Forrest collection of Shakespeariana, bound in 76 large volumes and containing nearly 18,000 illustrations of Shakespeare's plays, has also been completed. A new catalog containing registry of 31,000 books has been provided for the Central Lending Library. Four lectures on "The city's books and how to read them" have been given, and in many directions there has been a general increase of usefulness in the library and its many branches.

Brazil, National L. The Brazilian government has authorized the ministry of justice and home affairs to expend \$2,600,000 for the erection of a building for the national library.

BURPEE, L. J. Building up the Canadian archives. (*In Nation*, July 19.)

An interesting account of the work begun by Dr. Brymner and now being continued and developed by Dr. Arthur Doughty, the present Dominion archivist, in building up and making available the Canadian archives. The archives building, for which an appropriation was granted two years ago, is now nearing completion. "It has been made as nearly fire-proof as possible. The book-cases, shelving, doors, and window-frames are of steel. It is even proposed to have tables and chairs of the same material. When the archives have been moved into their new quarters, they will be as safe as human ingenuity can make them." To the new building will be removed not only the present archives collection, but the historical material now scattered through various departments of the government, and the entire mass of material will then be classified and shelved. After this preliminary organization it is planned to make the archives available to students by a card index. "The new archivist has also made a beginning with a bibliography of Canadian history, designed on a scale far in advance of anything now available. This will also be on cards, but when reasonably complete it will be published in one or more large volumes, to be followed at intervals by supplements." A guide to historical manuscript material throughout Canada is another enterprise planned, on which specialists are already at work in the various provinces. "The recent organization of an archives department at Toronto, under the provincial government, has stimulated the interest in original documents in Ontario, and has relieved the Dominion archives of much research so far as that province is concerned. By a system of co-operation the provincial and Dominion archivists will each get the benefit of the other's labors."

Christiania, Norway. Deichmanske Bibliothek. (Rpt., 1905.) A special interest attaches to this report for those who at St.

Louis came to know Herr Nyhuus, and the enthusiasm he gives to his work. The record for 1905 shows 82,605 volumes in the library and a circulation of 484,589. This, as Herr Nyhuus points out, is 2.18 books per inhabitant for Christiania. Of this circulation 157,048 went to children—those under 18—and there is a strong plea for a children's room, that this work may be done more effectively. 61,642 of the circulation was from the seven delivery stations. During the year the Kristiania Folkebibliothek society gave their books to the Deichmanske Library, and it was planned to start a branch with these, but so far this has not proved feasible. 5915 v. were sent to the binder, the average cost being 1.02 crowns, or about 28 cents. The library lost 108 v.

The card catalog now includes all books not in the printed catalog, and is to be completed as rapidly as possible. A library publication of 1905 of interest to American librarians is a list of the *belles-lettres* in English, French and German, published at half a crown (14 cents). The directorate of six had two new members chosen during the year, one of whom is a woman. The political crisis in Norway did not, as might have been expected, lessen the use of the library, but the percentage of historical literature read increased decidedly.

Croydon (Eng.) P. Ls. (17th rpt.—year ending March 17, 1906.) Added 3785; total 55,263. Issued, central library, home use 210,289; ref. use 50,237; branch libs. 191,551 (fict. percentage of the total issue, including reference, is 57.6). Readers in ref. lib. 21,560, the largest yet recorded. Issues from school libs. 70,265, an average of 18 issues of each volume.

The establishment of 30 school libraries during 1904 have been most successful, while as their natural extension, this year there have been several series of "library talks" to children, both in the Central library and in the Ecclesbourne Road school, with a total attendance of 5013 children. Three series of talks to adults during the winter have also been given with the new feature of issuing the books exhibited on such occasions to any members of the audience, whether or not holding a library ticket. These issues are called "privilege" issues, and serving as an introduction to the use of the libraries, have shown good results. The experiment has even been extended to societies. A number of book exhibitions relating to various topics took place in the lecture room.

In the clerical department the central card subject-catalog has now been brought up to date, and the branch card subject-catalogs, in reality union catalogs, are nearing completion. Mention must also be made of the magazine index, bulletined during the month, and then placed in the subject-catalog, as well as of the children's reading lists issued in connection

with the "library talks" and published in the *Reader's Index*, a magazine published every two months by the libraries committee.

The report also contains a description of the proposed children's room, now become a necessity, and the librarian's comments on the excellent results of the monthly staff meetings.

Appended are statistical tables, lists of subjects of "library talks," the titles of "privilege" issues of books, and 24 queries addressed to the library; also a report of the annual meeting of the Library Association held in Cambridge in August, 1905.

Glasgow P. Ls. One of the handsomest of the district libraries of Glasgow, that at Parkhead, was formally opened on the evening of Aug. 4. The building is of red stone and cost £6000, with an additional £1000 for furnishing. The general reading room has seats for 70 readers and newspaper stand accommodations for an equal number. There is also a ladies' reading room, for 36 readers, with reference books and periodicals. A reading room for boys and girls is also provided.

Venice, Biblioteca Marciana. BIBLIOTECA MARCIANA NELLA SUA NUOVA SEDE: 27 Aprile, 1905. Venezia, Bibl. Naz. Marciana, 1906. 117 p.

Contains the inaugural addresses delivered on the opening of the new building of the Marcian Library, historical articles regarding the library, and a bibliography.

Librarians

BARNARD, Miss Sarah F., for 50 years librarian of the Nantucket (Mass.) Athenæum, died at her home in Nantucket on Aug. 27. Miss Barnard had resigned the position of librarian, on account of ill health, on July 17, and had been unanimously elected librarian emeritus. Miss Barnard was a native of Nantucket, and in the autumn of 1856, when 21 years old, was appointed librarian of the Athenæum, succeeding Maria Mitchell, who had resigned to become professor of astronomy at Vassar College. She held the position continuously until advancing years and ill health compelled her retirement only a few weeks before her death.

BARNES, Walter L., of the New York State Library School, 1901-2, has resigned his position as librarian of the Y. M. C. A. at Albany, N. Y., to become assistant librarian at the University of Colorado, Boulder, Col.

BROWN, Miss Edna A., New York State Library School, class of 1898, assistant at the Rosenberg Library, Galveston, Tex., has been appointed librarian of the Memorial Hall Library, Andover, Mass.

BROWN, Walter L., assistant librarian of the Buffalo (N. Y.) Public Library, was on July 14 elected librarian of that library, succeeding the late Henry L. Elmendorf. Mr. Brown was born in Buffalo, and educated in the public schools of the city and at Albany Academy. In 1878 he entered the service of the Young Men's Christian Association, in which he remained for five years. From 1883 to 1897 he was connected with the bookselling firm of Peter Paul & Co., and in the latter year he was appointed assistant librarian of the Buffalo Public Library, then just established as a free public institution, a position he has held until the present time. His appointment to the headship of the library he has so faithfully served has been received with general satisfaction, for he possesses unusual equipment for the post in his thorough knowledge of the city, of the library, and of the book world. In his previous years of work, especially during Mr. Elmendorf's continued ill health, he has proved his fitness for administration, and has won the confidence of the board of directors and the loyalty of the staff. Mr. Brown has been a member of the American Library Association since 1887.

COCHRANE, Miss Sarah A., for 20 years chief of the catalog department of the Detroit (Mich.) Public Library, resigned Aug. 1 to take a well-earned rest. When Miss Cochrane took hold of the work the library had some 75,000 books, entirely unclassified and without a catalog of any description. The Decimal classification system was adopted. Without any previous training or experience in this line of work and with a staff of wholly untrained helpers, Miss Cochrane, within three years, classified the entire library, made a good start on a card catalog, and prepared and put through the press the "General catalog," a volume of some 1200 large octavo printed pages, which with its three supplements, in the same form, is considered by many librarians a model of its kind. This is an illustration of her energy, comprehensive grasp of the work in all its details, and ability to accomplish results.

CRAIG, Miss Clara L., of the New York State Library School, class of 1905, has been promoted to the position of reference librarian at the University of Nebraska.

ELMENDORF, Mrs. Theresa West, was on July 14 elected assistant librarian of the Buffalo (N. Y.) Public Library, succeeding Walter L. Brown. Mrs. Elmendorf has been closely identified with the work of the Buffalo library during the nine years of her late husband's service as its librarian, and it is a satisfaction to her many friends that her high abilities are still to be devoted to the field in which they have been so fully proved.

GARDNER, Miss Jane E., librarian of the People's Library, Newport, R. I., has accepted

a position on the staff of the Seattle (Wash.) Public Library, her appointment to take effect Oct. 1.

GEROULD, James T., librarian of the University of Missouri, has been appointed librarian of the University of Minnesota, Minneapolis.

HIRSHBERG, Herbert S., of the New York State Library School, class of 1905, has resigned his position as assistant in the Music Division of the Library of Congress to become assistant in the circulating department of the Carnegie Library, Pittsburgh, Pa.

JENNINGS, Judson T., New York State Library School, class of 1897, librarian of the Carnegie Library, Duquesne, Pa., was on Aug. 29 appointed director's assistant in the New York State Library, his appointment taking effect Oct. 1.

McKEE, Miss Alice D., of the New York State Library School, class of 1905, has resigned her position as cataloger at the University of Michigan to become librarian of the Beatrice (Neb.) Free Public Library.

MACMULLEN, Miss Grace Lord, a member of the library staff of Columbia University, died at her home in New York City Aug. 8, in her 33d year, of an illness that kept her from the library less than one week. Miss MacMullen was born in New York City Oct. 26, 1873. She received her education in private schools of the city, and in 1893 she passed successfully the Harvard examinations in history, algebra, geometry, physics and Greek, and two courses each in French, German, Latin and English. From 1890 to 1893 she taught classes in the school of her father, the late John MacMullen. During the next four years she was engaged in private tutoring and rendered occasional service in the Washington Heights Library, of which her father was trustee-librarian. In January, 1897, she was appointed third assistant in that library. From October, 1898, till May, 1899, she was a library apprentice in Columbia University. On May 1, 1899, she went to the New York Society Library for special cataloging work, where she remained until April, 1900. She returned to Columbia in October of the same year, and here she remained until her death. Miss MacMullen was exceptionally competent in every department of library work assigned to her, and she was so lovable in character and disposition that she won the affection and respect of her associates. She was a member of the New York Library Club and of the American Library Association, and had attended the Narragansett Pier Conference.

MURCH, Miss Philura E., of the New York State Library School, 1905-6, has been appointed assistant in the Portland (Ore.) Library Association.

PERRY, Everett Robbins, B.L.S., New York State Library School, class of 1903, has been appointed general assistant in the New York Public Library.

Post, William L., for several months past Acting Superintendent of Documents, at the Government Printing Office, Washington, was appointed Superintendent of Documents on Aug. 14, succeeding L. C. Ferrell, resigned. Mr. Post's promotion is not unexpected, and it has been fully earned by his long and efficient service in the Office of Documents. He has been connected with that office since its establishment in 1892, when he was assigned to it as file clerk. Later he was transferred to the library, where he was engaged in classification and bibliographic work, and became identified with some of the best indexing and cataloging work done by the office. The admirable index to the publications of the Agricultural Department, 1862-1892, published in 1904, was prepared by Mr. Post, and the ingenious classification and arrangement there accepted were devised by him.

RAINES, Judge C. W., state librarian of Texas, died at his home in Austin on Aug. 2. Judge Raines was born on Sept. 18, 1839, in Upson county, Georgia, but had lived in Texas for many years. He studied at Princeton University, but left when a junior in 1858. He joined the Confederacy at the opening of the Civil War and remained in service until its close. He was county judge and *ex-officio* county superintendent of public instruction for Van Zandt and for Wood counties, Texas, from 1876-1878 and from 1886-1890. On May 5, 1891, he was appointed the first state librarian of Texas, which position he held until January, 1895, when he was displaced by a change in administration. On July 7, 1899, he was reappointed and held the position until his death. As state librarian Judge Raines did a great deal to build up a collection of material relating to Texas history, in which he was deeply interested. The old state library, begun in 1836, and destroyed in the burning of the capitol in 1881, had consisted of an incomplete and miscellaneous assemblage of law books and government documents, and at the time of Judge Raines' appointment the annual appropriation for books had dwindled to \$300 and there were no facilities for safe keeping, access, or use. As a result of Judge Raines' efforts the appropriation for books was promptly raised to \$1000 a year and an extra appropriation of \$500 a year was granted to defray the expense of collecting historical material relating to Texas. During the first two years of his work a remarkably full collection of Texas newspaper files was obtained, and the foundations of a good state collection were laid, which it was his constant pride and effort to develop. Judge Raines also compiled and published, as a personal undertaking, a "Bibliography of

Texas," a pioneer work in its field, which although in some respects crude, was an important and valuable contribution to state bibliography; he had completed only a few weeks before his death an elaborate "Analytical index to the laws of Texas, 1832-1905." Of his work as state librarian is said: "His work in the library was a labor of love, and freely did he devote his whole time to it. For many years he was without an assistant; and confining as his duties were during those years, he could be found in the library before breakfast, and often he worked there until 10 o'clock at night. His great love of reading and his deep interest in Texas history gave him command of a vast fund of information, and made him one of the best informed men in the state. His information was at the service of every inquirer. As a result all inquiries were referred to him for facts pertaining to the history of the state. During his term of office the library developed into a valuable bureau of information; answering inquiries was a regular part of his work."

TOLMAN, Frank Leland, head of the reference department of the library of the University of Chicago, was on Aug. 8 appointed reference librarian of the New York State Library, his appointment taking effect Oct. 1. Mr. Tolman was graduated from the University of Chicago in 1899, was a graduate student for the two years following, and since then has been connected with the university library.

Cataloging and Classification

CHICAGO (III.) P. L. Accessions, from May 1 to July 1, 1906. (Bulletin no. 76.) 1906. 16 p. O.

— Books in foreign languages, added during the years 1905-1906. (Bulletin no. 75.) 1906. 16 p. O.

Mainly German, but includes also French, Italian, Spanish, Danish-Norwegian, Swedish, Dutch.

— Books in the Bohemian language, added 1884-1906. (Bulletin no. 70.) 1906. 8 p. O.

CHRONOLOGICAL RECORD OF TRAVELS. Albert J. Edmunds, in an article on "Travelling Friends in America," in the *Friend* for June 30, 1906, says: "In the card catalog of the Historical Society of Pennsylvania we have an article entitled:

'NORTH AMERICA: GEOGRAPHY AND TRAVEL'

"A small blank is left at the end of the line for a date. The date given is the first year when the traveller was in America (including Canada and the West Indies). We thus have a chronological view of American travels from 1492 down to date. This enables students of

any given period to go to contemporary accounts of the country."

CLARK UNIVERSITY L. List of books and pictures in the Clark memorial collection; ed. by Louis N. Wilson, librarian. (Clark Univ. L. publications, v. 2, no. 1, July, 1906.) Worcester, Mass., Clark Univ. Press, 1906. 4+74+6 p. O.

A careful annotated record, arranged in chronological main divisions, running from Manuscript books, Early printed books, through the 16th to the 19th centuries, to Modern books, which latter division contains 786 numbered entries; and is followed by a subject index.

COPYRIGHT ENTRIES. With the first week in July the Copyright Office began the publication of a new series of the *Catalogue of Copyright Entries*, making marked and important changes from the previous system. The weekly catalog is now issued in four parts, the classification following in general that adopted for the proposed copyright law, although combining some of these classes for practical purposes. Thus part 1 includes Class A, Books, including Group 1, Books proper, and Group 2, Pamphlets, leaflets, contributions to periodicals, etc.; Class D, Dramatic compositions, and Class E, Maps and charts. Part 2 includes Class B, Periodicals, that is, the names of periodicals as distinguished from contributions to periodicals included in Group 2 of Class A. Part 3 includes Class C, Musical compositions. Part 4 includes Class F, Engravings, cuts and prints, Class G, Chromos and lithographs, Class H, Photographs, Class I, Fine arts. The system of arrangement varies in the several parts, but each part, except part 3, is indexed by authors or copyright proprietors. Part 1 is, of course, of especial interest to libraries. It gives in the first place a reprint of the full entry of the Library of Congress cards from the type used for card purposes—a decided advance in copyright cataloging. In the case of Group 1, Books proper, figures indicate the number of cards required for complete card catalog entry, the serial number of the copyright entry, the date, and the card order number. The index gives, under the name of the author, a short title and the card order number, from which easy reference may be had to the full entry. It is proposed to cumulate this index, but to what extent has not been determined upon.

The CROYDON (Eng.) P. Ls. *Readers' Index* for July-August is a special number devoted to a "Union subject-index of the libraries." It is a close nonpareil alphabetic index, two columns to the page, referring only to class or subject number, but not to individual books. As books are arranged on the shelves in simple numerical order and as open access prevails, the reference from subject number

to books is a simple matter. The subject number also refers directly to the cards in the subject catalog, which are arranged in exactly the same order as the books.

GREAT BRITAIN. Patent Office L. Class list and index of the periodical publications in the library. 2d ed. London, 1906. 291+8 p. S.

HAMPTSTEAD (Eng.) P. Ls. Descriptive catalogue of the books in the lending department, 1906. 22+509 p. 8°.

Reviewed by E. A. Savage in *Library World*, June, p. 321, as "undoubtedly the best general catalog published in England for several years past." Sold at 1s. to ratepayers and borrowers; to others at half a crown.

INTERNATIONAL CATALOGUE OF SCIENTIFIC LITERATURE (*In Science*, Aug. 17, p. 218-220.)

A belated report of the first meeting of the international convention of the "International catalogue of scientific literature," held in London, July 25-26, 1905.

KATALOG OVER BOGER skikket for folkebogsamlinger; udgivet af Kirkedepartementet. Kristiania, Ameseus Bog- & Accidenstrykkeri, D. 1906. 8+104+27 p. Q.

A D. C. classed list, with prefatory outline of the Decimal classification and author index appended; recommended for popular libraries by the state department of education.

NEWARK (N. J.) F. P. L. A thousand of the best novels. Rev. ed. Newark, N. J., 1906. 40 p. D. 5 c.

In this revision 190 titles have been dropped and others have been chosen to replace them. The type of this list has been held, and other libraries, so desiring, may order copies with their own imprint on the cover, but without other changes, at \$33.50 per thousand.

ST. PAUL (Minn.) P. L. Class list no. 2: Philosophy and religion, 1906. St. Paul, July, 1906. 4+206 p. O.

A short-title, two-column D. C. class list, followed by an alphabetical author list.

WARRINGTON (Eng.) MUSEUM. Catalogue of music. Warrington, 1906. 16 p. O.

A classed list, followed by index of composers.

WILMINGTON (Del.) INSTITUTE F. L. Bulletin for July has a "List of books on Spain and Alfonso XIII."

CHANGED TITLES

"The cruise of the yacht *Dido*," by C. G. D. Roberts (Cosy corner series), published by Page, May, 1906, is the same book as "Reube Dare's shad boat," published by Hunt & Eaton, 1895. A. VAN VALKENBURGH.

Bibliography

ASTERS. Burgess, E: Sandford. Species and variations of Biotian asters; with discussion of variability in aster. N. Y., Botanical Club, 1906. 15+419 p. il. 8°. (Memoirs of the Torrey Botanical Club.)

Brief bibliography of American asters. (1 p.)

BENEDICTINES. Bibliographie des Bénédictins de la Congregation de France; par des pères de la même congrégation. Nouv. ed., entièrement refondue, accompagnée des portraits. Paris, H. Champion, 1906. 3 p. l., 179 [1] p. front., pors. 25½cm.

BEST BOOKS. New York State Library. Bulletin 104, Bibliography 40: A selection from the best books of 1905, with notes. Albany, 1906. p. 549-590. O. 10 c.

BUSINESS. Carnegie Free Library, Duquesne, Pa. Books on business and trades: Special list no. 2, June, 1906. 20 p. D.

CREMONA. Ferotti, L. Saggio di bibliografia cremonese. Cremona, tip. Patronato dei figli del popolo, 1906. 133 p. 8°, 3 l.

DANISH BIBLIOGRAPHIES. The state library at Aarhus, Denmark, has begun the publication of a series of short lists for the use of its readers, and these embrace the whole kingdom, as the library sends its books to any one in Denmark. The first number is entitled "Bygningskunst" (Aarhus, Th. Køster's Boghandel, 1906, 24 p. 12°.) It treats of the art of building and its history topographically by countries. References to Danish trade journals are included, also works in other languages than Danish, particularly a section relating to Schleswig-Holstein before 1864.

EARTHQUAKES. Brooklyn Public Library. Earthquakes and volcanoes. Brooklyn, N. Y., Public Library, 1906. 14 p. S.

Classed list of books and articles in periodicals.

ENTOMOLOGY. Folsom, Justus Watson. Entomology, with special reference to its biological and economic aspects. Philadelphia, P. Blakiston's Son & Co., 1906. 7+485 p. il, pls. O.

Classified bibliography (58 p.).

GARDENING. Select bibliographies: 1, Gardening. (*In Library World*, July, p. 29-40.)

GIPSIES. List of works in the New York Public Library relating to gipsies. (*In*

- New York Public Library *Bulletin*, July, p. 358-367.)
- JAPAN. List of works in the New York Public Library relating to Japan: part 1. (*In* New York Public Library *Bulletin*, August, p. 383-423.)
- LAW. Bibliographie générale et raisonnée du droit belge. Tome II (1899-1903); par Émile van Arenbergh. Suite au tome premier (1814-1889): Notices nos. 1 à 9517 par Ed. Picard et Ferd. Larcier. Bruxelles, Institut International de Bibliographie, 1906. 25½cm. (Institut International de Bibliographie, Bibliographia universalis, contribution no. 49.)
- The main work, covering period 1814-89, was issued in five parts, 1882-90.
- MANUSCRIPTS. Buenos Aires, Biblioteca Nacional. Catálogo por orden cronológico de los manuscritos relativos á América existentes en la Biblioteca Nacional de Buenos Aires. Buenos Aires, Imprenta de la Biblioteca Nacional, 1905. 4 p. l., 386 p. 27cm.
- MISSIONS. Student Volunteer Movement for Foreign Missions. Students and the modern missionary crusade: addresses delivered before the Fifth International Convention. Nashville, Tenn., February 28-March 4, 1906. N. Y., Student Volunteer Movement for Foreign Missions, 1906. 713 p. 8°. Bibliography of recent missionary literature (19 p.).
- MISSISQUOI. McAleer, G.: A study in the etymology of the Indian place name Missisquoi. Worcester, Mass., 1906. 102+2 p. por. maps, 8°, pap., 50 c. Bibliography (2 p.).
- MUNICIPAL AFFAIRS. Library of Congress. Select list of books on municipal affairs, with special reference to municipal ownership; with appendix, select list of state documents; comp. under the direction of A. P. C. Griffin. Washington, Gov. Print. Office, 1906. 34 p. O.
- MUNICIPAL OWNERSHIP. Brooklyn Public Library. Books on municipal ownership. Brooklyn, N. Y., Public Library, 1906. 28 p. S.
- Brief annotations indicate trend of argument or writer's point of view.
- NEW YORK CITY. Brooklyn Public Library. List of books on Greater New York.
- Brooklyn, N. Y., Public Library, 1906. 34 p. S.
- A good classed list; "New York in fiction" covers nine pages.
- PHILIPPINES. Library of Congress. List of works relating to the American occupation of the Philippine Islands, 1898-1903; by A. P. C. Griffin; reprinted from the "List of books (with references to periodicals) on the Philippine Islands, 1903," with some additions to 1905. Washington, Gov. Print. Office, 1905 [1906]. 100 p. O.
- RED CROSS. Criado y Dominguez, Juan Pedro. Bibliografía de la Cruz roja española. Nueva ed., completamente refundida y adicionada. Madrid, E. Catalá, 1905. 304 p., 2 l. 28cm.
- REMBRANDT. Roeper, Adalbert. Ergänzung zum verzeichniss der durch photographie u. kunstdruck reproduzierten arbeiten Rembrandts. (*In* *Boersenblatt f. d. deutschen Buchhandel*, July 3, 1906, p. 6515-6519.)
- ROADS. Webb, Sidney and Beatrice. Bibliography of road-making and maintenance in Great Britain. London, Roads Improvement Assoc., 1 Albemarle st., W., 1906.
- A chronological list of authorities used by the authors in preparing their "History of English local government," now under way.
- SCHOOLS. Suzzallo, Henry. The rise of local supervision in Massachusetts (the school committee, 1635-1827). N. Y., Teachers' College, Columbia University, 1906. 7+154 p. 24½cm. (Teachers' College, Cont. to education, v. 1, no. 3.)
- Bibliography of works consulted, p. 150-154.
- SIBERCH, John. Bowes, R., and Gray, G. J. John Siberch: bibliographical notes, 1886-1905; with facsimiles of title-page, colophons, ornaments, initial letters, woodcuts, etc., used by John Siberch. Cambridge [Macmillan & Bowes], 1906. 49 p. D. [150 cop.].
- Contains bibliographical list of the books printed by Siberch, the first Cambridge printer.
- SPIDERS. Porter, James P. The habits, instincts, and mental powers of spiders, genera argiope, and eperia. (*In* *American Journal of Psychology*, July, 1906, 17:306-357.)
- This article is followed by a bibliography of 77 titles.

SWEDISH LITERATURE. Arskatalog för svenska bokhandeln. Utg. af Svenska Bokförläggare Föreningen genom V. Gödel. Arg. 34 (1905). Stockholm; Föreningen, 1906. 119 p. 1 kr.

WALES. [Cardiff (Wales) Public Library]. Bibliography of Wales: a record of books in Welsh or relating to Wales. no. 22. May, 1906. 8 p. O.

"Contains, so far as can be ascertained, all publications issued during the preceding half year."

WATER SUPPLY. Fiertes, J. H. Waste of water in New York and its reduction by meters and inspection: report to the committee of water supply of the Merchants' Association of New York. New York, June, 1906. 272 p. 8°.

Appendix E contains a full bibliography.

WHALE. Allen, Grover M. Sowerby's whale on the American coast. (*In American Naturalist*, May, 1906, 40: 357-370.)

Followed by a three-page bibliography.

WHISKEY INSURRECTION. List of references on the Whiskey Insurrection in Western Pennsylvania in 1794. (*In Pittsburgh Carnegie L. Monthly Bulletin*, July, p. 344-352.)

YOUNG, Edward. Kind, J. L. Edward Young in Germany: historical surveys, influence upon German literature, bibliography; submitted . . . for the degree of Doctor of Philosophy, Columbia University. New York [Macmillan Co.], 1906. 14+186 p. O. Chapter 5: Bibliography of German translations, editions, reviews, and notices.

INDEXES

CRAVER, Harrison W., comp. Index to Proceedings of the Engineers' Society of Western Pennsylvania. v. 1-20, 1880-1904. Carnegie Library of Pittsburgh, 1906. 144 p. O. An author and subject index in one alphabet, very full, giving a line to each entry, with descriptive annotations.

NEW YORK STATE L. Bulletin 100, Legislation 26: Index of New York governors' messages, 1777-1901; submitted for graduation by Malcolm Glenn Wyer and Charlotte Eliz. Groves, New York State Library School, class of 1903. Albany, 1906. n. p. O. 25 c.

Classified according to the arrangement used in the "Index of legislation" and "Digest of governors' messages," issued annually by the state library; a subject index is appended.

Notes and Queries

LIBRARY OF CONGRESS REPORTS FOR DISTRIBUTION. — The Library of Congress has for distribution a few copies of its reports from 1897 to 1904. Libraries on its mailing list which need any of these volumes to complete their sets should send requests to the Librarian of Congress, Washington, D. C.

NEWARK BINDING EXHIBIT. — The exhibition of binding prepared by the Newark Free Public Library was shown at the summer school, Madison, Wis., during August, returning to Newark about Sept. 1. Several libraries have asked to have it, and the following list of dates and places has been prepared. The dates which could be changed are those of Kingston, Utica and Hagerstown: Public Library, Lawrence, Mass., Sept. 19; Cambridge Public Library, Cambridge, Mass., Oct. 17; Silas Bronson Library, Waterbury, Conn., Nov. 7; Pratt Institute Free Library, Brooklyn, N. Y., Nov. 28; Kingston City Library, Kingston, N. Y., Jan. 2; Utica Public Library, Utica, N. Y., Jan. 22; Washington County Free Library, Hagerstown, Md., Feb. 15.

The only conditions made in sending out this exhibit are that the transportation charges shall be borne by the libraries using it, and that each library shall pay the Newark library \$2.50 toward the cost of it.

DR. PIETSCHMANN ON "THE BOOK." — Dr. Richard Pietschmann, chief librarian of the University of Göttingen, has written a chapter (issued separately in the "sonderabdruck" usual in Germany) on *Das Buch*, for "Die kultur der gegenwart," herausgegeben von Paul Hinnerberg. Within the limited space of 21 pages the author offers, in a compressed summary, a vivid picture of the influence of the book on civilization, and of its development throughout the ages, from the papyrus roll to the most modern attempts at carrying out the theory that the book in type, decoration and cover should form one artistic whole. F. W.

BULLETINS ON BOOK BUYING. — Bulletin 28 (August) of the A. L. A. committee on book buying reports on the replies received to bulletin 26 regarding out-of-print and poorly made books. Several libraries reported that they would order at once from 19 to 71 copies of the 20 out-of-print books listed; the largest single order was one of 30 copies for Bunner's "Jersey street and Jersey lane." From 8 to 42 libraries sent in the names of another 20 books as poorly made and unfitted to stand library wear. The votes in both cases will be reported by the committee to the publishers of the books mentioned. Commenting on the small number of votes, the committee say: "It should be borne in mind that some libraries have not purchased certain of these books and so have no report to make."

THE LIBRARY JOURNAL

VOL. 31

OCTOBER, 1906

No. 10

THE success of "Library Week" at Twilight Park, in the Catskills, when more than fifty libraries were represented by 150 librarians, assistants and trustees, proved that the Association did wisely in not confining itself to one place for its meetings. In some respects the place was not as satisfactory as Lake Placid, where the ample facilities of the club house and closely adjoining cottages and the attractions of the water make it ideal for such gatherings. But the central situation and lowered cost, both in transportation and in hotel accommodations, resulted in the representation of a larger number of libraries than ever before, especially the smaller libraries, from which representation is most desirable, although the number of individuals was not as large as that of the remarkable meeting of 1905. Neither was the representation from other states equal to that of last year, when it was one-third of the whole meeting, but the representation was still one from seven states. There was less pressure and hurry than heretofore, and correspondingly more opportunity for real recreation; and the meetings were probably not less profitable from the professional point of view for this reason. The strain of A. L. A. conferences, and indeed of some of the less crowded gatherings, is rather to be deplored than encouraged. The success of Library Week under changed environment emphasizes the fact that in addition to the A. L. A. conference the librarians of the Atlantic coast have now two regular annual opportunities of meeting—in the spring at Atlantic City and in the fall during Library Week. With the development of such A. L. A. subsidiary conferences as that proposed for the Southwest, with the increase in state associations, with sub-state associations such as exist in Massachusetts—where, in addition to the Massachusetts Library Club, there are Cape Cod, Bay Path and Western Massachusetts library organizations—with the development of institute work, as in New York and many other states, the library profession realizes to the full the value of associated and co-operative work.

SUCH "get-together" work, which is rather in danger of being overdone than the contrary—for librarians cannot be absent from their posts or diverted from their current work too many times in the year—gives the necessary inspiration and uplift to those who do come together, and through them to their libraries. But it fails to reach that greater number of librarians and libraries so far not even represented in the American Library Association or in the more local organizations and not yet in touch, "elbow to elbow" or hand in hand with their fellows. Indeed, many of these have scarcely seen a fellow-librarian, or know practically that they belong to a great profession. Here is the case where, if the mountain will not come to Mahomet, Mahomet must go to the mountain. Under the various nomenclature of library inspector, visitor, missionary, or what not, several of the state commissions or library departments reach such library fields through the helpful and sympathetic assistance of a trained worker, whose business is to visit outlying fields and through institutes or by individual personal conversation to give the necessary impetus that at least starts development. Miss Askew's paper, read at the New York meeting, excellently records and illustrates this kind of work and its useful result. A state which, like Massachusetts, has relied solely on the individualistic principle, though it has succeeded in establishing a library in every town, still lacks one element of final success. Some of the best work in the country should be done by the rural libraries, which can keep in touch with their people more closely than the great urban libraries. But they cannot afford to send their librarian, nor can she afford to pay her own way, to library meetings, and for such correspondence and statistics are an inadequate substitute for the spoken word and the outstretched hand. Library organization will not be developed to the full until the individualist principle, so successful in its way in Massachusetts, is supplemented in each state by the associated helpfulness embodied in the library visitor.

THERE is one class of books which have had too little attention from librarians who have to do with work for children. These are the ever-growing class of "supplementary reading" issued for the schools. Into these books, under the stimulus of direct competition, some of the best work of the day is being put, in the selection of poems or prose classics, in the adaptation of well-known fiction for the use of younger readers, in the popularization of scientific and industrial knowledge, and in fascinating yet accurate presentation of history, biography and travel. Of course certain of these books are to-day utilized in each school, and the live librarian comes in relation with them. But the range of this sort of publication is vastly beyond the use in any school, and the collection or selection of such books not utilized in the local school may well be commended to the librarian. They are usually well made, well illustrated, and furnished at a very low price—so that there is nowhere better value for the money. For example, a little library of travel that has a popular and usually accurate description of a country, a color print of the national flag, many illustrations, and often the music of the national hymn, would prove a little folks' Baedeker in a children's department, and like books are to be found dealing with industries and sciences in like manner. It seems scarcely true any longer that there is no royal road to knowledge, for certainly the children's room of the modern library is the open gate to such a road. By selecting such books for children in place of those of which *Buster Brown* is the type, librarians should be able to stimulate demand by wise supply instead of merely catering to "what the children want."

THE report of Professor Hamlin on library architecture abroad, though specially related to the problems of the new central library building for Brooklyn, which is to occupy the peculiarly shaped site of a truncated triangle, will be read with interest by all librarians, especially in view of the organized attention now being given to library architecture in connection with the A. L. A. headquarters collections. Since Richardson's remarkable library buildings, which were noted for originality of design, though they were noble

buildings rather than good working libraries, the tendency of American library architecture, as Professor Hamlin points out, has been to work from classical precedence. There is much to be said in favor of a freer hand in library design, and Professor Hamlin's comprehensive and able report should be very suggestive both to architects who desire to work in the library field and to trustees and librarians who have buildings in contemplation. There is abundant proof abroad that a site of irregular shape often challenges an architect to do his best work in overcoming difficulties, and this seems to be as true in the library field as in other fields. It is gratifying to note that Professor Hamlin, who speaks from outside the library profession, finds little within library buildings abroad that is in advance of the development of equipment and methods here. This view is confirmed, somewhat singularly, from a point of view at the other end of the world in the article elsewhere reprinted from a New Zealand paper. A colony of the mother country is likely to appreciate everything English rather than anything American, and this tribute to American library development from an Australasian source is certainly interesting and agreeable.

THE A. L. A. Booklist, as distributed gratuitously by most state commissions to small libraries throughout the country, is doing great good as a help to librarians and to book committees in the selection of purchases. But here again the value of the spoken word, the lifting thought, is not to be overlooked. One of the library associations has had the practice of devoting an hour or two once a year to brief words on the notable books of the year which should be purchased or avoided, especially by small libraries. It is of course a hopeless task to cover in such a time an adequate number of titles; but there is general testimony to the usefulness of the method which permits, if well handled in a compact paper and discussed under the leadership of an alert and stimulative leader, the free statement of pros and cons which is not always practicable on the printed page. This feature may be commended to library associations which have difficulty in making up a program and finding subjects to talk about—*if such there be!*

THE EFFECT OF CIVIL SERVICE METHODS UPON LIBRARY EFFICIENCY*

By HELEN E. HAINES, *Managing Editor of The Library Journal*

As an introduction to the discussion of this subject, it is desired to set forth only certain points regarding the application of a civil service system to public library staff organization. No analysis or review of the principles and purposes underlying civil service itself is necessary; the system as a whole may be accepted as the result of the most intelligent and earnest effort to secure for the public service the same degree of efficiency, continuity and development that any employer would desire in his own private business. To eliminate the factor of personal influence from appointments, to give security to the efficient worker, and to see that merit is the prime qualification for promotion are the chief ends that civil service is intended to secure. On the other hand, the immense field that it covers, both in number of workers and in varieties of work, gives it the character of a rigid machine rather than of a flexible tool, and involves generalizations that are likely to put workers of middling competence in an unfair equality with the most competent.

The effect of civil service upon library efficiency varies according to the character of the civil service system. When the library civil service is the library's own instrument, planned to meet its needs and responsive to those needs, it is at once a safeguard and an assurance of library efficiency. When it is a general municipal machine in which the library is represented by a small cog, fitted in among the larger and more important cogs of the police service, fire service, inspection and janitor service, the efficiency of the library is likely to be hampered by many vexatious and undesirable restrictions.

Probably the greater number of our public libraries come, at least in part, in the first class named. Here libraries such as those of Buffalo and Brooklyn—which are municipal institutions, yet free from direct municipal

control—have a decided advantage, for they may create their own civil service system, devised and managed by those most familiar with the library's needs and the qualifications necessary in its employees. In many—probably in most—cities where the library is under direct municipal control and so comes within the municipal civil service, the civil service commissioners realize the special requirements involved and confide the preparation and conduct of examinations for appointment to the library authorities. In Massachusetts, for example, the Civil Service Commission—a state board—controls not only state appointments, but municipal appointments also, but so far has exempted library appointments from an operation of their rules. Thus in the Boston Public Library all appointments (except in the janitor service) are made after examinations in three grades in conformity with the library's own regulations and service requirements. These regulations cover exhaustively the various branches of the library service, and would be likely, at first sight, to discourage unfit applicants. One of the most careful and well worked out schemes of library civil service is that adopted by the Brooklyn Public Library just two years ago, of which a few copies are available at this meeting. This has served quite widely as a model elsewhere and was adopted almost in its entirety last summer by the California State Library—one of the comparatively few state libraries in which a civil service system based entirely upon the library's own needs prevails. The St. Joseph (Mo.) Public Library was in 1904 placed under civil service rules in fact as it had been in name for some years, these rules—included in the library by-laws—being prepared and administered by the library. They provide, as usual, for open competitive examination of untrained applicants, conducted by the library authorities. A similar general system prevails in Cincinnati, where Mr. Hodge says: "I do not see

* Read before New York Library Association at Twilight Park, September 25, 1906.

how it would be feasible for such examinations to be given by others than those immediately in charge of the library. Only librarians and a scattering few trustees understand the requirements to be met by those going into library work."

Among the libraries conducting their own civil service system, the Buffalo Public Library reports as follows:

"No appointments to positions on the library staff are made without the applicants having had either special library training, or an examination given by the library. These examinations are given about once a year, depending upon the eligible list. We require that candidates should have at least a high school training, or its equivalent.

"Our experience has been that out of fifty or sixty candidates who take this examination eight or twelve pass. After having passed the examination, we give them a test of two weeks' actual work in the library, and if then found satisfactory, the names are placed upon the eligible list.

"The number of persons who pass seems small, and because of this result, the examinations have been criticised as being too severe, or as requiring much information not generally possessed by high school graduates. The latter charge is probably true. The fact is, however, that we wish but a selected number of the candidates, and the result has been, we think, to give us the best of each class and has proved very satisfactory thus far.

"The usual civil service examinations, prepared by those not connected with library work, and not knowing its requirements, would, we are sure, give us very different results.

"We believe that it is absolutely necessary to have these examinations of candidates, both for the efficiency of the service and to relieve those having the appointing power from the pressure of friends of unfit candidates for library positions."

From the Grand Rapids Public Library Mr. Ranck writes:

"As I understand civil service in this connection it means that it is the policy of the library to get persons who are available for the money at hand, and best qualified for the

work that is to be done, and this means, for those who have had no experience, that some sort of a test of qualifications must be established. The matter and manner of test leads directly, of course, to the method of conducting it, and the question naturally arises whether such a test is most efficient when conducted under a general provision covering the whole city, or when conducted by the library itself. To my mind the efficiency of such a test depends very largely upon the spirit of those who conduct it. If the library board is permeated with the spirit of spoils and places on the library staff are to be regarded as a means of paying personal or political debts on the part of its members, I can imagine that a civil service system could be so conducted that its efficiency would amount to little or nothing. On the other hand, under a general law governing the whole city, I feel sure, though I have had no experience with it, that an organization or body of men having no personal knowledge of the needs or requirements of library affairs could not conduct a library examination nearly so well as the library authorities themselves. I, therefore, most heartily favor the conduct of civil service examinations by the library authorities. That is the method in vogue at this library.

"Persons who have had a number of years' experience in other libraries or persons employed by the library for work not directly requiring library training, for instance, such as stenography or general office work, have been and will be employed here in the future, without conducting an examination, simply on the strength of a recommendation and an examination of the work which they have done elsewhere; for instance, we believe that if a person has given a number of years' satisfactory service in an office, and if on investigation we are satisfied both with the work and with the recommendation, we would not hesitate to employ such a person. The same is true of persons who have had some experience in library training either in other libraries or in a library school. We regard the original examination even at its best as only a partial test of the abilities and qualifications of the persons.

"Our practice here with reference to persons without library training, who enter the library service proper, is to conduct what we term an examination for substitutes. This examination is designed to test the education and general information and what might be termed the intellectual qualifications of the applicants. Passing this examination does not mean, however, that the person will secure an appointment in the library. It simply means that we regard them as having the necessary intellectual qualifications to make it worth while for them to begin library work with us. They are then put on our list of eligible substitutes and given training both formally and informally in the work of the library, and all of this is a still further test of their ability. This test is made just as thorough as we know how, and as a matter of fact, in the examination held two years ago 25 per cent. of those who passed the written examination failed on the subsequent test when put to work here in the library.

"Last month we conducted a second examination for substitutes. In this examination 17 persons took part, and of these 6 passed the preliminary test. All of those who took this examination had at least a high school education, and some of them had considerable more—anywhere from one to four years in college. I might say that some of those who had college or normal school training failed to pass the examination.

"I might add further that persons who have gone through the test of from three months to two years as substitutes, after passing the examination already referred to, receive appointments to the library staff as occasion for additional appointments arises, entering what we term the graded service. In this service persons start in at a minimum salary which increases on demonstration of satisfactory work \$7 per month at the end of the first year, and \$5 per month at the end of each succeeding year for a period of four years until the maximum in the graded service is reached. It is very definitely understood that promotions from one grade of salary to another depend not on lapse of time, but on a continued demonstration of good work. We regard this as an essential part of the civil service sys-

tem. The whole idea of the library board is that increase of salary and promotion of position depends not on the length of time a person is connected with the library, but on the character of the work done.

"Personally I regard such a system as a most satisfactory one in its effect upon library service. Of course the success of its duration depends very much on the spirit in which it is carried out, for I have a suspicion that civil service exists sometimes in name only rather than in practice. The library, like every other institution, is constantly endeavoring to develop a maximum of efficiency, not only in spasmodic cases, but so far as possible throughout the whole library staff, and to my mind nothing tends to promote this more than a general realization of the fact that promotion comes only on demonstrated fitness, and furthermore that good work in the library is bound to be recognized sooner or later in a substantial way by those in authority."

In the cases so far noted the civil service system exists practically as a part of the library's own administrative machinery. It is where the library is forced to accept an inflexible civil service as a part of the municipal machinery that the chief difficulties exist. In the case of one of the largest public libraries in the country, the library service ranks as a division of the city civil service, and the library examinations are directed by the civil service commissioners. The subjects which the examination covers, with the weights accorded to each subject, are as follows:

- | | |
|--|------------|
| 1. Penmanship..... | 2 weights. |
| 2. Spelling..... | 2 " |
| 3. Arithmetic..... | 1 " |
| 4. Letter writing..... | 2 " |
| 5. Knowledge required for position to be filled..... | 3 " |
| | — |
| | 10 |

It is apparent that this schedule does not furnish an ideal basis for testing the qualifications of a library assistant. The librarian of this library reports that the examination questions themselves are prepared by the library authorities for the commission, and that wide latitude is given as to their scope. "So far as the examinations go," it is said, "it

would not make much difference, as they are conducted at present, whether they were held under the auspices of the commission or of the library board." But he adds: "Where the present method seems too rigid is in the matter of promotions and transfers. It is sometimes a difficult matter to get the right person for the right place, especially where certain qualifications are required which cannot be brought out in an examination." In another city where similar conditions prevail, it is felt that the civil service rule requiring that all candidates must have resided in the city for at least one year often militates against the best interests of the library—though on a few special occasions it has been suspended. This librarian says: "There is no doubt in my mind that a system of civil service invented and perfected by library authorities to match their precise needs would be far preferable to a general law covering all sorts of departments of the government." The librarian of one of the smaller cities in this state writes: "Under the law our appointees must be certified by the Civil Service Commission after examination. The commissioners are sensible men, however, and recognize the imbecility of the legal assumption that a general civil service examination may discover legal fitness. So they come to us for examination papers, and, as the competitors are drawn from our apprentice class, it is to all intents and purposes a library examination and a library appointment. This is a small city and no one would be likely to try the examination without serving an apprenticeship (here or elsewhere) and without an assurance that the library would make the appointment if the candidate passed a satisfactory examination. That is the way the problem is solved here owing to the goodwill and sense of the Civil Service Commissioners. I do not know why it cannot be so solved elsewhere.

"To make the civil service examination the only basis of a library appointment is so fatuous in principle and so undermining to efficiency that no library can afford to concede it. Let the library insist on its right to make its own appointments or make no appointments. Public opinion will sustain the library."

Frequently the strict enforcement of the municipal civil service conditions involves a library in unusual difficulties. This is particularly the case in another New York library, where the common sense attitude just cited does not characterize the Civil Service Commission. In this library, while the civil service regulations are prescribed and enforced by the Civil Service Commission, the maximum salary for each grade of the library service is fixed by another body—the Board of Estimate and Apportionment. These salaries are very low. Consequently, when the library authorities apply to the Civil Service Commission for an assistant at, say, \$600 a year, they desire a person whose qualifications are defined under the \$900 salary grade, and as the Civil Service Commission prepares its questions according to the salary paid, the library suffers heavily in consequence. The librarian of this library reports: "I think the objections to appointment from lists prepared by the Civil Service Commission are strong. For one thing, they do not give any weight whatever to personality, which is of great importance. Their 'eligibles' hand in an application blank signed by several persons unknown to the examiners, and as far as I know no inquiry is made. It is possible to get really objectionable people and discover their unfitness only after appointment and perhaps several months' service.

"Again the examinations are not suited to the requirements of the position. On one occasion applicants were told to catalog five books (from memory) and were given five cards on which to do the work. The examinations are not at all adequate, and the questions asked are of a simplicity delightful to the examined, but appalling to the appointing powers.

"A third and very serious objection is that for the junior grade, beginning at \$300, the examination is naturally simple and quite untechnical. Such questions in literature as the following are the rule: Name the authors of the following—'Bleak House,' 'Ivanhoe,' 'Scarlet letter,' 'Evangeline,' 'Silas Marner'—never more than five. This is all very well for \$300; but when an examination for the higher grades, perhaps for assistant libra-

rian, is held, the questions are purely technical, and no farther inquiry is made as to the qualifications of these same girls in literature, history, etc. Arithmetic consists of long division and a little percentage. Experience counts 30 per cent. Thus you will see that no adequate test is made of education, no account taken of personal qualities, manner and appearance, and in the higher grades the technical examination is not searching nor difficult." The effect of civil service upon the efficiency of this particular library, as is evident from this report, has been disastrous in the extreme. It has indeed prevented any effort to fit applicants for their work by apprentice training in the library—for whereas the library formerly had the privilege of placing members of the apprentice class who had served without pay for six months on the eligible list at a rating of 100, the Commission has withdrawn this privilege, so that the library cannot now offer members of the apprentice class any advantages over other applicants, and this has compelled them to give up the class.

The ill effects of civil service upon library efficiency, as here noted, cover, it will be seen, the following: too elementary examinations; lack of technical subjects in examinations; difficulty in transferring an assistant from one department to another; promotion regulated mechanically by length of service instead of by quality of service; year's residence in city required of all candidates, which naturally shuts out what the local papers delight to term "alien experts"; incongruity between salary granted and qualifications desired; rigid holding of library authorities to the "eligible list" for all appointments and vacancies; and lack of recognition of the element of personality—one of the most important factors in the selection of a library assistant. In addition there is one of the most serious difficulties of all—the difficulty of dismissing an appointee from the library service when "protected" by civil service rules, no matter how unsatisfactory the work or how objectionable the person. Municipal civil service rules require that charges shall be preferred in writing as a first step to the dismissal of an employee. This frequently involves a hear-

ing before the Civil Service Commission, with eager newspaper reporters in attendance, and a sensation "story" in the local press, with portraits of the persons concerned, and widespread undesirable notoriety for the library. In many cases the procedure of dropping an unsatisfactory employee involves so much difficulty and possible clamor that a librarian permits the continuance in the library service of persons who would be promptly eliminated were the institution a private business or educational establishment. Only the other day the Ohio State Library became a storm center for newspaper uproar over the dismissal from the library force of a scrubwoman and a woman employed in labelling and collating books. The assistant in question refused to resign and demanded a hearing, which was granted, the "star chamber" sessions being duly commented on by the local press. This experience is a familiar one, but it is evidently entirely inconsistent with the best interests or the efficiency of a library. No board of directors or other library authority should be willing to allow its authority to be curtailed by this provision of civil service, if it is possible in any way to better conditions.

The notes here presented indicate briefly and inadequately some of the ways in which a civil service system affects public library efficiency for good and for ill. They offer, it is believed, a fit subject for discussion by librarians. They may perhaps best be closed and the way for the discussion opened by reading the following contribution to the subject, sent me by Mr. Purd B. Wright, of the St. Joseph Public Library:

Mr. Wright says:

"A short study of this problem, rather superficial possibly, leads me to suspect that much of the trouble experienced under a general municipal civil service scheme has been caused by the attempt to make the questions of too general a nature; that insufficient credit has been given for personality, or adaptability of the person for the work to be done; that training, expert possibly, was not recognized as it should be, thus handicapping the specialist; and, finally, that lack of power to discharge, or discipline, except after tedious

trial, forced the retention of people who had lost their usefulness, or, for different causes, had become a serious detriment to the department. A power or protecting clause or body behind which one may hide is always taken advantage of by the disorganizer, the lazily inclined, and those with lack of energy and ambition, and the vicious. In any work which has to do with serving women, as the library, the question of the trial of an employee, under a general civil service commission, may become a grave one. A recent case in point in the library world will illustrate this: Repeated charges were made by well-known, truthful women against a male employee, which, in case of a business house, would have resulted in his immediate discharge. The library officials were powerless, because, under the civil service code, charges must be made in writing and complainants were compelled to appear in person before a public court and subject themselves to examination on the witness stand by lawyers. It will be readily understood that under certain circumstances women would certainly cease using the library, or that department of it, or bear the insults in silence.

"If there must be an examination by a municipal civil service commission, let it be broad, covering the general qualifications, all persons passing to be certified to the library authorities, for a second and searching examination; all appointments thus made to be for a probationary period. Power to discharge for cause should be centered in the library department. In the case of the employment of experts, authority should lie in the library trustees to make original appointments, provision being made for notification of the general commission, of the reasons therefor, qualifications of the appointees, and

salary. All this would be cumbersome and unnecessary, unless to meet a case of peculiar exigency.

"As most library boards are constituted, little can be said for the intervention of another body in library management. Library trustees serve without compensation, are usually recognized as among the most prominent citizens of the community. They are interested in the library and its work and proud of its success. They stand for good service, and, if left to themselves, will install a civil service so much the superior of anything a disinterested board will devise, so far as the library is concerned, as to permit of no comparison. The library board is usually appointed on merit, solely with regard to fitness for the position. There is absolutely no reason for making it secondary to any other authority other than the broad ones of limitation and review of expenditures.

"Politicians will always try to get around a general civil service proposition; seldom will they try in the case of a library civil service rule. They reason that no part of the city government gets so closely in touch with the right kind of people as does the library. And they are afraid of the 'right kind of people.' Another reason is that the library staff is such a small proportion of the whole of the city staff that the professionals in office brokerage do not consider it worth the turmoil it would create were an attempt made to annex it to the field of spoil.

"The position of the library, as a general rule, has been unique in its freedom from scandals of the ordinary municipal kind, and it should be permitted to enjoy this enviable distinction. Clean boards, with unhampered hands, will tend to this as no other thing possibly can."

PROBLEMS OF A SMALL TOWN LIBRARY*

By SARAH B. ASKEW, *New Jersey Library Commission*

BEFORE discussing the problems of a small town library, I think if we should know just what we each understand by the term "small library," we will save time and misunderstanding. A discussion was once held between two librarians as to a list of periodicals for a "small library." They could not seem to agree. At last one of them asked, "What do you understand by the term 'small library'?" "Why," the other one replied, "why, a library of about 25,000 volumes, with an income of about \$5000 per year." Then it came out that the questioner had been arguing from the standpoint of a library of 1500 volumes and an income of from \$500 to \$1000 per year. No wonder they did not agree.

It is this difference in viewpoint which makes so many of the librarians of our small libraries return from our large conferences—and, unfortunately, even our state association meetings—with rather a stunned feeling. They have heard discussed, in meetings intended for those in charge of small libraries, simplifications of cataloging systems—the simplifications as suggested, and which some considered radical, being so much more complicated than the system generally in use in the small libraries as to be wholly incomprehensible.

The librarian has heard discussed the classification of scientific books, and looking at her little collection of perhaps 100 scientific books, if she has a sense of humor she laughs. If she hasn't, she thinks with a sinking heart of the things which she has done without to go to this convention, forgetting the good she has obtained by coming in contact with other librarians, and even from these same discussions from a larger standpoint than she is able to take. In our conventions, where there are so many more librarians of large libraries than of small libraries, we are apt to forget the larger number of the latter. In fact, in New Jersey we have only five free public libraries of 25,000 volumes and over, and yet out of 132 libraries we have 26 of less than 1000 volumes; in fact, the books in all of the twenty-six libraries do

not aggregate more than 7850 volumes, yet last year these twenty-six libraries circulated over 59,000 volumes at a cost of but four cents a book. Two-thirds of our libraries have less than 3000 volumes, and three-fourths less than 5000 volumes.

In this paper I am considering as small libraries those with less than 5000 volumes, located in small towns, although it has gone somewhat against the grain to admit that anything over 1500 volumes, with an income up to \$1000 or thereabouts, is a small library. The reason for defining so particularly what I am going to speak of under the term "small library" is because its real problems are fundamentally different from those of a library with 20,000 or 25,000 volumes.

Most of the problems of a small town library go back to that root of all evil—"money," or rather the lack of money. The problems arising from the lack of money are:

1. How to keep the library open to the public enough to make it serve the purpose it should in the community.
2. How to get the absolutely necessary technical work done, so as to be always at the service of the public during the hours when the library is open.
3. How to get enough new books to keep alive the interest in the library.
4. How to get the needed supplies, and the kind of supplies to get.

These problems which result from the lack of money cannot be treated separately, for they all depend on each other; the real problem being how to save money on one so as to spend it on the other. It would hardly seem that the first and last two did really depend on each other, but in one of our small towns the question which has lately been puzzling the board is whether to spend the \$60 increased appropriation for books, or to pay the librarian enough more to keep the library open one day more each week and pay for the extra light and heat, or to put book-pockets in the books and buy furniture. The trustees finally decided to add the money to the book fund—the wisdom of which was certainly questionable in this instance, as the library is only open two days a week and then for but a short time.

* Read before New York Library Association at Twilight Park, September 25, 1906.

And what is the use of books if people cannot get to them?

In walking the straight and narrow path which is beset with these problems the best balancing-stick which a librarian can use is "gumption." I use this word in quotation marks, as the Jersey papers have advertised the fact that this is what the chairman of our commission considers the most necessary qualification for a librarian. I agree with him. Without this all other qualities are as nothing, and the librarian is sure to fall into the thorns of technicality on one side or the mire of utter lack of system on the other. One is as deadly as the other, to the real aim of the librarian, which is to get the best books possible to the most people possible.

Now to solve the problems.

In many places the problem of getting the technical work done and still being at the service of the public has been solved by the librarian going a half-hour before the library is opened, and staying from twenty minutes to a half-hour after the closing hour. There is no one, even if she does supplement her salary by outside work, who cannot squeeze out this extra half-hour before and after. This leaves her free to devote herself to her public during the hours when the library is open.

There is an error which many of the librarians of small libraries fall into which is a great drain on their time and which keeps people away from their libraries. I know this from personal experience. That is overzealousness in helping their people; if "officiousness" were not such an unkind word we might call it that. They should hold themselves ready to serve their public, but never force their services. Then, again, librarians often take up their time looking up too much material, which swamps the inquirer and makes him feel himself a burden; and rather than bother the librarian so much another time he will not visit the library, or will try to go in and out without being noticed. They should make their people independent. One librarian said that a great many people who came in her library had never picked out a book for themselves. They had lost a great pleasure. On the other side, is the librarian who, when asked to select, says "People's tastes differ, I would rather not."

Under the head of getting the technical

work done, comes the question of help. There is barely enough to pay the librarian, nothing for help. The people should be made to help. It will not only get the work done, but it helps to interest them. There is one small town library in the southern part of our state which I wish every librarian of a small library could visit. This librarian has pressed everyone in town into service. Her women's clubs have mending evenings. They mend well, too; for at first she tore out what they had done and made them do it over. These women are very proud of their work and bring friends in to see it. She has trained some of the high school girls to catalog fiction. They think it fun, and do not come in and do it haphazard, but have regular hours, once a month. Then, another beauty of it is they are so proud of their cataloging they make their friends use the catalog, as well as use it themselves, and just as soon as a card becomes soiled they take it out and make a new one. The librarian says her catalog is rewritten once a year, she believes.

The boys became jealous, and she constituted them into an orderly squad, with badges. They look after the shelves and the room, and card the books. Whatever is not done well she makes them do over again, and the badge is taken away for a certain length of time. This serves another purpose. In carding the books they become familiar with them. This librarian has established a self-government club among the boys and girls, with herself as referee. They make the rules for behavior, and enforce them among themselves. The question came up of keeping the library open every day. She canvassed the schools and the clubs and laid the matter before them, showing them how the usefulness of the library would be curtailed if it was not kept open every day, and telling them that she would be glad to give her whole time, but her salary was so small she had to add to it by outside work. She was almost swamped with volunteers. She selected twenty from these for the first term of six months, held regular library classes, taught them the system, where the books were, and kept each one at the library one evening when she was there; now each one of these twenty people takes an evening once a month and an afternoon once a month, and the library is kept open not only every day but almost all the time.

The men of the town objected that they had no hand in the work. The librarian's reply was that more money was required, and she would ask them to help in that way. She made out little slips containing pledges of so much per year, in amounts from 50 cents upwards, and the list of subscribers she published from time to time. The library now has from this source an income of \$300 per year. It has a catalog on the very simplest order, but full of analytics; she has no book number nor needs any; has an accession book, and the Browne charging system. Her classification does not go beyond the third figure; in some classes books are simply put under the main class. The librarian learned her library methods mostly by studying and by visits from the commission and through correspondence.

The problem of how to obtain library training is almost solved for the librarian of a small library; if she cannot go and get training the commission will take it to her. The isolation feature of the small town library has almost disappeared because of the state library commission also. The commission worker takes the outside world to the small town. The problem of interesting the people and doing outside work, too, is being solved in this way: the commission visitor goes to the schools, either with the librarian or for her, visits the people, helps her tell the children about the library, and backs her up in all this work.

Now comes the book problem. The travelling library is a very great help in this problem. This travelling library by supplying fiction enables the librarian of a small town library to spend her own book money for books of permanent value. Another way the small libraries in our state have been getting money for new books is by selling the "has-beens," that is, the current fiction of last year. There is always some one who will buy this. One of our small libraries made \$25 in one year on dead wood in this way. Second-hand dealers will buy books as well as sell them. Then again, librarians should make their wants known; ask the clubs, when they are through with books, to give them to you, and say that then next year you can spend more money on the books they need.

The lack of buying facilities is also to be taken into account. The librarian cannot examine the books. From the commission,

though, she can get book-lists which are annotated, and second-hand catalogs. The A. L. A. Booklist is an invaluable starter, although sometimes the first two pages of this list will require more money than the library has to spend in a year. But the commission will check this for her. It will also recommend the best places to buy.

This brings us to another problem. The librarian does not always have the making out of the book-list. The board makes out the list. I know a library where this was the case when the present librarian first went there. Every month she made out a list of what she wanted and sent it to the head of the board, with an annotation as to where the books could be bought, and with that suggestion for some occult reason so dear to every man's heart—that she knew how busy he was and had ventured to do this as a saving of his valuable time. He was glad to accept this, and after a few months she omitted it, to see what he would do, and he asked for it.

Now the question of supplies comes up. The small library should remember that what is economy for the large library is not for her. It may be economy for the large library to make its own book-pockets, when the pages can do it in their spare time; or to make their own magazine binders in some one's spare moments; but her most precious asset is her time, and it pays for her to buy the best and most lasting materials and supplies that will save her time and energy. There are supplies which are absolutely not needed, such as book-plates and guarantors' blanks; but when her system demands book-pockets, catalog cards, and personal cards or pockets, she should get good ones already made; they last well, cost little, and save time. The commission will order these things or advise with the libraries regarding their purchase.

As to the rebinding of books, the small library should apply to the commission. It stands in a position to help by sending all of the rebinding for several small libraries to one binder. These small libraries then get the same rate as the larger ones. This helps solve this problem. A book should never be rebound merely because it happens to be in the library. Before rebinding a librarian should consider carefully whether the book is of enough value to warrant the expense.

Now we come to one or two problems which arise not from a lack of money, but from the fact that the library is a "small town library."

Every one knows the librarian; every one knows the library. There is nothing truer than the fact that "familiarity breeds contempt." One of the problems before the librarian of the small library is not to let the familiarity reach this degree. Her very advantage is her disadvantage, and that is the fact that she knows every man and woman and child by name. In the library she must be a friend of all and the personal friend of none. She must maintain a certain dignity

for herself and her library that will inculcate the desire to behave well simply from the fact that you are in the library and she is the librarian. She must never trade on her personal or social friendship for any one, nor let any one trade on it, and yet be a friend to all. She must show absolutely no favors, and yet see that the right book gets to the right person. She must have few rules and very little red tape. She must assume that her rules will be obeyed and her red tape respected, and not demand it. She must put the responsibility on the people, and they will assume it as long as she cheerfully does her part.

BULLETINS FOR CHILDREN

By LILLIA M. D. TRASK, *Children's Room, Orange Free Library*

FROM the time when the children's room in public libraries was first established until now, the effort and aims of all in charge of these rooms has, consciously or unconsciously, been to stimulate the minds and souls of the children, and so, with varying methods, each library has been working towards the ideal. That this general aim of children's librarians is not widely known and appreciated is shown by the statement which recently appeared in print, "We should remember that the public library does not, as a rule, provide for the needs of young children, nor does it attempt to form the taste of any child." If this were true, the more shame it would be for us, but if it is false, our one effort should be to prove to the public by actual results the error of the opinion.

Of the many methods used by librarians to help the children, none has proved so effective as the bulletin work, and yet because some bulletin work does not accomplish as large results as others, it may not be amiss to speak specially of such work done in the Orange Free Library, which is original in its underlying principle, and which is doing much toward the desired ends.

To interest a child, give him something to do; help him to prove himself of use, and you not only have strengthened his moral nature, but secured a permanent enthusiasm. This is true whatever be his environment and bringing-up.

From passive onlooker to active creator is quite a step, but little by little with us the transformation has been effected, until we now have our children planning and executing at least a part of the bulletins of their own room. For others who would do likewise four successive steps will probably be found necessary to accomplish this end:

1st. Suggestion:

Post your own bulletins, and make the children see what you have prepared for them. Place your board in the very path to the desk, that it may not fail of notice. And about your bulletins, heed three points—have them timely; with reference to books in the library; and not too nicely finished. We have tried elaborate bulletins, carefully finished in every detail, and found them failing of the attention received by less perfect specimens; we can only conclude, therefore, that they appear to the children too much like a part of the furnishing of the room, and suggest plenty of time to be looked at later. Have your bulletins then sketchy, and the very roughness of detail will suggest a temporariness that will keep the children on the lookout for new ones. Do not disappoint them in that—change your posters frequently, have an active bulletin board, and in consequence you will have watchful, wide-awake onlookers.

2d. Co-operation:

You have shown your little friends that you are ready to do things for them, make them

meet you half way. Supplement your pictures with a few pertinent questions, and such bibliography as your library affords. Take, for instance, pictures of the recent San Francisco disaster, paste them upon a sheet of manila paper, append a few simple questions that will suggest comparison of this earthquake with former ones as to cause and effect, add your bibliography, and post quickly while the story of the catastrophe is still news.

Then your conversation with the small folk will run in this wise: "You have noticed the pictures of the San Francisco disaster? Can you answer the questions? You will find pad and pencil hanging there. Johnny Jones has answered them, and you see he has his name posted on the Honor Roll in consequence."

And this same Honor Roll, let us say, will prove in many cases an incentive. There is a space apart always for the one who is first with his answers, provided of course they are correct; but even to appear to one's fellows among "Those who have correctly answered the questions" is quite worth while. And if, as in our case, one can further see the list of names published in a local paper, the gratification to one's vanity is stimulating rather than harmful.

3d. Initiative:

Encourage the children to furnish pictures, promising to supplement suitable questions. "Johnny Jones, Flag Day will soon be here, and we want the children all to know about it. Here is a book of flags; you can draw—will you copy some of the pictures for a poster for us to fit these questions: 'How many different flags have been used as our national emblem? When was the present one adopted? Why is June 14 called Flag Day? How old will Old Glory be this birthday?' Then if you would stimulate a like interest on the part of others, do not fail to note on your board 'Pictures for Flag Day Bulletin were drawn by Johnny Jones.'"

4th. Creation:

"Good morning, Johnny. You see these two new books we have just received; they are stories about the Great Southwest. We would like to have a bulletin about that part of the country; will you see if you can find some suitable pictures, and think up some good stiff questions for the other boys to answer? Here are some books that will help

you." The resulting bulletin is too large to show you, but these are the questions asked by a boy of 11: "What are the principal states of the Southwest? What is the capital of New Mexico? When was it founded? What is the chief occupation in the Southwest? Who discovered the Grand Cañon of the Colorado? What makes a cañon? Who was the governor of Mexico when New Mexico was settled?" And the "other boys" answered them.

Of course all this presupposes on the part of those in charge of the Children's Room, a love for the children so complete that but a few days' acquaintance with them will have revealed to you all their little fancies and interests. With this knowledge it is a simple matter to find just the children who are interested in travel and history; just who will care to draw the pictures; just which are of a more practical bent and will take pleasure in helping with a scientific bulletin; just which revel in sentiment and will delight in presenting an original poem. Grace D. had so far only 12 years of meagre advantages; she may later improve on the following lines, but at present it is a great encouragement to her to see them on the bulletin board, with a magazine cut we found to fit:

"WOODLAND FLOWERS

"Of all the beautiful gifts of God
Are the wild flowers upon which we so often have
trod.
May He ever keep our hearts pure and clean,
As the lovely flowers we all have seen."

Stevenson will not rest the less quietly, we believe, nor Longfellow, nor Wordsworth, because their names appear below hers as "Others who have written about the flowers; ask at the desk to see their poems."

These in brief are the principles on which our bulletin work is based, and the means used for keeping awake the mind and soul of the child who has learned the way to the library.

It may be objected that most libraries are too busy to so individualize their little clients. Try it, and I think your objection will not stand. If it does, we would advise neglecting the rest of your work rather than this; for only by drawing out the child can you discover and meet its needs—only by recognizing in each a distinct personality can you make what is worth while appeal to each.

LIBRARY ARCHITECTURE ABROAD

Report of Prof. A. D. F. Hamlin as Consulting Architect to the Board of Trustees of the Brooklyn Public Library

Hon. Bird S. Coler, President Borough of Brooklyn,

Hon. David A. Boody, President Board of Trustees Brooklyn Public Library, and Members of the Board,

GENTLEMEN: I have the honor to submit herewith my report upon the European trip made in company with your librarian and your architect, in compliance with the resolution and instructions passed by your Building Committee to investigate and report upon library buildings and sites in Europe, and such other architectural matters as might be relevant to the problem of the proposed new central library building.

The subjects which seemed to me, as your consulting architect, to require special consideration were, first, the general planning and arrangement of library buildings; second, the form and arrangement of particular parts or features; third, equipment and furniture; fourth, architectural and decorative design; fifth, the use made and the architectural treatment of sites approximating in some degree the form of that set apart near the reservoir for the proposed new building. On all these points suggestions and lessons of value were obtained from many of the cities visited, and these will be set forth in the course of this report.

Setting sail on July 31 from New York, we reached Liverpool on the evening of August 7. The forenoon of the 8th was spent in the fine group of buildings of which the Public Library is a portion, and of which the plans were furnished us by Mr. Corvell, the librarian. The afternoon was spent in Manchester in the People's and Rylands libraries. The next day was devoted in part to the Radcliffe and Bodleian libraries of Oxford University, and the remainder to the railway run *via* Oxford to London. Friday, Saturday and Sunday were spent in Paris, where the Bibliothèque Nationale was explored from end to end, and where especial study was devoted to the admirable use made by the French architects of the opportunities for architectural effect afforded by irregular sites. Photographs were taken and others purchased of many examples of the architectural treatment of such sites. Sunday night train was taken for Germany, and during the following two weeks the following cities were visited for longer or shorter periods varying from an hour or two to three days: Stuttgart, Karlsruhe, Heidelberg, Frankfurt, Cassel, Göttingen, Halle, Leipzig, Berlin, Dresden, Vienna, Zürich and Bâle, and thence to Paris. Here the party separated temporarily, your adviser going to Amiens and thence rejoining your librarian and architect in London, where he spent four days. From London he proceed-

ed to Bradford, attending one or two sessions of the convention of the British Librarians' Association. Edinburgh was next visited, with special reference to the Carnegie Library there; and finally Glasgow, where the Mitchell Library and branches were visited and plans of the new buildings proposed were examined. From Glasgow the return trip to New York was made, September 8-15.

The entire journey, carried out upon a carefully prepared itinerary, was accomplished without accident or mishap, and mostly under exceptionally favorable conditions of weather, except for the extremely hot September weather in England. In almost every city visited the most friendly and courteous assistance was rendered us by the various library officials. In all 25 library buildings were visited, the list of which follows:

Public Library, Liverpool.
People's Library, Manchester.
Rylands Library, Manchester.
Radcliffe-Bodleian Library, Oxford.
Reading-Room, People's Palace, London.
British Museum Library, London.
Bibliothèque Nationale, Paris.
Library of Industrial Museum, Stuttgart.
Volks- und Landes-Bibliothek, Karlsruhe.
University Library, Heidelberg.
Freie Bibliothek, Frankfurt (and Branch).
Stadt Bibliothek, Cassel.
University Library, Göttingen.
University Library, Leipzig.
New Imperial Library, Berlin.
Representatives' Library, Berlin.
Historical Library, Dresden.
K.K. Hofbibliothek, Vienna.
University Library, Bâle.
Public Library, Amiens.
Public Library, Bradford.
Carnegie Library, Edinboro'.
University Library, Edinboro'.
Mitchell Library, Glasgow.
Mitchell Library Branch, Glasgow.

In addition to these, as many more buildings of other sorts—museums, banking-houses, educational buildings, etc.—were visited because of special architectural features or characteristics which seemed to offer suggestion or instruction pertinent to the problem in hand. Among the most important of these may be mentioned the Musée Guimet in Paris, the Landesgewerbe Museum at Stuttgart, and the Ethnological Museum (Völkerkunde) at Berlin.

I. In the matter of the *general planning and arrangement of library buildings*, the general result of the trip was to confirm the impression prevalent among American librarians that in this country the special requirements of library service have been much more carefully studied and worked out more completely towards certain types than has been the case in Europe, where there is no semblance of approach to a general type even in the several

parts of the library, much less in its conception and fundamental planning. But this very variety was in a measure suggestive, raising the question whether we in the United States had not perhaps been working into too narrow a rut of design. It thus became necessary to study with care even those buildings which depart the farthest from the American types of library planning.

The most common point of superiority in the European libraries appears to be in the architectural treatment of the entrances, halls and stairs. To the American this treatment may appear wasteful and extravagant. Our library types have crystallized about the problem of the small or branch library, which we have evolved almost into a finality, rather than about that of the great central library. In the branch libraries economy, restraint, simplicity are almost always, and rightly, insisted upon. In large central buildings grandeur of scale and generosity of space are possible and necessary. In our largest libraries, as at Washington, Boston and New York, architectural splendor and amplitude of scale have perhaps been carried to an extreme, and there is no library in Europe to equal these. But in buildings of an intermediate importance, as at Leipzig and at Bâle, and in museums and other edifices of a character somewhat related to libraries, the entrances, stairs, halls, and the most important apartments, are treated in a style of monumental dignity and often with great decorative elegance.

The most important library among recent examples in Europe is the vast Imperial Library now building in Berlin. Through the courtesy of Dr. Trommsdorf and of the superintendent in charge, in the absence of Regierungs-Baurath Adams, the architect, we were permitted to examine the plans and to visit the works. Unfortunately no blue prints could be furnished, and I can only speak of its arrangements from memory. It appeared to be a fairly well arranged plan enclosing a great court with many smaller courts, the chief reading-room, on the main axis, lying beyond the great court and between smaller ones, and the side wings being partly occupied by stacks and partly by a great number of special libraries and study rooms. The chief excellence of this building, after all, to an American eye, is its sound and thorough construction, although the massiveness of the walls is carried to what we should consider an extreme. The exterior architecture, as shown by a full-scale model in plaster, left much to be desired, both in composition and detail.

More interesting, in spite of its smaller size, was the library at Bâle, where an approximately triangular lot is occupied by a building which, when extended to full completion, will show two long converging wings meeting at a circular entrance pavilion. In this the lighting was excellent, and the stack-

rooms and work rooms more nearly like American libraries than is usual in Germany; but the scale was not large enough for a very monumental treatment of the circular pavilion, which was chiefly devoted to the entrance and stairs.

The very interesting libraries at Heidelberg and at Cassel will be referred to later. That at Cassel is described in Mr. Hill's report more fully than I could do it.

II. It is, however, in *particular features or parts* rather than in general plan that European libraries offer suggestions. The new hall of entrance of the Bibliothèque Nationale; the sombre and ecclesiastical but beautiful vaulted stair hall of the Rylands Library (chiefly a theological library) at Manchester; the superb stairway and hall of the Art Museum at Vienna; the imposing and admirably lighted semicircular reading-room of the University Library at Leipzig; the truly magnificent Hall of Manuscripts, formerly the reading-room, of the Hofbibliothek at Vienna, by Fischer von Erlach—the finest specimen of German rococo interior design I know of; the handsome circular library (now, unhappily, dismantled) of the People's Palace in East London; the handsome circular reference room of the Radcliffe Library at Oxford; the vestibule and rotunda of the Bâle Library; and the remarkable subterranean stack-rooms of the Hofbibliothek at Vienna, are among the most interesting features of library design encountered during this journey. They represent the work of different ages and different conceptions, but each of them is worthy of study and offers suggestions to the American designer.

Your adviser paid particular attention to the question of circular reading-rooms. While some librarians, including the Oxford librarian, expressed rather strong objections to this form, your adviser could get no clear and convincing reason for this dislike, and believes it applies, not to the reading-room as such, but to the inconvenience of alcoves around a reading-room of this form. Certainly the circular reading-rooms visited—all of them in England, by the way—were among the best lighted and most impressive reading-rooms examined during the trip. They would not equally well serve all sorts of reading-room purposes, but for general open-shelf popular reference purposes, with wall-cases under the high windows and a central delivery desk, served by elevators and stairs from a stack-room or mezzanine below, they offer the opportunity for perfect supervision and convenient service, and for a spaciousness and dignity of architectural effect which are not easily secured in any oblong room. The question is pertinent, because one of the obvious solutions of the problem before your board is a structure terminating towards the Plaza in a circular pavilion, the upper part of which could be effectively utilized for the pur-

poses of one of the several large reading-rooms required in such a building.

One of the handsomest of all the reading-rooms visited was the semicircular Lese Saal of the fine University Library at Leipzig. This room, 70 feet in diameter, is splendid not only by form, but by decoration, and is admirably lighted both by wall windows and by skylight. This form has the advantage over the circular form of being capable of closer direct juxtaposition to the stacks. In this particular example the lower part is surrounded by a narrow stack-room bending around the curve and containing the books most constantly in demand, to the number of perhaps ten thousand volumes.

The great manuscript and book-room of the Hofbibliothek at Vienna was originally a reading-room, and far surpasses in splendor any other example visited during the trip. It is a superb hall, reached through an almost equally sumptuous antechamber; its lofty vault is frescoed with magnificent allegories; its walls, between the great windows, are covered to a height of some thirty feet with wall cases in carved walnut of the finest workmanship, a gallery serving the higher cases; and all the resources of the baroque style are put to use in the architectural embellishment of this noble hall. While its book storage is wholly unpractical, requiring the use of long ladders, it is an excellent reading-room, finely lighted, and spacious, and there is a quaintness of style and warmth of color in it which make it singularly inviting and well worth studying for its splendor of effect and richness of detail. It is a master work of Fischer von Erlach, the greatest Viennese architect of the middle of the eighteenth century.

This room, the great reading-room of the Bibliothèque Ste. Genéviève (Paris), and that of the Public Library at Amiens in France, were the best examples seen of the long hall lighted on both sides. Where the height is sufficient to allow of lofty windows, this lighting suffices for a hall of considerable breadth; but where, as at Amiens, the room is relatively low, skylighting is necessary to supplement the side lighting. In most of the larger reading-rooms, at least those which seemed the best lighted, both kinds of light are employed. The light thus secured is diffused light, casting no sharp shadows, and is the most agreeable for the reader and safest for the eyes.

Of the circular reading-rooms visited, that of the British Museum is the largest, measuring over 120 feet in diameter; that of the People's Palace, next in size, about 100 feet; then the reading-room of the Liverpool Library; and the smallest that of the Radcliffe Library at Oxford, about 50 feet in diameter within the radial alcoves. The first is lighted only from overhead; the second from walls and roof; the Liverpool room from overhead;

and the Radcliffe Library from alcove windows and windows in the high drum of the dome. The great reading-room of the Paris Bibliothèque Nationale is lighted wholly from overhead by nine *oculi* in as many low domes; the light is rather surprisingly good. But skylighting cannot, or ought not, to be alone depended upon, because it fails very early in the day, requiring much greater consumption of gas or electricity than where abundant side windows exist; while in our climate extensive skylights cause down draughts of cold air in winter and are liable to leak sooner or later. For the new library, therefore, it is strongly recommended that the larger reading-rooms be, if possible, provided with bilateral lighting with or without auxiliary skylighting.

One impression derived from these examples was that the *form* of the reading-room is a matter of much less importance than is generally supposed in this country. A spacious room of almost any shape, if abundantly lighted, can be made into an excellent reading-room if the rest of the plan is favorable. The form should, however, be simple, without recesses or ells, which interfere with easy supervision and service; otherwise it may in a measure depend upon the arrangement of the rest of the building.

With regard to *stacks* and *stack-rooms*, the European practice appears to be far inferior, on the average, to our own. But the Hofbibliothek in Vienna offers a very valuable suggestion of provision for future increase of accommodation. The growth of this great library of a million volumes appeared absolutely limited by the plan of the palace buildings in which it is housed, when the authorities conceived the idea of excavating their cellars down almost to the foundations of the ponderous masonry. These were so deeply laid that the new cellar stack-rooms extend 48 feet below grade; nevertheless they are not only perfectly dry, well heated and abundantly ventilated, but they receive even considerable daylight by judiciously arranged areas and wells. Strange to say, they are excellent stack-rooms, and compel the serious consideration of the advisability of providing cellars more than usually deep, with abundant areas for natural lighting, to be completely finished and fitted up, however, only when the increase of the library shall have filled up the stack space above ground.

The delivery room, as we understand it, hardly exists on the Continent, and the English examples offer no suggestion of architectural value. The card catalog has not yet won general recognition abroad; and open shelving for public use seems to be almost unknown. In all these features of the planning of public libraries, as well as in provisions for the comfort of the staff, American practice is far ahead of anything we saw abroad. But for the purposes of a great central library

a valuable suggestion is offered in the provision made in many European libraries for the permanent exhibition of valuable manuscripts, rare volumes, prints, etc. Notable examples of this are seen in the British Museum, the Bodleian Library and the Hofbibliothek at Vienna. It is to be hoped that ample space will be allowed in the new Brooklyn building for this important function of a great library as a museum of the history and art of books.

III. With regard to *furniture and equipment*, many suggestions of detail were gathered during the trip relating to such devices as rolling or sliding stack sections (of which one type is used in the British Museum and another in the Zwinger Palace at Dresden); sliding card catalog cases (Dresden); hermetically sealed cases for rare books (Dresden); stack electric lights (Vienna); cases for exhibiting manuscripts (Vienna; Göttingen); and other like devices. But these belong more properly to the librarian's domain than to that of architecture.

IV. In *architectural and decorative design* the European libraries offer much that is interesting and suggestive, though little perhaps that is directly applicable to our problem. The splendid reading-room at Dresden and the monumental exterior of the University libraries at Dresden, Strasburg and Vienna; the impressive long façade of the celebrated Bibliothèque Ste. Genéviève at Paris, which "inspired" the exterior design of the Boston Public Library; the superb Hall of Manuscripts at Vienna; the impressive, if somewhat solemn and dusky gothic vaulted hall of the Rylands Library at Manchester; the monumental elegance of the interior of the University Library at Edinburgh, all suggest the varied possibilities of library architecture. Of all these examples, the Vienna Hall of Manuscripts, with its dignified but not overdone baroque architecture and the splendid frescoes on its vaulted ceilings, seems to your adviser the most directly suggestive for the purposes of our own problem—not by way of copying, but of inspiration. There is a tendency in our modern American library architecture towards stiffness and excessive formality; with rare exceptions our great libraries are lacking in warmth, color and expressiveness; if stately they are apt to be cold in effect; if not overwrought and extravagant they are apt to be severe and bare. Some departure from a too severe classical formalism, some enlivening of the interiors to make them more habitable, human and inviting, would add greatly to the attractiveness of many of them. Let halls and stairways be stately with marble and gilding if need be; but let the more habitable rooms rejoice in the more vital and human richness of historical and allegorical painting, with the freer lines of the less formal variations of the historic styles.

V. The last division of this report must

be devoted to the very important problem of the monumental handling of approximately triangular sites and of a great library on avenues having a decided grade. European cities are full of examples of such buildings, because few of them are laid out on a rectangular street plan. To the European architect converging streets offer peculiar architectural opportunities, which have been variously treated in different cases. In most instances the truncated narrow end of the block has been made the most important face by a specially rich architectural treatment. Two among the most monumental fountains in Europe decorate the ends of such "flat-iron" blocks—the stupendous Fontana di Trevi at Rome, and the rich Fontaine St. Michel in Paris. In Paris there are also two smaller examples of such fountains—the Fontaine Molière, on the Rue de Richelieu, and the Fontaine Cuvier, near the Jardin des Plantes. These are mentioned, not because a fountain would be appropriate in the case of the new library, but simply to show how valuable, to a European designer, is the opportunity afforded by the truncated end of a triangular block, and how eagerly it is seized upon for architectural effect.

In the majority of the most successful buildings, alike in France, Germany and Austria, thus situated at the intersection of converging streets, the truncated end is occupied by a circular or nearly circular pavilion, which is made the dominant feature of the composition. Familiar examples of this are the Grand Hotel and Cook's offices in Paris; in the Vaudeville Theatre the round pavilion decorates a right angle; the Central Hotel (Dresden) and an important building on the Albrechtsplatz in Vienna are other examples. Among other instances of a like treatment of important commercial buildings on a monumental scale is a bank building in Frankfurt—the Handelsbank; and the new Gaiety Theatre in London, although not satisfactory in its detailed handling, derives its chief architectural effect from the same device. More monumental in scale and character than any of these, however, are two of the Berlin museums—the Kaiser Friedrich Museum and the K. Museum für Völkerkunde (Ethnological Museum)—both of which present to the spectator approaching their narrower ends an imposing circular pavilion of the most monumental design. The library at Bâle has already been alluded to. In addition to these the Musée Guimet, in Paris, as well as its very similar sister building of the same name in Lyons, offers a good illustration, not, it is true, of impeccable architecture, but at least of an interesting use of the truncated end of a building between converging streets, to provide an important focal architectural feature, which dominates the design and furnishes the main entrance and vestibule to the

whole building. All these examples are of value, for they show that the mere fact that the narrowest face—the truncated end—of the new library is the one that faces the most important approach, *i.e.*, the Plaza, so far from being an objection or a real difficulty, may be made the occasion of the most monumental and successful architectural treatment.

But the architect is not confined to this one solution of the problem. The new library is to be much larger than the buildings cited above, and if for any reason a vast and imposing circular pavilion should prove inadvisable, there are numerous other forms suggested by the buildings visited. The great Industrial Museum at Stuttgart, by Nicklmann, upon a plot very similar to the Brooklyn site, offers to the approaching spectator a façade of about 150 feet set between two circular pavilions by which the angles with the diverging side wings are masked—a treatment somewhat like that employed in Paris for the *Magazins du Printemps*. The composition of this building is unfortunately sacrificed in great degree to a restless confusion of detail, a common fault in German buildings. The mass is fine and the general effect good.

Of far more imposing effect and much greater dimensions is the new Town Hall, or *Rathhaus*, at Leipzig, which stands upon a truncated triangular plot whose proportions approximate those of the Brooklyn library site. The terminal treatment is different from any of the other examples cited, and the architecture of a more picturesque character; carrying variety of treatment perhaps to an extreme. It is offered here not as a suggestion of type for the new library, but to show how varied are the possibilities of architectural treatment of a monumental building of this irregular plan, and how imposing and effective such a building may be. The openness of its site somewhat resembles that of the Brooklyn site, and the tall tower—an ancient tower with a modern top—though not an integral part of the *Rathhaus* itself, combines pleasingly with the general mass, to which it offers an effective contrast.

Some of the photographs taken on the journey show the effective use made abroad of curved masses to terminate a building or to mediate between and unite diverging or converging wings. One of the most monumental and familiar examples of this is the *Trocadéro auditorium*, in Paris, forming the central feature of the great front towards the Seine; another is the segmentally curved front of the *Liverpool Technical Schools*; a third the *Petit Palais*, on the new *Avenue des Invalides*, which is on an irregular or trapezoidal plan, and has curved bays adorning its corner pavilions. Others are the *Grand Palais*, opposite the just-mentioned *Petit Palais*, terminated at either end by a broadly sweeping curve; the terminal pavilion of the

Musée Guimet, in Paris, already mentioned, and beyond it the handsome round pavilion of a typical apartment house of the more monumental sort; the *Handelsbank*, at *Bâle*, and the *K. Amtsgericht*, at *Leipzig*; the *Paris Hippodrome*, whose converging façades meet in a polygonal pavilion which would be very handsome if the domed roof had not been so cheaply finished; the *Tonhalle*, at *Zürich*, an example of a nearly circular hall or pavilion; and the *Radcliffe Library*, at *Oxford*, one of the finest of all examples of a circular pavilion, no less suggestive because it here happens to be an isolated building.

The question of the treatment of the *grade* of the new site is of fundamental importance though here placed at the end of the list. The impressive row of connected buildings in *Liverpool*, of which the Library, with its circular reading-room, forms the central feature and marks or masks the angular break in the street façade, stands upon a grade somewhat like that of *Flatbush Avenue* and the *Parkway*, and shows one method of handling the problem. But the finest solution is that adopted on the *Albrechtsplatz*, at *Vienna*, where the steep grade along the side of the *Augustine monastery* has been taken up by a very monumental terrace-embankment wall, treated with great architectural elegance. As the streets here converge, the conditions approximate those of the *Brooklyn site*, and offer a direct suggestion for the handling of the grading at this point, giving opportunity for a stately entrance (instead of a niche and fountain) with monumental steps leading to the upper level or garden in front of the front end of the library; while on either hand there might be doors leading to vaulted chambers under this terrace, or by corridors to the basement of the building beyond.

The libraries at *Bâle*, *Cassel*, *Heidelberg* and *Amiens*, the *Leipzig Rathhaus*, and the stately stair-hall of the *Stuttgart Industrial Museum* show the variety of style in European libraries and public buildings, and raise the question of the relative propriety of a picturesque and of a monumental treatment for the problem in hand. In Germany the picturesque breaking up of mass and skyline is traditional, and is often very well done, though one cannot praise such details as the central bay of the new *Heidelberg Library*. The *Cassel Library* is, however, a charming building, and the *Leipzig Rathhaus* very successful in its monumental effect. But in spite of German successes it would seem that the proximity of the massive and stately *Brooklyn Institute* and of the *Memorial Arch* imposes upon the designer of the new library the adoption of a stately classic handling of his building, or at least of one of the Renaissance versions of classic architecture. The great size of the building seems to demand large scale in the composition. But the

openness and the shape of the site, the proximity of the water tower and the purpose of the building, lend themselves to a freer handling of the detail than would be possible with a rigidly classic design, though they do not prohibit a severer purity of style. These conditions are so obvious that the decision may be safely left to the architect himself. Your adviser is seeking in these remarks merely to present the situation, not to dictate a design.

In conclusion, your adviser feels that the recent visit to European centers and monuments strengthens his conviction of the wisdom of the choice of the site, and confirms the opinion that it offers magnificent architectural opportunity for the handling of which the buildings visited abroad offer a great variety of the most interesting and useful suggestions, both in general and in detail.

Respectfully submitted,

A. D. F. HAMLIN,

Oct. 12, 1906.

AMERICAN LIBRARIES THROUGH NEW ZEALAND EYES

From the Wellington, N. Z., Times

THAT the United States of America lead the English-speaking world in library science may nowadays be taken as an axiom. Not only do some of the most impartial and best-informed English newspapers admit it, but we have in corroboration the experience, gained at first hand, of a man like Mr. McNab, the new Minister of Lands, whose observations in America all go to show the great advance which the people of the United States have made in library organization and management. Mr. McNab had only opportunity to examine the fringe of the subject. As he himself observes, a more thorough investigation is needed; and there is no doubt that if New Zealand workers in the domain of library science are to make our management of these institutions worthy the name, it is from America that we must draw not only the general principles, but the practical application of them. In Wellington we are a shockingly long way behind, because, for lack of elbow-room, our central municipal library has not been allowed to expand along its own lines, much less to develop along the more practicable and profitable modern lines of America.

Now that, for weal or woe, the libraries committee has decided to stick to the present building, and to add two more rooms, it is to be hoped that the precept and practice of the leading school of library science will be employed to make the rearrangement as effective as it can be within the enlarged space. In this connection, the Minister's suggestion that it would pay the library people of this

country to send a suitable representative to America might well bear good fruit. What is wanted is a man who will be not only prepared to look at the libraries, but to work in them, and learn by experience all those details of disposition, management and method that make a perfect machine. Then, sooner or later, New Zealand libraries must get down to bedrock and start out after the child and the primary school pupil, which is just what the American institutions are doing with conspicuous success. A fact that speaks volumes is that while the noiseless mechanical conveyer is handling the books in the Congressional Library at Washington, in the British Museum they still ply a laborious traffic with a lumbering trolley. New Zealand's preference to the motherland need not extend to preference in favor of obsolete methods of library management, and we trust that no time will be lost by our municipal authorities in bringing the Free Public Library up to date in the directions we have indicated.

THE CONFERENCE AND THE PRESS

Read by Herbert Olin Brigham at Rhode Island Library Association meeting

FOR some time I have been receiving clippings relating to Rhode Island library matters, and after the Narragansett Pier Conference there came over one hundred and sixty items, clipped from ninety newspapers published at sixty various points from Maine to Texas. Naturally the major portion of the reports were printed in Eastern papers, but those of Austin, Tex., New Orleans, and Sacramento, Cal., and Montreal, Canada, noted some phase of the conference. The papers of the Mississippi Valley received an occasional letter or printed a résumé of the meeting of 1906, and those of the Southern states, especially North Carolina, gave the A. L. A. some attention. The articles thus printed may be roughly divided into 11 classes: (1) Announcements. (2) News accounts. (3) General résumé of the convention. (4) Items regarding visits to local points. (5) Reports of special addresses. (6) Letters from and interviews with librarians. (7) Editorials. (8) Reading articles. (9) Personal notes relating to libraries. (10) Officers for next year. (11) Suggestions for the next conference.

The majority of the notices were less than a column, but the Providence papers, the Boston *Transcript*, the Brooklyn *Eagle*, the Concord *Monitor*, and the New York *Evening Post* gave extended accounts of the proceedings, and in some cases verbatim reports of the principal addresses.

When one considers, however, the greater

distance and the lack of local interest, the Boston *Transcript* gave relatively greater attention to the subject. Before the conference a readable column article on the A. L. A. appeared, and a sympathetic editorial on the subject. During the library week a talented special writer represented the *Transcript* at the Pier, and the two departments "The Librarian" and "The Bibliographer" each alluded to the convention several times. The other Boston papers gave brief accounts of the daily doings, featuring the local addresses.

The Concord *Monitor* — which place, by the way, is the former home of President Hill — received a daily letter from the Pier, and devoted abundant space to the Conference, a total of six columns during the week. The Brooklyn *Eagle* in deference to the president of the A. L. A. gave full accounts, and the New York *Evening Post* printed a half column every day, in addition to two special articles of some length. Other journals which received telegraphic notes were the other New York dailies, the Philadelphia *Ledger*, the Springfield *Republican*, and the two papers at Manchester, N. H., the *Mirror* and the *Union*. The New Orleans *Times-Democrat* noted the fact that district meetings were to be held in the Southwest, and a few papers printed the list of officers for the ensuing year.

Several journals gave more or less space to the announcements of the convention, the papers of Providence and Brooklyn giving the largest amount.

A general résumé of the week at the Pier was noted by newspapers scattered throughout the country from Rutland, Vt., to Peoria, Ill. The Washington *Star* gave a most readable account of the week, filling a column. The papers of Richmond, Asheville and Charlotte gave reports of the Conference, giving the decision as to the place of the next meeting. The North Carolina papers congratulated Mrs. Ross, Miss Wallace and Mr. Randolph for their untiring efforts, and the newspapers of Richmond consoled themselves with the feeling that it was a compromise, and that Virginia would get one week of the convention.

The trips to Providence and Newport and the post conference to Nantucket brought forth notices from the Rhode Island newspapers and those of Fall River and New Bedford. The New Bedford *Standard* printed three insertions of the same article, with the heading "Librarians Here," doubtless believing that the journeyings of the librarians had some popular interest.

Individual addresses called for some attention on the part of various papers, especially the home towns of the several speakers. Miss Olcott's paper was noted by the Pittsburgh press and by a long article in the New York *Evening Post*. Mr. Wright's discussion of library advertising elicited comment from his

home paper at St. Joseph, Mo. Miss Hunt's address on the "Children's library" was printed in part in the Brooklyn papers, as well as those of Utica, her former home. Mr. Bowerman's report on library binding received attention from the Washington *Star*, and President Hill's address was not only reported in full by the Brooklyn *Eagle*, but also by the Newark *Call* and the *Register* of Torrington, Ct., and "The Librarian" in the Boston *Transcript* discussed some significant points in the address. The Peoria *Journal* found Dr. Canfield's suggestion regarding books for immigrants worthy of notice, and the Lincoln *Journal* devoted an editorial to the subject. The report of the special committee on book-binding resulted in an editorial in the New York *Tribune* and an extended article in the New York *Sun*. The prevalence of women in library work was a subject of articles in the New York *Evening Post*, Baltimore *American* and St. Louis *Globe*, and of an editorial in the Columbus *Dispatch*. The topic of Children's Reading caused another Columbus paper to give editorial space to the subject, and the New York *Evening Post* devoted much space to a discussion of women's clubs and children's rooms. The *News*, of New Brunswick, N. J., printed an editorial with the caption "Too many books." The *Telegram*, of Youngstown, Ohio, made special note of Miss Stearns' paper and Dr. Canfield's address. The "Librarian," in the Middletown *Times*, noted a few amusing anecdotes of library work.

Gifts and bequests, especially those of Andrew Carnegie, were the cause of comment by several New England papers, notably the Springfield *Union*. The personal element played a large part in these clippings. The home-coming of some librarians in a small Western city was an event worthy of an extended newspaper account, and one finds recorded in perishable wood pulp paper the impressions of several librarians. The closing sentences of a "special" from the Pier to the *Press* of Muncie, Ind., is of interest: "The Narragansett country affords so many places of historic, romantic and picturesque interest that the Indiana party is much overworked in its attempt to both see and hear."

Many of the letters to the home papers are most readable. There may have been some that escaped the clipping bureaus, for we know that 47 persons promised the committee on publicity to send such a letter, and nothing like that number shows in the returns. In many cases the return of the wandering librarian was a subject of personal mention in the local sheet and occasionally the honors bestowed on this or that library official were a subject of home pride.

The leaders and sub-heads utilized by the papers showed most clearly the salient points of the Conference that appealed to those ex-

cellent judges of human nature, the newspaper men of the country. The headings which appeared during the opening days of the Conference indicated an interest in the large attendance. As one editor saw it, "The Pier was Besieged by Librarians," and another heading writer discovered that Providence was also besieged by this formidable body. The headings for Providence Day showed a sense of relaxation: "Librarians Take a Day Off," "Librarians on a Jaunt," "Librarians on Outing," "Librarians' Day of Pleasure," "Librarians Take Trips," and this sententious head, "Pleasure Now." The most laconic heading was the single word "Librarians." On the other hand, the newspapers must have thought that we accomplished something, for these headings appeared: "Librarians Make Reports and Talk," "Librarians at Work," "Celebration has no Effect at Narragansett Pier" (doubtless referring to the Fourth of July); this true statement, "Librarians Busy," and as a last farewell, "The Pier is Dull with the Librarians Gone."

Two amusing headings appeared in the *Concord Monitor*: "Watch Hill. This is the Password at the Librarians' Meeting," "Library Problems. National Association Busy at Narragansett Park," a not unnatural error when one considers that the celebrated trotting park was the home of book-makers.

Some of the headings were most mild in type, but frequently the newspaper man selected a telling sentence from some address for his leader: "Must Reach all Classes": H. G. Wadlin's Idea of Modern Libraries; "Librarians Wax Fat in Ease": Lindsay Swift Compares Proprietary and Public Institutions; "Too Much Trash in Children's Books"; "Yellow Journalism Cure: a Multiplication of Libraries the Antidote," says Lt. Gov. Jackson" (*N. Y. Times*, a paper not tinged with that color).

Dr. Canfield's discussion of "Books for the Immigrant" was particularly noticed, and probably attracted more attention than any other topic of the conference. As a rule we were called by our proper title, librarians; but the *Washington Star* dubbed us "book distributors." I, for one, object.

As a rule the accounts were accurate, and showed much care on the part of the several reporters, especially Dr. G. E. Wire and Mr. Congdon of the Associated Press. The interest shown by the Associated Press was partly due to the committee on publicity, which makes a report on p. 214 of the Conference Proceedings. They have made, as indicated by this report, a praiseworthy attempt to enlist newspaper interest; they have distributed 1600 reprints of papers delivered at the Conference of 1905; they have sent out 900 copies of library news letters to various journals and papers; they have compiled a list of 100 newspapers and magazines which would be likely to print library news, and

they have endeavored to have various papers establish a column or department relating to libraries. As a result 16 newspapers are listed, and half of these are represented in the collection of clippings. The committee asked 300 librarians and assistants to send a report of the Conference to his or her local paper, and 47 agreed to do so. As has been noted, comparatively few of these printed letters are included in the clippings.

The recommendations of the committee are most elaborate and cover a wide field of activity.

In conclusion: It is impossible to make comparisons with previous conferences in this matter of newspaper accounts, but it must be borne in mind the Narragansett Pier meeting was the second largest in the history of the Association; that the meeting was held in a populous section of the country, and in a territory which boasts of over 250 daily newspapers. With these considerations it is evident that too little space was given by the Eastern press to the meetings. While it may be admitted that the topics are frequently very technical and uninteresting to the general public, the high literary reputation of some of the speakers and the selection of topics of current interest should have caused the newspapers of the country to recognize more thoroughly the importance of the event.

THE PUBLIC LIBRARY AS AN AID IN SUNDAY SCHOOL WORK

THE Grand Rapids (Mich.) Public Library issued under date of Nov. 29, 1905, the following circular letter, addressed "To the Ministers of Grand Rapids:"

"The Public Library is most anxious to serve in every possible way the churches and the social, philanthropic and educational organizations connected or affiliated with them. Through the Sunday school and the Sunday school teacher much of the best personal work of the church is carried on—the kind of work that counts for so much in the lives of the children. We wish to call your attention to the fact that the library has on its shelves a considerable collection of books of special interest to Sunday school workers. It will strengthen the work of your teachers if they will read some of these books. A list of them was published in the September bulletin of the library.

"The library is ready to prepare lists of books that will be directly helpful to the Sunday school teachers in the lessons that are taught in the schools—books relating to the life, times, and country that is being studied, as well as commentaries on the particular parts of the Bible under consideration. If you think your teachers would make any use of such a list we shall be very glad to send you in advance the references for each quar-

ter of the year if you will kindly indicate your desire for them and let us know the series of lessons that will be studied in your school. Should you prefer we should be very glad to have you help us select this list of references or to revise them before they are sent out. We would send one type-written copy for each quarter to those schools that wish them. We believe that such a series of references will encourage more study on the part of your Sunday school teachers, thereby strengthening their teaching, and at the same time it would enable them to use the library for such work to the very best advantage.

"We would call your attention to the memorial libraries which are sent free to sick or injured children, provided the child has no contagious disease. If you know of any such child at any time call up the children's librarian. A box of interesting books for a convalescent or shut-in child means many a happy hour in his home. Help us to find the boys and girls who need these sunshine boxes. There is no expense connected with it, the delivery being cared for by the library.

"For the historical collection of the library we should like to have you send us regularly programs, bulletins, and everything printed in connection with your church and its work. These things will be preserved in the library for all time and will be interesting and valuable to the historian in future generations, for such things are a part of the life of the city as it is to-day."

GREENSBORO (N. C.) PUBLIC LIBRARY: CARNEGIE BUILDING

THE Public Library of Greensboro, N. C., has had its usefulness many times increased by its removal, on Easter Monday, 1906, to the building generously donated by Mr. Carnegie. The exterior is of light brown pressed brick and sandstone except where granite is used for the steps of the entrance.

The main floor, which is entirely given to the library's use, is, in the opinion of many visitors, remarkably adapted both to climate and to economy of administration. The rooms, as the plan shows, are unusually large, and the assistant at the delivery desk has a complete view of the children's room on the north and of about two-thirds of the 67 feet of reading and reference room on the southern side.

The woodwork of the main floor is of oak in light finish to match the library furniture. The floors alone are of pine, that of the children's room and part of the delivery room being covered with cork. All furniture is very simply planned. Low shelving covers available wall space in the children's room and a dark green bulletin board of cork three feet wide, above the cases, gives the needed background for picture and poster. The children's tables are not stationary, and

there is a rolling partition above the arches for the needs of a story hour. Upon the most prominent wall space will be placed the words, adapted from Milwaukee's public library, "This room is under the protection of the children of Greensboro."

In the larger reading-room low shelving fills all wall space except that used by paper rack and magazine cases. Two large wall cases are placed in the reference alcove. The big open fireplace is perhaps the most popular feature of the room. The chandeliers, table lamps and wall lights of the entire building are in dull brass.

A bronze medallion of the benefactor, Mr. Carnegie, greets all visitors from the delivery room, as well as a bust of Shakespeare. A number of pictures and maps are placed on the walls of the main reading-room.

The work-room on the library floor is large and airy and connected with the receiving room below. The stack-room has a capacity of 19,000 volumes. The two front rooms in the basement are finished in pine and fitted for the use of clubs and various civic and educational bodies.

The history of the Greensboro Public Library previous to the occupancy of the new building may be summarized as follows:

A town canvass, led by the chairman of the state library committee, resulting in a general subscription of \$3000, was our "reason for being." The aldermen donated three rooms on the third floor of the city hall, and appointed, under the Scales Library Act, a board of six trustees to organize and control the new institution.

With the subscription fund the trustees paid for furniture, books and periodicals, the cost of cataloging under the Dewey decimal system, and of maintenance for three months. The library was formally presented to the city with speeches and enthusiasm, and started bravely on its way Feb. 5, 1902, with 1490 books, 250 public documents (not cataloged), 32 periodicals and 3 daily papers.

Beginning with May, 1902, \$36 in money was furnished by the city to aid the library's monthly expenses; but this amount was increased in March, 1903, to \$100, and continued, with lights and heat, until Nov., 1905, brought the first payment of the promised 10 per cent. on the cost of our Carnegie building, or \$250 per month.

The fund we have been able to use for books has varied, of course, with our changing fortunes, and, happily for the cause, a number of valuable books have been donated; but we managed in 1904 to spend \$402.38 for books and \$135.40 for periodicals and papers; in 1905, with a slightly larger income against the expenses of moving, additional janitor service and supplies, we spent for both books and periodicals \$484.

The library now faces the untried propositions of light and heat, both likely to revolu-

tionize our ideas of a proportionate book fund as achieved under the conditions of the old income.

The library is open on week days from 10 a.m. to 10 p.m., except during the months of June, July and August, when, opening at 10 o'clock, it closes at 7 in the evening. Two people divided the labor of administration for nearly four years, but in September, 1905, another assistant was provided.

In our catalog department we use a type-writer and Library of Congress cards in all cases where obtainable.

Book selections are determined by a committee of six, appointed by the trustees and not included in their number. To this committee the librarian submits her own recommendations and all others filed in the library for such purpose, and she can place no order for book or magazine except with their approval of its contents. They really carry entire responsibility for the character of the library's wares and to them all complaints are referred.

For the first two years the circulation was more than 2000 volumes per month, allowing only one book on each card; for lack of popular books in the third and fourth years this figure was lowered, but the character of the circulation had changed from 95 per cent. to 77 per cent. fiction, the daily attendance from 125 to 150, the value of the magazine indexes had begun to tell, and we had made our beginning in reference work.

We now have 3000 borrowers and 2912 books, including 370 non-circulating reference books and not including 365 public documents (not cataloged) or our Bodley service (usually about 200 volumes). We have 72 current magazines, 300 volumes of old magazines, 1033 pamphlets and 7 daily papers. Our monthly circulation now averages 2314, with a daily attendance of 100 in midsummer and more than 225 the rest of the year, and the librarians' aid has been asked in as many as 223 instances in our reference work during a single month.

That the library has been able, with such small resources, to win the patronage of students has been our greatest pleasure and encouragement. It is due in part to gifts of periodicals and use of state and government publications, but most of all to the fact that our trustees have never refused to supply the best working tools as they are needed to improve the library service. We believe that the A. L. A. index is worth its price to any little library "zealous of good works," because it unlocks the reports of the Bureau of Education.

Among our discouragements the greatest by far have been the inadequate supply of fiction and the appalling wear and poor binding in both fiction and juvenile works. We have tried the Bodley service as a temporary relief in the first case, but the greater problem of wear still "brings to us fresh dismay."

A few weeks ago we entered upon our first experience with the Chivers binding.

Greensboro had its beginning in 1808 and now numbers a population of 23,000, more than twice what it possessed in 1900. Long a town of schools and churches, it has suddenly become a railroad, manufacturing and commercial center, and all its streets bear evidence to the abounding life of a new and prosperous South.

The library endeavors to co-operate loyally with every local interest. Its best work must always be done for the schools, but the newly organized County Historical Association has made its home with us. The Daughters of the American Revolution, the Art Club, the Music Club and the County Medical Society all hold their meetings in the library building. The Daughters of the Confederacy contribute manuscript and pictures for the honor of the "man in gray," the State Audubon Society lends its valuable books of nature study, and the literary clubs all file their programs with the library as soon as printed.

Our book fund does not yet justify any special appeal to the industrial public, and no lecture course will be attempted this year; but we hope, through plans almost matured, to compass the needs for a story hour and a boys' fraternity copied from the successful one of Camden City.

BETTIE D. CALDWELL, *Librarian.*

THE KRUPP LIBRARY AT ESSEN, PRUSSIA

THE Kruppsche Bücherhalle, in Essen-Ruhr, is an important development of the new library movement in Germany, and, as was said in the *LIBRARY JOURNAL* for December, 1905, it has its lesson for other countries as well. That portion of Reyer's "Fortschritte der volksthümlichen bibliotheken" (Leipzig, 1903) which relates to it has been reprinted in pamphlet form, with statistics of use from March 1, 1899, to Feb. 28, 1906. The following summary of this pamphlet brings out some interesting facts.

When the library was projected, fears of ill success were expressed, based on the supposed want of interest on the part of the "plain people." But the use of the library from the very beginning exceeded all expectations. The necessity for widening the scope of the institution became apparent, additional means were granted by the Krupp firm, and the library has grown from 7500 volumes to 51,750 (of which two-fifths consist of extra copies). Two-fifths of the volumes are in circulation at the same time, and the readers number 13,450 (out of a possible 34,850), who drew 388,001 volumes during 1905-06. This result is unique in Germany. Many "volksbibliotheken" are formed with worn-out or cast-off books and under censorious restrictions. Not so at Essen. There is no attempt to influence the reader. It is

a fundamental rule here that every user of the library must leave the building with a happy face. The attendants must find a way to satisfy demands, for there is hardly any which cannot be met in some way. The reader must feel that he is sure to be cheerfully helped. The librarian must drop his learned air and strive simply to aid.

The library's stock of books is carefully selected, and only the best are added. This applies to *belles lettres* as well; in which field not only modern authors, but the German classics also, are steadily drawn by the workmen. The desire for entertainment after the work of the day, through a work of fiction, is justifiable, and it is no result to be ashamed of that the use of this kind of literature in the Krupp library amounts to 50 or 60 per cent. of the circulation.

The best means of increasing the use of the library appears to be by the development of the juvenile section. In this department the increase from 7961 volumes drawn in the first year to 84,340 in the seventh, is significant. And these children remain regular readers. It is to be noted that very many of the least intelligent workmen have of their own choice turned their attention to juvenile literature, "a proof of the . . . sensible manner in which . . . this library is used." As is known, the one- or two-book system is not enforced here; the reader draws as many books as he wishes. This liberty has not been abused; only two volumes were lost in four years. "Perhaps these successes are to be regarded as an educational result." The business runs smoothly; the reader returning books and asking for new ones is kept from one minute to one and a half; in rush hours not more than three to five minutes. The work is systematized to the smallest detail; each worker is responsible down to the errand boy. As to the rules of the library, they were drawn up for certain purposes and a certain public. One rule will not hold good for all. That is one of the reasons why the usefulness of popular libraries is not everywhere uniform. Libraries are arranged according to certain systems which are defended as though there were things in library economy which absolutely could not be done otherwise.

The main aim kept in view in the preparation of the catalog is that it may never fail, even if it is a question of immediately indicating a single essay contained in a collection, the author of which does not come to the mind.

"As to the rest, the intention of the management, to serve all in the manner of the American libraries, has proven useful. The literature which is not out daily, but remains for the reader demanding quality, forms the necessary backbone of a public library which deals with broad masses of the people. Only the very heaviest scientific literature may be excluded."

FRANK WEITENKAMFF.

LIBRARY ASSOCIATION OF THE UNITED KINGDOM

29TH ANNUAL MEETING

THE 29th annual meeting of the Library Association of the United Kingdom was held this year at Bradford, Sept. 3-7. About 200 members and delegates, including several American librarians, were present at the opening session on Monday, Sept. 3, and in the evening were entertained at a reception by the mayor and mayoress of Bradford.

On Tuesday morning the members were formally welcomed at the Cartwright Memorial Hall in Lister Park by the mayor on behalf of the corporation, and by Mr. Alderman J. S. Toothill on behalf of the public libraries and art gallery committee. The president for the coming year, Sir William H. Bailey (Salford), then delivered his inaugural address. Speaking of the great progressive movements that had marked different periods, he stated his conviction that one of the greatest triumphs of the age of Queen Victoria had been the Free Libraries Act. Up to the present time this act has been adopted in 203 cities and boroughs, which control about 600 libraries. There are now in the free libraries of this kingdom 5,809,196 volumes, and probably nearly 50,000,000 readers used those free libraries last year. Can any one doubt the refining influence of this literature? One good example of the increase of education and intelligence among the working classes is found in the societies and institutions they manage themselves, without any form of patronage; witness the friendly societies, and the Co-operative Society of Manchester, with its turnover of about £20,000,000 a year for goods, its banking cash turnover of more than £100,000,000, and its great contributions to its own libraries, to education and charity. And all its members are working folk. It is not enough to mention the working classes alone as an evidence of improved education and the influence of free libraries. The libraries are for all classes. We often forget those who by pluck, natural genius, and hard work have repaired a defective education, and now occupy great positions as manufacturers and merchants. In the industrial world no man or master is of much value to himself who is ignorant of the literature of his trade. The Library Association for a long time past has devoted much consideration to the increased use of free libraries for education, industry, and industrial art. Progress has been made, excellent work done, and educational authorities are joining in the movement. The municipality now has control of both free libraries and public education. Referring to the Forney Libraries of Industrial Art, established in the working-class districts of Paris, the especial aim of which is to keep on the shelves of each all material of interest to the

particular trade of the district, the president urged that these libraries be initiated in the United Kingdom, in furtherance of the great aim of making the libraries strengthen the nation's commercial position.

The first paper on the program was "A survey of the public library movement in Bradford," by Mr. M. E. Hartley (Bradford). Mr. Scrutton followed with a "History of the Bradford Library and Literary Society," and Mr. C. A. Federer gave an account of the "Bradford Mechanics' Institution Library." Mr. J. Daykin (Yorkshire Union of Institutes) dealt with "Village libraries, with special reference to Yorkshire."

After being entertained at luncheon by the mayor, the members met at an afternoon session to discuss public libraries and education, as well as the somewhat distantly related question of bookbinding leathers. The first subject was introduced by Councillor R. Roberts (chairman of Bradford education committee) in a paper on "The relation of public libraries to the present system of education." "The leather question" was dealt with by Dr. J. Gordon Parker (Herold's Institute, Bermondsey), and his remarks gave rise to an interesting and practical discussion on the best leathers and methods of detecting defective preparation of the skins.

The proceedings were resumed on Wednesday morning, Sept. 5, when Mr. H. W. Fovargue (Hon. Solicitor to the Association) submitted his views on "Library legislation for county areas," and incidentally referred to the new Public Libraries Bill which the Association is promoting, and which, among other points, proposes that libraries shall be relieved from the payment of local rates, that the Act shall be extended to counties, and, moreover, that the present limitation of the rate to one penny shall be removed. A resolution, "That this meeting approves of the principles of the Public Libraries Bill drawn up by the Council," was carried.

Mr. J. McKillop (London School of Economics) then dealt with "The present position of London municipal libraries, with suggestions for increasing their efficiency." There are in London about 85 libraries and branches supported by rates raised by 25 out of 28 metropolitan boroughs. The suggestion was that a central loan collection of the more expensive books specially useful to the university student should be formed, and that these books should be issued free of charge, for use at home, through local libraries. The cost was estimated roughly at £60,000 spread over ten years, with an annual charge for administration of about £5000 after four or five years. Mr. L. Inkster, Mr. L. Stanley Jast, Mr. H. D. Roberts, Mr. Doubleday, and others favored the idea of a central authority. A resolution requesting the Council to consider the question was carried.

In the afternoon Mr. and Mrs. James Roberts invited a large party to meet the members at a garden party in their beautiful grounds at Milner Field, Saltaire.

In the evening the annual report of the Council was submitted at a business meeting. The Council were able to announce an increase in the membership, but the number of deaths during the year had been unhappily large, including that of Dr. Richard Garnett. The Association had been officially represented at the inaugural ceremonies of several new libraries. The first of the three local conferences authorized by the Cambridge meeting in continuation of the work of the public education and public libraries committee was held at Birmingham on May 3, by kind invitation of the Lord Mayor, who presided over the meeting. Mr. H. J. Tennant, M.P., had promised to take charge of the bill to amend library legislation proposed by the Council. The Council drew attention to the great and increasing success of the work of the education committee: over one hundred students entered for the last examination, being more than double the number of the previous year. Correspondence classes in library history and administration and in cataloging had been conducted by Mr. Brown and Mr. Quinn, and had been taken advantage of very largely by assistants outside London. Courses of lectures in cataloging, classification, library history, and library administration had been delivered at the London School of Economics and Political Science. In consequence of his appointment to the librarianship at Brighton, Mr. H. D. Roberts had been obliged to resign his office as Hon. Secretary, and the Council expressed their thanks for the valuable services rendered by him during ten years. Nearly the whole edition of 1000 copies of "Leather for libraries," prepared by the Sound Leather Committee, had been sold. Satisfactory progress had been made during the past year in the cataloging of the library of the Association, now conveniently housed at the London School of Economics. The report, balance-sheet, and accounts were received and adopted.

The whole of Thursday was devoted to the important technical subjects of classification, cataloging, bookbinding, and professional education. In a paper on "The development of classification" Mr. E. A. Savage (Wallasey) criticised the separation of geography from history and the keeping of biographical literature apart in subject classification. The relative functions of classification and cataloging were often confused. The formation of an advisory board on cataloging and classification was recommended by Mr. T. Aldred (Southwark). Mr. Cyril Davenport (British Museum) followed with a lantern lecture on the history of bookbinding in England, and, aided by a fine series of pictures of beautiful

specimens, described the characteristic work of the great English bookbinders from the ninth century to the present time.

In the afternoon Mr. H. D. Roberts dealt with "The education of the librarian: elementary stage," and Mr. E. A. Baker (Woolwich) with the advanced stage of the same subject. "The Thomas Greenwood Library at Manchester" was described by Mr. W. E. A. Axon (Manchester), and "The Library of the Association at the London School of Economics" by Mr. E. W. Hulme. The proceedings then came to an end.

During the meeting a model bindery for a library, including leathers, arranged by Mr. Douglas Cockerell (Messrs. W. H. Smith & Son) was exhibited, and also a collection of the best books of 1905 and 1906, formed with the kind co-operation of the principal publishers. A classified and annotated list of these books was on sale. In the evening the usual annual dinner of the Association took place at the Midland Hotel, and on Friday there was a whole-day excursion to Farnley Hall, Ilkley, and Bolton Abbey, which wound up a well-attended and successful meeting.

LIBRARY WEEK AT TWILIGHT PARK, N. Y., SEPT. 24-OCT. 1, 1906

THE sixteenth annual meeting of the New York Library Association was held at Squirrel Inn, Twilight Park, in the Catskill Mountains, with an attendance of 155, the largest on record, with the exception of last year, when the A. L. A. Council, Publishing and Executive Boards and the Library Institute met at the same time and place. Seven states were represented, with the District of Columbia and the Province of Quebec. The attendance from New York state was most gratifying, as the Narragansett Pier conference had been attended by so large a number of librarians that an increase in attendance at the state meeting was unexpected. 24 representatives of small libraries in the state were present.

The first session was held on Monday evening, Sept. 24, the president, Miss Mary W. Plummer, in the chair. There were 115 persons present. The president called the meeting to order with a stone gavel—the gift of Dr. A. S. Steenberg, of Denmark. Miss Plummer introduced Mr. Eastman, who spoke interestingly of Twilight Club, Twilight Park and Squirrel Inn, and directed to favorite walks and drives.

The Report of the treasurer was read.

Mr. Eastman read the gratifying Report of the committee on library institutes, showing that 29 library round table meetings had been held, bringing together during the year 402 persons representing 194 libraries, an advance of more than 50 per cent. on the number reached by the institutes of the previous year.

The committee recommended the continuance for another year of this plan of small and informal gatherings with the supervision of an appointed visitor at each, and presented the following resolutions:

1. We are gratified with the report of the committee on library institutes that in 29 library round table meetings in different parts of the state there have been brought together during the past year, 402 persons representing 194 libraries, an advance of 50 per cent. on the number reached by the 88 institute meetings of the previous year, and we recommend the continuance for another year of this plan of numerous and small informal gatherings with the supervision of an appointed visitor at each.

2. We urge upon librarians who have not attended round table meetings to avail themselves of future opportunities to do so, assuring them that, even if it costs an effort to be present and to contribute to the success of these neighborly gatherings, they will be abundantly repaid, not only by a wider acquaintance with library methods, but also by the new light in which their work will be placed, by the new spirit in which it will be done, and by the sympathy of new found friends.

3. We call the attention of library trustees to the advantage which comes to the library in the stimulus and new interest gained by the librarian in such meetings, an advantage which is amply sufficient to justify on their parts the allowance of time and the expense necessary to secure such attendance.

4. We would encourage the frequent meeting of small groups of librarians whenever convenient and without regard to the plans of the state committee, promising cordial assistance to all such gatherings as the occasion is made known to our officers or committee.

5. We recommend that librarians who find it possible to do so, invite neighboring school librarians to visit them occasionally on a Saturday for consultation on library work, and the committee is instructed to include this feature in its plans for the state.

6. We urge upon the officers of local library clubs, organized in connection with the institute movement, the importance of continuing the club organization as the basis and rallying point for the more scattered work of round tables, and we recommend a club meeting once a year in the fall or early winter with a distinct appeal to public interest in the place where it is held.

7. The committee on library institutes is authorized to pay from the funds of the association the expenses of its work for the coming year.

8. The committee on library institutes is authorized to print 500 copies of its annual report and send a copy to each public library in the state.

Mr. Eastman also read the Report of the committee on legislation.

The committee on reading lists and on publicity made no report.

The president appointed the following committees to report at a later session: *Resolutions*—Mr. R. R. Bowker, Mr. Arthur E. Bostwick and Miss Isabel E. Lord; *Nominations*—Mr. Frank P. Hill, Miss Mary L. Davis and Miss Waller I. Bullock.

Miss Plummer delivered the president's address, a summary of which follows:

PRESIDENT'S ADDRESS.

We find ourselves in this, the sixteenth year of the State Association's existence, meeting among new surroundings and under new auspices, not less favorable to enjoyment than heretofore and perhaps more favorable to steady and significant work.

The natural tendency of all such bodies as this, as they grow older, is to draw the line a little closer around those who formed the original nucleus with its earlier additions, and to consider these the body itself, a tendency which must be continually resisted, if good, extensive, living work is to be accomplished.

The State Association, including or, at least, designed to include, all sorts and sizes of libraries, owes a duty to the very smallest as to the very largest. By meeting this year in a more accessible spot, the Association gives earnest of its desire to be inclusive and comprehensive.

It is a vital question, I think, whether we should not meet each year in a different part of the state, in order to bring attendance within the reach of the most remote and isolated libraries. At the recent A. L. A. meeting at Narragansett Pier, this was emphasized as desirable and almost necessary by Miss Stearns, Miss Downey and others. It has been stated that the representation of the small libraries of the state in this Association is less than ever before and has been steadily declining for some years.

Because of the knowledge of this condition it has seemed desirable that we should consider briefly this evening the functions of the state library association in this state or any other.

There are two views that may be taken. We must all admit that in one sense such an association is not an authoritative body. It has neither legislative nor executive power, and as a volunteer body, it has no official standing. As to its value in creating and moulding public and professional opinion and bringing legislation to pass—that depends altogether on the character and reputation of the specific association.

If it fully represents the library interests of the state, to the remotest corner, and represents them well, it can exert an indirect and pervasive influence that may bring many things to pass, provided it sees its duty to be in that direction.

The other view—and some of you may think the truer view—is that a state association has nothing to do with legislation, with general reforms and improvements, that it is only a volunteer assembling of the librarians of the state for individual professional improvement and the exchange of ideas.

To adapt Terence to our use, "We are librarians and nothing that concerns librarians is alien to us," or, at least, nothing should be. I submit that we, as an association, have had a very good time at our meetings, that we have had some good papers and discussions, that we have appointed numerous committees and made valuable acquaintances, and that a few people have worked very hard and faithfully to make the working part of the meetings successful, but, with the exception of the library institutes, have we brought anything to pass that affects the general library interests of the state? Is it not a good moment for us to cast an eye over the field and see where, with the good will and co-operation of the state officials, we can best apply our energies, making the association a positive power for good throughout the entire state?

As a preliminary to action there should be acquaintance with the situation, and I have no doubt the State Library could and would supply us not only with affirmative but negative information. To read always of what has been done without knowing what remains to be done is pleasant and encouraging, but it is likely to land one finally in a sort of blind man's paradise where exertion seems needless.

As to definite work to be done, perhaps some of you are saying "for instance?" A work which is in its infancy in this state, as in many others, is destined, in my belief, to hold the center of the stage during the greater part of the coming decade. This is the work in the normal schools in the interests of bibliography and librarianship—the inclusion in the normal course of such subjects as the management of school libraries and, more important still, the use of libraries in schools as aids to study and culture. I am telling no secret when I say that a large proportion of the young persons who go to our normal schools go there with very little knowledge of books other than their school books, and some of them, I regret to say, go out of the normal school without having added seriously to their book acquaintance. Naturally, when they begin to teach they cannot give what they have not got.

What can the State Library Association do here? Draw into its meetings as many educators as possible, go to their meetings with a "concern" to speak, call their attention to the schools that are taking the lead in the work, if they have not already remarked it, and, in short, cry as loud in the wilderness as possible until attention is attracted to and fixed on this point.

The libraries of the public institutions of

the state, penal, reformatory, etc., have never, so far as I know, attracted the interest of the Association, immense and important as is the field they offer for investigation. Iowa has taken the most advanced step in regard to these libraries by placing them all in the charge of a state visitor—a trained, experienced woman librarian, who is to be responsible for the quality and fitness for their respective institutions of all these book-collections, influential over the lives of the criminal and delinquent classes. Are we ready to enter upon the question of our responsibility here, after making due investigation of the facts?

The various reformatory institutions for children and young people, those for defective and neglected children, in city and country—what are their book resources? what the value of them for character-training? what the nature of their use? How much do we know about this?

Has the importance of books for convalescents, for incurables and for the blind impressed the hospitals and asylums of the state sufficiently? If not, can we, as an association, do anything to deepen and extend the impression?

How are our foreign-born population supplied with books outside the great cities where their case has forced itself on the authorities? Is there anything we can do as an association to further their interests, both by inducing in them a desire for an education in things American and by preventing them from losing touch with their own best literature and history?

The Report of the committee on library institutes has been heard, and I think we shall agree that the institute, as hitherto carried on, has been rather a large tool for individual work, and that the plan of work for the past year comes nearer the thing needed and desired. Ought not the Association to consider the possibility of state instructorships or some equivalent offices to whose services at any time the small library would have a certain right and on whom it might call, up to a certain point, without the fear of trenching upon time and strength belonging to others?

The era of volunteer work must always be gone through in any reform or improvement, but it is not the time of the greatest progress, because it lacks unity, concentration, harmony and persistence along settled lines. The sooner the occasional enthusiasm and self-sacrifice of volunteer work can be harnessed for steady road work and take on the character of duty, the better for the work.

As an unofficial body the State Association is not bound to any unwieldy or complicated machinery, its membership is constantly kept alive by new, young and energetic blood, it voices the current feeling and the current con-

viction as a stationary body could not always do. If it sees signs that any part of the library interests of the state are becoming, as it were, vested interests, that any library function is crystallizing into rigidity, the Association is at liberty to "shake things up" in free and full discussion.

I hope my setting forth of the work in which this Association may take a hand, if it will, either as a promoter or an actual participant, has not made anyone tired in anticipation. If the prevailing feeling is that we are not a "working" body and that we do enough if we help one another individually out of our little difficulties once a year, the majority rule is to be respected; but I suspect the minority will continue to see visions and will keep quietly hammering away until some of the visions come true.

Upon motion of Mr. Hill, the recommendations suggested in the president's address were referred to the Executive Board, that definite action might be taken.

The meeting then adjourned.

The Tuesday evening session opened with a large attendance. The president enumerated the subjects of the evening and introduced Miss Helen E. Haines, who read a paper on "The effect of civil service on library efficiency," printed elsewhere in this issue.

The subject was discussed by Mr. R. R. Bowker, who gave a brief history of the civil service reform movement.

Mr. Hill pursued the subject by reading a paper prepared by Miss E. V. Baldwin, of the Brooklyn Public Library. It maintained that, while civil service examinations and rules do not always result in the appointment of the one most competent, they do exclude the absolutely unfit. Such rules, therefore, afford protection. The real difficulty with any municipal scheme is that library assistants are often unwilling to submit to an examination open to general competition, and that to arrange for special positions, to have others exempt from examination, to secure promotion of the deserving, requires too much time. The examination questions do not always pertain to the duties of the particular position to be filled. One great difficulty of the Brooklyn Public Library when under municipal control was in securing janitors. While the civil service rules safeguard appointments, they make it difficult to dismiss an incompetent assistant. Since becoming a private corporation, with full power to make appointments, the Brooklyn Public Library has prepared a scheme of library service. This provides for the graded and non-graded. Examinations in graded service are competitive except in cases of transfer from one department to another in the same grade, or when there is no one in the eligible list available and suitable. Promotions and increase of salary are based upon qualifications

rather than mere length of service. Graduates of library schools and assistants for other libraries, after examination, are eligible for appointment to graded service, according to their experience. This "scheme" has been in force for two years and has met the requirements.

Miss Jessie F. Hume, of the Queen's Borough Library, discussed the subject from the point of her own experience with the municipal civil service.

The president then introduced Miss Sarah B. Askew, of the New Jersey Library Commission, who read a paper on "Problems of a small town library," printed elsewhere in this issue.

After a full discussion by Mr. Bowker, Miss Hinsdale, Miss Lord, Mr. Peck, the reader of the paper, and others, the meeting adjourned.

On the opening of Wednesday evening's session, Miss Plummer introduced Mr. Arthur E. Bostwick, of the New York Public Library, and suggested that while we talk of buying and lending, charging and discharging books, circling around them continually, we seldom talk of the books themselves, and stated that Mr. Bostwick in his paper, "The love of books as a basis for librarianship," would remedy this deficiency.

Mr. Bostwick found analogies between the love for human beings and the love of books. The book is made up of soul, body and clothes. The true lover is he who loves the soul. He would rather have a little old dog-eared copy of his favorite author than a mediocre production that is a typographic and artistic masterpiece. Love of books is preeminently a characteristic of civilized man. The very existence of a library presupposes a love of books, and it should be not only a qualification but an absolute prerequisite for entrance upon librarianship. Some avowed book lovers confuse a love of books with a love of reading. A real love of books is betrayed rather than announced. This is perhaps why it is so little considered among the modern qualifications of librarianship. Love of one's work becomes a simple matter when there is a love of the subject matter of that work. All work consists of a series of acts, which taken apart from their relationship are unimportant and uninteresting, but which acquire importance and interest from those relationships. Association with book lovers will often awaken a love for books, and mere contact with books themselves may do it. Our open shelves have brought it about in thousands. The busy assistants at the desk may in a word convey the fact that a body of workers are personally interested in books and eager to arouse it in others. To test ourselves we may put the question, What would the world be to us without books?

Miss C. M. Hewins, of Hartford (Conn.)

Library, could not be present, and her paper was read by Miss J. A. Rathbone.

A good many times a year a girl applies for a library position, so writes Miss Hewins, because she has a great love of books. This love usually consists of having read a few historical novels so carelessly that she places Ivanhoe in the 16th century and Richard Carvel's visit to London in the reign of James the Fourth. She is always told that she needs several years more of school, and the habit of careful and attentive reading before she is ready for library work. On the other hand, a woman well acquainted with several languages and a student of the best literature, made an entire failure of an annotated finding-list for a Sunday-school library because she lacked executive ability and the power of adapting herself to new conditions.

The writer referred to her own childhood, the favorite poems and the people that were so real to her as she again turned the pages of Mrs. Lowell's "Gleanings from the poets"; closing with the statement that the love of that one book and the roads leading out from it had proved a fair basis for librarianship.

Mr. Adam Strohm reviewed the same subject, and Miss Lord emphasized some points of Mr. Bostwick's paper.

"Women's clubs and libraries in New York state" was the subject of the paper read by Miss Anna H. Perkins, librarian of the Iliion Public Library. After touching upon the history of women's clubs, she detailed the good work that has been done in the numerous cases where the club has preceded the library. In many instances the library owes its existence to the local club, that has raised money for its maintenance by the giving of lectures, concerts, suppers, drills, book parties, rummage sales and like entertainments, because the good people of the village would have refused to sign a subscription paper. Club women not only support the little library, but often give their services to keep it open until it can afford a paid librarian. A report from the chairman of the library committee of the State Federation of Clubs showed that generous donations of money and books had been made from 1901 to date. Clubs more than any other organizations support libraries because they cannot do without books. A large percentage of the circulation of solid books is due to their use by club members. On the other hand, libraries have done much for clubs. The librarian is usually an active member and gives valuable assistance.

Miss Myrtila Avery, of the Department of Educational Extension, State Library, led the discussion.

The chair asked if it would not be desirable, in view of the good work done by the clubs for New York state, as set forth by Miss Perkins, that the Association send a

message of recognition to the State Federation of Women's Clubs. The matter was referred to the committee on resolutions.

Mr. Eastman spoke of the department of picture work at the State Library, termed visual instruction, and gave directions for borrowing the lantern slides and accompanying lectures.

Miss Plummer said that the Pratt Institute Library School had prepared club programs during the past year, which had been and would be lent for club work.

The meeting then adjourned.

Fourth session, Friday evening, Sept. 28, 1906. The president called for the Report of the auditing committee. The committee reported that the treasurer's report was found correct, and recommended that the constitution be so revised that the fiscal year be the calendar year so far as memberships are concerned. Upon motion of Mr. Eastman, it was decided to have a committee of three appointed to revise the constitution.

Miss Lord read the report of the committee on resolutions as follows: "The New York Library Association records its sense of bereavement in the death of Mr. Henry L. Elmendorf, who was long a member of the Association, and who served it not only in the presidency, but in many successive offices, and in all with abiding faithfulness. His service to the Association cannot be measured in words, but is recorded in the results of his labors as our co-worker. His thoughtfulness and kindness made his associates his friends, and these qualities endeared him not least to those who were newcomers in library work and in the Association. Because of these qualities our loss is personal as well as professional. To our associate, Mrs. Elmendorf, we send from this conference our deepest sympathy in her personal grief." The resolution was adopted by a standing vote.

"The New York Library Association records its belief that so important a public work as the Ecclesiastical Records, a recently completed New York State publication, should have the valuable material therein contained made accessible to students by a full index and trust that an appropriation will be granted to the state historian for this purpose.

"The New York Library Association expresses to the New York State Federation of Women's Clubs its grateful appreciation of the part taken by women's clubs throughout the state in the formation and encouragement of public libraries, and of the service and support club members have given to library work.

"The New York Library Association assembled at its annual conference sends greetings to Herr Andreas Steenberg, and hearty thanks for his expression of friendliness in his gift to the Association of a unique and beautiful gavel.

"The New York Library Association extends its thanks to the Twilight Park Association for the privileges granted to its members during its annual conference; to the hostesses of Squirrel Inn, the headquarters of the conference, for their unfailing attention and thoughtful kindness; and to the other inns of the Park for their several courtesies."

The committee on nominations submitted its report and the secretary was instructed to cast a ballot for the following officers, who were then declared elected to serve for the coming year:

President, Walter L. Brown, Public Library, Buffalo;

Vice-president, J. I. Wyer, Jr., N. Y. State Library, Albany;

Secretary, Miss Theresa Hitchler, Public Library, Brooklyn;

Treasurer, Edwin W. Gaillard, Public Library, New York;

Member of Committee on legislation, A. E. Bostwick;

Member of Committee on institutes, A. L. Peck.

The secretary then read the following recommendations of the Executive Board for definite action on the suggestions embodied in the president's address:

Part 1.

- (1) The New York Library Association at its annual meeting, at Twilight Park, voted it desirable that the Education Department of New York state should prepare and have published a detailed and minute statement, in form convenient for reference, of the library conditions of the state;
- (2) further, the New York Library Association calls the attention of the State Education Department to the need of an investigation of and report on the libraries of the penal, reformatory, and charitable institutions of the state, and suggests the provision of further facilities for this work if present ones are not sufficient;
- (3) further, the Association expresses to the State Education Department its sense of the desirability of ample facilities for the work of organization and reorganization of the smaller libraries of the state and for the founding of libraries in localities without free library resources.
- (4) Recommended that representatives of the educational organizations of the state be invited to attend the next meeting of the Association and take part in its discussions.
- (5) Recommended that the Association request the Normal Principals' Council to receive at its convenience a committee of the New York Library Association, to present a communication from the Association relative to the teaching of the use

of books in the normal school courses of the state.

- (6) That the incoming Executive Board be instructed to carry out either by themselves or through committees named by them the above recommendations.

Part 2.

- (1) Recommended that the annual meetings of the New York Library Association be bound to no particular place, but that the Association meet next year, if possible, somewhere in the Catskill region in the same week of the year.
- (2) Recommended that meetings continue one week in length, but that the more important features of the program be scheduled for the first three days, in order that members having but a few days at their disposal may still have the benefit of the more interesting sessions.

A discussion followed which resulted in part 1 being adopted entire, and part 2 being referred to the new Executive Board.

Upon motion of Mr. Hill, the report of the committee on institutes was deferred until the next session.

Mr. W. F. Seward, librarian of the Public Library of Binghamton, gave an address on a "Plan of systematic advertising for small libraries." There is often a discouraged feeling in the air that only a large library with its staff can do effective work; that the small library can only imitate the large library. The small library, in proportion to its equipment, in proportion to the population can do more than a large library. In a small community personality counts and favors are gratefully received, while in a large city much is lost in the great momentum of the mass. Some small libraries are too genteel to do business, and remind one of a country parlor that is only opened on state occasions. I suggest that if a small library is worth more it will get more money. I would urge advertising. As a preliminary for advertising, study your local conditions. What important problems are your citizens discussing? In buying books, consider your retail merchants, analyze your manufactures and industries, and in buying books have the courage of your imagination. In order to carry out plans for advertising, use organizations already existing. Use their bulletin boards as well as the hotels and stores. Invite co-operation and freely use the village newspaper. Invite co-operation from everybody and tolerate dictation from nobody. Do not make your library an annex to a woman's club. Have a free lecture course and use lantern slides. Take advantage of opportunities and your library, however small, shall become an intellectual center radiating light.

Mr. C. W. Andrews, the president of the American Library Association, extended a cordial invitation to the next meeting of the

A. L. A. He outlined attractively the opportunities offered by the conferences for association, for exchange of thought, and for travel.

The president opened the session on Saturday evening by appointing Mr. W. R. Eastman, Mrs. H. L. Elmendorf, and Miss Mary L. Davis a committee of three to revise the constitution.

Mr. Eastman then read the resolutions of the committee on institutes, and it was decided to consider these resolutions one by one and to adopt them in whole or in part. After a free discussion, it was decided to adopt the resolutions with the following amendments: that in no. 6 "at least" be inserted after the word "meeting;" in no. 8, "500 copies" be changed to "2000 copies." It was thought best to print the extra number of copies that the report might reach library trustees.

Miss Plummer reported that no regular press committee had been named, but that most of the cities and villages of the state were to receive reports of this meeting through the local librarians in attendance.

A discussion followed as to the feasibility of printing the papers read at the N. Y. L. A. meetings and of printing a handbook of libraries and book lists for free distribution. Upon motion of Mr. Wyer, it was voted, That the New York Library Association in annual conference at Haines Corners recommends to the N. Y. State Education Department the publication of a quarterly library bulletin devoted to the interests of the libraries of New York state.

It was also voted, upon motion of Mr. Eastman, That the Association approves the action of an informal meeting of its members held at Narragansett Pier, July 4, 1906, and hereby ratifies the action of the Executive Board in holding "Library week" at a place more accessible than Lake Placid.

Miss Plummer read a letter from a librarian not in attendance asking "How can we popularize a subscription library with those who are not members?" A discussion followed, resulting in several helpful suggestions.

Mr. Wyer asked that the question of reserving current fiction be discussed, which brought forth a lively debate, a majority favoring the reservation.

Miss Ovington, who is especially interested in the American negro, talked interestingly of his additions to our literature, and urged librarians to place some of these more radical writings on the shelves, that both sides of the negro question might be represented.

The chair then offered the gavel to the incoming administration in the person of Mr. Wyer, the new vice-president, who spoke appropriately in the absence of the president, Mr. Walter L. Brown, and brought to a close one of the most interesting meetings the New York Library Association has ever had.

ADELE B. BARNUM, *Secretary.*

Round tables were held on Wednesday and

Thursday mornings with an attendance of over one hundred at each.

The first, on "Encouragements of library work," was conducted by Miss Waller I. Bullock, of the Utica Public Library. Miss Frances Rathbone, of the East Orange Public Library, spoke on the encouragements from the point of view of a small public library, Mrs. A. Malthy on those in work for children, and Miss Julia Wheelock, of Pratt Institute, on those in reference work.

Miss Frances D. Thompson presided at the round table on "New ideas, methods and devices," and was ably supported by Miss Mary Davis, of the Hart Memorial Library of Troy; Miss Agnes Elliott, of Pratt Institute Free Library; Miss Frances Rathbone, and others.

The weather was perfect for a meeting in the Catskills, and every one took advantage of the numerous accessible walks and drives. The usual "climbers" tramped Round Top and High Peak, and drives to Sleepy Hollow, the "ledge drive," with magnificent views from Hotel Kaaterskill and Mountain House, and to Onteora and Elka parks were the order of the day.

It was not needful to leave the inn to enjoy nature, for it looks out upon the picturesque Kaaterskill Clove, with an extended view over the Hudson to the Berkshires. The habitué took a proprietary interest in the beautiful mountain scenery; the newcomer was charmed and left with regret.

American Library Association

President: C. W. Andrews, John Crerar Library, Chicago.

Secretary: J. I. Wyer, Jr., State Library, Albany, N. Y.

Treasurer: George F. Bowerman, Public Library, Washington, D. C.

PROCEEDINGS OF THE EXECUTIVE BOARD AT HAINES FALLS, N. Y., SEP-

TEMBER 28, 1906

Present, C. W. Andrews, E. H. Anderson, F. P. Hill, Helen E. Haines, J. I. Wyer, Jr.

Voted. That the Executive Board, in behalf of the American Library Association, express to the officers of the Boston Athenæum the sincere appreciation of the Association for the courtesy which during so many years has made available, practically without cost, convenient quarters for the offices of our Publishing Board.

Voted further, That this action be recorded in the minutes of the Executive Board, and that the secretary be directed to furnish a copy to the Athenæum Corporation.

N. E. A. CO-OPERATION COMMITTEE

The resignation of Dr. J. H. Canfield from the chairmanship of the committee on co-operation with the N. E. A. was presented. Dr. Canfield having expressed a willingness

to continue upon the committee, Mary E. Ahern was named as chairman.

DATE OF 1907 CONFERENCE

Voted. That if satisfactory railroad and hotel rates are secured the annual conference for 1907 be held at Asheville, N. C., May 23-29 next.

TREASURER'S BOND

On recommendation of George F. Bowerman, treasurer of the Association, it was voted to require the treasurer to furnish bond through a satisfactory indemnity company in the sum of \$3000, the cost to be charged against the Association treasury.

DISTRICT MEETINGS

Pursuant to action taken by the Council at Narragansett Pier referring the matter of district meetings to the Executive Board with power, it was voted,

That the Executive Board of the American Library Association is prepared to accredit an official representative to the meeting of any state or district library association upon request from the proper officer of any such association, provided satisfactory local arrangements can be made to defray expenses. The secretary is directed to send a copy of this action to the secretaries of all state and district library associations.

JAMESTOWN EXHIBIT COMMITTEE

The following committee was named on arrangement of exhibit at the Jamestown Exposition in 1907: John P. Kennedy, chairman; C. H. Hastings, Anne Wallace, J. I. Wyer, Jr., with power to add one other member.

The secretary reported an appropriation of \$100 from the Exposition to be used by this committee, and that the A. L. A. Publishing Board stands ready to defray expenses of transporting and arranging its own exhibit, to form part of that of the American Library Association. The board directed the secretary to express its thanks to the Virginia State Library for its courteous offer of assistance and co-operation, and approved the suggestions for an exhibit submitted by the preliminary committee, Mr. Henry J. Carr, chairman, which reported at Narragansett Pier.

ANNUAL BUDGET

The finance committee submitted through the treasurer the following budget for the year 1906-07, ending with the expenses incident to the Asheville conference.

Proceedings.....	\$1600
Stenographer for conference.....	150
Handbook.....	250
Secretary's salary.....	250
Secretary's and conference expenses....	600
Treasurer's expenses.....	100
Committee on bookbuying.....	200
Other committees and sections and incidentals.....	400
Total.....	\$3550

The board reappropriated a balance of \$40.81 remaining from an appropriation of \$50 made to the committee on bookbinding, which is still unexpended, this to be paid by the trustees of the endowment fund.

Acting upon a resolution suggested in the report of the committee on international relations and formally moved in conference at Narragansett Pier by W. C. Lane, the Executive Board voted as follows:

By formal resolution passed and carried in general session at its annual meeting at Narragansett Pier, R. I., June 29-July 6, 1906, and now ratified by its Executive Board, the American Library Association requests the Library of Congress and the Department of State to express to the German government its appreciation of the offer which has been so generously made by that government to extend to American libraries the same privileges of international lending of manuscripts and printed documents which are now enjoyed by the various European nations, and to urge the acceptance of this offer in behalf of American libraries, to become effective as speedily as may be. The secretary is further directed to transmit to the Librarian of Congress a minute of this action.

Acting upon motion *in re* printed catalog cards for current German periodicals offered by Mr. W. C. Lane at Narragansett Pier, the Executive Board voted to instruct the committee on international relations to make a special effort to further or secure the printing of catalog cards of German books either by a proper department of the German government or by a German library, with the suggestion that the matter could most advantageously be taken up through the Verein Deutscher Bibliothekare.

J. I. WYER, JR., *Secretary*.

A. L. A. PROCEEDINGS, 1906

The papers and proceedings of the Narragansett Pier Conference of the American Library Association, 1906, have been published and distributed from the office of the LIBRARY JOURNAL to members of the Association so far as lists have been received. These lists include first those members whose names were included in the Handbook of 1905, and, secondly, those later members who had joined some time before the Narragansett Pier Conference. These lists are now being checked off on the 1906 Handbook, and those who have joined since the Narragansett Pier meeting and some others should presently receive their copies. Any members who fail to receive their copies by Nov. 10 should send word to the Publishing Board offices, 34 Newbury street, Boston, Mass. Extra copies, or copies for non-members, may be had at \$1 each.

State Library Associations

CALIFORNIA LIBRARY ASSOCIATION

The fourth district of the California Library Association met at Long Beach, Sept. 28, and about 75 men and women interested in library work attended the sessions.

Miss Antoinette M. Humphreys, of Redlands, presided over the gathering, which was held in the First Congregational church.

Rev. Charles Pease offered the invocation, after which C. F. Lummis, of the Los Angeles Public Library, read a paper on "Some notes of the Narragansett meeting."

At the afternoon session a question box was conducted and a dozen delegates took part in the discussion.

CONNECTICUT LIBRARY ASSOCIATION

President: George S. Godard, State Librarian, Hartford.

Secretary: Mrs. Belle H. Johnson, Public Library Committee, Hartford.

Treasurer: Miss Esther B. Owen, Public Library, Hartford.

Seventy persons connected with the libraries of Connecticut attended the fall meeting of the Association at Norfolk on Thursday, Sept. 20. The Norfolk Library, in which also the fall meeting of 1893 was held, had been tastefully decorated with flowers for this occasion. Since the meeting of 1893 the Association membership has so increased that it was necessary to hold the business sessions in the Norfolk gymnasium.

The meeting was convened in the library, however, at 10.30, and words of welcome from Miss Isabella Eldridge were read by Hon. H. H. Bridgman.

State Librarian George S. Godard, of Hartford, president of the State Association, responded, after which the delegates adjourned to the Norfolk gymnasium, where a short business session, which included the reading of reports of the secretary and treasurer, and discussion and the addresses, took place. The subject of "Branch libraries and delivery stations" was opened by a report from Miss Emma Wakeman, of Fairfield, read in her absence by Miss Edith Pancoast; this was discussed by Miss Alice Shepard, of Springfield, and in a report from Miss Alice T. Cummings, of Hartford, read by Miss Abigail H. Farren, of New Haven.

Miss Dotha Stone Pinneo, of Norwalk, and Miss Laura F. Philbrook, of Middletown, read papers on "Hard and fast *vs.* elastic rules." Both recommended as few rules as possible and their enforcement.

This closed the morning session, and the delegates were invited to the home of Miss Eldridge, where luncheon was served.

The afternoon session began at 2.30, when Miss Caroline M. Hewins, of the Hartford

Library, talked upon "Standards of book selection." Discussions were assigned as follows: Frank B. Gay, of Hartford, "Recent books of history, biography and fine arts"; Walter Learned, of New London, "Recent books of science and useful arts," and "Recent fiction," and Miss Jennie Smith, of Waretown, "Recent books of travel and general literature."

The last speakers were the Rev. John Coleman Adams, D.D., of Hartford, and the Rev. Samuel Hart, D.D., of Middletown, whose subjects were "Out of doors in the library" and "Good fellowship among librarians," respectively.

WASHINGTON LIBRARY ASSOCIATION

A meeting of the Washington Library Association was held in Seattle at the University of Washington on July 13 and 14, 1906. The visiting librarians were the guests of the Seattle Public Library and the University Library; representatives were present from 14 different libraries of the state and several from other states. State librarian J. M. Hitt presided. The meeting was held at this time in order that the members of the Library Summer School, then in session at the university, might become familiar with library conditions of the state.

At the close of the first day's session all members of the Association and the guests were given a boat ride across Lake Washington to Meydenbauer Bay, where dinner was served.

The third annual meeting of the Association will be held at Olympia with the State Library in May, 1907.

The program was as follows:

FRIDAY MORNING, JULY 13, 1906

1. Address of welcome. Dr. T. F. Kane, President University of Washington.
2. Business.

FRIDAY AFTERNOON

1. Public documents and the small library. C. W. Smith, University Library.
2. System of classification and cataloging explained and present conditions in our libraries discussed. Mrs. Jessie M. Boyd, Seattle Public Library.
3. Library binding. Miss Harriet E. Howe, University of Illinois.
4. Reference work for schools, clubs, debates, etc. Miss Bertha Royce, University of Illinois.

SATURDAY MORNING, JULY 14

1. How to develop and extend new libraries in the state. Mr. J. M. Hitt, State librarian.
2. Round table. How may the receipts of a library be increased? Mr. J. T. Eshelman, Tacoma Public Library.
3. Work accomplished in one year in a small library. Miss Elizabeth Hall, Yakima Public Library.

4. Maintenance of the library in the small town, and the expenditure of its funds. Mrs. J. M. Walker, Aberdeen Public Library.
5. High school libraries in Washington. Prof. A. H. Yoder, State University.

SATURDAY AFTERNOON

1. Local history and the state. Prof. Edmond S. Meany, State University.
 2. Functions of the state library commission. Mrs. Belle Stoutenborough, Seattle.
 3. Choice and care of periodicals. Miss Grace E. Switzer, Bellingham.
 4. Round table. The state library and needed library legislation. Mr. J. M. Hitt, State librarian, Olympia.
- E. PEARL McDONNELL, *Secretary*.

Library Clubs

CAPE COD LIBRARY CLUB

President: Hiram Myers, Orleans.

Secretary: Miss Alexina P. Burgess, Wareham.

Treasurer: Mrs. Florence H. Bend, Chatham.

Under pleasant auspices the annual meeting of the Cape Cod Library Club was held Friday, Sept. 28, in the Unitarian Church, at Sandwich, a large gathering of library workers and students of library methods attending both morning and afternoon sessions. A pleasant feature of the day was a lunch served in the vestry of the church during the noon hour through the hospitality of the Sandwich Library.

The business meeting, which began at 11.30 o'clock, was occupied with the reading of reports from the secretary and treasurer, the election of officers and the appointment of committees. The old board of officers was unanimously re-elected for the ensuing year. Miss Martha N. Soule, however, expressed her enjoyment in serving the club as its secretary, but announced that it would be necessary for her to decline a re-election, and Miss Alexina P. Burgess, of Wareham, was elected in her stead. The executive committee is as follows: Mrs. G. R. Agassiz, Yarmouthport; Hannah S. B. Dykes, Wareham; Laura M. Bearse, Centerville; H. F. Hopkins, Provincetown; Mrs. Maurice G. Crocker, Osterville, and A. May Knowles, Eastham.

A vote of thanks was tendered Miss Soule, the retiring secretary.

Reports were read by Mrs. Maurice G. Crocker, who went as delegate to the American Library Association meeting at Narragansett Pier; Miss E. C. Nye, of Barnstable, who was a delegate to the meeting of the American Civic Association in Cleveland last October, and A. S. Bowerman, of West Falmouth, the club's delegate to the Massachusetts Library Club meeting in January.

At the afternoon session Mr. W. I. Fletcher, of Amherst, addressed the club upon the subject "The bull in the (library) china shop." After speaking at length of certain modern developments in library technique as "china," for example, the card catalog, the stack, classification, etc., he concluded: "I regard the on-coming 'bull of progress' with complacency because it has always seemed to me that in the constructive period of the library movement we have been so occupied with devices and schemes, with the technical side of the work, that we have laid altogether too much stress upon it and have not realized that our work is essentially professional and not technical. We must know books from the inside and cultivate intellectual relations with our patrons, rather than merely to 'run' a library. I should like to see every librarian and library attendant first of all a scholar, an ardent seeker after knowledge and wisdom, living among books with delight, content with nothing short of absolute familiarity with them, a linguist in some fair sense of the word, if books other than the vernacular are at hand, and at the same time eager and able to help and guide others. Such a one will use all good apparatus, but will know that the best apparatus is but a clumsy and rough-shod aid in a work which must be first of all one of intelligence and scholarship. Such a one will look upon the destruction of all the china in the shop with calm indifference."

A vote of thanks was tendered the speaker, and others who contributed to the success of the meeting. A general discussion of library methods followed till the hour of adjournment.

Library Schools and Training Classes

CHAUTAUQUA LIBRARY SCHOOL

The sixth annual session of the Chautauqua Library School opened July 7 and continued till August 17, under the directorship of Melvil Dewey, with Mary E. Downey as resident director, assisted by Sabra W. Vought and Harriet R. Peck.

Miss Ahern was with the school a week, delivering helpful, inspiring lectures as follows: "The librarian's duty to herself"; "Salaries, hours, vacations"; "Business methods"; "The A. L. A. and its outgrowth"; "Who's who in the library world." The students enjoyed knowing her personally. Mrs. Evelyn Spread Barnett, literary editor of the Louisville *Courier-Journal*, lectured on "Literary criticism," Marilla W. Freeman on "Reference books," and Miss Bingham, of the Chautauqua Arts and Crafts School, on "The composition of bulletins from the standpoint of the artist."

The course of study included library organization and administration, cataloging,

classification, reference work and bibliography. Lectures were given also in accessioning, shelf-listing, book-numbers, alphabeting, binding and mending, and were followed by practice work which was carefully revised. Opportunity was frequently given for questions and discussions of problems relating to practical library experience. Visits were made to the James Prendergast Library, Art Metal Construction Company, Buffalo Public Library and Niagara Falls Public Library.

The students worked with faithfulness and enthusiasm, and a delightful spirit of harmony and good fellowship prevailed among them.

Aside from the regular students there were many visiting librarians and trustees who attended special lectures and consulted in regard to library matters.

The school already promises favorably for next year. Inquiries concerning the work should be addressed to Chautauqua Institution, Chautauqua, N. Y., or to Mary E. Downey, Public Library, Ottumwa, Iowa.

MARY E. DOWNEY, *Resident Director*.

DREXEL INSTITUTE LIBRARY SCHOOL

Miss Ella R. Seligsberg, for the past three years assistant librarian and instructor in the Library School, has resigned; Miss Ellen D. Biscoe, a graduate of the New York State Library School, has been appointed in her place. Miss Biscoe was for six years librarian of the Eau Claire (Wis.) Public Library, and later was on the staff of the New York State Library.

Miss Mary L. Erskine, class of '04, has resigned as librarian of the William McCann Library, Norristown, Pa., and on Sept. 20 entered upon her duties as librarian of Wilson College, Chambersburg, Pa.

Miss Harriet A. Mumford, class of '97, who has been travelling in Europe during the past year, has been appointed librarian of the William McCann Library, Norristown, Pa.

Miss Mary P. Farr, class of '95, is organizing the library of the State Reform School, Morganza, Pa.

Miss Helen D. Subers, class of '03, is organizing the library of the Chestnut Hill Academy, Chestnut Hill, Pa.

CLASS OF 1906: APPOINTMENTS

Mrs. Mary E. Daigh, substitute, Public Library, Champaign, Ill.
Miss Susan K. Beck, librarian, Public Library, Crawfordsville, Ind.
Miss Mary E. Pearson, Miss Edith K. Schanche and Miss Edith M. West, catalogers, University of Pennsylvania Library.
Miss Ruby P. Pegan, assistant, Public Library, Denver, Col.
Miss Irma A. Watts, assistant, State Library, Harrisburg, Pa.
Miss Margaret Forgens, cataloger, State Col-

lege Library, Ames, Ia. Miss Forgens during the summer was engaged as cataloger in the Library of the University of Pennsylvania.

Miss Effie M. Prickett, cataloger, State Library, Hartford, Conn.

ALICE B. KROEGER, *Director*.

UNIVERSITY OF ILLINOIS STATE LIBRARY SCHOOL

The school opened Sept. 19 with a registration of 43 students, including 20 college graduates. In addition 115 students from other departments of the university are taking the general reference course, which counts two hours a week for one semester.

Miss Bertha E. Royce, of the reference department, succeeds Miss Howe as instructor of library economy. Miss Royce was prepared at Syracuse University and the Buffalo Teachers' Training School, and received her B.L.S. from the Illinois Library School in 1904. Before entering the school she was assistant librarian at the Patterson Library, Westfield, N. Y. For the past two years she has been reference assistant and instructor of general reference course in the University of Illinois. Last summer she was instructor in the summer library school at the University of Washington.

Mr. Philip S. Goulding succeeds Miss Cole as catalog librarian and will meet the advanced students for discussion of cataloging problems in addition to supervising their laboratory work in the department. Mr. Goulding was graduated from Yale in 1898, and spent the following year at the New York Library School. Since then he has been classifier and cataloger at the New Hampshire State Library, the University of Missouri, the University of the South and the Library of Congress.

The Library Club has reorganized with a limited membership, and will meet in the evening once a month at private houses. The first meeting was held at the home of Miss Sharp. The copyright was the subject for discussion and was presented by Misses Fetterman, McMahon and Burnside.

PERSONAL NOTES

The following members of the class of 1906 have received appointments as given below: Marian Bell, assistant cataloger, Bryn Mawr College; Florence Currie, assistant cataloger, Carnegie Library, Pittsburgh, Pa.; Mattie Fargo, librarian, Normal School, Cedar Falls, Ia.; Lily Gray, reviser, Wisconsin Library Commission, Madison, Wis.; Mrs. Ida A. Kidder, document cataloger, State Library, Olympia, Wash.; Elizabeth Laidlaw, assistant cataloger, Springfield, Ill., Public Library; Lucy Lewis, librarian, New Mexico College; Josephine Meissner, librarian, Normal School, Peru, Neb.; Ola Wyeth, assistant cataloger, Northwestern University, Evanston, Ill.

Miss Alice G. Derby, 1903-04, was married

to Mr. Oscar Carr in Columbus, Ohio, on Sept. 21.

Invitations have been received to the marriage of Miss Grace Goodale, B.L.S., '03, formerly instructor in the Library School, to Mr. Edward O. Keator, '02, in Cincinnati on Oct. 15, and to the marriage of R. W. Elden, '05, to Miss Leila P. King, '04, Oct. 20, at Rockford, Ill.

Former students will be grieved to hear of the recent deaths of Mrs. Elizabeth Branch Shepherd, B.L.S., 1900, and Mrs. Flora Hunter Howell, Library School, 1904-05.

KATHARINE L. SHARP, *Director*.

McGILL UNIVERSITY LIBRARY SCHOOL

Under this heading Mr. C. H. Gould, librarian of McGill University and director of their summer school, has written an account of its third session for the *Canadian Municipal Journal*, July, 1906, p. 251-252. The article is illustrated, and gives a full list of the staff and lecturers.

MINNESOTA SUMMER SCHOOL

The sixth annual session of the Summer School for Library Training was held at the State University, June 19 to July 27, 1906. There were 14 regular students in attendance and three others attended the special lectures on children's work. The school was under the direction of the secretary of the commission, who also gave the lectures on classification, accession, shelf-list, administration and library extension. Mrs. Karen M. Jacobson, vice-director, was in charge of the school during the first three weeks, while the director was absent in attendance upon the A. L. A. conference. Mrs. Jacobson also gave the lectures on cataloging, book selection and binding. The lectures on reference work by Miss Margaret Palmer, of the Rochester Public Library, were of great practical value and full of inspiration. Miss Edna Lyman, of the Oak Park (Ill.) Public Library, gave the lectures on children's work, dealing chiefly with the subject of the books themselves. A new feature which was added to the course this year was the special lecture on lettering of books, labels and picture bulletins by Miss Mary Moulton Cheney, of the Minneapolis School of Fine Arts.

The usual visits were made to the libraries of St. Paul and Minneapolis, where Miss Countryman gave an inspiring talk on "Librarianship as a profession," and to the binderies and the publishing house of the H. W. Wilson Co.

NEW YORK STATE LIBRARY SCHOOL

The 21st year of the school opened Wednesday, Oct. 3, with a senior class of 13 and junior class of 27. Ten of the juniors are from New York state and 12 states are represented on the list.

A pleasant reception was held at the home of Mr. Anderson on Oct. 6.

CALENDAR 1906-07

1906

- May 28-29, Entrance examinations.
 Oct. 3, School opens Wednesday, a.m.
 Nov. 12, Election day, holiday, Tuesday.
 Nov. 28, Thanksgiving recess begins Wednesday noon.
 Dec. 3, Thanksgiving recess ends Monday p.m.
 Dec. 4, Lectures begin Tuesday a.m.
 Dec. 21, Christmas recess begins Friday p.m.
 1907.
 Jan. 2, Christmas recess ends Wednesday p.m.
 Jan. 3, Lectures begin Thursday a.m.
 Jan. 12, Lincoln's birthday, holiday, Tuesday.
 Feb. 22, Washington's birthday, holiday, Friday.
 Apr. 9-22, Visit to New York, Philadelphia, Baltimore and Washington libraries.
 Apr. 23, Lectures begin Tuesday a.m.
 May 30, Decoration day, holiday, Thursday.
 June 28, Commencement exercises.

CLASS OF 1907

- Bailey, Louis Jonathan, Rochester, N. Y., B.S. University of Rochester, 1905; assistant New York State Library, 1906.
 Brown, Mary Gilbert, Elmira, N. Y., B.A. Elmira College, 1895.
 Coulter, Edith Margaret, Salinas, Cal., B.A. Stanford University, 1905.
 Dinsmoor, Kate Elizabeth, Lawrence, Kan., B.A. University of Kansas, 1903; assistant history department University of Kansas Library, 1905.
 Hillis, Julia Eunice, Albany, N. Y., B.L. Syracuse University, 1905.
 Holding, Anna Lucille, Albany, N. Y., B.A. Oberlin College, 1901; West Virginia University Summer School, 1902, 1903.
 Kildal, Arne, Christiania, Norway, Ph.B. University of Christiania, 1904.
 Lewis, George Lothrop, Gorham, Me., B.A. Bowdoin College, 1901; M.A., 1903; assistant Bowdoin College Library, 1901-05.
 Merritt, Louisa Flanders, Malone, N. Y., B.A. Cornell University, 1904.
 Metz, Corinne Ann, Newark, O., Western College, 1899-1900; B.L. Denison University, 1903.
 Nunn, Janet Hume, Minneapolis, Minn., B.L. University of Minnesota, 1883; University of California, 1900-01; University of Wisconsin, 1903; librarian High School Library Sleepy Eye, Minn.; librarian High School Library Lake City, Minn.
 Steffa, Julia, Claremont, Cal., B.S. Pomona College, 1900; librarian Pomona College Library, 1903-05.
 Vitz, Carl P. P., Cleveland, O., B.A. Adelbert College, 1904; Western Reserve University Library School, 1904-05; assistant Cleveland Public Library.

CLASS OF 1908

- Adsit, R. Lionne, Voorheesville, N. Y., B.A. Vassar College, 1906.

- Coffin, Helen, Albany, N. Y., B.A. Cornell University, 1906.
 Fay, Lucy Ella, Knoxville, Tenn., B.A. Newcomb Memorial College, 1895; M.A. University of Texas, 1901.
 Fifield, Winifred Faye, Los Angeles, Cal., B.L. Pomona College, 1906.
 Hart, Fanny, New York City, B.A. Vassar College, 1898; Teachers' College, Columbia University, 1898-99; assistant New York Public Library, 1904-06.
 Hektoen, Dr. Martin, Westby, Wis., B.A. Luther College, 1895; M.D. Rush Medical College, 1899.
 Hooker, David Ashley, Fort Edward, N. Y., Rollins College, 1896-98; B.A. Middlebury College, 1906.
 Hulburt, Annabel A., Brasher Falls, N. Y., Oberlin College, 1895-97; B.A. Cornell University, 1901.
 Joslyn, Rosamond, Buffalo, N. Y., B.S. Elmira College, 1902; assistant Buffalo Public Library, 1903-06.
 Kimball, Florence Belle, Hudson, Mass., B.A. Boston University, 1903; Amherst College Summer School of Library Economy, 1902; cataloger Worcester Free Public Library, 1903-05.
 Lathrop, John Ely, Westfield, N. J., B.A. Yale University, 1906.
 McGirr, Alice Thurston, Pittsburgh, Pa., B.A. Vassar College, 1906.
 Marquand, Fanny Elsie, Mt. Vernon, N. Y., B.A. Wellesley College, 1906.
 Moore, Dora, Parkersburg, W. Va., Ph.D. Denison University, 1903; West Virginia University Summer School of Library Science, 1905.
 Paddock, Alice Moseley, Moline, Ill., B.A. University of Michigan, 1901; assistant Moline Public Library, 1905-06.
 Porter, Charles F., Corinth, N. Y., B.A. Hamilton College, 1884; Auburn Theological Seminary, 1884-87.
 Reeves, Bertha Butler, Bridgeton, N. J., B.A. Smith College, 1899.
 Roberts, Ethel Dane, Wausau, Wis., B.A. University of Wooster, 1891.
 Ross, Georgette, Washington, D. C., B.A. Woman's College of Baltimore, 1899.
 Rush, Charles Everett, Fairmount, Ind., B.A. Earlham College, 1905; Wisconsin Free Library Commission Summer School of Library Science, 1904; assistant Earlham College Library, 1904-05; assistant Wisconsin University Library, 1905-06.
 Shaver, Mary Mumper, Hazleton, Pa., B.A. Woman's College of Baltimore, 1906.
 Smith, Elizabeth Manley, Portland, Me., B.A. Vassar College, 1902.
 Smith, Fannie May, Warsaw, N. Y., B.A. Smith College, 1905.
 Stebbins, Howard Leslie, Springfield, Mass., B.A. Amherst College, 1906; assistant Amherst College Library, 1903-06.
 Tunbridge, Helen Elizabeth, Hamilton, N. Y., B.A. Bryn Mawr College, 1897; Radcliffe

College, 1897-98; assistant Colgate University Library, 1904-06.

White, Mabel Gordon, New York City, B.A. Vassar College, 1906.

Whittemore, Ruby Gertrude, Hudson, Mass., Ph.B. University of Vermont, 1906; assistant University of Vermont Library, 1902-05.

J. I. WYER, JR., *Director*.

PRATT INSTITUTE LIBRARY SCHOOL

The school opened Sept. 18, with 26 students and one special, and the usual faculty except that Miss Emily Turner, '98, has taken the place of Miss Elizabeth Haskell, '05, as school secretary and reviser.

The entering class registers as follows:

Alison J. Baigrie, East Orange, N. J., graduate East Orange High School.

Elizabeth K. Clark, Springfield, Ill., B.A. St. Mary's, Knoxville, Ill.

Alice M. Colt, Santa Barbara, Cal., B.A. Leland Stanford University.

Grace A. Cooper, Des Moines, Iowa, graduate Des Moines High School; two years in Iowa State Library.

Leora M. Cross, Denver, Col., Ph.B. Oberlin College; two years assistant in Portland (Ore.) Public Library.

Edith M. Darrow, Chatham, N. Y., graduate Chatham High School; two years Vassar College; one year Columbia University.

Louise F. Encking, Fond du Lac, Wis., graduate Fond du Lac Academy; special student University of Chicago.

Lucie M. Fernald, St. Paul, Minn., graduate Carleton Academy; one year Wellesley College; seven months librarian Public Library, Redwood Falls, Minn.

Martha L. Frey, Brooklyn, N. Y.

Marian R. Glenn, Carthage, Mo., graduate Carthage High School; one year assistant Public School Library.

Ella M. Hazen, White River Junction, Vt., graduate Kimball Union Academy; two years Mt. Holyoke College.

Hetty S. Jarnagin, Jefferson City, Tenn., A.B. Salem Female Academy; one year Vassar College; two years librarian of University of Tennessee.

Janet Jerome, Denver, Col., graduate Miss Wolcott's School, Denver, with postgraduate work.

Lois M. Jordan, Minneapolis, Minn., graduate Minneapolis High School; two years Carleton College; graduate University of Minnesota.

Jessie Kneeland, Brooklyn, N. Y., graduate Adelphi Academy.

Annette G. Munro, Bristol, R. I., graduate Bristol High School; three years Wellesley College; special student Brown University and University of Wisconsin; six years librarian Wheaton Seminary.

Elva E. Rulon, Peru, Neb., graduate Fairfield College, Ped.B. Nebraska State Nor-

mal School; eight years librarian Nebraska State Normal School Library.

Rhoda C. Shepard, Indianapolis, Ind., graduate Shortridge High School; special student University of Chicago; five years assistant Indianapolis Public Library.

Elizabeth J. Sherwood, Iowa City, Iowa, graduate Iowa City High School; graduate University of Iowa; three years assistant in Iowa University Library.

Annie L. Shiley, Missouri Valley, Iowa, B.A. Grinnell College.

Julia E. Tyrrell, Plymouth, Mass., graduate Middleboro High School; two years Boston University.

Margaret C. Upleger, Mt. Clemens, Mich., graduate Mt. Clemens High School; seven years librarian Public Library, Mt. Clemens.

Idalia L. Weed, Los Angeles, Cal.

Stella L. Wiley, Castana, Iowa, graduate Castana High School; Ph.B. University of Iowa.

Special student

Elizabeth Wood, Boone College, Wuchang, China, graduate Batavia (N. Y.) High School; ten years in Batavia Public Library; librarian Boone College.

Summary by states: Iowa, 4; Michigan, 1; New York, 3; California, 2; Colorado, 2; Minnesota, 2; Illinois, Indiana, Massachusetts, Missouri, Nebraska, New Jersey, Rhode Island, Tennessee, Vermont and Wisconsin, each 1.

Since the list published in the July number of the JOURNAL three other members of the class of 1906 have taken positions: Miss Blanche Lowe as assistant on the Pratt Institute Free Library staff; Mrs. Delia F. Sneed as organizer for the Georgia Library Commission, and Miss Jessie Sibley as first assistant in the circulating department of the Carnegie Library of Pittsburgh.

MOVEMENTS OF GRADUATES

Mrs. Harriet P. Sawyer, librarian of the New Paltz (N. Y.) Normal School, has been engaged by the Wisconsin Library Commission to give part of her time to the Commission and part to the Library School.

Miss Mary M. Douglas, of Pratt Institute Free Library, has accepted an appointment as first assistant in the East Liberty branch of the Carnegie Library, Pittsburgh.

Miss Laura Sikes has been appointed first assistant in the children's department of the Wylie Avenue branch of the same library.

Miss Jane E. Gardner, librarian of the People's Library, Newport, R. I., has accepted an appointment as head of the circulating department of the Seattle (Wash.) Public Library.

MARY W. PLUMMER, *Director*.

SOUTHERN LIBRARY SCHOOL

The second session of the school opened on Sept. 17, the exercises beginning with a prayer by the Rev. John M. Gunn, S.M. Mr. George Howard, vice-president of the Carnegie Library of Atlanta, made the opening address, which was followed by a few timely remarks from Mr. Robert L. Foreman, also a member of the board of trustees. Miss Wallace, the director of the school, welcomed the students formally and extended to them an invitation to luncheon.

The afternoon session was devoted to the inspection of the Carnegie Library, after which the students assembled in the classroom, where the director made a talk dealing briefly with technicalities.

The class of 1907 is composed of
Ethel Everhart, Atlanta, Ga.
Lena R. Holderby, Atlanta, Ga.
Hortense Horne, Atlanta, Ga.
Rosalie Howell, Atlanta, Ga.
Constance Kerschner, Emmetsburg, Md.
Mary Lambie, Allegheny, Pa.
Susan Lancaster, Columbia, S. C.
Maud McIver, Atlanta, Ga.
Claire Moran, Atlanta, Ga.
Susan R. Simonton, Carrollton, Ga.
Nan S. Strudwick, Hillsboro, N. C.
Eva Wrigley, Macon, Ga.

The faculty for the coming year will be as follows:

Amy Wallace, director, lecturer on organization, administration and the history of libraries.

Julia Toombs Rankin (Pratt Institute Library School, 1899), instructor in technical library economy.

Elfrida Everhart (head of reference department of the Carnegie Library of Atlanta), instructor in reference work and public documents.

Mrs. Delia Foreacre Sneed (Pratt Institute Library School, 1906), lecturer on the development of the English novel, current events, book selection, book buying and the history of printing.

Anna May Stevens (head of the circulating department of the Carnegie Library of Atlanta), instructor in details of the open shelf and circulating department.

POSITIONS OF GRADUATES, CLASS OF 1906

Miss Eloise Alexander, Carnegie Library of Atlanta.

Miss Florence Bradley, Carnegie Library of Atlanta.

Miss Mattie Bibb, Public Library, Montgomery, Ala.

Miss Marion Bucher, Library of Agnes Scott College, Decatur, Ga.

Miss Lila May Chapman, Carnegie Library, Columbus, Ga. (temporary).

Miss Carrie Dailey, Carnegie Library of Atlanta (temporary).

Miss Jessie Hopkins, Public Library, Wilmington, N. C.

Miss Mary Martin, Winthrop College Library, Rock Hill, S. C.

ANNE WALLACE, *Director*.

WESTERN RESERVE LIBRARY SCHOOL

The school opened Sept. 19 with 15 regular and 35 special students, the latter all being from the Cleveland libraries. The board of trustees of the Cleveland Public Library has made a business arrangement with the school by which accepted applicants for positions in the public library, meeting the entrance requirements of the school, are admitted with free tuition. Most of those taking advantage of the training this year are assistants already in the library, who are taking part time work in the school with the intention of completing the course gradually.

Miss Whittlesey is acting director of the school. Mr. Williams is giving the course in book selection this year and also the bibliography. Mr. Severance, who has had the latter subject, is spending the year in study in Italy.

The class register is as follows:

Bertha Rickenbrode Barden, Cleveland, O., Vassar College, 1901-06; A.B. Vassar College, 1905; A.M. Vassar College, 1906; Vassar College Library, 1902-05.

Nina C. Brotherton, Cleveland, O., A.B. Vassar College, 1906.

Agnes Burns, Coshocton, O., graduate Coshocton High School, 1898; Phelps' School (Columbus, O.), 1898-99.

Harriet Adele Comings, Oberlin, O., A.B. Oberlin College, 1903.

Mary Lillian Ely, Dayton, O., Miami University (Oxford, O.), 1900-01; graduate Dayton Normal School, 1903; private instruction, 1904; branch librarian Dayton Public Library, 1904-06.

Alice Marian Flagler, Westfield, N. Y., graduate Westfield High School, 1904; Simmons College (Boston), 1905-06; Patterson Library (Westfield), 1904.

Theodosia Estelle Hamilton, Indianola, Iowa, A.B. Simpson College, 1902; Iowa Summer School of Library Science, 1904; librarian Simpson College Library, 1903-06.

Ethel Marjorie Knapp, Cleveland, O., Kentucky University Academy (Lexington), 1895-96; Ohio Wesleyan University (Delaware), 1896-99; Wooster University (Wooster, O.), Jan. 1900-03; A.B. Wooster University, 1903.

Nellie May Luchrs, Cleveland, O., A.B. College for Women, Western Reserve University, 1906.

Mildred Florence Parsons, Chardon, O., graduate Chardon High School, 1904; Ohio Wesleyan University (Delaware), 1904-06. Marguerite Burnet Resor, Cincinnati, O., B.A. University of Cincinnati, 1906.

Emeretta G. Root, Washington, D. C., George Washington University (Washington), 1905; Washington Public Library, 1905-06.

Adelaide Rudolph, Cleveland, O., B.A. Hi-

ram College (Hiram, O.), 1879; graduate work Columbia University, 1893, 1898; A. M. Columbia University, 1898.
 Louise Catherine Sadlier, Cleveland, O., graduate Cleveland High School, 1901; graduate Cleveland Normal Training School, 1904; Cleveland Public Library, 1906.

Special students from the Cleveland libraries: Mila Otis Bomgardner, Isabella Caroline Buchwald, Charlotte A. Buss, Hattie M. Callow, Ruby H. Churchill, Anita Marie Cleveland, Florence L. Crosier, Estelle Davies, Clara Louise Doeltz, Edith Leona Eastman, Anne C. Granger, Rose C. Gymer, Grace Genevieve Haley, Juliet Alice Handerson, Ruth A. Hapgood, Edith M. Hill, Jennie E. Isbister, Helen V. R. Johnstone, Sadie H. Levey, Jean Lowrey, Ella May, Mrs. Adaline Crosby Merrill, Florence Metcalf, Eva Millward Morris, Stella C. Norton, Pauline Reich, Clara Risdon, Charlotte F. Salen, Julia Schmehl, Bessie Hunt Shepard, Josephine F. Siskovsky, Minnie McDaniel Sweet, Mary G. Thompson, Marian Davis Thum, Mary Emily West.

W. H. BRETT, *Dean*.

WISCONSIN LIBRARY SCHOOL

The first class of the Wisconsin Library School began full schedule work on Thursday, Sept. 27. The 24 students of the class came to their work after several months of earnest preparation, for besides the regular educational qualifications, the extra-entrance requirements of reading-list, typewriting and library handwriting practice, and a month's apprenticeship in a public library, demanded the spending of much time in special study and work along professional lines. A number of the class entered on examination, but these had also to meet the extra-entrance requirements.

On Friday evening, Sept. 28, the faculty of the Library School gave a reception to the class. It was in the nature of a house-warming, as the school-rooms had not been formally opened. The guests numbered a hundred and more, and were the library workers in Madison—from the Wisconsin Historical Library, the University Library, the Public Library, the State Law Library and the Wisconsin Free Library Commission; a number of the professors of the university and citizens specially interested in library work were also among the guests.

The school-rooms are on the second floor of the new City Library building, and the first use of them during the six weeks of the summer session proved them well adapted for school purposes, especially their situation in the building with a public library. In their furniture and decoration the general plan and color scheme of the library building were followed. The furniture is weathered oak, and the walls are frescoed in yellow, the whole effect being highly pleasing and artistic.

In the large and well-lighted school-room the walls are lined with book-shelves, every desk is provided with an adjustable chair and reading-lamp, while special furniture has been added for various needs—periodical racks, card cabinets, reading ledge and shelves for the convenient consultation of heavy reference books, bulletin boards, vertical files, folio cabinets, etc. The lecture-room is provided with university chairs for the students, and the necessary reading-desk, table, chairs, blackboards and bulletin for the instructors. The offices and revision-room are suitably furnished for conveniently conducting the business of the instructional department of the Commission.

In fitting up the rooms, not only the effective administration of a library school was considered, but also the assistance that a model equipment would render to the students, for various kinds of library furniture can be seen in actual use, and the adaptability of furniture to available space can be noted.

CLASS OF 1907

Harriet Luella Allen, Milwaukee, Wis., graduate Elkhorn High School, 1879; Rockford Seminary (Ill.), 1881-82; graduate White-water Normal School, 1894.
 Laura Frances Angell, Delavan, Wis., graduate Delavan High School, 1900; University of Wisconsin, 1905-06.
 Mary Ella Bechaud, Fond du Lac, Wis., graduate Fond du Lac High School, 1901; Summer School of Wisconsin Free Library Commission, 1902; University of Chicago, second semester, Jan.-June, 1906. Library experience, assistant Fond du Lac Public Library, 1901-05.
 Helen Dearing Carson, St. Paul, Minn., graduate St. Paul Central High School, 1903; one year and a half in Europe; University of Minnesota, 1905-06.
 Ruth Colville, Racine, Wis., graduate Jamestown (N. Y.) High School, 1899; Elmira College, 1899-1901; one summer in European travel.
 Grace Rathbone Darling (Mrs.), Oshkosh, Wis., Ph.B. University of Michigan, 1883.
 Helen D. Gorton, Racine, Wis., Racine High School, 1897-1900; Summer School of the Wisconsin Free Library Commission, 1901. Library experience, assistant Racine Public Library, 1902-06.
 Lola M. B. Green, Big Rapids, Mich., graduate Big Rapids High School, 1886; graduate Ferris Institute (Big Rapids), 1892.
 Caroline Strong Gregory, Milwaukee, Wis., graduate East Division High School, Milwaukee, 1905; Milwaukee Normal School, 1905-06.
 Marie Ophelia Hansen, Hammond, Ind., graduate Hammond High School, 1895. Library experience, librarian Hammond Public Library, 1904-06.
 Helen Hutchinson, Chicago, Ill., graduate Hyde Park High School, 1899.

- Lydia Esther Kinsley, Janesville, Wis., graduate Manistee (Mich.) High School, 1897; University of Michigan, 1902-05. Library experience, assistant Manistee Public Library, 1905.
- Ada Josephine McCarthy, Richland Center, Wis., graduate Richland Center High School, 1890; Chicago Kindergarten College, 1893; Milwaukee State Normal School, 1896. Library experience, substitute Richland Center Public Library, 1904-06.
- Ruth Pauline Miner, Madison, Wis., B.A. University of Wisconsin, 1905. Library experience, apprentice Madison Public Library, 1905-06.
- Edith Marie Norton, Buffalo, N. Y., graduate Masten Park High School, 1904; Peddie Institute, Hightstown, N. J., 1905-06. Library experience, apprentice Peddie Institute Library, 1905-06.
- Julia Sherlock Osborne, Madison, Wis., B.L. University of Wisconsin, 1903. Library experience, in charge of the township library, Birnamwood, Wis., 1904-06.
- Margaret Blaine Reynolds, Milwaukee, Wis., graduate East Division High School, Milwaukee, 1904; Milwaukee-Downer College, 1904-06.
- Ella Viola Ryan, Madison, Wis., graduate West Bend (Wis.) High School, 1895; graduate Oshkosh Normal School, 1901.
- Myrtle Elmeda Sette, Juncau, Wis., graduate Watertown (Wis.) High School, 1904. Library experience, apprentice Watertown Public Library six months, 1905.
- Harriet Winslow Sewall, St. Anthony Park, Minn., B.A. University of Minnesota, 1906.
- Anna Du Pré Smith, Madison, Wis., B.A. University of Wisconsin, 1906.
- Josephine Ada Voss, Watertown, Wis., graduate Watertown High School, 1904.
- Marion Wakely, Jacksonville, Ill., Jacksonville High School, 1891-95. Library experience, assistant Jacksonville Public Library, 1905-06.
- Marion Frances Weil, Milwaukee, Wis., graduate East Division High School, Milwaukee, 1904; Milwaukee-Downer College, 1904-06.

MARY EMOGENE HAZELTINE,
Chief of Instructional Department.

Reviews

REPORT of the Committee on Leather for Bookbinding, ed. for The Society of Arts and The Worshipful Company of Leather-sellers by the Rt. Hon. Viscount Cobham, Chairman of the Committee, and Sir Henry Trueman Wood, Secretary of the Society. Lond., George Bell, 1905. il. 8+122 p. 8°.

DANA, John Cotton. Notes on bookbinding for libraries. Chic., Library Bureau, 1906. il. 118 p. 12°.

In view of the increasing interest manifested by librarians in the discussion of methods and materials of bookbinding, it seems fitting to draw further attention to two or three of the most important of the recent publications on the subject. The report of the committee of the London Society of Arts, printed in 1901, was reissued last year in enlarged form, with illustrations, with 11 colored plates, and 12 samples of leather. Ten of the colored plates are reproductions from photographs of experimental samples showing the effects of strong light and other injurious agencies on leathers of various tannage and dye. But most suggestive is the frontispiece, a row of morocco and calf bindings less than 50 years old, never subjected to hard wear, yet standing in rags and tatters. The report as reissued is partly rearranged. The account of the scientific investigations has "been practically rewritten," the services of that sub-committee having continued after the first report was rendered. As additional material is presented in Appendix II a paper by Mr. M. C. Lamb, on the fading of sumach-tanned leather dyed with coal-tar colors. Appendix III reprints the original circular sent out to librarians and tabulates their replies.

When the reprint of this report in a more dignified and permanent form was proposed, the Society of Arts received assistance in a liberal grant from the court of the Leather-sellers' Company. We hope that this joint publication is auspicious of future co-operation. The book is a specimen of superior typography, printed on beautiful paper, with generous type and margin.

Returning to the samples of leather, the sealskin and pigskin have much harder surfaces than the goatskin, and should therefore suffer less from abrasion, as would also a morocco of harder surface, though for durability the best morocco skins are those that are soft and pliable. Two members of this same scientific sub-committee, Dr. Parker and Mr. Seymour-Jones, writing elsewhere,* state that sealskin is nearly or quite as durable as morocco—though this seems doubtful. Yet these leathers may well be given further trial, the pigskin on heavy reference books, the sealskin on standard works much used. Both leathers are rich in appearance. The sealskin has a beautiful grain.

Modern leather perishes because of improper tannage and the use of sulfuric acid in the dyeing. Formic acid may be substituted (p. 49). "A pure sumach tannage will provide a good and durable leather . . . as durable as any made in the past" (p. 9). A suitable dressing to preserve leather bindings

* Leather for libraries, by E. W. Hulme, J. Gordon Parker, A. Seymour-Jones, Cyril Davenport and F. J. Williamson. Published for the Sound Leather Committee of the Library Association. Lond., 1905. 57+14 p., with 6 samples of leather.

may be found. The committee believe there should be no great difficulty in producing durable leather and in testing it so as "to guarantee its suitability for book binding" (pp. 15-16).

The opinions of these experts are positive and encouraging; but they do not always seem quite conclusive. It is to be regretted that the investigations were not extended over a longer period of time. Many of the tests were made under special conditions to force more rapid results—not under the conditions in which books live, not in the state of nature, as we may say—and the conclusions may therefore be somewhat in error. Let us hope that the investigations now being conducted by the U. S. Department of Agriculture will be continued for many years, and that additional definite conclusions may be obtained.

The Society of Arts report in 1901 made a positive impression in England and initiated an open demand for improvement in the craft of bookbinding. But American librarians did not give the matter much attention until at Mr. Dana's request two years ago the present committee of the A. L. A. was appointed to investigate bookbindings and publishers' papers. A few Americans, however, had been led to adopt some of the Society's recommendations, and others, having found for themselves that their bindings were uneconomical, had prevailed upon their binders to make experiments or to revert to devices formerly in good use. The handbook of Mr. Douglas Cockerell has done much to instruct us in proper methods; and the personal efforts of Mr. Chivers of England to obtain a market in this country for his improved bindings have sometimes prevailed where other arguments have been unheeded. Librarians are now awakening to the importance of this subject. It is evident that there has been great waste in the binding of modern books. An organized movement should be made to secure better methods, more durable materials and more skillful workmanship.

Among the several pronouncements of the recent report of the A. L. A. committee on bookbinding, which give authority to many statements antecedently published, one of the most important appears to be the assurance that publishers will supply libraries with special editions, provided the demand for such becomes a definite one. This report, moreover, states that leather guaranteed to be prepared in accordance with the standard of the Society of Arts committee may be ordered in New York, or may be imported at a comparatively slight additional cost.*

We should furthermore thank our committee for the encouragement it has obtained for us from the Department of Agriculture, whose investigations should lead to scientific conclusions and trustworthy, tested standards. Finally, this committee's discussion of the economics of library binderies should do much to determine the policy of the larger libraries; for it is in these library binderies that experiments may best be made, and by them "sound" leather may most satisfactorily be imported.

It seems natural that the A. L. A. committee which, we may say, had its origin in Mr. Dana's request, should, even though he is not one of its members, base its report primarily upon his "Notes on bookbinding," which was published just previously. This course seems wisely chosen, so concise and so correct is the information furnished by Mr. Dana's excellent little volume. His pages are closely packed with solid facts, sound opinions and sage advice. Writing in his easy and sententious style, he may indeed at times seem a little too oracular, but the manner is consciously assumed, one fancies, to ward off digressions that might expand his chapters—for he permits no padding. But modestly enough he says in his first paragraph that his "suggestions and advice . . . should not be taken as final; for the binding and rebinding question is not yet settled."

Mr. Dana might have prepared a fuller work on bookbinding from the librarian's point of view, and such a work would be welcome; but he has preferred not to do so at a time when further investigations promise to supply more positive information. As he was probably one of the foremost to adopt the recommendations of the Society of Arts, it is to be expected that his book should contain many briefer restatements from the society's report, from which also he takes his illustrations, except the frontispiece and an interesting drawing, "The anatomy of the joint" (p. 34).† Though small in size, the "Notes" must not be mistaken for a primer for young assistants, and "it is not a guide to the craft of binding." It is, rather, a handbook or résumé of important matters for experienced librarians. In the author's

such leather. On the last printed page of the Society of Arts Report (1905) appear the names of the makers of the approved leather from which the twelve samples in the book were selected. Two of the best known of these firms are named in Dana's "Notes," p. 65, where it is also stated that Dr. Parker has made an arrangement with the L. A. U. K. by which, as their official expert, he will test samples of leather. Perhaps he would thus serve American librarians also.

* In the back of the Sound Leather Committee's book will be found advertisements of producers of

† The joint shown is similar to one used by Mr. Chivers.

own words: "If good binders were more common, librarians would need little of the information here briefly set forth. But under the present conditions of the bookbinders' art in this country librarians themselves must often furnish considerable expert knowledge, if they wish their work well done." The handbook treatment appears in five of these 16 little chapters, being alphabetically arranged definitions of technical terms, etc. In the back of the book is a list of dealers in materials and machinery, a list of the best books on the subject, and an index.

The book was so specially mentioned and commended in the A. L. A. committee's report, where many of its statements were reviewed or quoted, that a detailed account is unnecessary, and only a few points will here be touched upon.

A good method of cheaply binding pamphlets is described on p. 47. The proper insertion of plates is contrasted with the improper (p. 36). On p. 32 the author probably means *not* that books usually have their "first and last sections guarded before sewing with a thin piece of muslin," but that they *should* have them so guarded. On p. 37 he says: "Neither strings nor tapes need to be laced into the boards on ordinary library work." Lacing-in strengthens against an outward strain, which easily pulls away a pasted joint. For leather and duck bindings on cords it is usually best to lace in the "slips." Tapes should be inserted, with the cloth hinge, into split or double boards. About tight backs not enough is said in these "Notes." The chapter on "Specifications" reads like directions to the binder who is to do his own binding; yet they contain suggestions that may be conveyed to a binder in other terms. The chapter on paper seems out of place, being little more than a brief account of paper-making such as would fit into the primer which this book is not, whereas here the chief facts and a few criticisms for librarians would be more in keeping and more useful. Binding records is one of the subjects that are dismissed too briefly in this excellent but too brief work. The definitions of famous styles of finishing are suggestive only to those who have some acquaintance with the masters of the art. On p. 38 we read: "Bind in half red or light brown cow-skin and green keratol sides." Red and green in binding materials is rather too strong a contrast in color for a man of such refined taste as we believe Mr. Dana to be. Keratol and several other cloth imitations of leather are recommended for casings, while doubt is cast upon the durability of even the best morocco. But is it so certain that such preparations of cloth will prove more durable? May not the treatment with starch, or celluloid, or what not, shorten the life of the fabric? For books in use these

materials may wear well, may soil less easily, may permit cleaning, but will they stand longer than morocco? "Imperial-morocco-cloth," "art-vellum," or other cloth merely sized to make it smooth seems safer than keratol or other preparations impervious to water.

The cost of morocco or other superior leather may deter librarians from using it, except on the most valuable books, but they should not too hastily accept advice to disuse it altogether. No such advice is given by the Society of Arts committee, nor by the Sound Leather committee. By those authorities, morocco, if properly prepared and employed, is still regarded as the best material for covering books, and assurance is given that leathers as durable as those of the past may be produced to-day and are now in the market. And there are morocco bindings two centuries old or more still standing in good condition.

HENRY E. BLISS.

Library Economy and History

GENERAL

APPLIED science reference room in the Pratt Institute Library. (*In Machinery*, September, 1906. 26:16-17) il.

An appreciative account of the applied science reference room of the Pratt Institute Library at Brooklyn. Librarians who are not familiar with the workings of this library will find this article suggestive.

Bogsamlingsbladet (Denmark), in its second number (September), has an article by Johannes Grönborg on the choice of books in public libraries. The annotated list of new books includes 35 titles.

Folkbiblioteksbladet (Sweden), v. 4, no. 3, has an article by E. Ingers on the aims of public library work in Sweden, and a list of popular books on social science for public libraries, by J. R. Nilsson. There are several brief articles, one being by Andreas Steenberg on the public libraries of Denmark.

GAILLARD, Edwin White, The public library, the schools and the museums of the city. (*In Bulletin of the Metropolitan Museum of Art*, October, 1906, p. 142.)

A brief account of the work done now and that planned for the near future.

The *Library Assistant* gives in its August number full reviews of Savage's "Manual of descriptive annotation" and Brown's "Subject classification," and has the first part of "Notes on materials for library bookbinding," by G. A. Stephen. In the September issue the "sessional programme" for 1906-1907 of

the Library Assistants' Association is printed in full, and Mr. Stephen's "Notes" are concluded.

The *Library Association Record* for September has "The medical libraries of London," by W. R. B. Prideaux, an article on the public library movement in Bradford, by M. E. Hartley, and "The value of annotations in catalogues and booklists," by Edward Green.

The *Library World* for September contains "Standardization in accession methods," by Robert Duncan, and "Library oversight," an article with an illustration of the plan of a small library that needs the supervision of but one person, by John W. Lister, of the Hove Public Library. The "Book selector" occupies nine pages.

Public Libraries for October contains "The need of an A. L. A. collection of plans of library buildings," by C. C. Soule, a Narragansett Pier Conference paper, and a number of brief articles. There is a summary of the Conference, including "Impressions of the A. L. A."

VROOMAN, Frank. Our national library. (*In the Arena*, September, 1906. 36:277-285).

A readable account of the history and present activities of the Library of Congress with special reference to the latter.

The *Zentralblatt für Bibliothekswesen* for September contains "Die Bücherei der Technischen Hochschule zu Danzig," a full account of the arrangements and working of an admirable school library, and the third part of "Ernst Moritz Arndt in den Deutschen Bibliotheken," by Paul Trommsdorff.

LOCAL

Ann Arbor, Mich. University of Michigan L. Mrs. Russell, widow of the late Professor Israel C. Russell, the geologist, has given the University library her husband's private collection of 3000 volumes.

Berkeley, Cal. University L. The library has received from Mrs. Henry Wolf-schn 340 volumes of historical works, in memory of her husband. The university department of botany has received the Brandegee library of 3000 volumes, together with the Brandegee collection of botanical specimens.

Binghamton (N. Y.) P. L. (Rpt. year ending June 30, 1906; in local press.) Added, 2681; total 16,272. Issued, home use, 130,776, of which 35 per cent. were non-fiction. Issued, home use, from children's room, 30,911. Visitors to reading and reference rooms, 38,311.

The report is an admirable one, showing activity and progress in many directions. A committee-room has been placed at the disposal of those preparing for debates and those working up special subjects.

The library has issued 40 reading lists,

sending copies according to subject to labor unions, contractors, manufacturing establishments, Christian associations and public schools. The newspapers have published 110 columns of library matter.

The free lecture course has become an established factor, and included travel and description, biography, meteorology, electricity, cooking. Lantern slides were used freely. The attendance was about 5000. Lists of books in the library on the subject of the lecture were distributed each time.

Last October the Broome County Historical Society was organized as an adjunct of the library. Much valuable historical material has been given to the society. Under its auspices an art and historical exhibit was made possible, increasing the use and publicity of the society and the library as well.

There has been an increased use of the library by the wage earner, and the circulation of useful arts has increased to double or treble that of the first year.

The Common Council has for this year made an additional appropriation for new stacks and books of \$2500; total appropriation for the year, \$10,000.

Burlington (Ia.) P. L. The library of the late C. E. Starr has been presented to the city by Mrs. Starr. Some 900 volumes are included in this gift, approximately one-fourth of which are works on the law and the remainder of a general nature.

Chicago (Ill.) P. L. The members of the Public Library board went on record at their meeting Oct. 8 in favor of extending the terms of its directors from three to six years. Several were anxious to make the tenure of office for life. The report of Professor Graham Taylor on this and other charter amendments is to be sent to the charter convention.

"Through the East," said Director Julius Stern, "many of the principal library boards select directors for life, many for 20 years and many for 10 years. With a long life better work and results are believed possible, removing the political significance that attaches to short-term appointments. The office of one-third of the board should be for life."

Derby (Ct.) P. L. (4th rpt. — year ending April 30, 1906; in local press.) Added, 1477; total, 10,764. Issued, home use, 39,007. New cards issued, 512. Fiction percentage, 62.5. The board of directors call attention to the need of more money for books.

East St. Louis (Ill.) P. L. (15th rpt. — year ending May 31, 1906.) Added 1655 (50 per cent. being non-fiction); total 22,735. Issued, home use 65,119 (fict. 28,391, juv. fict. 20,779); ref. use 9166; total increase of 18,120 v. New registration 2042; total number of cards in force 3654. Receipts \$10,275.40; expenses \$11,148.60 (salaries \$3150; repairs, etc. \$3040.38; books, binding, catalog, etc. \$2151.80).

"At the beginning of the year we estab-

lished for our definite aim the accomplishment of three things, *viz.*, the development of the reference department, the enlargement of the children's room work, and the stimulating of reading in the non-fiction classes." To attain the first, additional room for reference work was secured by the removal of the museum to other quarters and the throwing open of the entire reference collection. Naturally the present imperative need is that of a trained reference librarian. Although the children's work has been carried on until the last of the year in a room only 18 feet square, there have been most gratifying results in increased circulation and growing interest. With the recent addition of a separate children's reading room the opportunities for effective work are proportionately larger. A deposit station established at the Monroe school has proved an encouraging experiment. In regard to delivery stations in drug stores, the librarian ventures the opinion that results hardly justify the entailed expense, and recommends instead a small branch library in the northern section of the city. That the efforts to encourage the reading of non-fiction have been reasonably successful may be inferred from the fact that the percentage of fiction was 6.62 lower than last year.

Not only has the cataloging of new and old books been steadily prosecuted, but a complete classified catalog of the library has been prepared and put through the press by the members of the staff.

Eau Claire (Wis.) P. L. (Rpt.—year ending June 30, 1906; in local press.) Added, 1023; total, 16,318. Issued, home use, 45,191. New cards issued, 1000.

Elmira, N. Y. Steele Memorial L. (Rpt.—year ending June 19, 1906; in local press.) Added 1269, of which 260 were gifts; total 11,497. Issued, home use 48,717, an increase of 4071 over the preceding year. No. borrowers (re-registration) 3943.

The Library of Congress cards have proved a great aid in cataloging.

In May a profitable round table meeting, under the auspices of the state library association, was held at the library, under the leadership of Mr. Asa Wynkoop, of the state library.

"We want the Steele Memorial Library to mean more to the city of Elmira every year. Its aim is to reach out in all directions, meeting the need of the practical man, the artist, the student, the child, the casual reader, and all those who should feel that the library exists for them."

Findlay (O.). The local Socialist party is making plans to establish a free city library, which, it is understood, will be especially strong in socialistic literature.

Grand Rapids (Mich.) P. L. (35th rpt.—year ending March 31, 1906.) Added, 7553; total, 73,573. Issued, home use, 316,678. New cards issued, 7100; total registration, 14,296;

visitors to reference department, 23,335; reading-room, 48,495.

"The past year may have been less important in some of its immediate aspects, but with reference to the future work of this institution it was, perhaps, one of larger significance than the year before. The passage by the state legislature of the new city charter, providing for library purposes four-tenths of a mill tax on the assessed valuation of the city; the action of the Common Council making the library the depository for municipal documents received from other cities and the medium for exchanging the documents of this city with other institutions and municipalities; the transfer by the Historical Society of Grand Rapids of its library and its funds to this library and its arrangements for continued co-operation and affiliation with the library; the contract between the Board of Education and the Board of Library Commissioners providing for the gradual establishment throughout the city of a system of branch libraries in the public school buildings; the arrangement with the Board of Education whereby the library is put in touch with the children who cease attending school, for the purpose of bringing to their direct attention the facilities of the library for the continuance of their education at home; the inauguration of the course of home reading for those who wish to pursue systematic study in any direction; the opening of the branch library at Bissell House; the establishment of a series of travelling libraries for the service of the schools, fire engine houses, and institutions generally; the establishment of several additional memorial libraries for sick or crippled children; the establishment of the Winnie Whitfield Butler collection of picture books for children; the large number of valuable gifts, including the splendid equipment of the Historical Room by Mr. Martin A. Ryerson, to whom the city is indebted for the library building; the purchase of a large number of important and valuable collections of books, including in this 89 complete sets of periodicals (nearly all indexed in Poole's Index), or such volumes as were needed to complete the partial sets already in the library; the arrangement with the physicians of Grand Rapids whereby it was possible to open a medical reading-room; the good fortune in being able to keep the library open and in full operation throughout the small-pox epidemic last spring and summer, when schools and churches were closed; these are some of the new or unusual things that helped to make the past year one of special significance."

The new charter permits the library board to accept trust funds for the library, which they could not heretofore do. It also transfers the museum to the management of the library board. The full text of the revised charter is given as an appendix.

The Winnie Whitfield Butler collection of

picture books now numbers 164 volumes. 1015 catalog cards have been sent to users of the library subscribing for cards on particular subjects.

A circular with an application blank is being sent to all "lapsed members," with the result so far that 25 per cent. renew their cards within a month.

Thirteen lectures were given in the Ryerson Building lecture-room, and some in Bissell House branch. Mr. Ranck expresses his hope that a free lecture system throughout the city may be organized and conducted by the library.

"Interesting the public in the library" is a section of the report that is of especial interest.

Jackson (Mich.) P. L. (21st rpt.—year ending April 30, 1906; in local press.) Added, 1179; total, 30,257. Issued, home use, 39,534. The library was closed for six months of the year before moving into its new quarters.

Kenosha, Wis. Gilbert M. Simmons L. (Rpt.—year ending May 31, 1906; in local press.) Added, 1254; total, 15,915. Issued, home use, 68,156. New cards issued, 7400, 604 being renewals; visitors to reading-room, 30,190.

Lawrence (Kan.) City L. During an epidemic of diphtheria the city schools and the city library are closed. All the library books will be disinfected.

Louisville (Ky.) F. P. L. The library is hereafter to be open Sundays from 2 p.m. until 9 p.m., instead of 2 p.m. until 6 p.m., as heretofore.

No decision has been reached as to the site of the new building for the Portland branch, as the citizens of that part of Louisville petition for two buildings, while the appropriation of the trustees provides for only one.

Mount Airy, Pa. Krauth Memorial L. On Sept. 27 the cornerstone was laid of the Krauth Memorial Library of the Mount Airy Lutheran Theological Seminary. The building is to cost \$100,000, and is the gift of an unknown donor. The cornerstone was laid by the Rev. Dr. G. F. Krotel, pastor of the Church of the Advent, New York.

Pittsburgh, Pa. Carnegie L. (10th rpt.—year ending Jan. 31, 1906.) Added 30,403; total 211,993. Issued, home use, 661,891 (net. 54.69 per cent.). Reading-room use of books and magazines, 157,096. Distributing agencies of the library, 168.

This report, which shows what work may be done by a library even under the most difficult physical conditions, has great interest. The old building of the Central Library is being reconstructed, as the new one is being built, and it was therefore inevitable that the use should fall off a little, but despite this the total circulation increased 2.6 per cent.

In October the East Liberty branch was

opened, and its use shows that it is much appreciated.

The report has an admirable folding map, showing the location of the various Carnegie Library agencies in 1905, of which a full list is given elsewhere in the report. Two charts show the growth of the lending collections, the increase in circulation and the fluctuations of the relative percentage of fiction issued, from the opening of the library to Jan. 31, 1906.

On June 17 the loan department of the main library was closed until Oct. 2, on account of the reconstruction. Users of the library were allowed to take six books of fiction and six of non-fiction for the whole time, and availed themselves of this privilege in great numbers. Books could be returned at any time during the summer, but none were issued.

In February, 1905, all old series cards of users which had not been re-registered were cancelled. The records show that in all 33.7 per cent. of the 46,857 first series cards have been re-registered.

"On Jan. 8 a new rule went into effect for non-residents employed in the city. These had always been compelled to pay a non-resident fee for their cards. The library now requires the signature of a resident of Pittsburgh to the agreement shown below and charges no fee beyond five cents for the postage used in obtaining the signature and notifying the applicant that his card is ready:

"Undersigned agrees to be responsible for loss of books loaned to applicant."

The technology department shows its usual record of about one-third of the reference work of the Central Library.

The need for more money for books is forcibly brought out.

Riverside (Cal.) City L. (Rpt.—year ending June 30, 1906; in local press.) Total 16,714. Issued, home use 70,452. New cards issued, 1411, 474 being renewals. During the year Margaret Kyle was appointed librarian.

St. Louis (Mo.) P. (F.) L. The Barr branch, the first in the St. Louis Public Library system, was dedicated on the evening of Sept. 17. The site, on the corner of Jefferson avenue and Lafayette avenue, was given by Mr. William Barr, the St. Louis merchant, and the building is the gift of Mr. Carnegie, who in 1901 gave \$1,000,000 to St. Louis for library buildings. Mr. F. W. Lehmann, president of the board of directors, made the dedicatory address, in which he gave a history of the library. Planned for in 1860, it was actually begun in 1865 by the Public School Library Society of St. Louis. In 1869 it was transferred to the school board, and in 1874 was made free for reading and reference, but a fee was still charged for taking books out. In 1893 the library was made entirely free.

Mr. Lehmann paid a tribute to Mr. Crunden and his work for St. Louis.

San Francisco, Cal. Mechanics' L. The Mechanics'-Mercantile Library is now installed in its new (temporary) building at the corner of Grove and Polk streets. This is a one-story structure 60 x 120 feet, simple in form and made attractive by window-boxes filled with bright flowers, and by a garden strip. It cost \$7000, and receives praise from the San Francisco press as a most attractive building. It now has about 10,000 volumes, and is being increased rapidly. The Mechanics' Institute has collected \$87,000 insurance, on a total of \$130,000. Plans for a permanent building, probably on the old site, are being made.

Springfield (Mass.) City L. Assoc. (49th rpt.—year ending May 1, 1906.) Added 14,255; total 143,212. Issued, home use, 381-818. New cards issued 3777. Receipts, \$49,708.47 (for library, art museum and science museum); expenses \$35,027.78 (salaries \$17,298.12, books \$8485.66, binding \$2107.82, periodicals \$1006.24, printing \$615.31, light and power \$952.48).

Much space is given in the report to the heading "Publicity and use," where there is an account of the methods of this admirably progressive library in making its resources known to its community. The various distributing agencies are noted, among them a new branch opened June, 1905, in the Ferry street settlement.

"The mail sometimes offers a convenient way of reaching readers. Thus post cards headed 'You may be interested in the following book recently added to the library' have been sent from time to time to persons to whom the book was thought likely to appeal; and reminders were mailed to 1300 readers whose cards had stood unused at the library for a long time, with the result that the majority have been resumed. . . .

"The newspapers have published items of library news on an average as often as once a week. But in spite of this, strangers inquiring their way have been known to meet citizens not only ignorant of the location of the library, but unaware of its existence! To reach and inform such persons, a large mailing card has been printed headed with an invitation to use the library, followed by a list of 50 books chosen for their variety and attractiveness, and these cards are being mailed systematically—50 each week—to all persons in the directory not already cardholders, who it is thought may use the library if it is brought directly to their attention. The results of this experiment are awaited with interest.

"But nothing, I am convinced, has been so effective in procuring readers for the better class of books as the descriptions of the current accessions printed each week through the courtesy of the publishers in three daily newspapers. . . .

"Last May the library published a list of its

books on the art of printing and mailed copies to all the printers in the city with a circular asking them to bring the list to the attention of their employees. One firm immediately requested 50 additional copies, and many employees of other houses procured copies at the library. It has been well used. Later a 16-page pamphlet containing the books on botany, ferns, mosses, mushrooms, trees, etc., was printed, and this also has proved very useful, especially to teachers. In the fall a four-page list on Norway and Sweden was issued, partly to take advantage of the general interest excited by their separation, but also to aid clubs studying those countries. A selection of the best titles on Sunday-school organization and teaching was printed and widely distributed to Sunday-school teachers through the different superintendents. One of the most important catalogs issued is a 24-page list of books on engineering and machinery, including gas engines, locomotives, refrigeration, steam turbines, automobiles, metallurgy, and similar subjects. This was supplied to students in the evening trade school at its dispersal, but its general distribution has been reserved till fall. With all these lists an important aim is to make them reach the readers likely to use them."

An extraordinary gain is noted in the issue of books in useful arts—one of 97 per cent.—and it is this side of the work that receives special commendation in a New York *Sun* editorial on this report, Sept. 27, called "What a public library does."

The home delivery of books was not resumed last fall, as the number of subscribers was too small to pay the cost.

Utica (N. Y.) P. L. The trustees of the Utica Public Library, in co-operation with the school board, will establish branch libraries in school buildings. The step has been considered by the library trustees for some time and the plan under consideration was made known Sept. 22 in a communication which was sent to the school board.

Chairman DeAngelis, of the school board, stated that the establishment of branch libraries had been considered by the commissioners, and when the repairs and improvements were made at School 18, in Whitesboro street, the locating of a branch library there was considered and a room provided for the installation of books for the people in that section of the city. The arrangement was made at the suggestion of the late John Brandegee, who was one of the library trustees. A room about 25 feet square was provided. It is on the first floor and admirably arranged for the uses to which it will eventually be placed.

Rooms for the use of branch libraries have not been considered in other schools because there has been no extensive rearrangement of school buildings since the branch libraries were decided upon.

The location of libraries in different parts of the city will be considered in the building of new schools in the future.

Wallingford, Ct. Ladies' L. (Rpt.—year ending Oct. 1, 1906; in local press.) Added. 621; total, 8536. Issued, home use, 37,767. New cards issued, 344; total registration, 2054. The library has a branch at Yalesville, which issued for home use 2603 books.

Wapping (Ct.) Memorial L. The library recently built at a cost of \$4000 by Mr. H. W. Sadd, of Wapping, Ct., as a memorial to the Sadd family, one of the first to settle in "Wapping parish," a part of the town of South Windsor, was dedicated on Sept. 19. Addresses were made by Mr. Sadd, the Rev. J. F. Robertson, Miss C. M. Hewins, of the Hartford Public Library; Hon. C. D. Hine, secretary of the State Board of Education, and Geo. S. Godard, state librarian. The library is built of blocks of cement, made in the cellar from sand dug from a hillside near by, is well lighted and spacious, heated by a furnace and well equipped for the needs of the neighborhood for years to come.

The town of South Windsor voted in 1898 to establish and maintain a public library, which was kept in the basement of the Baptist church until lately, when it was moved to a room in the large new school-house. The Wapping Library is a very flourishing and successful branch, receiving books from the main library, which are changed every few months. A Chautauqua circle, which has existed for a long time, has been a most valuable and stimulating influence in creating a desire for a library.

Yale University L., New Haven, Ct. (Rpt. for 1905-1906—year ending June 30, 1906.) Added 15,931; total in various libs. about 475,000. Issued, Linonian and Brothers L., 27,221; University L., 19,896. Receipts about \$50,000.

Pending the completion of the new building, the activities of the year have been directed towards the rearrangement of departments, the extension of catalogs and accession lists, and the general systematizing and centralizing of clerical work. The Linonian and Brothers Library, a selected collection kept at a total of 25,000 v. by annual additions and transfers, has proved of great service to the mass of students who do not require unrestricted access to the large collections. The college newspaper reading room has been moved to Dwight Hall. Several valuable collections have been left, notably that of Rev. Professor George E. Day, that of Theodore Woolsey Heermance, and during the previous year that of Professor Albert S. Wheeler with a generous fund for its maintenance. This report covers the first year in office of the new librarian, John Christopher Schwab. The report for 1904-1905 is also issued simultaneously in separate form.

Gifts and Bequests

Biddeford, Me. A gift of \$1000 toward the permanent fund of the McArthur Free Public Library has been received from Thomas Wigglesworth, of Boston.

Flemington, N. J. By the will of the late Dr. William H. Bartles, the town will receive a bequest of \$10,000 to establish a public library.

Hillsdale, Mich. This town is to have a new modern library, the gift of the late C. T. Mitchell.

Kendallville, Ind. Flint & Walling, wind-mill manufacturers, will provide a mechanics' free library for this town.

Lebanon, O. The public library has received \$3500 from William E. Harmon, of New York, of which \$2500 is to be used in the completion of the new Carnegie building and \$1000 is to be expended for books and periodicals.

Oberlin (O.) College. The \$100,000 endowment required by Mr. Carnegie as a condition of his gift of \$125,000 for a library building, made in January, 1905, has been raised by subscription. The largest single gift was that of Dr. C. N. Lyman, of Wadsworth, amounting to \$34,000.

Tolland, Ct. A bequest of \$10,000 is made to the Tolland Library in the will of Ratcliffe Hicks, a native of the town, who died recently at Interlaken, Switzerland.

Warren (Mass.) P. L. The will of Mary G. Hitchcock, of this town, provides that after the death of Mr. and Mrs. D. G. Hitchcock \$1000 of a trust fund shall go to the Warren Public Library.

Waterbury (Vt.) P. L. By the will of the late Mrs. Horace Fales, a trust fund of \$10,000 is created, for the benefit of the library, to be known as the Horace Fales Fund. The annual income, of about \$500, will be available for the purposes of the library.

Westboro (Mass.) P. L. By the will of the late Ellen M. B. Winch, of Westboro, the library receives a bequest of \$2000.

Carnegie library gifts

Quincy, Mich. \$10,000 for a public library. At last accounts the offer had not been acted upon, as a similar proposition from a citizen of Coldwater was also under consideration.

Redfield (S. D.) College. \$15,000 for a library building when the general college endowment, at present \$50,000, reaches \$100,000.

Liverpool, England. \$40,000 for a branch library building, the corporation to provide a site.

Librarians

BOSWELL, Miss Jessie P., of the New York State Library School, 1904-06, has been appointed cataloger in the Library of the University of Michigan.

BROWN, Demarchus C., was elected state librarian of Indiana, to succeed W. E. Henry, on Sept. 10. Professor Brown has been connected with Butler College, Irvington, for 30 years, first as a student, then as instructor in Greek, and latterly as librarian. He is a member of the State Board of Charities.

CRUNDEN, Frederick M. Mr. Crunden's many friends will be glad to know that his health has improved sufficiently for him to take the journey to St. Louis. He is at St. Luke's Hospital there. His physicians, unfortunately, are unable to hold out any hope of his immediate betterment.

DANZ, Miss Helen, has been appointed librarian of the Way Library, Perrysburg, O., to succeed the late Mrs. Ann Frederick.

DICKINSON, Asa Don, of the New York State Library School, 1902-03, has been appointed librarian of Union College. Since the fall of 1903 Mr. Dickinson has been an assistant in the Brooklyn Public Library.

FISHER, Rev. Dr. A. N., of Portland Ore., formerly pastor of the Monroe Avenue Methodist Church, Rochester, N. Y., has been elected librarian of the College of Theology at Willamette University.

FISHER, Professor Ray D., son of the preceding, Syracuse University, 1904, has been elected librarian of Willamette University.

FLEISCHNER, Otto, assistant librarian of the Boston Public Library, was knocked down by a motor-car in Copley Square, on Sept. 29. He was taken at once to the City Hospital, where his injuries were found to be a compound fracture of the right thigh, the fracture of three ribs on the right side, and severe contusions. The last accounts report that he is recovering, and no internal injuries are feared.

GIBSON, Charlotte Chaffee, children's librarian of the Washington County Free Library, Hagerstown, Md., has just published, with Little, Brown & Company, a book for children called "In eastern wonderlands." It is the story of a trip by three children through eastern countries.

HAWKINS, Miss Jean, of the New York State Library School, class of 1902, has been appointed sub-librarian for classification in the New York State Library.

HAZELTINE, Miss Alice I., of the New York State Library School, 1901-2, has resigned her position as librarian of the Carnegie Library, Oil City, Pa., to become first assistant in the children's department of the Carnegie Library of Pittsburgh.

JENKS, Edwin M., graduate of the New York State Library School, class of 1903, has been appointed librarian of the Institute of

Musical Art of the City of New York. Since last January Mr. Jenks has been in charge of the Applied Science Reference Room of Pratt Institute Free Library.

KELLAR, Miss Louise, has been appointed librarian of the Liberty (N. Y.) Public Library, in place of Miss Grace Smith, resigned.

LAMB, Miss Eliza, of the New York State Library School, class of 1902, has been appointed assistant in the catalogue division of the Library of Congress.

LINN, Mrs. Frances Burns, of the New York State Library School, 1903-04, has resigned her position as librarian of the Public Library, Norwalk, Ohio, and has begun her work as librarian of the Free Library, Santa Barbara, Cal.

McKNIGHT, Herbert, of the New York State Library School, class of 1900, died at the home of his parents in Fairhaven, N. Y., Sept. 9. Mr. McKnight was for three years in charge of the history division of the New York State Library. In 1901 he was appointed assistant in the maps and charts division of the Library of Congress, where he remained until about two years ago, when he became special subscription agent for the F. A. Owen Publishing Company.

SPAFFORD, Miss Martha E., of the New York State Library School, 1902-03, has been engaged for three or four months as special cataloger at the Public Library, Milton, Mass.

WEBB, Edward D., of Cortland, N. Y., died there on Oct. 4. Although Mr. Webb for many years made his home in Rye, N. Y., he had from the beginning of the Franklin Hatch Library served as one of its trustees. Mr. Webb was 88 years of age.

Cataloging and Classification

BLUMHARDT, J. F. Bengali, Oriya and Assamese books. 8+353 p. Lond., 1905. (Great Britain India Office, Library. Catalogue. 1905. v. 2, pt. 4.)

BOWDOIN COLLEGE. Descriptive catalogue of the art collections of Bowdoin College, by Henry Johnson, curator. Ed. 3, rev. and enl. Brunswick, Me., 1906. 100 p.

With illustration showing the Walker Art Building; with index of the artists' names, and a list of photographic reproductions of some of the art works cataloged.

KANSAS CITY (Mo.) P. L. Catalogue of fiction. (Quarterly; v. 6, no. 3, July, 1906.) 162 p. 8°.

A plainly printed dictionary catalog. For books of short stories, contents are given.

LIBRARY ASSOCIATION OF THE UNITED KINGDOM. Class list of best books, 1905-1906. Published for the Library Association by

the Library Supply Co., London, Eng. 1906. 70 p. 8°.

This is the first time that this annotated class list of best recent books has been published in book form. The system of book selection has, moreover, been reorganized. A list of the contributors and their respective classes, for which they were responsible, is printed in the front of the book. The time of publication was changed so as to precede the meeting of the Association. As the compilation was therefore hastened, the editors have thought it proper to apologize for their inability thoroughly to adapt their work to the newly developed system.

NEWARK (N. J.) F. P. L. Paintings, bronzes, and other objects of interest in the Free Public Library of Newark. 1906. 22 p. 16°.

A neatly printed little list. It "shows what friends of the library have done for it in this direction and makes the suggestion that others follow their example." But it does not list all the wealth of this library in art objects, for of some 800 numbered items less than a quarter are printed here. A separate catalog of the Howard W. Hayes collection will be published later.

NEW YORK P. L. Books for the blind in the circulating department. 1906. 19 p. 8°.

Classified by the several kinds of type, and with subdivisions showing the wide range of this special literature. Such books as Gidding's "Sociology" and Lockyer's "Primer of astronomy" are available to the sightless.

—Music for the blind. 1906. 7 p. 8°.

VICTORIA (Australia) Public Library, museums, and national gallery. Catalogue of the exhibition of old, rare and curious books, manuscripts, autographs, etc., held in commemoration of the fiftieth anniversary of the opening of the Public Library of Victoria, 1856-1906. Melbourne, Victoria Public Library, 1906. 58 p. 8°.

Bibliography

ALASKA: GEOLOGY. Martin, G: C. The petroleum fields of the Pacific coast of Alaska. Washington, 1905. 64+11 p. (U. S. Geological Survey, Bulletin no. 250.) Bibliography (4 p.).

AMERICAN HISTORY AND BIOGRAPHY. Blair, M. G. An index to American history and biography for seventh and eighth grades. Cincinnati (O.) Public Library, 1906. 39 p. 12°. (Special reading list 11.)

APPENDICITIS. Sprengel, Otto. Literaturverzeichnis [über appendicitis.] (In Billroth,

[C. A. T.], M.D., and others, ed. *Deutsche chirurgie*. 1906, v. 46 d, pref. p. 9-117.)

APPLES. Beach, S. A. Authorities consulted in preparing the work on apples in New York. (In N. Y. [State] Agricultural Experiment Station. Annual report, 1905, v. 22, pt. 2, pref. p. 17-20.)

ARCHITECTURE. The Quarterly Bulletin of the American Institute of Architects for July, 1906, v. 7, no. 2, contains an index of literature from the publications and periodicals on architecture and allied subjects from April 1, 1906, to July 1, 1906. This index is classified, and in it are listed nine articles on libraries.

BIRKBECK, MORRIS. Smith, C: Wesley. Morris Birkbeck and the English settlement in Edwards county, Illinois, founded by . . . Birkbeck and George Flower, 1817-18: a contribution toward a bibliography.

This was printed with a reprint of "An appeal to the people of Illinois on the question of a convention," by . . . Birkbeck, Shawneetown, 1823, and occupies p. 21-33 of the pamphlet.

BOYS. Bowne, J. T. Classified bibliography of boy life and organized work with boys. N. Y., International Committee of Y. M. C. A., 1906. 39 p. 8°.

Reprinted from *Association Boys*, August 1906, with index. The list contains some 450 titles, 50 of which are from books, the rest from periodicals.

CEPHALOPODS. Ruedeman, Rudolf. Structure of some primitive cephalopods. (In N. Y. [State] Museum Bulletin, 1905, no. 80, p. 296-341.)

Bibliography (2 p.).

CHILD STUDY. Wilson, Louis N. Bibliography of child study for the year 1905. (In *Pedagogical Seminary*, September, 1906, p. 374-397.)

The usual annotations and author index are given to this valuable annual bibliography. 305 titles are listed.

COPEPODA. Williams, Leonard Worcester. Notes on marine copepoda of Rhode Island (In *American Naturalist*, September, 1906, p. 639-660.)

Bibliography (3 p.), some of the titles dating as far back as 1776.

DICKENS, Charles. Editions of Dickens's works. (In Connecticut P. L. Committee Monthly Book List, August, no. 16, p. 18-19.)

Careful notes describe 17 editions.

EDUCATION. Wyer, J. I., jr., and Leonard, Mabel E. Bibliography of education for

1905; reprinted from the *Educational Review*, September-October, 1906. 89 p. 8°.

The seventh annual summary of educational literature; it contains 665 titles. Twenty-two books are selected as books that should be in every educational library. There are many and full annotations.

ENTOMOLOGY. Folsom, J. W. Entomology, with special reference to its biological and economic aspects. Phil., 1906. 7+485 p. 8°.

Bibliography p. 409-466.

—Needham, J. G. May flies and midges of New York. Albany, 1905. 352 p. 8°.
(N. Y. State Museum Bulletin no. 86; Entomology 23.)

Bibliography (6 p.).

GREAT BRITAIN: GEOLOGY. Great Britain Geological survey. List of memoirs, maps, sections, etc., published by the Geological Survey of the United Kingdom and the Museum of Practical Geology. Lond., 1905. 116 p. 8°.

HUNTING AND TRAPPING. Springfield City Library. Hunting and trapping. (*In Bulletin*, August-September, p. 361-362.)

IRON AND STEEL. Stoughton, Bradley. Books on iron and steel. (*In* Iles, George, *Inventors at work*.) N. Y., Doubleday, 1906. p. 176-179.

A carefully annotated list, giving 14 titles. The annotations, which are real "evaluations," carry weight, as coming from the Adjunct Professor of Metallurgy, Columbia University.

JAPAN. List of works in the New York Public Library relating to Japan. Part 2, Conclusion. (*In* New York Public Library *Bulletin*, September, 1906. p. 439-477.)

LINCOLN, ABRAHAM. Smith, W. H., jr. A priced Lincoln bibliography. N. Y., privately published, 1906. 3+70 p. 8°.

About 1200 items, with the prices at which they have been sold, usually at auction.

LYCOSURA. Thallon, Ida Carleton. The date of Damophon of Messena. (*In* *American Journal of Archaeology*, second series, July-September, 1906. p. 302-329.)

This article is followed by a classified bibliography of Lycosura and the excavations made there.

NEW YORK STATE: GEOLOGY. Woodworth, J. B. Ancient water levels of the Champlain and Hudson valleys. (*In* N. Y. [State]

Museum, bulletin no. 84, Geology 8, 1905. p. [65]-265.)

Bibliography (8 p.).

RAILWAY RATE REGULATION. Newark Free Public Library. Railway rate regulation; a few of the best and latest books on the subject. Newark, N. J., Free Public Library, 1906. 4 p. 8°.

An annotated list of nine books and five magazine articles.

RETINA. Weyssse, Arthur W., and Burgess, Waldo S. Retina. (*In* *American Naturalist*, September, 1906. p. 611-637.)

Bibliography (3 p.). A considerable number of the titles are German.

ROD, ÉDOUARD. Roz, Firmin. Edouard Rod; biographie critique. Paris, E. Sansot, 1906. 69 p. 18½cm.

Bibliography (8 p.).

ROUSSILLON, France. Vidal, P. [A. A.], and Calmette, J. [L. A.]. Bibliographie roussillonnaise. Perpignan, Impr. de C. Latrobe, 1906. 558 p. 22½cm.

SCOTT, Sir Walter. Editions of Scott's novels. (*In* Connecticut P. L. committee Monthly Book List, July, no. 15. p. 20.)

Fourteen editions are described.

SOCIAL SCIENCE. Internationales Institut fuer Sozial-Bibliographie.

This institution, founded in 1905, proposes to issue a monthly bulletin aggregating in the year some 6000 to 8000 titles of books and some 12,000 to 15,000 magazine articles, speeches, etc. These titles will appear in German, French, and English, those published in other languages being provided with German translation. Arrangements have been made for co-operation with the chief countries of Europe and America, and a prospectus has been issued, with instructions to correspondents. The central bureau is in Berlin, W. 50, Spichernstrasse 17.

—Kritische blaetter fuer die gesamten sozialwissenschaften; bibliographisch-kritisches zentralorgan; hrsg. von Dr. Hermann Beck . . . in verbindung mit Dr. Hanns Dorn . . . und Dr. Othmar Spann. Dresden, O. V. Boehmert.

A monthly begun in January, 1905.

SOMERSETSHIRE. Humphreys, A. L. Somersetshire parishes: a handbook of historical reference to all places in the county. London, 1905-[06.] 15+855+[2] p.

Issued in eight parts.

STUPIDITY. Terman, Lewis M. Genius and

stupidity: a study of some of the intellectual processes of seven bright and seven stupid boys. (*In Pedagogical Seminary*, September, 1906. p. 307-373.)

Bibliography 23 titles.

TECHNICAL BOOKS. Providence Public Library. Books for workmen in the three leading industries of Providence: textiles, jewelry and silversmithing, foundry and machine shop work. Providence, Public Library, 1906. 26 p. 16°.

A valuable classified list, with brief annotations.

— Society for the Promotion of Engineering Education—Committee on Technical Books. Descriptive list of technical books. Chicago, A. C. McClurg & Co., [1906.] 64 p. 8°.

This is a revision and enlargement of the list published by this society in 1903. It now contains nearly 500 works, an increase of rather more than one-half. The increase in the section on "Steam and gas engineering" is especially noticeable, while architecture remains practically unchanged, having been well represented in the list of 1903. The additions to the list are nearly all in the line of practical and standard works, and fewer elementary books are included than many libraries will probably wish. The list also still fails to include any considerable number of books specifically relating to the various manufacturing industries.

The list of technical periodicals recommended has been enlarged and now includes the proceedings of several engineering societies. The alphabetic arrangement of these periodicals and also of the table of contents of the list is a commendable improvement.

The list bears no date, and gives neither edition nor date of publication for the books included. This is a grave defect in a list of a class where books are being constantly revised and superseded. An author index would add much to its value.

TEETH. Burnham, William H. The hygiene of the teeth. (*In Pedagogical Seminary*, September, 1906. p. 293-306.)

This article refers especially to the hygiene of the teeth of school children.

Bibliography, 18 titles.

WATER. Hoyt, J. C., and Wood, Mrs. B. D. Index to the hydrographic progress reports of the U. S. Geological Survey, 1888 to 1903. Washington, 1905. 253+3 p. 8°. (U. S. Geological Survey, Water supply and irrigation paper, no. 119.) Bibliography (4 p.).

WATER-SUPPLY. Forbes, U. A., and Ashford, W. H. R. Our waterways: a history of inland navigation considered as a branch of water conservancy. London, 1906. 15+366 p. 8°.

List of authorities cited, p. 317-321; chronological list of Acts of Parliament relating to rivers, p. 308-312.

WILDE, OSCAR. Sherard, R. H. The life of Oscar Wilde. N. Y., Mitchell Kennerley, 1906. 16+470 p. 8°.

Bibliography (14 p.).

Notes and Queries

CONTINUOUS PAGINATION OF READING MATTER AND ADVERTISING.—It is called to my attention that most of the English periodicals are beginning to carry on the pagination of the text to the advertisements, so that the librarian is confronted with the difficulty either of binding up a large number of pages which are practically repeated each week, or to have volumes on the shelves in which many pages are missing. Can we not as librarians make some united protest against this practice? I have no doubt that the librarians of all English speaking countries will join in objecting to this recent innovation of the publishers.

WILLIAM BEER,

Howard Memorial Library, New Orleans.

TIME LIMIT FOR BOOKS FOR HOME USE.—We should like to know what libraries, especially large ones, now lend books for four weeks, to be returned without renewal, in place of the two weeks' privilege with renewal.

GEORGE F. BOWERMAN,

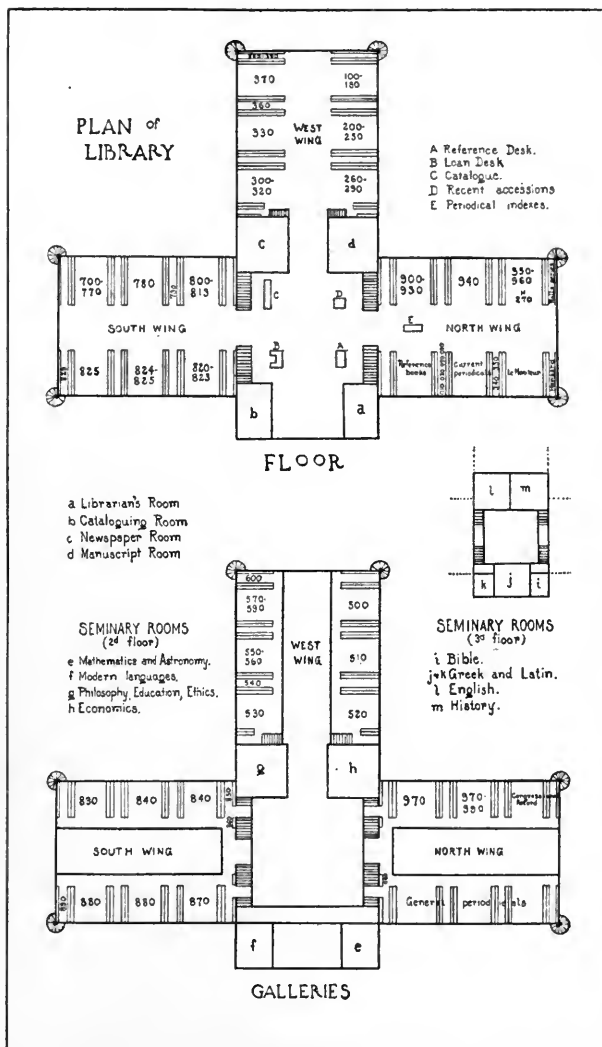

Librarian, Public Library, Washington, D. C.

LEAGUE OF AMERICAN MUNICIPALITIES: SOUVENIR VOLUME.—The Chicago Bureau of Statistics has for distribution the souvenir volume recently published for the League of American Municipalities. This contains, among other matter, a review of Chicago's administrative history, 1837-1906, by Hugo S. Grosser; a history of Chicago's seal, by Dr. C. J. Cigrand; a history of the league, by J. MacVicar; full-page portraits of former mayors; and a new map of the city. Libraries desiring one or more copies of this volume may obtain the same by sending 25 cents (in stamps) per copy, to cover postage and packing, to Hugo S. Grosser, city statistician, City Hall, Chicago.

"A THOUSAND OF THE BEST NOVELS."—In your notice of "A thousand best novels" in the September LIBRARY JOURNAL you gave the price of five cents per copy. This is an error, as it costs 10 cents for a single copy by mail. Will you kindly correct this in the October number of the JOURNAL?

BEATRICE WINNER,

Assistant Librarian, Free Public Library, Newark, N. J.

DIAGRAMS OF FREDERICK FERRIS THOMPSON MEMORIAL LIBRARY — VASSAR COLLEGE *

[*The diagrams given in place of floor plans are from the *Handbook* of the Library and were intended primarily as a guide to the location of the books. Three interior views as well as views of the exterior are given in *Architecture*, September, 1905.]

THE FREDERICK FERRIS THOMPSON MEMORIAL LIBRARY — VASSAR COLLEGE

THE LIBRARY JOURNAL

VOL. 31

NOVEMBER, 1906

No. 11

THE problems of college libraries, to which much attention is given in this number, are in part the same as, in part quite different from, those of general libraries—but in most relations much can be learned by each class from the other. The purpose of college libraries should be to encourage scholarly reading among students, and it certainly should be among the aims of a public library to encourage scholarly reading among the public. One of the ideals of library administration is to increase the proportion of non-fiction in the totality of reading, but it is to be remembered that a large portion of the best English literature is in the form of fiction. Not only librarians, but the reading public of to-day, are apt to overlook this fact; and, on the other hand, college librarians may overlook the fact that the reading of what may be called English classic fiction is a part of the true scholar's equipment and should be encouraged as much as possible. If the true university is a collection of books the ideal of good reading is achieved when from that university all-round readers are produced, *i.e.*, readers who have a good knowledge of the general field represented by printed books.

It has recently been stated that college libraries are more behindhand in many respects than any other special class of American libraries, especially in reports, statistics and administrative organization. If that is so, the reason is not far to seek. The public library has had concentrated on itself of late years the very best attention and has obtained the services of trained librarians—many of them of a high order of administrative ability; while in too many cases the library is only an incidental feature of the college, and the college librarian is not recognized in his true relations with the university body. Attention is concentrated not on the librarian, but on the president of the college or the university, who nowadays is expected to be a man in the public eye and in whom centers the college administrative work. There are notable college librarians, and, in fact, one of the most notable has graduated from

college presidencies into the librarian's chair at a great university; and in other colleges the librarian is a member of the faculty or governing body. But the college librarian as such has yet to emerge into his proper dignity in relation with the general scheme of the college, and to this end the College Library Section of the American Library Association ought to be of increasing importance.

THE Massachusetts State Library Commission has under consideration an alternative for the library visitor or inspector which should prove an interesting experiment. The Massachusetts commission has followed two cardinal principles: of handling the commission work at a minimum of personnel and expense, and of seeking to promote individualist action on the part of towns. It has accomplished the triumphant result of obtaining library facilities for the people in every township in the state, but it is by no means a certainty that these facilities have in all towns been developed to full advantage, and we emphasized last month the value of library visitation in obtaining this fullness of result. The new plan, which has been for some time past in contemplation, seeks to cover the field by volunteers in each part of the state under the charge of a lady especially well fitted for the executive work, though not a professional librarian, the local help being given by ladies fitted by character and knowledge if not by professional experience to go about among the libraries, studying their needs and inspiring the local librarian to do the best possible work. The whole profession will watch with interest this new and novel development, should the commission decide to enter upon this line of work.

ONE of the most practical fields for co-operative usefulness is in respect to binding, and that good work is being done in this direction is evidenced by the increase of literature on this subject, embodying valuable investigations, as pointed out in the last number of the LIBRARY JOURNAL by Mr. Bliss. Durability of binding and also of paper may

well be considered primary desiderata in the library view of books. One of the most important suggestions evolved from recent discussion is that the publishers should sell an edition in sheets of books in large demand by libraries, to be bound especially for libraries, presumably in a standard style. This might have a secondary advantage in obtaining a closer price for library books than is practicable under present publishing arrangements. But it would have the disadvantage that the outward individuality of books, now so important a feature in cloth binding, would be lost to the library reader, and with it an important element of attractiveness. There are perhaps some libraries still in existence which preserve the ancient uniformity of paper-covered dullness, but the variety and bright array of good color on modern library shelves is one of the attractive features of a well-chosen public library. On the other hand, an interesting result has been achieved architecturally, so to speak, in the Rhode Island State Library, in the new capitol, where the approximately uniform binding of law books, long sets, etc., was seized upon by the decorator as the motive for the color scheme in the library room, so that there is a harmony of tone throughout. Further discussion of the question of bindings from the many points of view which are possible cannot but be helpful to all libraries.

MR. W. I. FLETCHER has been playing "the bull in the (library) china shop," half humorously and half seriously, in a paper of that title which has evoked a good deal of interest at several meetings of library organizations before which he has read it. The important process of standardizing which has been going on in American libraries for the past generation opens of course the dangers of conventionalism and of a new set of hard and fast rules or traditions which may finally have to be re-formed in turn. Mr. Fletcher's protest against carrying the stack system too far should especially be heeded by architects. For a rural library, eight or ten thousand volumes is a fair limit; more will scarcely be used, and every added volume is of course a new care and expense. When a rural library reaches this stage, selection rather than col-

lection should be the process of growth. Mr. Carnegie's liberal donations for buildings in small places as well as in cities have perhaps led to the planning of larger collections and stack rooms than are really necessary or fully useful. The ideal library which can have but one attendant, or at most two, should be a happy combination of the public with the private library, in which readers may see about them a collection of books attractively arranged, an ideal not fulfilled by the formality of the stack system.

THE situation in Brooklyn raises interestingly the question of architectural competitions for library buildings. Competition is formally opposed, though it is not declared unprofessional, by the American Institute of Architects, and many, perhaps most, architects concur in that opposition. The reason is perhaps three-fold: that time, effort and expense are wasted in developing many plans where only one can be chosen; that the best architects are therefore least likely to enter into competitions; and that there is a feeling that competitions are not sure to be fair and honest. In a phrase, it is better to choose the best man and let him do the right thing. The uncertainty is in finding by any other process the best man who is sure to do the right thing. The modern compromise of combination which affords competitive opportunity to present plans, with substantial payments for several of the most worthy and plans from architects who have already achieved success in the special field and are invited to submit plans at a fair remuneration for them, gives perhaps the best assurance of getting the right thing when such plans are brought together for the final choice. This has been the plan adopted for many important public buildings and is a good precedent to follow. The United States government has adopted by law a method of competition, in view of the sad results produced under the other method, and some of the public work in the several boroughs of New York City, where political favoritism ruled, has afforded notorious example of how not to do it. The new Education Building at Albany, which is to house the State Library, has adopted a scheme for a double competition, as set forth elsewhere.

COLLEGE LIBRARIES AND COLLEGE LIBRARIANS: VIEWS AND COMMENTS

BY W. N. CHATTIN CARLTON, *Librarian Trinity College, Hartford, Conn.*

As a class college libraries have unquestionably not kept pace with the public institutions in the progress that has characterized library development during the last thirty years. It is true that conditions are neither so archaic nor chaotic as at the date of the famous volume on "Public libraries in the U. S." (1876). The notable changes in methods of instruction, the effects of the elective system, the increase in lecture courses, and the wide influence of German taught instructors, have all forced the college libraries into some semblance of progress. But much remains to be done before the average college library occupies the same place in and receives the same support from its constituency that the average municipal institution to-day occupies and receives without question.

It is not difficult partly at least to account for this condition of things. Too many college trustees and presidents have clung to the old idea that almost any one could look after the library; few have realized that the position demanded special qualifications. Professors who had failed or outlived their usefulness in the class room, clerical alumni temporarily without a parish, an instructor already overburdened with other academic work—are not these familiar figures among the college librarians of the past? Exceptions there were to be sure, and even among the types just referred to it sometimes happened that the right man for the place was found. Chance had shown him his true *métier*. But how pathetically often the contrary occurred. The same college officials responsible for such unhappy appointments have canvassed the credentials of a night watchman or engineer with the greatest care, yet again and again have entrusted their libraries to the care of men whose only recommendation was failure or misfortune in some other line of endeavor. Their American practicality and business acumen showed them that the safety of a valuable plant depended upon the trained knowledge and skill of their engineer, but it

could not reveal to them in tangible shape how much the educational work of their plant might be extended by the requirement of similar trained preparation and experience in the guardian of their books. We need not, however, judge them too severely. In some cases they knew nothing of the possibilities of the position they were neglecting; in others, conditions beyond their control dictated their choice. Moreover, it is to be remembered that even college bred trustees of the generation now passing away could have but a dim idea of the vast changes in the relation of the library to the college that had grown up since their college days. When they were undergraduates the library was something distant and remote. Few ever penetrated its quiet recesses; many men graduated without ever having seen it. The bold student who had ventured within its portals came back to his fellows with a story of a dimly lighted room, rows of giant folios on theology or metaphysics, shelves of dumpy brown duodecimo editions of a few English and many ancient classics, the whole presided over by a kindly but abstracted senior professor whose studies the student felt it would be a profanation to disturb.

Much the same reasons that prevented the necessity of a new type of librarian from being realized are also responsible for the long refusal to the library of that financial support which has been accorded so readily and lavishly to the chemical, physical, or engineering laboratory. It was easy to understand that the chemical department must have \$1000 for supplies and equipment; it was almost impossible to see why the professor of Greek needed a *Corpus Inscriptionum* costing \$500; it was patent to the meanest intelligence that a dynamo must be installed in the physical laboratory, but who on earth could imagine why the professor of English needed a German periodical extending to over a hundred volumes and costing \$300? A leading cause for our slow rate of progress has been, then,

this tardy recognition of (1) the real relation between the library and the college, (2) of the need of a large amount of literary material in the work of instruction, and (3) the necessity of special training in the one appointed to organize and care for this material and to make it speedily accessible to both instructor and student. But the tide has now turned and the college libraries are headed in the right direction. The purse strings of college boards have been loosened in the direction of the library; trained young men and women are now finding places in the libraries of educational institutions where but a short time ago there were no positions to be filled.

But the young college librarian early discovers that he is confronted with unexpected and unusual problems. This is largely due to the fact that his library school training has properly concerned itself chiefly with public library administration, which has been so admirably systematized that it readily lends itself to systematic explanation, whereas college library administration is in many respects radically different from public and its principles are very far from having been systematized. In fact, individual college libraries differ from one another so much more than do individual public libraries that it may be doubted whether such complete systematization is possible in their case. A single illustration will make this clearer: The work of establishing a public library, erecting its building, selecting and purchasing its books, engaging its staff, and opening it to the public can be accomplished to-day with as much ease and expedition as a steel bridge can be thrown across a river by the trained force of any large contracting and engineering firm. Can this be done with the same precision and smoothness in the case of a library for a newly-founded institution of learning? Obviously it cannot be so done. That the principles on which college and university libraries should be conducted are in many important respects quite different from those upon which municipal libraries should be administered was fully recognized in the 1876 report, but we do not find that much has been done toward stating clearly what the differences are that exist between the two kinds of library and how the conditions they create are

met. A free exchange of views and record of experience on the part of those engaged in library work always does something toward making differences clear; but if this paper have no other result it may be of some use and suggestion to those just beginning their careers and to those still in the schools who are looking forward to service in a college or university library. It is a statement of the views rather than a record of the experience of the writer. He has been led to them partly through experience, partly through the study of conditions in libraries other than the one he is associated with, and partly through reading and reflection.

A first question that occurs is, does the college librarian need a different preparation from that of the public official? It is very decidedly my opinion that he does, but instead of *different* perhaps *additional* is a better word to use. A college degree plus the library school course or an equivalent amount of training in a well-equipped library are assumed as essentials in both cases. But the college librarian finds himself in such a very different relation to his constituency that something more than this seems necessary in his case. He is to be associated with a body of men (the faculty) who are, or ought to be, finely trained scholars in their respective specialties, and he is to co-operate with them in their common work of solving the current problems of higher education. He should have a full understanding of and sympathy with their point of view as specialists, of their methods and needs as scholars, and also be broadly conversant with the educational questions of the day that he as well as they will be called upon to consider and determine upon with reference to their adaptation to the institution with which he and they are connected. In order, therefore, that he may take his place as a professional and academic equal among them, it would seem as though the training of a modern college librarian ought in general to resemble the training of a modern college professor. This implies, in addition to the above-mentioned essentials, graduate study leading to one of the higher degrees, M.A. or Ph.D., *i.e.*, training in scholarly method and use of literary material.

If it be said that this requirement would greatly extend the present period of prepara-

tion, the charge must be admitted; it would. We should have the college course of four (or three) years, the graduate course of one, two, or three years, and the library training of one or two years, the latter corresponding to the office or hospital experience of the young lawyer or physician. But the result in breadth and fullness of preparation would be well worth the cost and sacrifice. There would be an incalculable gain in that dignity and respect which is readily accorded those who have pursued an established and generally recognized course of study for their special work, but which is only grudgingly accorded those "who come in by another way." Equality of rank with his teaching colleagues could not well be denied the college librarian who had had an academic training equivalent to theirs, a training recognized and understood by college governing bodies. Many of these bodies distinctly do not understand yet what we mean by library training. The fact is unfortunate, but it is true.

The certain effects of a generation of librarians trained in this way would be: increased respect for the position, a full recognition of its proper rank in the academic world, a higher standard of librarianship, and a greater attractiveness in the calling itself for able, ambitious and scholarly young men and women.*

In this connection certain matters associated with the words "scholar" and "executive" may be discussed. Much has been heard recently about the changed type of librarian demanded by modern conditions. Not scholarship, it has been openly asserted, but executive and administrative ability is the first essential in the chief librarian of the present day. He is to be charged mainly with the control and direction of the library machinery; and (though this is naturally not often put so bluntly) it is to his low salaried assistants and subordinates that the public must look for learning, humanistic and cultured knowledge of books, and skilled literary guidance. And in the contemporary discussion of the topic there has at times been detected a feeling of relief at this prospect of escaping the obligation of being a student, of being

both a scholar and a business man. This proposition, that the modern librarian must be primarily a "business man" and only incidentally or not at all a scholar, I must be permitted to describe as one of the most vicious fallacies that ever gained currency among intelligent men and women. It would be difficult to invent a more perfect instance of putting the cart before the horse. And what an apt illustration it is of that very "materialism" and "commercial spirit" which our American libraries were to do so much toward improving and enlightening!

As earnestly as I can I wish to protest against this false view and to maintain its opposite. Scholarly training and scholarly ability are and always should be the prime requisites and chief characteristics of a college or university librarian.* Viewed in the light of its material organization the library is of course a machine; but viewed in the light of its purpose it is an institution devoted to the preservation, dissemination and advancement of knowledge. Both the machine and its purpose are intimately connected, there is no dispute about that; but of the two the purpose is the greater matter and the qualities needed for the delicate task of directing and accomplishing it are intrinsically more important and of a higher nature than those needed for the purely business side of library administration. Hence I regard it as fundamentally wrong that the latter should be exalted over the former. It is the great purpose of the institution that should be represented in the person of its chief official. Intellectual breadth, sane learning, and sympathy with every seeker after knowledge are the things that should be associated in the public mind with the word librarian; not an impressive array of telephones, speaking tubes, typewriters and clerks with documents awaiting his signature. These all have their place, but it is by no means the prominent one they show signs of assuming.

A prompt objection to this position will be the time-worn query, "But is not the man of learning, the average college professor,

* The writer is not a college graduate. *Author's note.*

*I hold the same view as regards the heads of national, state and municipal libraries, and for much the same reasons as here adduced in the case of college libraries.

notoriously unbusinesslike and lacking in executive ability?" The reply to this is: "Some certainly are, but the popular impression that scholars are invariably poor business men and hopelessly impractical is entirely wrong." It is well to remember that the bulk of all the administrative work in American colleges has long been done and is being done by individual professors and faculty committees, and that on the whole it is being done very well. Those familiar with such work know that it often calls for a high order of executive ability, and that in most instances this ability has been readily found in the smallest college faculties. Scholarship is not necessarily incompatible with business talent; on the contrary the two qualities are frequently found in the same person.

But even if a scholarly librarian should be found deficient in "executive ability" it by no means follows that he should be superseded by a business man, relegated to a subordinate position, or dismissed. If he has the other essentials here indicated, if he represents with dignity the purpose of the library, if he has succeeded in making it the complement of instruction and an aid to research, he should be retained as its real chief, and the functions that require a capacity for organizing concrete business and administrative details should be assigned to a subordinate official possessing that capacity. The library, let it again be asserted with emphasis, is an institution of learning. Its chief and representative in the eyes of the public should not be one whose title to the position is based on qualifications that would fit him equally well for the head of a department store or system of retail tea shops.

It will be a grievous ending to America's magnificent library effort and progress if it shall result in conditions which neither require nor have positions of honor for librarians of the type of Panizzi, Bradshaw, Maunde Thompson, Garnett, Leconte de Lisle, Hartwig, Dziatzko, Cogswell, Winsor, Poole, Cutter and Hammond Trumbull.

As a rule the public librarian is in much closer touch with his board of trustees than the college librarian is with his highest governing body. The president of the college is usually the intermediary in the latter case and very often this arrangement is perfectly satisfactory. But when matters of importance

concerning the library are under discussion, it is advisable to have the librarian explain them fully in person before the board. He should be permitted to state in his own words the reasons for his recommendations and be prepared to make them clear and convincing, for he is in a better position to do this than any one else. It is for the board to decide whether it is desirable to adopt his suggestions or whether they have the means to carry them out if approved. His suggestions should not be left unacted upon or rejected because the board does not understand the situation, need, or recommendation.

The Library Committee or Council should be representative and catholic in its membership. Both the board of trustees and the faculty should be represented in it; the president, the treasurer and the librarian should be members, *ex-officio*. In a small committee, the treasurer, if a member of the board, might also represent the trustees. The relationship between the librarian and the treasurer should always be a close one. The latter knows the exact state of the funds at all times; he is, of course, the first to know of any decrease or increase in the income, and a quarterly statement from him of balances or overdrafts will often save the librarian much unnecessary bookkeeping.

Great variety exists in the constitution of library committees, and it is not easy to lay down general rules as to manner of appointment, number of members and functions. The committee should be appointed by the board of trustees, be responsible only to this board, and, through the librarian or as a committee, report to it directly. Under no circumstances should the committee be appointed wholly by the faculty nor should it be a subordinate committee of that body. The library should be, administratively, entirely outside the jurisdiction and control of the faculty.

The size of the institution will mainly determine the size of the committee; the larger it is the greater will be the care necessary in selecting its membership. In a small college it is possible to have Literature, Language, History, Economics, Philosophy and Science all represented in a comparatively small body; in a very large college this is out of the question. But a group of men selected on account of their known breadth of intellectual interests and knowledge of college

needs will rarely fail to act justly and on the whole wisely. Departments unrepresented on the committee need fear neither neglect nor discrimination, for it sometimes happens that in an over-anxious desire to be impartial the professors on such a committee are more fair to their unrepresented colleagues than to themselves. In a large university the units of representation on the library committee would perhaps best be the several faculties (Arts, Science, Law, Medicine, Theology, etc.,) rather than departments. This plan would operate where the general library provides for all. Where the graduate schools have specially endowed collections, or separate library appropriations, local modifications of this scheme of representation would be necessary. In general, the smaller the committee the more likely it is to be a working instead of an honorary body.

Certain fixed functions of the committee may be: to act as the immediate governing body of the library, to determine matters of general policy, to apportion the income with reference to book purchases, binding, cataloging, assistants, etc., to make final decision on large, unusual, or very expensive purchases, and to fix the proportion which periodicals and continuations shall bear to the total amount of book purchases.

In the relation of the librarian to the faculty we have another situation not quite paralleled in public library administration. It is a very important, very peculiar, very much misunderstood relation. It ought to be a very harmonious, mutually appreciative and understood one. The work of the librarian is not confined to aiding and directing undergraduates. The larger the institution the less likely he will be to come in direct contact with large numbers of them. But whether the college is large or small the relationship between librarian and faculty must be close and constant. Harmony between them is absolutely essential both as regards the library and the work of instruction. A librarian who has himself been trained as a specialist will, other things being equal, be more likely to understand the point of view of the instructor than one who has not had such an experience. As a student of library problems he will know when the excessive development of some special or very narrow field is likely to result badly for the collection as a whole or as to the

future of the department concerned. His experience will show him what is to be said on both sides; his judgment will indicate when exceptions are advisable and when the general policy should prevail.

Now in the private conversations of professors and librarians we too often hear remarks that indicate erroneous interpretation of motives and methods. From college professors such expressions as the following have been heard: "Our librarian thinks he knows better what we ought to buy than we do"; "He insists on buying what he calls 'Poole sets' before getting the foreign journals we want"; "He is always asking if such and such a book won't be out of date in a year or so; or, if it is one that bids fair to be of permanent value he wants to wait until he gets it at second-hand or auction"; "Classification? I don't know what system we have. I find books that belong to my department scattered all through the library." From librarians come complaints such as these: "The professors are unreasonable; they want everything and they want it all at once"; "They take out the books before the bill for them is checked up and it is weeks before we can get them for marking and cataloging"; "They think every book they order should be placed on the shelves of their department regardless of its main subject matter"; "The students in the [Chinese] department want certain popular English works, but we can't buy them because the professor has exhausted his appropriation in the purchase of treatises by German and Russian [Sinologists]."

Now, if we were to take these two sets of hasty expressions literally we could hardly escape the conclusion that an "irreconcilable conflict" existed between professor and librarian. Of course this is not the case. Shining through them clear as daylight their cause is seen to be simply a misunderstanding of respective needs and positions. Let us consider possible solutions of the particular misunderstandings which these random quotations show have really arisen in widely scattered places.

The first professor's remark may be dismissed very briefly. Either he completely misunderstood the librarian, or the librarian was unfit for his place. Of all men librarians are in the best position to know that omniscience is not, cannot be, and never was

intended to be, a human attribute. In the second instance, we will assume that the librarian had found through his daily work with the undergraduates that their peculiar needs could be greatly served by certain "Poole sets," and a library committee had given these the right of way among purchases. Were these facts communicated to the objecting professor? If not, they should have been. He should have been reminded of the fact that the library officials know better than any individual instructor can what the general needs and demands of the students are; it should have been clearly explained to him that the expressed and experienced want was so imperative that it would have been most unwise to neglect it, and the point should have been illustrated by concrete instances.

It is both natural and legitimate for a librarian to wish to avoid lumbering the shelves with books that will soon become obsolete. To purchase them seems like a veritable throwing away of money; their storage means valuable space occupied by almost valueless material, and we know that next to money book-space is the thing for which we are ever weeping, wailing and gnashing our teeth. But the college librarian must not forget that it is the object of the institution he serves to gather and transmit *present* as well as past knowledge. If a new book on electrical engineering, however slight, contains information which a professor deems it wise for his students to have at hand instantly; if the present moment is the only time when that book is going to be a "live" one, it is best to get it, even if the professor does cheerfully assure the librarian that six months hence it will be "dead" and can be thrown away. "Now is the accepted time" must be the rule in such cases. The utility and convenience of possessing books at the moment when they can be used most effectively also often justifies their purchase at "the long price" on publication. Is it after all a real gain to save \$6 or \$10 on the cost of a valuable and needed work, but lose two years' use of it? Here again the college librarian must overlook certain "practical" considerations; he has interests to serve whose measure of value is not the dollar.

The "foreign journal" topic is ever to the fore, and the smaller the appropriation the more hotly is the subject of *Zeitschriften* dis-

cussed. Three points are almost always involved: (1) cost, (2) the extent to which students will use them, (3) the probability that for some time they will be used only by the one or two professors interested. The cost item will often settle the question one way or the other. If *any* students can be got to use an authoritative foreign journal in connection with their college work it is a good thing not only for them and for the department concerned, but also for other departments—even good habits sometimes spread among undergraduates. In nine cases out of ten it is over the third point that most of the trouble arises. The librarian hesitates; he thinks of the many books on many subjects that the collection lacks. The library committee ponders and doubts; can it afford to make the outlay? is it fair to other departments? if this sacrifice is made for one, why not for all?—and the committee decides that it cannot authorize the purchase of the *Jahrbücher*. That they are often right is beyond question; that their motives are correct is indisputable, and that they genuinely regret the deprivation of the professor is undoubted.

But suppose we try to view this matter from a slightly different angle; suppose we carry it up to a little higher plane of consideration than that of mere expense and expediency. The object of every college worthy of continued existence is to provide the best possible instruction by the most accomplished instructors it can afford to retain on its faculty. Its repute is ultimately determined not by numbers, not by imposing buildings, but by the character and grade of its instruction and the usefulness and value of the results of the investigations made by its instructors. Now, if a qualified professor wants a foreign journal of world wide repute in its field, one that contains a large share of the newest contributions to its subject, it is well worth some sacrifice on the part of the college and the library to obtain it. The immediate incorporation of its subject matter in the professor's lectures keeps his instruction abreast of the times, necessitates frequent revision of those lectures, enlivens them with references to discoveries, inventions and experiments not yet six, three, or even two months old, and rarely fails to stimulate the interest of such students as are worth teaching. Again, if the private investigations of

an able professor will be materially furthered by having such a journal at hand, it is a good investment for the college to provide that journal and share in any distinction that may come to its servant through published researches made with its aid. Librarians and their committees must never forget, however small their means, that they have a duty to perform towards the teachers as well as the taught. These things are so self-evident it seems idle to pen them, but are they recognized and acted upon as often as they might be?

The professor's comment on classification and the remarks of the librarians quoted above can be considered together for the reason that the same cause begot them. It is simply this, that many college officials have as yet no conception of what a complicated piece of machinery the well managed modern college library has come to be, and what a mass of petty detail is necessary to keep it in shape for easy, unhampered use by student and instructor. We know that these details must be attended to or our collections will at once become unmanageable mobs of books, useless to everyone. Some professors do not know this, some at times forget it. It will not be wise to force the information upon them. But in countless indirect ways the meanings of things can be brought gradually to their attention, until from hostile critics they are transformed into sympathetic helpers almost without their knowing it. Tact alone works this miracle, but has it not long since been accepted that without tact no man can succeed as a librarian?

Our "Chinese" example illustrates the extent to which an ambitious instructor may forget the need of his students for books suited to their comprehension rather than his; and it also calls attention to a fact likewise unknown to many instructors, viz.: that students often register their complaints and express their desires far more frankly at the librarian's desk than at the professorial rostrum.

So often have we heard that "the library should be the center and heart of the institution," the phrase has become hackneyed; but among the things that make for its attainment none is so fundamental as the perfecting of this relation between faculty and librarian. There must be concessions, sacrifices and new

understandings on both sides, and for some time to come these will have to be chiefly on the part of the librarian. This may seem hard and it is hard, but all pioneer work is a more or less "gruelling" experience. The librarian, after making certain that his position is right in the light of the best current experience, must be firm as adamant when some proposed rule, policy or detail of management would affect the main purpose or general usefulness of the library. Not an inch of legitimate progress should be sacrificed. Useful assistants should not be made to do janitor service. Book funds should not be used to pay for heating or salaries. The general appropriation for library purposes should not be increased or decreased according to the condition or needs of other departments. Important details of management should not be subject to faculty decision or interference. The library as a unit affecting many other units exceeds in importance the departmental unit in the same way that the college as a whole exceeds in importance any of its parts.

But in many matters of subordinate library detail (and after all these are most often the prime causes of differences and dissension) the college librarian can well afford to make concessions to the faculty such as the public librarian would not think of making to any portion of his constituency. The instructor even in his most intolerant moments usually represents the educational activities of the institution, and these of course are of far greater immediate moment than our technical machinery. The temporary dislocation of a bolt or plate in this ingenious (and necessary) mechanism need not cause a total breakdown. Our temporary inconvenience may result in another's getting vital intellectual good, and this is precisely the object of all our striving, is it not?

Indispensable essentials in college librarianship are: the widest possible breadth of view and catholicity of interest, sympathy with the aspirations and work of the instructors, and a hearty willingness to place at their service all the materials and forces at command, so far as is consistent with the general welfare and good management of the library. Given these qualities, a librarian's relations with that universally abused body, the college faculty, cannot fail to be helpful, mutually informing and reasonably harmonious.

STUDENT CIRCULATION IN A UNIVERSITY LIBRARY*

By THEODORE WESLEY KOCH, *Librarian University of Michigan*

MR. ARTHUR C. BENSON, fellow of Magdalen College, Cambridge, in his latest volume of essays, entitled "From a college window," says that one room in his college which he always enters with a certain sense of desolation and sadness is the college library; there are in it so many books that are "no good for reading," as Dante Gabriel Rossetti used to say in his childhood of his father's learned volumes. Mr. Benson describes the books of his college library as "delightful, indeed, to look at; rows upon rows of big irregular volumes, with tarnished tooling and faded gilding on the sun-scorched backs. What are they?—old editions of the classics, old volumes of controversial divinity, folios of the Fathers, topographical treatises, cumbrous philosophers, pamphlets from which, like dry ashes, the heat of the fire that warmed them once has fled." With a large central university library into which pours the annual cataract of literature, Mr. Benson feels that these little ancient college libraries have no use left, saving as repositories or storerooms. "They belong to the days when books were few and expensive; when few persons could acquire a library of their own; when lecturers accumulated knowledge that was not the property of the world; when notes were laboriously copied and handed on; when one of the joys of learning was the consciousness of possessing secrets not known to other men." Mr. Benson wishes that some use could be devised for these college libraries, but confesses that they are not even the best of places in which to work, now that almost everyone can afford to have his own books in his own study, and with a comfortable reading chair. He grants that it would be too expensive to keep these little libraries up to date, and recognizes that this would bring up the question of what to do with the old books, which would soon be crowded out. Mr. Benson concludes that perhaps the best thing for a library like this would be, not to attempt to buy books, but to subscribe like a club to a circulating library

and to let a stream of new volumes flow through the place and collect upon the tables for a time.

While neither the college nor the library described by Mr. Benson has its counterpart in this country, I think that some of us have seen American university and college libraries where there was as little of intellectual cheer and as great an absence of life as in the old Cambridge room of which we have just read. The interesting thing for us in Mr. Benson's essay is the suggestion that it would be well to devise some means of providing students with reading material. To have this come from one of the most conservative of the old world universities is encouraging to those of us who believe that the libraries of colleges and universities exist as much for the sake of the student (even though he be an undergraduate) as for the professor and advanced investigator.

In 1856 the privilege of borrowing books from the library of the University of Michigan was taken away from the students; in February, 1906 (a half-century later), it was restored to them. The reason for the change and our experiences in making it are to be the subject of this brief paper.

In the early history of the University of Michigan, as in other educational institutions, the library was open but a few hours per week. Consequently it was thought necessary for the students to have the privilege of taking books to their rooms. Students were comparatively few in number and the demand for books was not very heavy. With the increase in the number of students and the consequent larger demand on the resources of the library, the hours of opening were lengthened, but the privileges of the undergraduates were curtailed until eventually the library was open all day and all evening (fourteen and a quarter hours), and the student had few privileges. Until a few years ago, the student at Michigan had free access to nothing in the way of reference books saving a few encyclopedias and a meagre collection of books for collateral reading. For books to which he was referred by

* Read before the College and Reference Section, Narragansett Pier Conference, A. L. A., July, 1906.

his professors he had to take his turn at the desk, and as a result he spent an inordinate amount of time waiting in line with his call slip, frequently to find that some one else had the book in use. All the current magazines were kept in a so-called "faculty reading room," barred to students, and if a student wished to see any of these magazines he had to make out a slip for the number he wanted to consult. You can imagine the amount of work this entailed at the desk when in the evening scores of students called for magazines to which they had been referred that day by their instructors!

The question of extending to students the privilege of borrowing books from the general library for use in their own rooms had come up several times within the last dozen years. In his report for 1896 President Angell had urged the regents to consider the feasibility of setting apart a certain number of books for student circulation: "Believing that such use of certain books will be more advantageous to the readers," said he, "I have long looked forward to the time when it would be practicable for us to permit it. I have always thought that when the number of volumes approached 100,000 we might safely give this larger liberty to students under certain restrictions. The expense of the service at the desk may be a little increased. The risk of loss is perhaps somewhat enhanced. But after all proper weight is given to these facts, we have to remember that the library is the great central power in the instruction given in the university, and that the books are here not to be locked up and kept away from readers, but to be placed at their disposal with the utmost freedom compatible with safety and with the general and equal convenience of all students."

Plans were formulated for a circulating library, with duplicates received from a recent bequest and a purchase as a nucleus, but the scheme never materialized. A somewhat similar plan for the segregation of a certain number of volumes in a special room, to be designated as a circulating library, was proposed as a compromise at Cornell University, one of the few institutions of our size which does not allow books to circulate among all students. But eight years have elapsed since this was first proposed at Cornell, and nothing has been done in the matter. The Cornell faculty recognizes that any such attempt to

regulate the demand of the student body by virtually saying, "These books you may take home and read; these books should satisfy your legitimate demands," would not work in practice. No librarian, nor any library committee, can select 5000 books from a university library of 200,000 volumes and say that these volumes represent all that can be justly called collateral reading for university students. No one can foresee what directions the demand for wide reading will take in some university courses. The writing of a particular theme may call for the reading of a book which no one would think of placing in a circulating library limited to 5000 volumes. The work may be very special in its nature, and might not be called for again in years. Yet if it were a volume of no great rarity there is no more reason why the student should not have the privilege of borrowing this than any of the 5000 fundamental works selected for the circulating library. Again, a student's reading may require the continuous perusal of volume after volume of serious matter, a grade of reading that cannot always be done to advantage in a large and noisy reading room where one is interrupted by the coming and going of throngs of students hurrying to and from lectures. For certain kinds of work the best reading room in the world is the private study.

As a result of (1) the non-existence of a reference library with open shelves, (2) the denial to students of circulation privileges, (3) the barring of students from the periodical room, there was a congestion at our delivery desk which caused considerable complaint and formed one of the most pressing problems in the reorganization of the reading room service. The remedies applied were the natural ones of establishing a reference library of about 6000 volumes on open shelves which were built around the walls of the reading room, hitherto bare of any such equipment. This was done during the Christmas recess of 1904-05, and two months later the "faculty reading room," which had been used by only a very few professors and for a minimum time each day, was furnished with additional tables and chairs and then opened to the students as a periodical room. One table at the farther end of the room was reserved for the faculty, and this has been found to answer all needs. A newspaper rack was

installed and the daily papers which had hitherto been kept in the librarian's office and filed in the stack, were now placed where the public could have access to them. The wisdom of this move was questioned by some professors of the Literary Department, who felt that newspapers had no place in a university library; that they were not in keeping with their ideas of a university reading room. My answer to such objections would be that the conception of the functions of a university had of recent years undergone a change; that to-day the curriculum included courses in journalism, higher commercial education, municipal administration and sociological questions of the day, and that to the students of these courses the current newspapers were essential as collateral reading. To the statement that many of these papers were on file in the Y. M. C. A. rooms, I made reply that one copy of the *Chicago Tribune* or *Record-Herald* would not go very far with 4500 students and 300 members of the faculty. These papers are placed on file at 2 p.m. on the day of issue. The afternoon and evening is the time in which our newspapers are most frequently consulted. If on an average four people consulted one paper during an hour, only 32 people could consult one of these papers from the time it was placed on file until the hour of closing the library in the evening.

In canvassing the board of regents and the library committee of the literary faculty, with whom rested the decision of the question of extending to students the privilege of borrowing books, use was made of the facts brought out some years ago by the committee of the Cornell University faculty having in charge the investigation of the subject. This committee sent a set of questions to the librarians of various universities in this country. A half dozen answers to their first question will show the general trend of the replies received:

If you were to administer a university library, untrammelled by precedent, would you permit undergraduates to draw books for home use?

Harvard.—I am strongly in favor of allowing undergraduates to borrow books for home use, for the reason that if a student's time for reading is limited to the hours that he can spend in the library, he will naturally confine himself to the use of such books as are really prescribed reading, neglecting the broad field

of literature, which is a most important factor in a liberal education. Of course I assume that most college students are unable to provide themselves with materials for general reading. No matter how comfortable you may make a reading room, I think the student will get better results from a quiet hour in his room, choosing the time for reading to suit his own convenience.

Pennsylvania.—Yes.

Princeton University.—Yes, without any doubt whatsoever.

University of Chicago.—We consider the home use of books—the books that are taken from the library building—the most important use we make of books, and are now at work securing as far as possible a second copy of bound magazines in order to make it possible for undergraduate students to take such reference works to their living rooms.

University of Wisconsin.—Most certainly.

Yale.—Yes.

The answers received by this committee to another series of questions warrant printing in full.

Does student circulation necessitate the purchase of duplicates?

Chicago.—It has been the policy of this library to buy duplicates in any department whenever extra copies of a certain book are of greater value to classes than as many new titles. In classes numbering from 60 to 70 students it is often necessary to buy three or four copies of important reference books. In connection with the departmental libraries duplicates are also purchased for the circulating department of the general library, for home use. All the books in our departmental libraries are considered as reference books and must be used in the rooms.

Columbia.—Circulation of books among students and graduates renders necessary the purchase of duplicates to a small extent, and renders desirable their purchase to a somewhat larger per cent. The percentage of the library which should be necessarily duplicated is not over two or three per cent., and not over five per cent. would be desirable. In many cases also more than one copy of a book is needed for use under any circumstances.

Harvard.—As a rule, no. Occasionally we duplicate books very much in demand by readers.

Pennsylvania.—No. Books greatly in de-

mand are either not given out at all or only for a short time, say a few days or a week.

Princeton.—We buy practically no duplicates, but would a few if means were greater.

Wisconsin.—Our limited book funds do not permit of this very desirable duplication in many cases. Any books apt to be much needed are "reserved."

Yale.—To some extent.

Even granting that the extension of the privilege to undergraduates does necessitate to some extent the purchase of duplicate copies of certain books, this is no argument against the practice. Why should not the university library buy extra copies of standard works just as the laboratories duplicate certain apparatus for the use of students? A university library has other functions than merely rolling up its sum total of volumes from year to year. If it is to take its proper place in the *educational* work of the institution, it must not regard as wasted the money spent for an occasional duplicate of a work needed for the reference shelves or for circulation. It must consider the needs of the teacher and of the undergraduate as well

as the claims of the original investigator and advanced student.

In the one semester during which we have been loaning books to students we have found that the extension to undergraduates of the privilege of borrowing books has cost us next to nothing in the way of additional service at the desk; it has not interfered with the use of the library by the faculty, and we do not believe that there is a single professor at Michigan who would vote for the abolition of the newly granted privileges.

That the students themselves value their newly acquired privileges has been frequently attested by their individual expressions of appreciation, and by the use they have made of these privileges, but never more convincingly than in the commencement number of their literary paper, where among the things which in their opinion have made the year notable are listed:

"Football saved."

"Yost becomes author and Benedict."

"Circulation of library books established."

When the question of library privileges looms up thus large in the student mind, who shall say that there is in it no room for aught but athletics?

A PLAN FOR THE COMPILATION OF COMPARATIVE UNIVERSITY AND COLLEGE LIBRARY STATISTICS*

By JAMES THAYER GEROULD, *Librarian University of Minnesota*

No questions arise more frequently in the mind of the progressive librarian than these: Is this method the best? Is our practice, in this particular, adapted to secure the most effective administration? Are we up to the standard set by similar institutions of our class? These questions are of the most fundamental type, and upon the success with which we answer them depends much of the success of our administration.

Two methods of solution are open to us. We may base our practice on our own experience, or we may supplement that experience by the experience of others. The results of the first are comparatively easy to calculate, but we have as yet no satisfactory method of estimating the results of the other.

Year after year the American Library Association has discussed, at its meetings and in its committees, the question of library statistics, but no satisfactory plan has yet been evolved by which such figures can be made available. We have, indeed, in the report of the Committee on Library Administration, a scheme for uniform reports of public loaning libraries which, for its purpose, is admirable. But even if this schedule were universally adopted, which is far from being the case, the results would be scattered through scores of pamphlet reports or buried in the archives of board rooms. Even in this comparatively well developed field there is no systematic attempt at digesting and rendering available this mass of material.

But the scheme advanced by the committee is not adapted, without modification, to the

*Read before the College and Reference Section, Narragansett Pier Conference, A. L. A., July, 1906.

purposes of the college and reference libraries. Their field of usefulness and their clientèle is quite a different one from that of the public lending library. Statistics of circulation and use are almost useless in this class of libraries on account of the existence of seminary and departmental collections. On the other hand, to cite but a single instance, there is no provision in the suggested plan for any report on the method by which the library funds are allotted to the various fields of instruction in the college, a most important and interesting item. Attention is called to many similar lacunæ later in this paper.

The growth and development of public libraries during the past twenty years has been much more rapid and satisfactory than that of college and university libraries. The latter class have not kept pace, in my opinion, with the former. In too many institutions, otherwise of high rank, the proper organization of the library has been delayed far too long, and in some, even yet, the library is a collection of books "without form and void." We are in some danger of being crushed beneath a public library precedent. The library schools, for reasons which are perfectly good, train primarily for the public library, and the graduate who enters on a college library career finds many worlds yet left to conquer. He tries to apply rules which are perfectly good in the public library, and finds that they will not meet the requirements. If he is not wise enough to see where they do not apply and does not know how to modify them, there develops between the librarian and the faculty a lack of co-operation which is unfortunate both to the man and to the institution. We must state our own problems and find our own solutions.

The most difficult task which confronts the librarian who is undertaking to build up a college library is to convince the board of the proper place of the library in the organization of the institution, and afterward of the fact that money is necessary to establish and carry on the work. Too many governing boards have become so accustomed to starving the library that they throw up their hands with the astonishment and horror of Mr. Bumble, the beadle, when Oliver asked for more.

Any academic argument in favor of a given plan is infective and pale as compared with a definite statement, reinforcing the argument that in this and that competing insti-

tution such and such things are done. On the other hand, it is perfectly fair that the board should require, in most instances, the citation of precedents. Occasionally, of course, one of us develops an idea which is altogether original and new; but most of us are so earthborn that our really good ideas are the ideas of some one else, or of a number of others, crystallized and adapted to our own needs. We ought to be able to lay our hands on these precedents quickly and easily.

In most instances the only way of securing these facts now available to us is to write to the libraries whose method is most likely to be of use to us and to ask questions, which the busy librarian sometimes has little time to answer adequately. A few years ago, in an ambitious attempt to prepare a monograph somewhat along the lines of Naudé's little book on the French university libraries, I was presuming enough to send a series of questions to a number of the larger libraries. In some cases I secured most full and satisfactory replies, but the number of cases in which the reply was either imperfect or altogether lacking was so large that I was forced to give up my effort.

I should hardly dare to say how many times since then I have supplied to others similar, though not so extensive, information about the library under my charge.

All these facts seem to me to emphasize the necessity of having some method of securing and disseminating information of this character. What should the scheme be and how can we best bring it about?

Without attempting to indicate in detail all of the lines of investigation necessary, it may be well to outline, in a brief way, some of the facts which such a report might bring out.

1. *Building.* When was the building erected? What was its cost? What is its present and ultimate book capacity? How many seminar rooms? What system of stacks is used?

2. *Books.* Total number? Additions during the year, by purchase, by gift? What special collections have you?

3. *Finances.* Income during the past year? Is the income the product of invested funds, legislative appropriations, or allotments from general university funds? How much has been spent for books, for periodicals, for binding, for supplies and equipment? Are salaries chargeable against library funds or

against the general funds of the institution? How are the funds allotted among the different departments of instruction? What classes of books does the librarian buy on his own motion? Do you charge a library fee?

4. *Librarian.* How elected? Does he have a seat in the faculty? Does he have the advantage of the sabbatical system? Does he give instruction in bibliography or library economy? Does he have the power of appointment and dismissal of subordinates?

5. *Staff.* Number on administrative and technical staff? How many doing order and accession work, reference work, cataloging, at loan desk, in other departments? Do you have a bindery? How many employees? Is promotion made by examination? Do you train your own assistants? Is the staff employed for the calendar or for the academic year? How much time allowed for vacations? Do you have a half holiday during the week?

6. *Orders and accessions.* What office records are kept? Do you have a regular agent for American books? Are your books ordered through a foreign or an American agent? Number of periodicals received by purchase, by gift and exchange? Do you use an accession book? If not, what other scheme?

7. *Catalog.* In what form is your card catalog? Average cost of cataloging per title? Do you use Library of Congress cards? A. L. A. cards? Have you duplicate departmental catalogs?

8. *Loans.* Do you loan books to all students? Is a deposit required? Is any restriction placed on faculty loans? What per cent. of your students use the library with any degree of regularity? What is your system of fines?

9. *Reference.* Have you a permanent reference library, and, if so, how large? Are the books largely duplicated in the main collection? Have you a separate room for serials? Have you the open shelf system for all students?

10. *Departmental libraries.* Do you have departmental or seminary libraries, and do you distinguish between them? How are they cared for? Have you any laboratory libraries not considered as a part of the university library? Are the books in the seminary library duplicated in the main collection? Are the seminary libraries permanent or shifting collections?

11. *Salaries.* What is the pay roll of the library?

The answers to the most of these questions will be, in many cases, relatively permanent, and will require revision only occasionally. In many cases, however, the facts should be ascertained annually. By this means, in the course of a few years, there could be brought together a collection of facts which would, I believe, be of great value to every college librarian.

If we grant the desirability of such a series of statistics, the question of ways and means at once arises. How can the work be done with the least expenditure of time and money? My suggestion would be this: Let the section appoint a committee to draft such a series of questions and agree to co-operate with the committee by replying to their requests for information. The material once gathered, two courses would be open. The committee might become a general bureau of information to whom a librarian might apply for facts and figures on definite subjects; or better, a compilation of the answers might be made, which, when mimeographed or printed, might be furnished to the subscribing libraries.

The crucial question is, of course, that of the cost. If no attempt is made at publication, the expense would be trivial and might, perhaps, be met by a small grant from the A. L. A. funds. If the results are to be distributed, a small subscription, certainly not over a dollar a year, would be required to inaugurate the scheme and keep it up-to-date from year to year. The co-operation of a considerable number of libraries is, of course, necessary, and that must be assured before it will be worth while to undertake the scheme.

The amount of work required of the committee will be, in the first year, quite large, but subsequently it can hardly be burdensome.

I now refer the plan to the section. If it appeals to you at all, I would suggest that a committee be appointed to consider the plan and report at our next session on the advisability of undertaking it. If their report is favorable, they might, at the same time, nominate a permanent committee to take the work in charge. Libraries represented at this conference could be asked to subscribe and the co-operation of others secured later.*

* A committee was appointed to take up this matter as follows: Theodore W. Koch, chairman, University of Michigan; James H. Canfield, University of Columbia; Louis N. Wilson, Clark University.

STIMULATION OF GENERAL READING IN THE COLLEGE LIBRARY*

BY ISADORE GILBERT MUDGE, *Librarian Bryn Mawr College*

ALTHOUGH in theory the college student should need no incentive to general reading, all librarians who have had experience in college or university libraries know that there are many students who of their own initiative do little reading except that required in connection with their regular class work. Occasionally this is due to lack of time and strength or actual difficulty with the required work; but aside from this, and aside from the strong call which the social side of college life makes, there is always to be reckoned with the tendency to stick closely to texts and prescribed reading in connection with some definite course, and to put off, or neglect altogether, the general reading which counts for nothing on an examination paper, but which does make the difference between the cultured man or woman who is heir to the world's civilization and the specialist who has studied a few subjects without relating them to the rest of life. In addition to this natural tendency, we have the increasing specialization of the college courses made possible by the various elective systems, so that in some colleges it is possible for a student to have the greater part of his work in two or three subjects only. If the student is conscientious in pursuing the prescribed reading in those few courses, he may become really well read in those subjects and yet remain utterly ignorant of the rich literature outside his chosen field. Numberless examples of this tendency to a one-sided development might be cited; two of these which have come within my own experience as a librarian I may mention. A graduate student in English who had pursued her work in Early and Middle English in colleges in this country and in Europe, was one day observed to be in difficulties with the library catalog. After some hesitation she confided to the loan desk assistant that she wanted to get "Tom Brown at Rugby," but thought she could not because

she did not know the author's name. The other instance I wish to cite can probably be duplicated by others who have done reference work; but as it actually happened to me and is not manufactured for the occasion, I want to tell of the other graduate student, also specializing in English, who once asked me most earnestly to get for her the works of *Ibid*, explaining that she knew nothing of this author except the name, but thought he must be important because he was referred to in so many different books, and if she ought to read his works she wanted to begin at once. Probably she admired his versatility.

If we agree in admitting that our average college student does not do enough general reading we must also agree that some effort to encourage more reading is desirable, and that such encouragement must be given by the library. In discussing means to such an end I shall take for granted that the college library is organized on progressive modern lines, with a good selection of books to which the students have free or partially free access, with a usable catalog which the students can learn to consult readily, with free circulation and with library machinery which is capable of making easy and convenient provision in the way of class reserves for the books selected by professors as either required or recommended reading for the different classes. Where the class reserves are elastic and include recommended as well as required reading, the accessibility of these books will sometimes help to determine the amount of recommended reading that is done. I also omit discussion of the plans variously known as "perceptorial systems" or "private readings" which are in use in certain colleges, as these, though most important aids in the formation of a habit of intelligent reading, are properly the province of the college faculty and do not fall except indirectly within the field of activity of the college librarian.

Foremost among all means of encouraging general reading must be ranked the addition to the library staff of a capable and enthusi-

* Read before the College and Reference Section, Narragansett Pier Conference, A. L. A., July, 1906.

astic reference librarian. If the reference librarian has himself the instinct for books the library has taken the first and longest step in advance. The library which has no reference librarian is handicapped at the outset in its efforts in this direction, for however much the other members of its staff may have this bookish instinct, they are necessarily shut out from the greatest usefulness in this direction by the fact that their first interest and their time must be given to their own routine. A different problem is here presented and much in the way of encouragement of general reading which can be undertaken where there is a reference librarian, must here be left undone. I speak with feeling in this matter, as the library which I represent belongs to this latter class. Nevertheless, even there something can be attempted, and the various methods which I shall describe are based principally on our own experience.

Of great importance in its effect upon the amount and character of the students' general reading is the method of expending the book fund for general literature, and the smaller the amount which is available the more important the question becomes. Unless the library is rich and the annual appropriation large the amount left for general literature after the appropriations for the college departments and for reference books are made is discouragingly small. The careful use of this small fund, be it only \$50 or \$100, may determine to a great extent both the amount and character of the general reading of the year. In planning such purchases, the temptation is to make a representative list of important new or standard publications which shall cover as wide a field as possible, including in this list the various books which students have asked for from time to time, without considering whether or not they have enough relation of subject to make a student who has read one want to go on and read all the others on the same list. At Bryn Mawr College, with a limited amount of money available for general literature and with a desire to make this of the greatest possible help to the students, we have found it much better to choose each year a few subjects, preferably such as are of special interest or importance at the time, and spend all our general money on these subjects, trying to purchase books of solid permanent value along these lines but

making no attempt to purchase a general list. The subjects chosen are always such as fall outside the fields of the different college departments and are not covered by any course in the college curriculum, and so would not ordinarily be provided for by any department appropriation. Very special subjects are avoided and those chosen are such as might appeal to the whole student body. Some of the subjects used during the last two years are Russian novelists, lives of Abraham Lincoln, musical history, and modern drama. The first and last of these have proved of most interest to the students, and now many of our students to whom Tolstoi was little more than a name, and Turgeniev and Dostoevsky not even that, and who, knowing little about modern English drama except in its acted form, knew nothing at all about the German dramatists, have read well through the whole list. Sometimes a special circumstance determines one of the subjects chosen. Each year among the lectures by persons not connected with the college, there is always one of special importance delivered by some person of distinction. Whenever it is possible to do so and still make the books thus purchased of permanent value to the library, we try to choose as one of our subjects for the general literature fund, the subject of this special lecture, knowing that the students will then have a double incentive to read—the knowledge that these new books have just been bought for the library and the interest aroused by the lecturer and his subject. Sometimes, when the lecturer of the year is himself a writer of distinction, we prefer to pass over his subject and buy instead copies of his own works. To illustrate, in 1904 Mr. William Butler Yeats lectured before the college and in 1905 the lecturer was Mr. Henry James. As the library possessed no books by Mr. Yeats and only a few of Mr. James's many novels, we used some of our general money to put complete sets of these authors in the library, taking care that people interested should know that this had been done. The result has been that for more than two years in the case of one, and for a year and a half in the case of the other, it has been practically impossible to find a book by either author on our shelves, except during the summer vacation. In the case of Mr. James, the library supply proved insufficient, and I was

recently told at Leary's bookstore, in Philadelphia, that everything by Mr. James which had come into that store during the past fourteen months had been sold again at once to some Bryn Mawr student.

The advantage of this expenditure of the general fund on a few subjects only, lies in the opportunity which it gives a student who has become interested in one of these new books to continue his reading for awhile along the same lines. The average student, whose time is pretty well taken up with his required work, will not do much outside reading unless there is some special incentive. If he becomes interested in some one new book which he has taken out, and, returning to the library, finds that there are other books, new and old, on the same subject, he is very likely to continue his reading along these same lines and perhaps end by reading nearly everything on the subject in the library, passing from the new books which had first interested him to the older material. If, on the other hand, this student finds that the book which has interested him is the only book of its kind on the book shelves, his zeal is in danger of diminishing to the vanishing point. There may be on the shelves for new books others on different subjects which are quite as interesting, but, as taking up one of these would mean readjustment and beginning again on a different line of thought, he is more likely to ignore these altogether. Students, particularly in colleges which have dormitory systems, talk over their reading a great deal, and where one member of a set has become especially interested in books on a certain subject his friends not infrequently imitate him and read the same books. This tendency to talk over and imitate has made it almost impossible to find a volume of Turgenev on our shelves during the past fifteen months. A few students found these books when they were first bought and displayed on the shelves for new books, became interested enough in what they read first to go through the whole set, talked them over with their friends, and months after these books had taken their place on the regular library shelves, these friends were still demanding them. Using all the general money for a few subjects has one disadvantage, as by this plan some important new publication which ought to be placed in the library is neglected. If

this work is of great importance, however, it may be ordered by one of the college departments, or the general literature subjects for another year may be so chosen as to include it.

In this connection may be mentioned a minor expedient which is often helpful. After the year's books for the general reading are purchased their immediate usefulness is increased by judgment in choosing the time when they are first made available. If this happens during the heartrending times of examinations the chances are that no attention will be paid to these books, while if they are displayed on the shelves for new books at some time of greater leisure, they are more likely to go into circulation at once and stay there throughout the semester.

Wherever it is possible to make such an arrangement with the college purchasing agent, the display of new publications sent out on approval by this agent is helpful to the student. It is usually possible to arrange for a weekly or semimonthly shipment of such books which may be displayed in some central and convenient part of the library, kept there for several days or a week, and then such as are not purchased by the college or individuals returned to the dealer. Display shelves of this sort may be made very attractive to students and are used by those who like to keep track of what is being published. Such exhibitions are of greater help to students who are buying books for themselves, than to those who do not or cannot spend money for this purpose, but the majority of college students buy books more or less spasmodically, and there are always a few who are forming libraries of their own and can be helped in this and other ways to buy with judgment. While it is by no means invariably true that the book collector is also a reader, the student who buys books is perhaps a little more likely to read them than the one who does not, and any help in the direction of wise buying given by the college library is also a help toward the formation of the reading habit and the encouragement of general reading. These new books should be displayed near enough to the reference desk for the student who becomes interested in one of the books to ask the reference librarian about it, its price, its author, what other books on the same subject have been written, how this compares with others, etc. We have

sometimes found that an interest aroused in this way would send students from some one of these new books to older ones on the subject which were already in the library.

It is not alone in the purchase of new books that an interest can be aroused. Many students like to haunt second-hand book stores, and, after they know that such things exist, like to examine second-hand catalogs. If properly directed, this interest may be used to encourage the reading habit. From the mass of second-hand catalogs received each week by the library certain ones which are most reliable or attractive may be selected and displayed in a convenient place for the use of the students. We have done this for several years at Bryn Mawr with excellent results. The catalogs selected have been principally English and American, with a few French and German lists on topics of special interest to graduate students. The most useful catalogs for this purpose are those which offer good editions of English poets, dramatists, essayists, etc., though certain students watch eagerly for lists on philosophy and sociology. The English catalogs which have proved most interesting in this connection are those of such dealers as Pitcher, Sutton, Hefner, Bull, Harding and Sotheran. Our first plan was to place such catalogs in open boxes on the shelves set aside for new books; but in the new library building which we open this fall, we shall reserve for these catalogs several compartments in one of the periodical cases in the magazine reading room. The catalogs alone are of interest to students, but it is much more helpful if the librarian or reference librarian can take time to answer questions about these catalogs and give advice about prices, methods of buying, editions, bindings, etc. Several of our students have become interested enough to buy books quite regularly in this way, selecting what they want in these catalogs, and then placing their orders either with an importer or directly with some foreign dealer. One student started with a slight interest in buying editions of English dramatists of the 17th century. Her interest was enough to make her come to me to ask about some items in a catalog of this sort and later increased so that she asked specially for other catalogs, wanted to know about prices, methods of order, etc. She has now not only ordered certain books which she

has seen advertised, but has made out a list of books which she wants to buy, principally out of print editions, and a London dealer is trying to get them for her.

The idea is so far from new that one hesitates to mention it, but for encouraging the use of the more recent additions to the library, nothing accomplishes more than a systematic use of special shelves for the display each week of the new books cataloged the week before. By new books we of course understand books new to the library, not merely recent publications. Perhaps I may best show what I mean by describing our practice at Bryn Mawr College. We have a small book-case capable of holding, when filled, about 100 to 150 volumes. This is placed in the delivery room between the main door and the loan desk in such a position that every one entering the room has to pass within four feet of it. Only a blind person could avoid seeing it. On these shelves we place each Monday all books cataloged during the week before, including everything except new volumes of periodicals. These are omitted because they have already been seen in unbound form. No attempt is made to show only the more interesting books, as experience proves that it is impossible to say that any book will be uninteresting to every one; but all recent editions, purchases, gifts and public documents are displayed alike. Even the documents are not infrequently carried off from these shelves. Perhaps what was on the surface the most amusing illustration of this was noticed when an omnivorous reader, whose regular intellectual bill of fare includes such diverse subjects as agriculture, socialism, Elizabethan drama and theological controversy, excitedly carried away a recent publication of the government printing office because she admired the binding, and wanted it copied for some of her own books.

We have a regular day and hour for changing the books on these new book shelves, which the students know and watch for. As soon as a new book is placed there it is at the disposal of any one who cares to take it. A rule requiring books to be left on these shelves for a few days before beginning to circulate was discussed, but was decided against on the ground that it was better to let a book go out as soon as some one was interested enough to want it. Probably a greater variety of

reading is brought to the attention of the students in this way than in any other. Open shelves of course help, but after a library has gone beyond a certain size, these not infrequently prove bewildering, and an inexperienced student who is looking for something for general reading may either become discouraged or perhaps find the shelves for one subject only and not get any farther. The new-book shelves, however, show a few books in a variety of subjects, so that almost any one can find there something of interest. Our experience has been that such shelves properly placed are more useful than a weekly bulletin of additions. The posted list takes more time; ten people will stop to look at the books to one who would read a posted list, and the actual books are always more attractive than their mere titles. To illustrate, some time ago I watched a student who was looking at the new books. After examining several carefully she finally took away a recent work on religious psychology which, if its title had merely appeared on a posted list, would never have appealed to her, as she ordinarily draws out little except Latin books and English literature of a special period. Her interest was more than superficial, for she objected to returning the book when it was wanted later by the professor of psychology. To the prominent position of these shelves, the fact that few books at a time are displayed, and the attraction of the book itself the success of such shelves is due.

Brief mention may be made of the usefulness of systematic co-operation with the various college literary clubs and a provision for special lists and book reserves whenever any of these clubs have lectures, debates, etc. We have found this particularly true in the matter of class and club debates. Of course lists and books on the subject of the debate would always be made for the convenience of the debaters; but these same reserves may be made to stimulate general reading if the attention of students who are not to take part

in the debate is called to these reserves. Where the interest in the coming debate is rather general there are always some students who have no part in the actual debate who are enough interested to want to read up on the subject, and to these the reserves may serve as the beginning of what may later develop into a fuller course of reading.

It may be interesting, in conclusion, to mention the reading record of one student who has from time to time attracted our attention because she seemed to be responding in greater or less degree to all these various attempts to encourage general reading. She is a good student, but not a brilliant one, is handicapped by poor health, and has all year carried outside work so that her time for general reading is less than in the case of some students. From October, 1905, to May, 1906, 8 months, she read 45 books divided by classes as follows:

Philosophy and ethics.....	11
Religion	5
Latin literature and philology.....	5
German literature.....	4
English "	3
Russian "	2
French "	1
Greek "	1
Chinese poetry (a German translation)	1
Psychology	3
Sociology	3
Art	1
History	1
Literary magazines	4

This list includes no books which were assigned by her professors as recommended or required reading. The record is not brilliant or remarkable, but is interesting as showing a diversity and balance, and any of us would probably count it a success if the average of general reading of college students could approximate this.

INSCRIPTION FOR A LIBRARY

By JOHN RUSSELL HAYES

They leave awhile the tumult and the fret
 Of things, who pass beneath this stately portal,
 Nor through all years to come can they forget
 These golden hours among great books immortal.

THE FREDERICK FERRIS THOMPSON
MEMORIAL LIBRARY BUILDING,
VASSAR COLLEGE

THE modern college library building must meet three primary demands: ample provision for study, convenient access to the shelves, and, in colleges where graduate work is done, seminary rooms. In this day of library progress the college library should, as far as possible, be an open shelf collection, and the problems of accessibility to the shelves and of room for study may be met either by the separate study hall and stack room, or by a combination of study hall and stacks by means of the alcove construction. This last arrangement is the one adopted in the new Vassar College library building, where provision is made for the storage of the main collection of books in alcoves. It is a plan especially adapted to a reference collection for students, giving, as it does, the maximum of accessibility to the books and the greatest convenience in their use. It necessitates a much larger floor space, however, than the separate study hall and stack room, and it will be seen from the dimensions of the building that the floor space of the Thompson Memorial building is unusually great, the extreme width of the building being almost 200 feet, the greatest depth from front to back over 150 feet.

The materials used in the construction of the building are Germantown granite and Indiana limestone. The general style, perpendicular Gothic, admits of much elaborate carving both in the exterior and interior decoration.

The general plan of the building is that of three similar wings built about a central tower. The north and south wings measure 54 x 68 feet, the west wing, opposite the entrance, 54 x 83 feet. The great central tower is the architectural feature of the building. It is 54 feet square and rises with buttressed walls to a height of 105 feet, and is crowned with battlements and crocketed pinnacles. Although the library tower, high above the trees, makes a conspicuous landmark for the surrounding country, the extreme width of the front elevation from wing to wing makes its real height less apparent.

A very short wing, or the porch of the building, extending 18 feet immediately in front of the tower and of the same width as the tower, contains the vestibule, with two stories of one room each on either side, and a third story of three rooms above. The pavement, broad stairway, and balustrades in the vestibule are of Tennessee marble.

The vestibule opens by means of swing doors into the spacious and beautiful Memorial Hall which is formed by the square tower. The walls of Indiana limestone rise perpendicularly to the ceiling, 60 feet from the floor. This portion of the building is

lighted by a row of windows nine feet high around the four walls, next to the ceiling. Below the windows is a carved frieze in which are prominent various college and university seals, and below the frieze, against the great plain stone surfaces, hang the Gobelin tapestries purchased for this hall. The lowest third of the wall is elaborately detailed, with mullions and panels with quatrefoil and trefoil tracery, carrying out the general style of perpendicular Gothic. The ceiling is of oak, beamed with ornamental bosses in each square. The floor is of marble tiles, white, black, green and buff, laid in large geometrical design. In one corner is a stone fireplace, carved with seals of women's colleges. Over the fireplace hangs a portrait of Mr. Thompson, to whose memory the building is erected. In Memorial Hall are placed the desk of the reference librarian, the loan desk, the card catalog cases and a table with a rack for the display of new books. These occupy the four corners, the new book table being by the fireplace. Between Memorial Hall and the right and left wings, stone stairways with balustrades pierced with quatrefoils lead to the galleries and seminary rooms.

In the portion of the west wing adjoining Memorial Hall are built three stories of seminary rooms, six in all. A spacious corridor, the height of two stories, makes a passageway between the lower rooms from Memorial Hall into the main portion of the west wing. Through this corridor, as one enters the building, is seen the great stained glass window in the end of the west wing, made by the Hardman Company, of Birmingham, England. It represents the conferring of the doctorate by the University of Padua upon a young Venetian woman in the year 1678. There are altogether 13 separate rooms, six in the west wing and seven adjoining the vestibule. These, exclusive of the four on the first floor, are used as seminary rooms. They are provided with shelving and lockers, tables, chairs and bulletin boards. Being grouped about the central portion of the building they are convenient of access to the general collection. The four rooms on the first floor are used for library purposes. The two either side of the vestibule, opening both into the vestibule and into Memorial Hall, are the librarian's room and the cataloging room. The two opening upon the corridor that leads from Memorial Hall into the west wing are used, respectively, as a newspaper room and a room reserved for the library's manuscript collection and for exhibitions.

The three wings contain the main collection and are the students' workrooms. Each wing is abundantly lighted by six great mullioned windows on the sides and a still larger end window. The end window of the west wing has already been mentioned as the stained glass window conspicuous from the entrance. All the other windows are of

leaded glass, with a row of printers' marks applied as decoration. The roof is supported by perpendicular king post oak trusses resting on corbels carved in the form of college seals; the ceiling is of polished oak. The floors and furnishings are of quartered oak in natural finish.

In each wing pairs of double-faced steel stacks, 15 feet in length, are placed at right angles with the side walls, to form three large alcoves and four narrow aisles on each side. The stack is carried up a second story, forming galleries on each side of the wings, thus doubling the alcove space. The galleries have glass flooring. One of the great mullioned windows fills the wall space in each alcove, on the floor and in the gallery. Study tables, measuring 9 ft. 6 in. x 4 ft., are placed in each alcove, both on the floor and in the galleries, also down the center of each wing. Each wing is provided in this way with 15 tables, nine on the floor, six in the galleries. At each table eight readers can work comfortably; a total provision, therefore, is made for 360 readers, exclusive of seminary rooms and basement. The floor space is so ample that extra tables could be placed in each wing if they were ever needed. The alcoves are generously spaced, measuring 13 feet between the pairs of double-faced stacks. A small window lights the aisle between every pair of double-faced stacks separating the large alcoves. In each wing under the large end window, which is considerably higher from the floor than the side windows, stands a specially constructed oak case, 5 feet high and 14 feet long. One, provided with shallow drawers, is for maps; the other two, with felt roller shelves behind leaded glass doors, are for large and choice folios.

The collection of books numbers at present over 55,000 volumes, and it is calculated that with the present provision of alcove stacks this number can be doubled, possibly tripled. The reserve possibilities for storage are the seminary rooms and the ample basement wings. A portion of the north basement is already fitted up with stacks for the storage of government documents and bound newspapers. A portion of the south basement, connecting with the cataloging room by a lift and stairway, is partitioned off as an unpacking room and work room. The remaining space in the basement is not at present utilized, but when needed can be fitted up with storage stacks.

Circular stairways in the six octagonal turrets, at the farthest corners of the wings, extend from the basement to the roof, and connect the basement, floors, and galleries.

No independent provision has been made for periodicals, as no class distinction has been drawn between readers of periodicals and readers of books. One alcove in the north wing has been fitted up with periodical cases and drawers for current and unbound numbers, and periodical tables are pro-

vided in each wing for periodicals relating to the subjects shelved there. The separate newspaper room secures freedom from the annoyance caused by noisy turning of the leaves of daily papers. Here also are kept, for general consultation, publishers' catalogs and advertisements of new and second-hand books.

The building is heated from the general plant, is lighted by electricity, and an electric fan provides for ventilation. Coat rooms and lavatories are provided in the basement.

Mrs. Thompson, the donor of the library, has made the building as complete as possible in every detail, supplying new library furnishings throughout. Everything in the library except the books themselves is new and Mrs. Thompson's gift. The standard steel stacks, and the furniture were purchased of the Library Bureau. Mr. Francis R. Allen, of the firm of Allen & Collins, of Boston, is the architect.

BRYN MAWR COLLEGE LIBRARY

THE new library building at Bryn Mawr College, the cornerstone of which was laid in June, 1903, is now rapidly nearing completion. The books were moved into these new quarters in July and the building, though not entirely finished, was opened for use by the college Oct. 3, 1906.

The architecture of the new library, like that of the other college buildings, is Jacobean Gothic of the period of 1630. The main library and two wings form three sides of a quadrangle, surrounded by a cloister enclosing a garden with a fountain in the center. The cloister is completed at the back by a blank wall until money can be secured for a large lecture building that will correspond to the main library. The main library contains the reading rooms, stacks, library offices, work rooms, etc., and the wings contain the seminary rooms, private offices of the professors, and the psychological laboratories.

As the library has been in its new quarters so short a time it is still too soon to announce many results from the change. Developments along certain lines are, however, indicated by the plan of the building, and certain results are already manifest.

There has of course been a great gain in room and convenience and a corresponding gain in the use made by the students of all library facilities. The accommodations for readers have been greatly increased, so that there are now seats for 136 in the main reading room, 10 in the periodical room, 15 in the non-resident study room, 104 in the various seminary rooms, besides 30 seats at small reading tables scattered through the stack. These tables, which are a particular feature in the stack arrangement, are intended for those who wish to do special work among the books not for general readers. As a result of this increased accommodation for readers the num-

ber of students using the reading rooms has in one month since college opened more than doubled, and there has been a corresponding increase in circulation. With the greater facilities for work of every kind has come an increased demand for reference work. In the old library no separate reference desk had been possible, but one has been provided in the new building, although no reference librarian has yet been added to the regular library staff.

The special feature of the new library which is showing largest returns at first is the very ample provision for seminary rooms and graduate work. As will be seen from the plan, there are 13 seminary rooms, one for each college department, except the departments of Spanish and Italian, which have a seminary in common. These seminary rooms are reading rooms for graduate students only, and are not used by undergraduates. The seminary collections consist of source material for graduate work. This ample provision for separate reading and research rooms for graduates has been made necessary by the very large proportion of graduates in the student body. Out of a total of 426 students registered this year 64 students, or about 15 per cent. of the whole number, are graduates. So far this arrangement of seminaries promises extremely well, and is already yielding excellent results in the increased facilities for advanced work. This plan in a way represents an extreme development of the seminary idea, for a medium-sized library, and the way in which it is working out is being watched with much interest

ISADORE G. MUDGE, *Librarian.*

ARCHITECTURAL PROGRAM FOR BROOKLYN CENTRAL LIBRARY BUILDING

*Report of Prof. A. D. F. Hamlin, Professional Adviser
on procedure for procuring preliminary plans.*

Hon. BIRD S. COLER,

President, Borough of Brooklyn:

Hon. DAVID A. BOODY,

*President, Board of Trustees, Brooklyn
Public Library:*

and Members of the Board:

GENTLEMEN: In compliance with the instructions conveyed to me in a resolution passed by the building committee of your board on Tuesday, July 17, 1906, I beg to report as follows upon the procedure which appears most desirable to pursue for the preparation of the preliminary plans for the proposed new Central Library:

1. Importance of the Problem.

The designing of any large public building is a task of great importance and of large responsibility, since the edifice must remain, not for a few, but for many years as a monument of the skill and foresight of the folly

and shortsightedness of those responsible for it; of their wise care for the interests of the public both present and future, or of their indifference or extravagance. A well-planned, well-built and beautiful building is a title to the long-lasting gratitude of the community. All the more is this true when, like a great library, the building is designed for a widely popular use. And when, as in this case, the building is to stand on a commanding site, amid monuments of architectural skill, in what will one day be a most important civic center, the dignity and importance of the problem are proportionately increased.

Moreover, the problem is not one to be solved by a moment's inspiration. The site is a peculiar one, imposing by its grades and form, certain definite limitations on the designer. It is a splendid architectural opportunity, but for that very reason it needs the most careful study. Its very difficulties offer to its designer the occasion for that sort of skill which converts difficulties into advantages. But this makes the preliminary study of the problem all the more critical and important. The fundamental scheme must be correct or all the architectural splendors based upon it will only be so much waste and extravagance, perpetuating the initial blunder. And in order that the architect may make his fundamental scheme aright, he must be furnished with a clear, definite and carefully studied program, prepared by competent hands and issued with the approval of the trustees of the library.

2. The Program.

In laying out the work of designing the Carnegie branches in Brooklyn, several weeks were spent in preparing the fundamental program for these relatively small buildings. The librarian and I devoted careful study to the various types of such buildings, to the most desirable arrangements to be called for in the proposed designs, and to the best way of securing at one and the same time the most convenient library buildings, and the largest freedom of individual design and suggestion from the various architects. If such careful preliminary study and preparation have been indicated in the successful carrying on of a group of relatively small buildings, it is certainly at least equally necessary in the case of the great edifice now contemplated.

The requirements of the program no one can now specify. Who can tell what or how many reading-rooms are needed, or how large each should be, or what parts of the building they should occupy? the number, size and character of work-rooms, store-rooms and staff-rooms; of offices and rooms of administration; of special study-rooms and special book collections; of rooms for prints, photographs and maps? These cannot be determined and laid down except as the result of careful study, correspondence and comparison of the experience of librarians in our larger

libraries of modern design. The relative assignments of volume space to open shelves and to closed stack-rooms; the size, arrangement and number of stories of stack-rooms, and the availability and use of basements and sub-basements for book storage, all demand expert consideration with special reference to the form and topography of the site. The site itself must be carefully examined; its subterranean conformation tested by borings; the possible influence of the proximity of the reservoir upon excavations, or of those on the reservoir and mains, must be determined by competent engineering advice.

3. *The Procedure.*

The simple and obvious procedure, under these conditions would seem to be, therefore, as follows: That the building committee should instruct the librarian to prepare a definite program for the proposed building, such program to specify the character and number, and, so far as the best interests of library service may seem to require, the approximate dimensions, position and relation of the different parts of the library, the functions and services for which provision must be made, and such other requirements as it may seem to him important to bring to the architect's attention.

That in the preparation of this program he be authorized to avail himself of such expert advice by competent librarians, architects and engineers as may be necessary to make the program complete and practicable.

That the program thus prepared be laid before the architect of the library for his suggestions and criticisms; and that the report, as modified in the light of these criticisms and suggestions, be then laid before the building committee for final approval.

Where so approved, the program shall be given to the architect as the official statement of the requirements and conditions to which the preliminary plans and drawings must conform.

That in the preparation of these plans and the accompanying elevations and sections the architect shall have at all times the fullest opportunity for consultation with the librarian (and, should one be employed, with the consulting architect or professional adviser of the committee).

That the general scheme of plans and elevations shall be submitted by the architect for criticism or approval to the librarian (and professional adviser, if any), before he proceeds with their embodiment in the final drawings; and when approved by them, to the building committee; and that the final drawings of the preliminary plans and elevations shall embody the general scheme thus approved by the building committee.

It is not intended by the above procedure to hamper in any way the free artistic activity of your architect, but to provide him with a solid groundwork of ascertained and clearly

expressed conditions upon which to build up his conceptions of the edifice. It is of the utmost importance that the new building, however beautiful as a work of art, shall first of all be a first-class library; that is, that it shall be planned so as to meet the requirements, the exigencies, the peculiar needs of the service of a great and growing library, and that it shall provide for these in a way to suffice for many years and to allow for future growth as well. These requirements and exigencies no one can understand, foresee and set forth unless he possesses expert knowledge as a librarian; and it is desirable, and he would be the first to recognize it, that in preparing such a program he should have also expert advice on such technical points as lie outside of his own specific field. Moreover, it is highly important that before this program is finally issued by the committee and made binding on the architect he, the architect, should have ample opportunity for suggestion and criticism of its requirements. Indeed, under the above procedure, the result will probably be that the preparation of the program will be in reality a joint work in which the librarian, the adviser (if any), and the architect will each contribute suggestions and criticisms, so that the program will, when approved and issued, be already acceptable to all concerned.

It is, of course, understood that the approval of the Borough President is throughout the above statement taken for granted as essential in everything which relates to the expenditures for this preliminary work, under the act providing the funds for this purpose.

I recommend the adoption of the above procedure in securing the preliminary plans. The necessary measures for topographical surveys, borings and tests of the site under competent engineering direction and advice can be taken while the preliminary work is in progress for preparing the program.

Respectfully submitted,

A. D. F. HAMLIN.

Oct. 15, 1906.

EDUCATION BUILDING AND STATE LIBRARY AT ALBANY, N. Y.

THE terms of the architectural competition for the new Education Building which the state of New York is to erect at Albany were made public not long since in a circular issued by the Board of Trustees of Public Buildings. This board, consisting of the governor, the lieutenant-governor, and the speaker of the Assembly, constitutes, in conjunction with a regent of the state university (Dr. Albert Van Der Veer, of Albany), the commissioner of education and the state architect, a Board of Award. The circular gives in full chapter 678 of the laws of 1906, which provided for a State Education Building to house the Education Department, the State Library, and

the State Museum of Natural History, and states that the two city blocks bounded by Washington avenue, Hawk, Elk, and Swan streets, with the exception of the land occupied by the Cathedral of All Saints and the state heating station, have been chosen as the site. Lafayette street will be permanently closed. A map or plot of the site is included in the circular.

The space required in the building will be at least as follows, in square feet. Administration, 54,300; state library, 107,000; book stacks (10 floors of 13,050 each), 130,500; museum, 57,200; total, 349,000. It is thought that four floors and a basement will provide the necessary accommodations. On this basis detailed estimates are given of the space required for the various subdivisions of each of the above groups. It is noticeable that nearly twice as much space is allotted to the state library, aside from the stacks, as to either administration or museum. This is largely accounted for by the extensive requirements for the general reading-room, the law library, the library school rooms, and the educational extension rooms.

The arrangements provide for a first and a second competition. All architects are invited to participate in the first, for which the main rules are, briefly, as follows:

Drawings are limited strictly to (a) floor plans and (b) elevations of four fronts and two sections; all of scale 1-16 inch to the foot. No perspective view is to be submitted. All drawings shall be on white paper, mounted but not framed, each on a separate sheet. A typewritten memorandum accompanying the work of each competitor shall cover: (1) a brief discussion of the general scheme, including provisions for possible future extension; (2) a statement of the number of cubic feet, with estimate of cost based on the cubic feet ratio; and (3) a brief specification of materials. No alternative arrangement will be accepted, but any competitor may submit more than one complete design.

The competition will be anonymous, the familiar method being employed of requiring with each set of designs an accompanying sealed envelope containing the author's name, the envelope to remain unopened until after the award.

The board will select the 10 most meritorious sets of designs and pay the author of each \$500. These authors will then be invited to engage in a second competition from which all others will be excluded, and each one participating will be paid the further sum of \$1000. The board will then select the three most meritorious designs and will pay the additional sums of \$2000 and \$1000 respectively to the authors of the second and third designs, all three designs to become the property of the state. The architect's commission will be awarded "to the author of assured responsibility presenting the most meritorious final design, at the rate of com-

pensation sustained by the American Institute of Architects, after deducting the amounts previously paid him on account of architectural designs and after charging him with any expense which in the judgment of the trustees may be necessary for the services of architectural engineers." None of the unsuccessful plans will be publicly exhibited without the consent of their authors.

A number of "Suggestions" appended include the recommendations that inside courts be avoided if consistent with sufficient light and ventilation; that the library stacks be placed on the land at the rear lying between the cathedral and the state heating station; and that the rooms of each group (the administrative offices and work rooms, the library, and the museum) ought to be arranged with some view to unity in each group, yet no one group need necessarily be wholly upon one floor or vertically in any one part of the building. Architects, however, are to be wholly free in the development of their plans.

The kind of building materials, so they be fireproof, is left to the architect. The cost of erection must be safely within the limit of \$3,500,000 fixed by the law. "This sum does not include furnishings or any movable appliances; it must include heating, lighting, and plumbing apparatus and all permanent and connected fixtures within the building." Heat, light, and power will, however, be supplied from an outside central station, not to be considered in the estimate.

All communications must be addressed to the Hon. Frank E. Perley, secretary of the Trustees of Public Buildings. All designs must be received at the office of the Superintendent of Public Buildings not later than 5 p.m., November 30, 1906.

BIBLIOGRAPHICAL SOCIETY OF AMERICA.

THE committee appointed to carry out the plan suggested by Mr. Felix Neumann, printed in the *LIBRARY JOURNAL* for September, has issued the following communication:

The committee on Americana of the Bibliographical Society of America desires to secure as complete a list as is possible of special collections in public and private libraries which contain material of use to students of the history of printing in America. This material would comprise collections of books, pamphlets, broadsides and newspapers printed in a single city, town or state, of the publications of individual printers, and of manuscript material referring to printers or their work, account books, letter books, etc. In some cases the presses and other office material of early printers may be still in existence.

The committee has especially in mind printers who worked in America before the year 1800, those who were the first to set up a press

in places on the outskirts of civilization, and those whose work has contributed toward raising the standard of American typography.

The committee asks all librarians and others who are willing to co-operate in its work, to fill out the enclosed blank as fully as possible and return it before Dec. 15 to

GEORGE PARKER WINSHIP,

JOHN CARTER BROWN LIBRARY, }
Providence, R. I.

FRENCH LIBRARY ASSOCIATION

THE first meeting of the French Library Association was held June 30, 1906, at the Musée Social, M. Deniker presiding.

The first business to come before the association was a letter from M. Nicaud, librarian of the University of Grenoble, containing a motion that the question of the improvement of salaries be considered at an early moment and reported to the Ministry of Public Instruction. The president reported that steps were already being taken.

The librarian of the municipal library of Grenoble sent a letter drawing attention to the reforms needed in municipal libraries and the necessity of a uniform regulation of libraries, large and small, by the government, such as it gives the municipal schools.

The question of apprenticeships was brought up and aroused some discussion. Instances were mentioned of apprenticeships of ten and twelve years, without payment. M. Martin, of the Library of the Arsenal, believed that this subject was included in the project of reform under consideration, the length of time being reduced to six months, and the apprenticeship conducted in the interest of the apprentice rather than in that of the library.

Another question excited an equal amount of discussion, that of the intermediary employees, between the rank of librarians and attendants, a class not recognized by the present law, but which should be, under the new plan of reform—at least in some kinds of libraries. The question of requirements for the office of librarian was raised, the new project requiring an apprenticeship period of probation and a degree. The subject of vacations was also considered.

The association adjourned to meet again on Nov. 10.

In the sessions held in July the commission considered the points to which it was desirable to call the attention of the authorities, and decided on the following resolutions:

1. *Entrance to the profession of librarianship.* No one can enter upon the profession without being able to show a diploma of higher instruction, and without having passed an examination in professional matters, except functionaries who have given ten years or more of paid service and may be excused from presenting a diploma.

The positions of administrators and conservators to be filled by librarians only.

2. *Salaries and promotion.* The libraries belonging to the government or to public institutions to be classified according to their importance. The personnel of these to be divided into classes also, of librarians receiving 3000 to 6000 francs and of conservators and administrators receiving from 7000 francs upward. Promotion to be based half upon merit, half upon tenure. In the promotion for long service, librarians to remain not longer than four years in the same class.

Conservators and librarians of municipal libraries to be similarly graded, with a fixed maximum and minimum salary and regular promotions.

3. The establishment of an intermediary grade between those of librarian and attendant, for employees of sufficient education, tested by examination.

4. The establishment, in the Ministry of Public Instruction, of an advisory committee on libraries, in which librarians shall be represented by a number of elected delegates.

M. W. P.

CARNEGIE FOUNDER'S DAY

THE board of trustees of the Carnegie Institute, Pittsburgh, have sent to all the libraries which have been founded by Andrew Carnegie, or whose buildings are a gift from him, a suggestion that they should establish an annual celebration of Founder's Day in honor of Mr. Carnegie. April 11, 1907, is suggested as the date for the first celebration, the second to be on the first Thursday in November, 1908, and future annual celebrations in November. The secretary of the Carnegie Institute has received many favorable replies, but no decision has been reached, nor are the details of the suggested ceremonies as yet outlined. It is hoped that the event will be an international one.

American Library Association

A. L. A. PUBLISHING BOARD

At the meeting of the Publishing Board held Oct. 23-24 at its office, 34 Newbury street, Boston, several decisions were made which interest librarians.

Miss Esther Crawford has been secured as editor of the new edition of the "A. L. A. subject headings," and the work will begin in December. An advisory committee to assist her has been chosen, made up of catalogers representing different types of libraries, as follows: Mr. G. M. Jones, of the Salem Public Library, chairman; Miss Harriet B. Prescott, of Columbia University; Miss Margaret Mann, of the Carnegie Library, Pittsburgh; Miss Linda M. Clatworthy, of the Dayton (O.) Public Library; Mr. A. G. S. Josephson, of the John Crerar

Library; Mr. J. C. M. Hanson, of the Library of Congress, and Miss Nina E. Browne, of the Publishing Board. Mr. Jones was chairman of the committee of 1898, which compiled the original edition. It is hoped that the work can be completed and published within a year.

The board has secured copies of Mr. W. R. Eastman's pamphlet on "Library buildings," issued as Library School Bulletin, no. 22, by the New York State Library, and will include it in its series of library handbooks to be sold at 25 cents. It contains views of 22 actual buildings, and gives floor plans, statement of cost, etc. Later the board will issue another "Handbook on library buildings," compiled by the League of Library Commissions.

Plans have been made to issue tracts on library schools and training, and on travelling libraries, dealing with the methods of conducting them, also select lists of German, French, Italian, Norwegian, Scandinavian, and Polish books.

The list of German books, prepared by Miss Emma Gattiker for the Wisconsin Free Library Commission, is now ready, and will be printed soon. It contains between 500 and 600 titles, including books for children and young people as well as for adults. It is intended to aid libraries in the selection of books for a permanent collection in the smaller public libraries, or for the formation of travelling libraries. While the list has been prepared primarily for the German reader—German by birth or descent—who does not read English, or reads it with difficulty and usually for business purposes only, due consideration has been given to the cultural side also, especially for young people who are studying the language in our schools. The price will be announced later.

With the December *Booklist* will be issued a title-page and author index to the two volumes for 1905 and 1906. Beginning with 1907 the index will be cumulated.

The "A. L. A. portrait index," edited by William C. Lane and Nina E. Browne, will be published shortly by the Library of Congress. It will not be distributed free, but will be sold at \$3 by the superintendent of documents, and all orders should be addressed to him. It is expected that the index will be ready before the year ends.

The Publishing Board will not include among its publications, as announced in the A. L. A. Handbook of 1906, the "Index to economic material in the American state documents," compiled by Miss Hasse under the auspices of the Department of Economics and Sociology of the Carnegie Institution, since the Carnegie Institution has decided to issue the index as one of its own publications.

Occasional calls for the cards for the Warner Library continue to come. The cards can be reprinted if enough libraries want them. Will every library which would order

the cards if they should be reprinted notify the secretary of the Publishing Board, 34 Newbury street, Boston?

REPRINTS

The board has reprinted Professor Channing's appendix to Larned's "Literature of American history," giving selected titles in American history for students and readers. The list is divided into three parts: (1) A good school library. (2) A collection for a town library. (3) A good working library. The notes regarding the titles selected will be found in the "Literature of American history."

NARRAGANSETT PIER PAPERS

The following reprints have been made from the Proceedings of the Narragansett Pier Conference, 1906:

Address of the president: one phase of library development, by Frank P. Hill.

The need of an A. L. A. collection of plans of library buildings, by C. C. Soule.

Books for the foreign population, by J. H. Canfield.

Some methods of library advertising, by P. B. Wright.

The children's library a moral force, by Clara W. Hunt; and The problem of the girl, by Lutie E. Stearns.

Report of the committee on library administration, by W. R. Eastman.

Small libraries: round table meetings.

Copies of these may be had at five cents each, postage prepaid, or at the rate of \$2.50 per 100, plus postage, by addressing the A. L. A. Headquarters, 34 Newbury street, Boston, Mass.

A. L. A. PROCEEDINGS, SURPLUS COPIES

Attention is again called to the back numbers of the Proceedings, offered at reduced prices. The full list, with prices, was printed in the September number of the LIBRARY JOURNAL. Orders will be filled in the order of application.

State Library Associations

CALIFORNIA LIBRARY ASSOCIATION

At a meeting of the executive committee of the California Library Association, held in Berkeley, Oct. 12, 1906, it was voted to accept the invitation of the A. K. Smiley Library to hold the annual meeting of the association in Redlands. The sessions will be held Jan. 3 and 4, 1907, leaving the 5th free for visiting neighboring libraries. This will be the first annual meeting of the association to be held in the southern part of the state, and no pains will be spared to make it a success. All library workers in the state are urged to attend, and as the meeting will be held at the time of the heavy tourist travel, it is hoped that many from other states may take this opportunity to visit Redlands. The associa-

tion extends a cordial invitation to all interested in library work to attend the meeting. The program will be announced as soon as practicable.

Other items of news of the association will be found in *News Notes of California Libraries*, each month.

MARY L. SUTLIFF, *Secretary*.

The first district, California Library Association, held its annual meeting in Sacramento Oct. 29. Reports from libraries were heard in the morning, and in the afternoon there were papers. The first district includes 23 counties.

COLORADO LIBRARY ASSOCIATION

President: Alfred E. Whitaker, State University Library, Boulder.

Secretary: H. E. Richie, Public Library, Denver.

Treasurer: C. R. Dudley, Public Library, Denver.

The regular quarterly meeting of the Colorado Library Association was held at the Public Library, Colorado Springs, Sept. 29. The meeting was the most largely attended and the most interesting of any in the history of the association.

The visiting members were the guests of the Colorado Springs Public Library at a delightful luncheon, served at the library at one o'clock, after which the regular program was carried out as follows: Address, Mayor Henry C. Hall; address, Mr. Alfred E. Whitaker; Coloradoana, Mr. Edward B. Morgan; Local historical collections, Mr. Charles R. Dudley; discussions.

H. E. RICHIE, *Secretary*.

IOWA LIBRARY ASSOCIATION

President: Miss Ella McLoney, Public Library, Des Moines.

Secretary: Mrs. A. J. Barkley, Public Library, Boone.

Treasurer: Miss Kate E. Thompson, Public Library, Nevada.

The 17th annual meeting of the Iowa Library Association was held in Ottumwa, Oct. 10-12, 1906. The sessions were held in the audience room of the First Baptist Church, with 109 members in attendance.

The first session was called to order by the vice-president, Miss Ella McLoney, of Des Moines, on Wednesday p.m., the president, Mr. Matthew Hale Douglas, of Grinnell, being detained at home on account of illness. The address of welcome by the visiting delegates was delivered by Mr. J. T. Hackworth, president of the Ottumwa Library board of trustees, who spoke particularly of the importance of the librarian as an educator. Miss McLoney responded in behalf of the state association.

The secretary then read the report of board meetings held since the last meeting of the association. The report was accepted and placed on file.

Miss Tyler reported the progress of library

work for the year, giving changes in librarians' positions, travelling libraries, gifts, summer library school, local library organizations and other matters of interest.

One of the principal features of the session was the address by Johnson Brigham, state librarian, who spoke on the theme "Librarians as educators."

A general discussion followed the paper.

"A new phase of library extension" was the subject of a very interesting paper by Miss Miriam E. Carey, supervising librarian of state institutions.

"Iowa is the first state to provide for systematic development and supervision of the libraries in the state philanthropic and reformatory institutions. The board of control having the 14 institutions of this character in charge, created the position of supervising librarian during the last year." Miss Carey spoke of her work at Mitchellville, Eldora, Davenport and Marshalltown, and then referred to the remarkable work with the insane of Miss Rowe of Clarinda, mentioning the titles of a number of books which have been read by the inmates of the hospitals at Clarinda and Independence.

At the close of the remarks by Miss Carey the chairman announced that President George E. McLean, of Iowa State University, was present and requested him to address the convention. President McLean responded.

At six o'clock the annual reunion and dinner of the society of the Iowa Library School was held at Hotel Ballingal. Wednesday evening from 8 to 11 o'clock a reception was given at the home of Mr. and Mrs. T. D. Foster by the Ottumwa Woman's Club to the members of the Iowa Library Association. Thursday morning, after the secretary's report was read and approved, Mrs. H. J. Howe, chairman of the legislative committee, gave a report of the library legislation of the 31st general assembly. Section 732 of the code was so amended as to provide for an increase in the tax levy in cities and towns having a population of 6000 or under, from two to three mills on the dollar. This will affect about 68 libraries in the state.

Section 729 was amended to definitely fix the responsibility for the expenditure of all moneys available by gift or otherwise for the erection of public buildings upon library trustees.

A new law enacted was for the use of public libraries by residents of county or townships outside of city or town. The work of the state library commission was advanced by an additional appropriation.

The secretary read a letter from the board of trustees of the Council Bluffs Public Library, inviting the I. L. A. to hold its next annual meeting in their city.

Letters were also read from Miss Tobitt, of the Omaha Public Library, and from the Nebraska Library Commission, urging the association to hold its next annual meeting either

in Council Bluffs or Omaha, and in joint session with the Nebraska association. The matter was referred to the incoming board.

A letter was read from President Douglas expressing regret that he was unable to be present and giving valuable recommendations on library work in the state.

Captain Johnson, of Fort Dodge, honorary president of the association, was then called to the chair. He made a few remarks, reviewing the early history of the association.

Two round table meetings were held simultaneously, that for representatives of public libraries being conducted by Miss Tyler. The following topics were discussed: "How to duplicate books, and why," "Ordering and using Library of Congress printed cards," "What *not* to bind" and "How we select books."

That for representatives of college and reference libraries was conducted by Miss Amidon, of Coe College. The following topics were considered: "The duplication of books, especially reference books, in libraries of limited incomes," "Buying by the 'bid' system," "Best method to be employed in bringing students into closer touch with the library," "Shall we have department libraries?" "What privileges shall we give to the public in our college libraries?" "Reformed spelling," "The growing helpfulness of the state library to the public libraries of the state."

Miss Gertrude Stiles, of Chicago, gave a most interesting and instructive talk on "Library binding," using samples to illustrate processes in binding and sewing of books, and samples of the various kinds of leather used in binding.

After the following committees were appointed by the chair the meeting adjourned:

Nominations: Miss Mary E. Downey, Ottumwa; Mr. W. P. Payne, Nevada; Mrs. Mary E. Daily, Council Bluffs.

Resolutions: Miss Bessie Sargeant Smith, Dubuque; Mr. Johnson Brigham, Des Moines; Miss Clara Estabrook, Eldora.

Legislative: Senator C. J. A. Ericson, Boone; Miss Vina E. Clark, Ames; Mrs. Anna S. Gates, Tipton.

Necrology: Mr. M. G. Wyer, Iowa City; Miss Amidon, Coe College; Miss Babb, Indianola.

Thursday afternoon's session opened with a report of the special committee on library binding by M. G. Wyer. This committee was appointed by the executive board in January for the purpose of investigating the feasibility of establishing a co-operative bindery for Iowa libraries, with cost of same, etc. The report of the committee was accepted and placed on file and the committee continued.

A round table for the representatives of the larger public libraries was conducted by Miss Bessie Sargeant Smith. Topic, "Circulation and its problems." The speakers were Mrs. Daily, Miss Graves, Miss McLoney, Miss Downey, Miss Sabin, Miss Wheelock,

Miss Duren, Miss Brainerd, Miss Thompson and Miss Wood. At the close of the round table the first speaker of the afternoon, Miss Grace Rose, of Davenport, was introduced. Her subject was "The school and the library."

The association was next entertained by an inspiring address from Miss Edna Lyman, of Oak Park, Illinois, on "The purpose of the story hour." She said in part: "Children will be held by the story who have not yet mastered the mechanical part of reading. Some things we can claim for story telling. First, the joy it gives to children. We have a right to feel that the story is the greatest power to cultivate correct English. Then the enlargement of view. The child's experience is limited. It is a source for the cultivation of the imagination; also an appreciation of the sense of humor. Through the story he learns the cause and effect of moral actions."

Miss Lyman closed by telling two stories illustrating the moral principle of love and kindness. Her style was so impressive as to convert the whole audience of "grown ups" into a company of fascinated children.

When Miss Lyman had finished speaking, Mr. Johnson Brigham announced to the convention that the daughters of ex-Governor Gue had made an offer to present to any public library in Iowa or any public school library not already possessing a set, the "History of Iowa," in four volumes, as compiled by their father. They may be had by applying to the library commission and paying cost of transportation. A vote of thanks was given by the convention to the donors.

A letter was read from Miss Ahern, of Chicago, editor of *Public Libraries*, who was to have given one of the principal addresses on Friday. She expressed regret at not being able to be present, and said, "Please convey to the association my congratulations on the growth in extent, in power and in professional attainments that I can see has been made when looking at it in the time between the days of the first meetings in Des Moines and the gathering as it is to-day."

Mr. Payne offered a motion that a committee be appointed to take action on the recommendations made to the association by President Douglas. Motion carried. Committee appointed: Miss Downey, Miss Wheelock and Captain Johnson.

Mr. Payne offered an amendment to the constitution, providing that the term of office of secretary and treasurer shall be two years, their terms expiring alternate years. He also moved to amend the by-laws by increasing the program committee, which now consists of president, secretary, and secretary of library commission, with two non-official members, one of whom shall be a resident of the city in which the annual meeting of the association is held. Motion in regard to by-laws carried. Amendment to the constitution to be acted on at the following session.

The meeting adjourned to meet at 8 o'clock

in the M. E. Church to hear the address by Professor S. H. Clark, of the Chicago University, on "Literature and the community." Professor Clark's lecture was one of the most scholarly, finished and inspiring addresses ever delivered before the association.

Friday morning the session was called to order by the vice-president. Secretary's report read and approved.

The address, "Book buying problems," by Mr. Purd B. Wright, of St. Joseph, Mo., was an interesting and helpful feature of this session. Mr. Wright discussed his subject under the following heads: "How much of the income shall be set aside for books?" "How far shall the demands of the public for popular books be supplied?" "Should libraries buy fine limited editions of standard authors?" "The wisdom and economy of buying of book agents."

Discussion followed from a trustee's standpoint, by various trustees.

"Library legislation, present and future," was the subject of a paper by Senator C. J. A. Ericson. Discussion on this address was led by Mrs. H. J. Howe.

Mrs. Daily, librarian of Council Bluffs, extended a very cordial invitation to the I. L. A. to hold their next annual meeting in the Bluff city.

On motion of Miss Tyler, the secretary was instructed to write a letter to President Douglas expressing regret for his absence at this meeting.

Captain Johnson, chairman of the necrology committee, reported the deaths of two valued members of the association during the past year—Mrs. Ada A. Van Vechten, of Cedar Rapids, and Mrs. S. F. Gunsolos, of Tipton. Mrs. Loomis, of Cedar Rapids, and Mrs. Yates, of Tipton, read beautiful tributes to the memory of these noble women, copies of which were ordered printed and kept with the records of the association.

The report of the treasurer, Mrs. J. M. Carpenter, followed, showing a balance of \$155.11, with the expenses of the convention unpaid.

Captain Johnson reported for the committee on president's recommendations as follows: That the suggestion in relation to district meetings be adopted and that the executive committee be requested to provide for carrying out of the same; that the suggestion in relation to providing for increased support for libraries be referred to the committee on legislation. Report accepted.

A notable feature of the morning's session was the visit in a body of the entire library board of Oskaloosa.

A brief business session was held Friday afternoon at 2 o'clock. The proposed amendment to the constitution was unanimously adopted.

The committee on resolutions reported through its chairman Miss Bessie Sargeant Smith. Report accepted and placed on file.

Miss Downey, chairman on nominations, reported as follows: President, Miss Ella McLoney, of Des Moines; vice-president, Mr. J. T. Hackworth, of Ottumwa; secretary, Mrs. A. J. Barkley, Boone; treasurer, Miss Kate E. Thompson, of Nevada.

The secretary being renominated, the new treasurer was nominated for two years. Report of committee accepted and secretary instructed to cast the ballot of the association. On motion of Miss Taylor, Mr. M. H. Douglas was elected to fill the vacancy on the executive board.

Mr. Howe was called to the chair while the executive board held a meeting and accepted the invitation of Council Bluffs to hold the next annual meeting of the association in their city and coincident with the Nebraska association. This concluded the work of the 17th annual session of the I. L. A. and the meeting was adjourned.

FLORA E. S. BARKLEY, *Secretary*.

KEYSTONE STATE LIBRARY ASSOCIATION

President: Charles E. Wright, Carnegie Library, Duquesne.

Secretary-Treasurer: Robert P. Bliss, State Free Library Commission, Harrisburg.

The sixth annual meeting of the Keystone State Library Association was held at Williamsport on Oct. 11, 12 and 13. The choice of a place of meeting was a happy one, Williamsport being an attractive city of about 40,000 population, in the beautiful upper valley of the Susquehanna.

As much good often comes from the informal social intercourse at such meetings, the first evening was given up to a reception, held in the parlors of the Park Hotel, the association headquarters. There was an attendance of 86 at the meeting, representing 35 libraries in all parts of the state.

The first regular session was called to order at 10 o'clock on Friday morning, Oct. 12, with the president, Miss Myra Poland, of Wilkes-Barre, in the chair. The association was welcomed in a short speech by the Hon. S. T. Foresman, Mayor of Williamsport, and a member of the board of trustees of the James V. Brown Library. He was followed by Miss Poland, who opened the meeting with an address on the general situation in the library world.

Mr. Edwin H. Anderson, of the New York State Library, then delivered an address on "Books for rural communities: some general considerations." Mr. Anderson dwelt upon the importance of putting the best and most useful books within the reach of the country boy, for it is mainly from the country and the small towns that the ranks of men who do things in the world are recruited.

The secretary-treasurer, Mr. Robert Bliss, presented his report of the work done during the past year. Circulars of information regarding the work being attempted by the

association and notices of the meeting with detailed program had been sent to about eight hundred trustees and librarians throughout the state, and this "campaign of education" had resulted in a much larger number of libraries being represented at the meeting than ever before, in a number of cases the librarian being sent at the expense of the library.

The afternoon session was in charge of Miss Helen U. Price, of Pittsburgh, who led a round table discussion on "Library work with children."

Miss Anna B. Day, of Connellsville, presented a paper on "Library work for children in a town library," which was discussed by Miss Susan L. Sherman, of Bradford; Miss Miriam M. Wharton, of McKeesport, and others.

Miss Alice I. Hazeltine, of Pittsburgh, was to have opened the discussion of "Methods of direct reading," but was detained by illness. She had prepared a paper, however, which was read by Mrs. Hard, of Erie. The subject was further discussed by Miss Frances Langfitt, of Allegheny; Miss Katherine McAlarney, of Philadelphia, and others. "The library in its relation to the elementary schools" was the subject of a paper by Miss Effie L. Power, instructor in library use and juvenile literature in the Normal School, Cleveland, Ohio. The subject was further discussed by Miss Anna B. Shutterly, of the state normal school at California, Pa.

The evening session was addressed by Mr. Hill, trustee of the James V. Brown Library, Williamsport; J. G. Rosengarten, president of the board of trustees of the Philadelphia Free Library, and Henry A. Fuller, trustee of the Osterhout Free Library, Wilkes Barre, who spoke of the relation of the trustee to the library, as viewed from the trustee's standpoint. Mr. Thomas L. Montgomery, state librarian, then spoke upon the same subject from the standpoint of the librarian.

The Saturday morning session was called to order at 10 o'clock, the first item of business being the election of officers. The nominating committee reported the following ticket: for president, Charles E. Wright, of Duquesne; for vice-president, W. F. Stevens, of Homestead; for secretary-treasurer, Robert P. Bliss, of Harrisburg. On motion, Mr. Henry J. Carr was instructed to cast the ballot for the nominees thus named and they were declared elected.

Mr. Wright then took charge of the meeting and led a round table discussion on the topic "The work of the smaller libraries." The first subject considered was "Methods of arousing interest and overcoming the public's inertia." This was discussed by W. F. Stevens, of Homestead; Miss Mary C. Weiss, of Warren, both of whom spoke of the value of the study club work in getting the people to use the library, and Miss Mary A. True, of Foxburg, who spoke of the work she is doing among the people of her town.

"Binding, rebinding and repairing" was discussed by Mr. H. F. Marx, of the Easton Public Library, the talk being illustrated by specimens of work done in their own library.

Mr. O. R. Howard Thomson, of the new James V. Brown Library, at Williamsport, spoke of what might be done to supply deficiencies in material for which there was a demand by calling on other libraries. Miss Emma R. Neisser, who is in charge of the department of books for the blind of the Free Library of Philadelphia, then told of what could be done in the way of supplying the blind with reading matter. Books will be loaned from Philadelphia to any one in the state without cost, such books being carried free in the mails.

As the hour for adjournment had come, the discussion of Library of Congress cards was postponed to the evening session. The afternoon was given up to recreation, which was taken according to individual bent. The majority took advantage of the provision which had been made for a drive over the hills about the city, and for two hours or more enjoyed the beautiful views and invigorating air to be found on the higher levels.

The evening session began with a short discussion of the use of the Library of Congress cards. A number of the libraries represented used them, and the general opinion seemed to be that they were a great saving.

The history of the Free Library Commission was then given by Mr. John Thomson, a member of the commission, and the work which is being done was presented by Robert P. Bliss, assistant secretary of the commission.

After this Miss Poland in a few words resigned the office of president to Mr. Wright, who declared the meeting adjourned.

ROBERT P. BLISS, *Secretary*.

MINNESOTA LIBRARY ASSOCIATION

President: Miss Lettie M. Crafts, University of Minnesota Library, Minneapolis.

Secretary-Treasurer: Miss Elizabeth W. Clute, Public Library, St. Paul.

The 14th annual meeting of the Minnesota Library Association was held in the lecture room of the Austin Public Library, Oct. 25, 26 and 27, 1906. Fifty-five persons registered. Of this number 30 were librarians, 22 trustees, 1 binder, 1 clergyman, and 1 superintendent of schools.

The first meeting was called to order at 8 p.m. by Miss van Buren, president of the association. Mr. F. I. Crane, president of the library board, then introduced Hon. George H. Sutton, mayor of Austin, who gave a brief address of welcome. Miss van Buren responded with an address on "The social side of the librarian's life." She urged that the librarian should embrace every opportunity to meet people outside of the li-

brary, in order to appreciate their interests and tastes, and time should be allowed her for social duties.

"The training of the trustee" was then discussed by Mr. W. D. Willard, of Mankato, and Mr. J. N. Nicholson, of Blue Earth. They gave some of the requirements of an ideal trustee as public spirit, broadmindedness, success in business, and an appreciation of the value of libraries. "The whole duty of the trustee" was then explained by Mr. A. P. Gove, of Rochester, in a very interesting manner. A general discussion followed. One member stated that a board composed entirely of women had proved very satisfactory, while another said that a mixed board was quite the reverse.

Miss Countryman, of Minneapolis, one of the founders of the association, spoke briefly upon its growth. There were only five present at the first meeting in an obscure corner of the old capitol in St. Paul. At that time there was hardly a public library building in the state outside of three or four of the largest cities.

One of the most important features of the evening session was the organization of a trustees' section, as the association felt the need of their assistance and co-operation. The following officers were elected: Mr. W. D. Willard, of Mankato, chairman; Mr. A. P. Gove, of Rochester, vice-chairman; Mr. J. N. Nicholson, of Blue Earth, secretary.

The subject for the Friday morning session was "Every-day problems." Papers were presented as follows: "Loaning one or two books at a time, and loaning reference books," Miss Josephine Powell, St. Peter; "Fines," Miss Mabel Sterner, Winona; "Buying foreign books for a small library," Miss Arabel Martin, Red Wing; "Sunday opening," Mrs. Alice A. Lamb, Litchfield; "Library housekeeping," Miss Sarah E. LeCrone, Faribault. The papers were short and a full discussion followed, which proved to be very interesting and instructive.

Friday afternoon the "Travelling library round table," conducted by Miss Countryman, occupied the time between the hours of two and four o'clock. Miss Countryman reviewed the history of the movement. After much opposition a bill providing for this system was finally passed in the state legislature, 1899.

At six o'clock the members of the women's clubs entertained the visitors at the Congregational Church. A sumptuous repast had been prepared, and a very enjoyable reception took place immediately after and preceding the evening session, which opened with a piano solo, "Hungarian Dance," Brahms, by Miss Alwine Rehman, which was well rendered. The pastor of the church, Mr. W. E. Knopf, then introduced the speaker of the evening, Mr. Charles W. Ames, director of the St. Paul Public Library, who had chosen

for his topic "Materialism and the public library." In opening he referred to the discontent of the people, of the evils that have been discovered in the political life of the country. He spoke of socialistic problems, of further legislation, and more laws as cures that had been suggested. The immigration problem was also touched upon, and the necessity of greater work in order to assimilate the hordes of ignorance and discontent that are being poured upon our shores.

He saw the safeguard of our institutions, and the advancement of the nation along moral and intellectual lines, in religion, the schools and the public libraries. He said he would not include journalism in the list, for the reason that it fed its readers on the sensations of the day. He read the headings from a recent issue of a well-known newspaper, which sounded like a catalog of crime. The reading of the horror column was closed by a little item hidden away, stating that the Minnesota Library Association would meet in Austin.

The speaker had the closest attention of his auditors when he touched upon the subject of the selection of books, and held that librarians, while servants of the people, also have a responsibility in the selection, and it was their duty not to give them what they wanted as a newspaper does when it spreads its pages with the horrors of the world, but to educate the people along the lines of better reading.

Saturday morning the convention was called to order at 9.30. The question for discussion was the "Public school and the public library." Papers were read by Mr. W. F. Kunze, of Red Wing, and Mrs. Flora C. Conner, of Austin.

Mr. G. A. Franklin, superintendent of schools in Austin, then gave his views on the subject, and expressed a willingness to assist in furthering the good cause.

The question box was then opened, contents fully discussed, commented upon, and answered by members of the association.

The following resolutions were adopted:

WHEREAS, The State Library Association has had so pleasant a meeting, be it

Resolved, That our sincere thanks be extended to the Austin librarian, and to the library directors and their wives, and the club women of Austin, who have contributed to our pleasure and entertainment;

Resolved, That we spread upon our minutes an expression of our satisfaction at the new and important step taken by the library trustees in forming a section of this association.

A report of the nominating committee was then called for. The chairman being absent, Mrs. Fleming read the same: president, Miss Crafts, of Minneapolis; vice-president, Mrs. Conner, of Austin. The offices of secretary and treasurer being so closely related, it was decided to combine the two, and Miss Clute, of St. Paul, was nominated for secretary-treasurer. For executive committee, Miss

Baldwin, of St. Paul, and Miss Martin, of Red Wing. It was also suggested that these two officers, with the secretary, constitute the program committee. No opposition being met with, the above officers were duly elected. Invitations for the meeting in 1907 were received from the Fairmont Public Library and the Twin City Library Club. The meeting was then formally declared adjourned.

The attendance was far greater than ever before, and a very noticeable increase of interest was manifested. Consequently the meeting was considered successful, profitable, and inspiring to all. Exhibits were loaned by the library commission, comprising a collection of books, pictures, photographs of library buildings in Minnesota.

ELIZABETH W. CLUTE, *Secretary*.

MONTANA STATE LIBRARY ASSOCIATION

President: Granville Stuart, Public Library, Butte.

Secretary-Treasurer: Miss Elizabeth McCord, Public Library, Bozeman.

The librarians of Montana have undertaken the formation of a state library association. The first meeting was held at Missoula, May 18-19, 1906, and a temporary organization was effected, with the following officers: president, Mr. Granville Stuart, librarian of the Butte Public Library; vice-president, Miss Gertrude Buckhouse, librarian State University, Missoula; secretary-treasurer, Miss Elizabeth McCord, Bozeman Public Library. The second meeting will be held in Butte, Dec. 26-27, 1906.

ELIZABETH McCORD, *Secretary*.

RHODE ISLAND LIBRARY ASSOCIATION

President: Harry L. Koopman, Brown University Library, Providence.

Secretary-Treasurer: Herbert O. Brigham, State Library, Providence.

The fourth regular fall meeting was held at Oaklawn on Oct. 15. Between fifty and sixty librarians were present.

The morning session was taken up chiefly with a round table discussion of the A. L. A. Conference at Narragansett Pier. After an address of welcome by the Rev. Irving J. Enslin, pastor of the Baptist church in which the meetings were held, and the usual reading of minutes, Mrs. Sanders, of the Sayles Memorial Library, Pawtucket, began the general subject. She was followed by the state librarian, Herbert O. Brigham, who took for his text the press reports of the Conference. His paper is given elsewhere. E. D. Tweedell, auditor at the Providence Public Library, spoke of the Conference from the assistants' point of view. W. E. Foster, librarian of the Providence Public Library, also spoke, and there was general discussion.

At the afternoon session Mr. Brigham spoke briefly of the Board of Education rules, and

the following resolution was then introduced and passed:

Resolved, That the Rhode Island Library Association desires to place on record its regret at the death, in Providence, Feb. 9, 1906, of the late Hon. Thomas B. Stockwell, who was for many years the state commissioner of education. Mr. Stockwell's interest in libraries and their work was intimate, long-continued and fruitful in results. The earliest gatherings of librarians in this state, long antedating the formation of this Association, were held in his office, and were due to his generous solicitude for the welfare of the Rhode Island libraries. He was always quick to recognize the serviceableness of measures designed to advance the work of libraries and to aid them if possible. Although withdrawn for the past few years from active participation in any public service, Mr. Stockwell's interest in library matters remained as strong as ever, and we feel that in his death we have lost a true and tried friend.

Miss Mary L. Lamprey, of North Easton, Mass., read a paper on "The administration of a small library," at the close of which Mr. Koopman suggested the advisability of an annual meeting of assistant librarians. Mr. Koopman then discussed "Book selection from an author's point of view," as recently outlined in the *Pine Tree Magazine* by Mr. Alfred York. A general discussion followed, and the meeting was then adjourned till mid-winter.

Library Clubs

THE CHICAGO LIBRARY CLUB

President: C. B. Roden, Public Library.

Secretary: Miss E. G. Smith, John Crerar Library.

Treasurer: H. L. Leupp, John Crerar Library.

The first meeting of the year of the Chicago Library Club was held Oct. 11, 1906, at the Chicago Public Library. The first vice-president, Miss Elliott, was in the chair, and opened the meeting with the announcement that the president, Mr. Frank L. Tolman, had accepted the position of reference librarian in the New York State Library. Mr. Tolman's letter of resignation was then read, in which he expressed his great regret in giving up the office of president of the club. He outlined theoretically and practically the work which the club could do and ought to do.

The nomination of Mr. Roden for president was presented and voted. Mr. Roden took the chair, and announced the subject of the evening, "The recent meeting of the A. L. A. at Narragansett Pier." Miss Hawley introduced the subject with the points which impressed her especially at this A. L. A. meeting. She spoke of the great amount of free time at the conference, the number of speakers outside the library profession, and the strikingly literary character of the program. Miss Hawley's brief *résumé* of some of the most important papers and addresses was intensely interesting. Mr. Merrill, who

was unable to be present, sent his paper on the meeting at Narragansett Pier. He commented, among other things, on the tendency of the A. L. A. to meet at watering places and amid scenes of natural beauty; it seemed to indicate that librarians are leading such strenuous lives that when they meet to discuss professional topics they seek to combine with the discussions as much vacation and relaxation as possible.

Miss Wood made a careful report of the catalog section, bringing out the important points discussed.

Miss Hyde gave a most amusing and entertaining account of the Rhode Island clam bake supper.

The following names were voted upon for membership: Miss Augusta Wilson and Miss Gladys Arnold, of the Chicago Public Library; Miss Mary E. Combs, of the Newberry Library, and Mr. Francis L. D. Goodrich, of the John Crerar Library. The meeting adjourned. Attendance, 31.

ELLEN GARFIELD SMITH, *Secretary*.

LONG ISLAND LIBRARY CLUB

President: Miss Eleanor B. Woodruff, Pratt Institute Free Library, Brooklyn.

Secretary: Miss Mildred Collar, Pratt Institute Library School, Brooklyn.

Treasurer: Miss Mary A. Kingsbury, Erasmus Hall High School, Brooklyn.

A regular meeting of the club was held on the afternoon of Oct. 25, in the chapel of Packer Collegiate Institute, Brooklyn, Miss Woodruff presiding. The constitution was so amended that members may be dropped after two years' non-payment of dues. After the brief business meeting the president introduced Mr. Arthur E. Bostwick, chief of the Circulation Department, New York Public Library, who read an admirable paper on "The love of books as a qualification for librarianship." This is the same paper Mr. Bostwick read at the New York state meeting at Twilight Park in September, and created even more discussion on the second reading. Among those who spoke in the discussion were Miss Theresa Hitchler, Miss M. W. Plummer, Miss Isabel Fly Lord, Mr. Walter B. Briggs and Mr. Bostwick. After the adjournment tea was served in the Packer Library, and the garden was available for a social hour.

MASSACHUSETTS LIBRARY CLUB

President: George H. Tripp, Free Public Library, New Bedford.

Secretary: Miss Louisa M. Hooper, Public Library, Brookline.

Treasurer: Miss Mary E. Robbins, Simmons College, Boston.

The fall meeting of the Massachusetts Library Club was held at Arlington, Thursday,

Oct. 11, by invitation of the trustees of the Robbins Library. Rev. Samuel C. Bushnell, chairman of the trustees, gave the address of welcome.

Miss Adelaide R. Hasse read a paper on "Public documents for a small library." Miss Hasse struck at the root of the matter by saying, "Free yourselves of the burden which indiscriminate distribution imposes upon you, and exert yourselves to devise some system which shall put on your shelves only those documents which you can use. Persuade yourselves that it will be cheaper for you to order these at cost price than to get others gratuitously. If you will do this you will find that all your little difficulties of cataloging . . . will disappear if not altogether, at least to a very large extent."

Miss Alice Crane, of the Loring Reading Room, North Plymouth, gave an interesting talk on "Magazines for a small library." Miss Crane made a strong plea for a generous periodical list in which all possible interests of a community should be represented. She recommended frequent revision of the periodical list, so that periodicals no longer popular could be dropped.

Mr. Langdon L. Ward, of the Boston Public Library, read an excellent paper on "Reading-rooms and other library agencies," which put before the members of the club in an unusually telling way the need and use of branch agencies. It gave a detailed account of the Boston Public Library system, and was a valuable addition to the program.

In the afternoon Mr. J. T. Trowbridge read from his own poems, "A story of the barefoot boy," written for Whittier's birthday; "Filling an order," read at the Holmes breakfast, Dec. 3, 1879; "Author's night," and "The winner."

Mr. Louis N. Wilson, of Clark University Library, followed Mr. Trowbridge with a paper on "Improper inducements to buy books."

Mr. Wilson scored the publishers who advertise a new edition when in reality the book has only a new title-page; he also censured publishers of so-called new encyclopædias, which are insufficiently revised and which contain but little new subject matter.

Questionable methods of book agents were brought out, and in the general discussion which followed the paper many warnings were sounded, especially to librarians of smaller libraries with limited book funds.

GERTRUDE E. FORREST, *Recorder*.

NEW YORK LIBRARY CLUB

President: John Shaw Billings, M.D., New York Public Library.

Secretary: Miss Alice Wilde, New York Public Library.

Treasurer: Edward Harmon Virgin, General Theological Seminary Library.

The first meeting of the New York Library Club for this season was held on the evening of Oct. 11, at the Tompkins Square branch of the New York Public Library. The treasurer's report was read and accepted, a recommendation of the executive committee that the club handbooks be placed in the custody of the secretary was approved, the secretary authorized to expend \$35 for the printing of the new constitution and list of members, and eight new members were elected. The president announced the decision of the executive committee to omit the November meeting and accept the invitation of the Long Island Library Club to meet with them in December, inviting them to meet with us in January.

The president then introduced Mr. Herman Rosenthal, of the Astor Library, who gave the club some very interesting "Glimpses of Russian authors." At the end of his paper Mr. Rosenthal spoke briefly of the character of the books used by Russian readers in the Astor Library, saying that since the beginning of the Russo-Japanese war the books most read, instead of belles-lettres, were those of the socialistic and religious classes. Gorky was read most of all, with Tolstoi second, and of the latter's works it was not the masterpieces of literature, such as "War and peace" and "Anna Karenina," but the religious pamphlets that were most called for.

Miss Ida Simpson, of the East Broadway branch of the New York Public Library, then told a little of the Russian readers of that neighborhood, speaking of the delight of the recent immigrant on finding that there is a place where he can borrow books in his own tongue, and of his joy, on going over the catalog, when he comes to his favorite authors, which are usually those of a high literary standing. It is not long before he begins to call for manuals to learn English, and soon for English books with their Russian translations. The immigrant's children read the Russian books very little, as they are encouraged on every side to read the literature of their adopted country. The readers are, of course, as a rule, members of the Russian colony of the neighborhood, but some come from considerable distances, as from Harlem, the Bronx, Brooklyn, and Queens.

ALICE WILDE, *Secretary*.

SOUTHERN WORCESTER LIBRARY CLUB

President: Miss Harriet B. Sornborger, Bancroft Memorial Library, Hopedale.

Secretary: Miss Beatrice Putnam, Free Public Library, Uxbridge.

A meeting of the Southern Worcester Library Club was held in the Upton Town Library, Upton, Mass., on Oct. 23, at 2.45 p.m. Miss H. B. Sornborger presided. The subject of the meeting was "Echoes of the con-

ference at Narragansett Pier." Mr. A. P. Williams on behalf of the trustees of the home library welcomed the club to Upton. Then Miss Sornborger gave a brief history of the A. L. A., telling of its formation, of the establishment of permanent headquarters in Boston, and of plans for the future. A paper was read by Miss Ethelwyn Blake, of the Milford Town Library, on "Children's work." Miss Blake summarized in a very interesting way the papers read on this subject at Narragansett Pier, closing with a verse from Mr. Sam Walter Foss's poem. Miss Beatrice Putnam gave an account of the A. L. A.'s publicity committee, and also suggested some methods of library advertising. The meeting closed with a question box, skilfully conducted by Miss Sornborger. It was an occasion helpful and stimulating to all present. After a vote of thanks to the trustees and to Mrs. Saddler, the librarian, for their courteous entertainment, the meeting adjourned. BEATRICE PUTNAM, *Secretary*.

TWIN CITY LIBRARY CLUB

President: W. W. Folwell, State University Library, Minneapolis.

Secretary-Treasurer: Miss Clara F. Baldwin, State Public Library Commission, St. Paul.

The first annual excursion of the Twin City Library Club took place on Saturday, July 21. The Minneapolis members of the club took the steamer "Hiawatha" at the Minnehaha Falls landing, and were joined at Fort Snelling by the St. Paul delegation. Supper was served on the boat, followed by a delightful evening on the river. About 50 members of the club and their friends were present, and all agreed that the excursion should be made an annual event.

The first meeting of the season of 1906-7 was held with the St. Paul Public Library on the evening of Oct. 1. Fifty-four were present at the supper, which was served in the Knights of Columbus Hall, just around the corner from the library. After supper the club adjourned to the children's room of the public library, where Mr. J. G. Pyle read a paper on "Anthony Trollope—realist." The paper was a brilliant piece of literary criticism which delighted all lovers of Trollope, while those who had not known his charms resolved to make the acquaintance of the Warden, Mrs. Proudie, Lily Dale and the rest without delay.

Dr. Folwell introduced his successor in the University Library, Mr. James Thayer Gerould, who was cordially welcomed by the club, and who expressed his pleasure in identifying himself with library work in Minnesota. CLARA F. BALDWIN, *Secretary*.

WESTERN MASSACHUSETTS LIBRARY CLUB

President: W. I. Fletcher, College Library, Amherst.

Secretary: Miss Frances E. Haynes, Mt. Holyoke College Library, South Hadley.
Treasurer: Miss Martha F. Gere, Clarke Library, Northampton.

The fall meeting of the club, held at Stockbridge Oct. 12, by invitation of the Stockbridge Library Association, was attended by seventy or more librarians and others interested in library work, invitations having sent to all librarians in this part of the state, whether club members or not. The Berkshires were in splendid autumn colors, and the meeting was therefore given largely the character of an outing. The annual meeting of the Stockbridge Library Association had been held in the Jackson Memorial Library at 11 o'clock, and on arrival of the delegation from Springfield and vicinity, who had been delayed by the usual Boston & Albany freight wreck, a joint session was held. Hon. Allen T. Treadway welcomed the visitors on behalf of the Stockbridge Library Association and the town. Mr. Fletcher then presided at the desk used by Jonathan Edwards when a resident of Stockbridge, and read an address upon "The bull in the (library) china shop." This was followed by an address by Mr. R. R. Bowker, editor of the *LIBRARY JOURNAL*, as president of the Stockbridge Library Association, upon "The possibilities and limitations of the rural library," which laid stress on the fact that in the limitations of the rural library lie its strongest points, namely, the necessity for restricting purchases to the best books only, and the librarian's opportunity for helpfulness to a personally-known clientèle.

After a brief walk to famous Laurel Hill, the visitors dined at the Red Lion Inn as guests of the people of Stockbridge. At two o'clock the company divided, some going by electric, but the majority taking the charming two-mile walk, to Mr. Bowker's place at Glendale. Here the afternoon session, held in Mrs. Bowker's log cabin in the pine woods, was devoted to a discussion of the past and future of the club, introduced by Mr. James A. Lowell, the retiring secretary. The general reticence in discussion on the part of the members present suggests that special effort should be made at each meeting to encourage greater responsiveness. Mrs. Belle H. Johnson, of Hartford, was present and told of her work in Connecticut as library visitor. Notice was given of an amendment to the constitution, providing an additional officer to be known as the recorder, which amendment will be acted on at the next meeting. Mr. Lowell was meantime appointed a committee of one to act in that capacity.

At four o'clock the meeting adjourned to the Bowker homestead, where afternoon tea was served by Mrs. Bowker, thus making an agreeable close to a most delightful day.

Library Schools and Training Classes

CARNEGIE LIBRARY OF PITTSBURGH TRAINING SCHOOL FOR CHILDREN'S LIBRARIANS

Mr. Carnegie, who gave a fund for the support of the school for three years, now at the end of that time announces his intention of continuing to support the school for an indefinite period.

ILLINOIS STATE LIBRARY SCHOOL

The Illinois State Library School Association has secured for the school a course of lectures by Miss Alice S. Tyler, secretary of the Iowa Library Commission and president of the League of Library Commissions. The course is to deal with problems of small libraries, and will be given in February or March. It is hoped to have a reunion of former students at that time.

The school quarters have been much changed and improved during the past summer. The library school room over the book stack has been fitted with wall shelving for the collection of bibliography and library economy. Here also are the departmental catalog, the collection of sample editions, and the children's library.

The former seminar room is reserved for small classes, typing and other laboratory work. The lecture room in the east tower, ground floor, has been redecorated and furnished with wall shelving.

On Saturday evening, Oct. 27, the senior library class entertained the juniors and the staff at a Hallowe'en party at the Kappa Kappa Gamma chapter house.

The first library reception of the year was held in the reading rooms Friday evening, Nov. 2. The new books added by different departments during the vacation were displayed, together with books for approval sent by G. E. Stechert and a selection from the children's library.

Recent personal changes:

Anderson, Augusta, 1905-06. Student assistant, Pittsburgh Training School for Children's Librarians.

Blakely, Jane, 1905-06. Student assistant, Pittsburgh Training School for Children's Librarians.

Bumstead, Frank M., 1905-06. Assistant University of California Library.

Carr, Flora F., 1905-06. Assistant Iowa State Library; July-August, '06, librarian Carnegie Library, Charles City, Iowa, September, '06, to date.

Carroll, Jessie Anna, B.L.S., '01. Married June 28, '06, to Mr. Ralph Eliot Smith, of Whittier, Cal.

Clark, Mrs. Martha B., 1894-95. Librarian Maryville (Mo.) State Normal School.

- Crane, Helen M., B.L.S., '05. Assistant Terre Haute (Ind.) Normal School.
- Derby, Grace E., 1905-06. Reference assistant University of Illinois Library.
- Houchens, Josie B., B.L.S., '05. Loan assistant University of Illinois Library.
- Humphrey, Guess, B.L.S., '05. Assistant secretary Nebraska Library Commission.
- Jackson, Charlotte M., B.L.S., '04. Assistant librarian Eastern Illinois Normal School, Charleston.
- Jenes, Fannie E., B.L.S., '01. Head cataloger Lincoln Library, Springfield, Ill.
- Kelley, Grace O., B.L.S., '03. Librarian Illinois State Laboratory of Natural History, Urbana.
- Lathrop, Olive, B.L.S., '00. Head cataloger Michigan State Library, Lansing.
- Lefler, Grace, B.L.S., '03. Acting librarian University of Missouri Library.
- Nason, Sabra, 1905-06. General assistant University of Illinois Library.
- Schaefer, Ellen M., B.L.S., '04. Assistant cataloger University of Wisconsin Library.
- Warner, Florence, 1905-06. Assistant cataloger, Lincoln Library, Springfield, Ill.
- Weilepp, Leila M., B.L.S., '06. Assistant cataloger University of Wisconsin Library.
- Wing, Alice L., B.L.S., '04. Assistant cataloger Ryerson Library, Grand Rapids, Mich.
- Woodmansee, Ralph C., B.L.S., '03. Shelf clerk University of California Library.
- KATHARINE L. SHARP, *Director*.

NEW YORK STATE LIBRARY SCHOOL

Dr. Henry M. Leipziger, who was in attendance at the University Convocation, gave an interesting talk before the school on Friday, Oct. 26. His subject was the philosophy, methods and development of the system of free lectures, which, as supervisor, he has conducted so successfully in connection with the Department of Education in New York City during the past 16 years.

PUBLICATIONS

The library school has just published a "Brief list of useful books on library economy." It is a revision, printed alone, of a similarly entitled list first printed in 1901 on pages 83-84 of the simplified library school rules. The new list contains 26 instead of 18 titles, and is more fully annotated than the first edition.

A new edition of the "Circular of information concerning the library school," revised to Oct. 15, 1906, has just been issued. In addition to the usual information as to faculty, admission, requirements and expenses the circular gives a detailed statement of subjects covered in the course of study with time spent on each.

SUMMER SCHOOL, 1907

Admission

The summer course is offered only to those already holding paid library positions or un-

der definite written appointment to such a position. Entrance examinations are not required, but candidates from other states than New York are expected to have completed a full high school course or its equivalent as a minimum of general education. As the number of desks is limited, application should be made as early as possible.

Date

The school will open June 5 and close July 17. As the course is crowded and the time of both students and faculty fully occupied during the whole six weeks it is impossible to admit any one after the opening day.

Fees

For those engaged in library work in New York state, instruction is provided without charge. To others the fee is \$20 for the six weeks' course. Each student should allow from \$6 to \$10 for textbooks and various fittings and supplies, to be retained as personal property.

Outline of course

The instruction will be given mainly by Miss Corinne Bacon, who will have general charge of the school, Mr. J. I. Wyer, Jr., and Mr. W. R. Eastman, whose unique experience in studying the problems of the hundreds of libraries throughout the state, is constantly utilized in the summer course. Other members of the faculty and some well-known non-resident librarians will lecture upon their specialties.

The course for 1907 will be general, and will be adapted, so far as possible, to the needs of the small libraries of New York state. It will include selection of books, book buying, accessioning, decimal classification, dictionary cataloging, shelf listing, reference work, book-binding, buildings and fittings, charging systems and work with children. Seminars will be held, where any practical difficulties arising in library work may be freely discussed. Special emphasis will be laid upon the more technical part of the work, some of the subjects herein mentioned being touched upon but briefly.

Credentials

A certificate is awarded each student who completes satisfactorily the work of the course and passes the regents examination thereon at its close.

J. I. WYER, JR., *Vice-Director*.

PRATT INSTITUTE LIBRARY SCHOOL

The club programs of the class of 1906 have circulated vigorously since the announcement was made in the LIBRARY JOURNAL that they were at the service of libraries doing work with clubs. The Oregon Library Commission, Des Moines (Ia.) Public Library and the public libraries of Springfield, Ill., Carthage, Mo., and Madison, Wis.,

have been among those using some or all of the programs.

Five of the class of 1907 are completing the cataloging of the library at Willow Place Chapel, Brooklyn, and attending to the giving out of books at stated hours. Others will undertake work as visitors of the home libraries of the Neighborhood Association in a few days.

The fiction course has begun this year with the foreign novelists, for several reasons.

The lecture course of the second term will be inaugurated in January by Dr. James H. Canfield on "The public library from the point of view of the educator," to be followed by three lectures from Miss L. E. Stearns, on "Some western phases of library work," "The library spirit," and "The child and his book," and by one from Mr. J. C. Dana on "Printing." Other lectures will be announced later.

The inaugural "tea" of the season was given Oct. 15, to introduce the students to the librarian and staff, and to the president of the Graduates' Association, Miss Frances L. Rathbone. On the evening of Nov. 9 the Graduates' Association will tender its usual reception to the entering class.

A number of the class attended the first meeting of the New York Library Club, and all were present at the opening meeting of the Long Island Library Club, the latter attendance being considered a class exercise. A number of them have taken advantage of the opportunity to visit the J. P. Morgan collection of books on exhibition at Columbia University. A bulletin of such opportunities in New York and vicinity is to be posted each week in the class-room.

Mr. and Mrs. F. W. Bursch (*née* Dennis), '97, have given up the editing and printing of the *Literary Collector*, owing to the state of Mr. Bursch's health, and have removed to Cos Cob, Conn., where they hope to have a private press and do occasional printing, compile private library catalogs, etc.

MARRIED

Mrs. A. H. Jackson, '04, to William Parker Flint, on July 9.

Miss S. K. H. Jacobsen, '96, to Emil Bie, on Aug. 21.

Miss Bertha G. Carr, '96, to Hardin Craig, on Sept. 4.

Miss Edith A. Gillespie, '02, to George Putnam Stowitts, on Oct. 3.

MARY W. PLUMMER, *Director*.

WESTERN RESERVE LIBRARY SCHOOL

The class is spending Wednesday afternoons during the first two months in visiting Cleveland libraries: the College Library, the Case Library, the Law, Medical and Historical Society libraries, and the Public Library, with its branches, sub-branches, deposit and delivery stations, its high school, grade school, settlement, factory and home libraries, pres-

ent varied phases and types of work for observation and study. The practice work in the Public Library began with the second Saturday of the term, a half day being assigned to it each week.

PERSONAL NOTES

Miss Hortense Foglesong, class of '05, has resigned her position as assistant in the Adelbert College Library, of Cleveland, to become cataloger in the Marietta College Library. During the summer Miss Foglesong classified and cataloged the library of the Case School of Applied Science, Cleveland. Miss Mary Scott Wallis, class of '06, succeeds Miss Foglesong in the Adelbert College Library.

Miss Martha Wilson, class of '05, has been promoted to position of first assistant in the catalog department of the Cleveland Public Library.

Miss Edna Allyn, class of '05, librarian of the Brooklyn sub-branch, Cleveland Public Library, was given two months' leave of absence during the summer to assist in the organization of the Public Library at Clyde, O.

Miss Alice G. Gaylord, class of '06, has been appointed an assistant in the Public Library of Duluth.

Miss Frances C. Hunter, class of '06, is engaged as a part-time assistant in the Cleveland Public Library, while carrying several courses of study at the College for Women.

W. H. BRETT, *Dean*.

WINONA LIBRARY SCHOOL

The Library School of the Winona Technical Institute, Indianapolis, has entered upon its second year.

Two valuable features of its course are the practice lessons in bookbinding and printing, which will be given in these finely-equipped departments of the institute, and the outline courses in English literature and history conducted by W. D. Howe, professor of English literature in Indiana University, and Harlow Lindley, professor of history in Earlham College. Miss Knowlton, of the Gertrude Stiles bindery, Chicago, will give special instruction in bookbinding as heretofore.

Miss Rena Reese, of the class of 1906, has been added to the staff of the school as instructor.

The faculty and class attended the Indiana Library Association meeting at Kokomo on Oct. 18 and 19, and gave a reception to Miss Plummer in Indianapolis on the 20th.

The following students form the class of 1907:

Edith G. Avery, Indianapolis.
Grace A. Burton, Gosport, Ind.
Bertha Carter, Plainfield, Ind.
Esther M. Fleming, Fort Wayne, Ind.
Mabel L. Hunt, Plainfield, Ind.
Bess McCrea, Indianapolis.
Hallie M. Riley, Indianapolis.
Mayme B. Ross, Winona Lake, Ind.

Marguerite Swain, Indianapolis.
 Caroline Williamson, Iberia, Ohio.

Positions are being filled by graduates of the class of 1906 as follows: Zada Carr, librarian Public Library, Earl Park, Ind.; Nannie C. Jayne, assistant Library Winona Technical Institute; Edna Longley, assistant Public Library, South Bend, Ind.; Jessie Masden, librarian Public Library, Piqua, Ohio; Rena Reese, instructor Library School, Winona Technical Institute; M. Grace Smith, assistant Public Library, Fort Wayne, Ind.; Edith Trimble, librarian Public Library, Kokomo, Ind.

MERICA HOAGLAND, *Director*.

WISCONSIN LIBRARY SCHOOL

The opening weeks of the Wisconsin Library School have been full of interest and earnest work. The schedule of study which is planned both for the sequence of subjects and for the combination of technical, literary, and practical branches, is developing satisfactorily. The long courses of the first semester with class appointments per week are cataloging, four lessons; reference, one lesson and a seminary; loan book selection, bibliography and classification, one appointment each. The use of the typewriter extends throughout the course. It is considered as essential to teach and revise the typewritten card, with careful attention to spacing, form, and speed, as the card done in library-hand. Lessons in alphabetizing were commenced after the cataloging was well under way.

As cataloging lies at the foundation of library technique, special effort is made to give the course effectually, yet not at the expense of the other courses. The A. L. A. and L. C. rules are adapted to the needs of the small library, and the form of the L. C. printed card is followed with modifications. No single code can be used without change, while each code contains many essential rules. Sample cards for the modified rules are not available in print. The time consumed in dictating rules and sample cards in class, and in consulting three or four codes in practice work, promised to be a serious matter. To meet this difficulty, the rules to be used from the several codes are chosen by the instructor, and together with necessary supplementary rules and sample cards are hectographed, one rule to a card, with a reference to the code from which it is selected. About two hundred hectographed rules and sample cards will be distributed to the students during the course. The additional rules dictated require the consultation of the important codes, so that students become familiar enough with them to use them independently.

The lectures in mechanical preparation of books for the shelves and mending were given during the first weeks, followed by supervised practice work. Three hours of apprentice work per week are required of

every student during the first semester. This service is given largely in the Madison Public Library, at the loan desk, in the work room, where the mending and mechanical practice are supervised by the instructor of the course, in the reading and reference room, and other departments, as the librarian needs. The library is establishing stations which are in charge of the students for stated hours.

The study of publishing houses is conducted as a seminary course, each member of the class being assigned a house as a special topic, which is presented to the class in lecture form. Several publishers are reported upon during the hour assigned for the seminary each week.

Special lectures have been given on book-plates, title-pages, and library publicity, each being followed by exhibits. Mr. Legler's personal bibliographical collection, which includes title-pages, book-plates, early manuscript and other facsimiles, rare books and much other valuable material, has been placed at the disposal of the school for exhibition purposes.

Miss L. E. Stearns has met the class twice, giving her lectures on the "Library spirit" and the "Library beautiful." Dr. George Murray Colville, of Racine, gave readings from Burns on the afternoon of Oct. 10, and Miss Ahern gave two lectures on the "Responsibilities of librarianship," Oct. 26 and 27. Mrs. Thwaites and Miss Hazeltine entertained the class informally to meet Miss Ahern while she was in Madison. She spoke during the evening on "Who's who in the library world." The class planned and carried out a very enjoyable Hallowe'en frolic, transforming as if by magic the double lecture room of the school into a reception room, decorated in the spirit of the occasion.

MARY EMOGENE HAZELTINE, *Preceptor*.

Reviews

LITERATURE of libraries in the 17th and 18th centuries; edited by John Cotton Dana and Henry W. Kent. Chicago, A. C. McClurg & Co., 1906. no. 1, Dury, "The reformed librairie-keeper;" no. 2, Cotton des Hous-says, "The duties and qualifications of a librarian."

The initial volumes of this collection exhibit an excellence in printing and a dignified restraint in editing that are not easily to be equalled. Both books are small, the first having 71 and the second 56 pages, and are fine specimens of the work of the Merrymount Press, of Boston. The edition is limited to 250 copies on small and 25 on large paper.

The choice of these two works for the

first numbers gives us a foretaste of those to follow. Dury's quaint imagery and sound advice to the librarian of a university are worthy of this beautiful dress and of careful reflection on the part of those who read. His conceptions of the librarian's duty so to use his store of books as to advance the cause of learning is one we do well to remember in these hurrying days. The biographical sketch by Ruth Shepard Grannis should cause many readers to venture further in a study of Drury's career. It is well written, but necessarily limited in its scope.

The discourse of the learned librarian of the Sorbonne on the duties and qualifications of a librarian is also of extreme interest and of no small value even at the present day. The spirit of willing service to all readers has seldom been better expressed than by Cotton des Houssayes. The introduction and notes are sufficiently full to set forth the meaning of the text, but go not a step beyond that. This is, after all, the goal of editing, and it is but seldom reached by ambitious editors. The translation is admirably done, though suffering under the difficulty of being an English rendering of a French version of a Latin discourse.

The remaining volumes of the series will be awaited with renewed interest after reading these first two. W. W. B.

NATIONAL EDUCATIONAL ASSOCIATION. Report of the Committee on Instruction in Library Administration in Normal Schools; prepared by Elizabeth G. Baldwin, May, 1906. Published by the Association, Secretary's Office, Winona, Minn. 71 p. 8°.

So much has something of the nature of this report been needed that a much less satisfactory document would have been received gladly. The present pamphlet of 71 pages, arranged in logical order and covering a discussion of school libraries and the public library in its relations with the public schools, the use of books, the organizing and administering of school libraries, must, in the present stage of school library development, prove exceedingly useful both to the teacher who has her own small library to administer and to the normal school librarian, who must send out normal students ready to deal with the problem of books in schools.

Scattered through the report in appropriate places are references to books and articles on the various phases of library work, especially as it concerns schools and school instruction. These references are for the most part to articles in library periodicals and in the Proceedings of the A. L. A.

The report closes with a summary of school library laws in the different states, with a reference to the annual report on library legislation prepared by New York state. Twenty-two pages are devoted to the strictly tech-

nical part of the librarian's work, which is not overestimated in proportion to the other sides of the work, as is often the tendency in normal school courses in library economy.

If any criticism were to be made of this very timely "gift horse," it would be to recommend still greater simplicity and elimination of the non-essential, in view of the fact that school libraries are usually small libraries and teachers usually very busy people. The trained normal school librarian who understands how to adapt her teaching to the condition and circumstances under which students will have to work will, however, be able herself to do much of the simplifying and eliminating, while finding the report in general a constant help and dependence.

The pamphlet has no index, which seems a pity, as it is quite long enough to need one.

Library Economy and History

GENERAL.

The *A. L. A. Booklist* for October has, beside the annotated list of new books, a list of some new editions of especial interest to librarians, "A few recent reference lists" (with notes), the usual index to reference lists, and summaries of Bulletins 25-28 of the A. L. A. committee on bookbuying.

Hess, Henry E. The making of a fire insurance library. 14 p. O.

A paper read before the 37th annual meeting of the Fire Underwriters' Association of the Northwest, Oct. 3, 1906. There is appended a list of bibliographies relating to insurance.

The Library for October opens with an article on "Writers and the publishing trade circa 1600," by Ph. Sheavyn. Arundell Esdaile writes on "Public schools and their libraries"—the schools being of course what we should call private schools for boys. There are articles on Adrian Kempe van Bouckhout and the quarto New Testaments of 1536, by E. Gordon Duff; on Thomas Love Peacock, by C. Williams, and on "The siege of Rhodes" (illustrated), by A. W. Pollard. W. E. Doubleday gives an account of the L. A. U. K. conference at Bradford, and Elizabeth Lee has a most useful review of recent foreign literature. Frederick M. Crunden has a fifteen-page article on "The public library as a factor in industrial progress."

The Library Assistant for October contains an abridgment of the address of George E. Roebuck at the 11th annual meeting in June, entitled "The Library Assistants' Association: a statement of its use and objects," and a review of the L. A. U. K. meeting in September. The November number contains "Publishers' and public libraries," by W. C. Berwick Sayers, a comment on the "book war" between the *Times* and the publishers. There is an account of the inaugural meeting of the

12th session of the Library Assistants' Association.

The *Library World and Book Selector* for October contains, besides notes on libraries, librarians and books, "How to write a novel," one page; "A midsummer night's dream," one page; "The Babbliographers," two pages, and the annotated list of current books, 10 pages. The articles are all humorous, the last one being a parody setting forth the English idea of "the inaugural meeting of a new American library association."

The November number of *Public Libraries* has "The library and the lecture," by Frank C. Patten; "The care of periodicals," by Fanny R. Jackson; "Library buildings from a librarian's standpoint," by Alta L. Stansbury; "Encouragements in library work," by Waller I. Bullock; "The order department of a branch library system" (Brooklyn Public Library), by Emma V. Baldwin; "Documents for small libraries," by Adelaide R. Hasse, and "A small library's solution for public documents," by Jessie Graham Smith.

In *Putnam's Monthly* for November there is an article by Gustave Michaud on "The reading habit in the United States." There is a chart showing the number of books issued by public, society and school libraries during 1903 in each state, and per 100 of population. Massachusetts leads in this last with 304, Connecticut follows with 227, New Hampshire shows 223, California 207 and New York 155. There is a picture showing "The birth rate of genius and the reading habit"—or perhaps this, too, should be called a chart.

The *Zentralblatt für Bibliotheksven* for October opens with an account chiefly statistical, of the Berlin libraries in 1906, by A. Hortschansky. P. Schwenke contributes "Weitere Denatstudien," in continuation from 1905, and Kl. Löffler has an article on two unknown publications of Westphalian humanists. Half the number is given to the usual careful reviews, to notes and the current bibliography of library economy.

The *Ziegler Magazine for the Blind* has been endowed by Mrs. William Ziegler, widow of the late millionaire. It is Mrs. Ziegler's intention to send the magazine free to every one of the 70,000 blind persons in the United States who may desire it. Mrs. Ziegler will establish a special printing plant, the best equipped of its kind, and the magazine will be printed there in either New York point or Braille. Mrs. Ziegler's interest in the blind is due chiefly to the fact that she has a son who suffers that affliction.

The *Hora Jocunda* of Edinburg is the only other magazine for the blind. The editor and publisher of the magazine founded by Mrs. Ziegler is Walter G. Holmes, 931 Broadway, New York City.

LOCAL

Atlanta (Ga.) University L. The library moved into its Carnegie building from cramped quarters in Stone Hall on Jan. 29, 1906.

For many years, owing largely to the generosity of the late R. R. Graves, of Worcester, Mass., it has had a well-selected library, now numbering about 12,000 volumes, and probably the best to which the colored people have access south of Washington, D. C.

In the old quarters, however, it was impossible to systematize the work, although the decimal system of classification has been employed for many years, and there was a card catalog. Now, as a result of Andrew Carnegie's gift of \$25,000 in 1904, there is a modern library building, of colonial architecture, with a three-story fire-proof stack, having a capacity of 30,000 volumes. At the left of the main room, as one enters the building, there is a reference-room for the use of the students; opposite this room a reading-room and a small room designed to exhibit pictures. Below the reference-room is an auditorium with a seating capacity of 150 persons, while opposite this are rooms in which to store the books belonging to the travelling libraries department. It is the plan to send books out into the schools in which the graduates of Atlanta University teach.

A word here concerning Atlanta University may serve in our description of the library. The school was founded soon after the Civil War by the Rev. Edmund Asa Ware, of Wrentham, Mass., and a few other men and women who believed in the higher education for the exceptional negroes who were to go out as teachers and leaders among their race. It is co-educational, and has a college, normal and high school departments.

The school year is from the first of October to the last of May, during which time the library is open daily, Sundays excepted, for reference and circulation. Ground was broken for the building of the library March, 1905; it was completed and ready for occupancy January, 1906, and was dedicated May 30, 1906.

Librarian, Mary Elizabeth Lane, formerly librarian Free Public Library, Barre, Mass. Assistants, young men selected from the school.

Boston (Mass.) P. L. (54th rpt.—year ending January 31, 1906.) Added 33,551, of which 19,609 were purchased. Issued, home use 1,508,492, of which 401,566 were from the central library, direct to borrowers or through branch delivery. Of the 297,994 v. issued direct from the central library 100,547 v. were fiction. In the children's room 58,533 v. were issued. New registration 3450; total number of active cards 76,661. Receipts \$340,370.55; expenses \$321,102.77 (salaries, including printing and binding departments, \$208,019.39; books \$33,648.86; periodicals

\$6712; newspapers \$1833.71; general maintenance \$70,888.81).

A full report, with plates, tables and a chart.

The agencies of the library were diminished by two during the year, the number now being 199. There is a very slight decline in the total circulation—one of 594 volumes—and Mr. Wadlin notes that this is due to the fact that the library was open one day less in 1905-06 than in 1904-05.

The new building at Codman square, Dorchester, erected by the Public Buildings department, was placed at the disposal of the library department and opened as a reading room March 6. This is the only agency of the library which occupies a new building erected chiefly for library purposes. Although there is a ward-room in the basement having an independent entrance, the remainder of the building is entirely devoted to the library.

A serious fire occurred Nov. 9 in the building 397 Shawmut avenue, occupied by the South End branch. The fire was caused by a defective furnace, and although considerable damage was done to the building the library property suffered little.

On Dec. 12 a fire broke out in the Old City Hall building, Charlestown, part of which is occupied by the Charlestown branch, but the library rooms were but slightly damaged, nor were they closed except briefly.

An arrangement has been made with the Boston Medical Library by which such books as the public library authorities shall decide on for the purpose shall be deposited with the former body. It is proposed to include "such strictly professional works as are used by medical students or by members of the profession." The Boston Medical Library has made a similar arrangement with other large libraries of the vicinity.

A careful analysis of additions is given. Of the 774 volumes of English prose fiction considered 161 titles were accepted, 1230 copies being bought. The usual notes of departments, special collections, etc., are given.

In speaking of the problems of administration Mr. Wadlin says:

"In several respects it seems impossible, under present financial limitations, to reach ideal conditions in the administration of a great public library, serving a mixed population. Our constant effort is toward such conditions, but between the necessity of confining our operations within rigid economy of management, and the desire to overcome certain defects, which are obvious no less to ourselves than to the public, there lies a line of compromise by which our action must be determined. . . .

"For example, books which are in active circulation soon become soiled. Borrowers frequently complain of this, and members of the examining committee have criticised the condition of certain popular books at the cen-

tral library and at the branches. The cause of complaint is legitimate, and is by no means disregarded by us, but it is impossible to at once replace these books. The expense is prohibitive. To determine how long such a book shall be retained in circulation, or whether it shall be rebound when the original binding is worn out if, at the same time, it is more or less filthy, calls for much discrimination. We condemn and discard such books as freely as the money available for replacing them permits, but this is far less freely than would be done under ideal conditions. Many of the popular books at the branches and stations are much soiled. As the custodian of one reading room remarks, "Doubtless the time comes when in any collection of much used books there are many volumes not quite bad enough to be condemned, but far too dirty to be pleasant to the touch." . . .

"We are able through the branch charging system to measure the life of a book upon our shelves. Taking six popular books as a test, it was recently found that, at a branch with a large circulation, such books were often issued from 100 to 120 times, being rebound twice. The shortest period in the life of the book was that previous to the first rebinding."

Brooklyn (N. Y.) P. L. The public lectures of the Board of Education will be given regularly in the auditorium of the Williamsburg branch and the Prospect branch. Later in the season other branches will probably be used for this purpose.

By the decision of the Appellate Division of the Supreme Court Mrs. Mary E. Craigie wins her suit against the city for salary from the time of her dismissal as assistant librarian of the old Brooklyn Public Library to the merging in the new system. The amount is less than \$1000.

At the September meeting of the Board of Trustees the following resolution was passed by the board:

Voted, That this board regrets the action of the President of the Borough of Brooklyn in designating an architect for the Central Library Building previous to the completion of the study of the site provided for by the appropriation of \$25,000 and the preparation of preliminary suggestion or a basis of competition for architects generally, and that it favors such public announcement as would enable other architects of the borough and of the city and from the country at large to present plans or enter into competition, so that the best possible plans may be secured.

At the request of President Coler, of the Borough of Brooklyn, a special meeting was called on Oct. 2, at which Mr. Coler made a statement as to his appointment of Mr. Almirall as architect, and the board adjourned without further comment or action. At the October meeting of the board the reports of Prof. A. D. F. Hamlin as consulting architect, printed in the last and in the current numbers of the *LIBRARY JOURNAL*, were presented, and the consideration of the reports and of the

general subject was made the special order of the ensuing meeting of the board. Since that time a contract has been signed by President Coler on behalf of the city and by Mr. Almirall providing for a payment of \$10,000 for preliminary plans and of an additional \$5000 for any modifications which should be required by the President of the Borough. The contract makes no reference to the approval of plans by the Board of Trustees of the library as was provided for in the resolution of appropriation, and at the November meeting of the board the contract was referred to the law committee of the trustees for written report as to its bearings upon the general question of the relations of the board to the erection of the Central Library Building.

Butte (Mont.) F. P. L. The repairs necessitated by the fire in the library in September, 1905, have been completed, and the first floor of the library is open to the general public. The books, to the number of 20,000, have been stored in the cellar, but are now all in place on the new steel stacks.

California libraries. The August number of *News Notes of California Libraries* contains the reports from the libraries of the state and a full statement regarding the state library. The September number is given over to an account of the children's rooms and corners of California libraries. There is a three-page list of "Guides used by California libraries in selecting books for children." There is much material in the number that will be of interest to library workers for children in other states. It is interesting to note that only three of the libraries reporting maintain a regular story hour. The number includes an account of the University of California Sumner School of Library Methods session of 1906. The October number has the special subject "Books for the blind." This includes an illustrated account of embossed types for the blind, data on occupations and accomplishments of the blind of California, etc.

Carey, O. Dorcas Carey L. The new library building was dedicated Oct. 19. It cost \$12,000, of which \$8000 was given by Mr. Carnegie and \$4000 by Mr. Edwin Brown, of Carey.

Cincinnati (O.) P. L. (Rpt. — year ending June 30, 1905.) Added 30,305; total 245,944 v., 49,388 pm. Issued, home use 734,810. Total number of library cards 45,047. Receipts \$112,170.43; expenses \$107,850.63 (salaries \$26,544.54; books, periodicals etc., \$25,252.77; engineers and janitors \$12,831.90, public card catalog \$11,929.14, fuel \$2841.33); Carnegie fund, receipts \$81,402.57; expenses \$16,886.01.

The general report, followed by a detailed report of departments, by their heads.

Mr. Hodges gives an account of his European trip, as to his visits to libraries and

bookshops. After it he gave four series of "travel talks" to the boys and girls of the library, illustrated by lantern slides.

"The ticket issued for these travel talks was unique in a way. One purpose of the talks always to be kept in view is that they should arouse interest in the places pictured and described sufficient to induce the children to read books in which they would find more about the towns or castles or people. The ticket was in the form of a small pamphlet, the front cover of which served as the ticket proper, though not to be torn off. The first pages of the pamphlet were given up to a list of references on the topics treated. This list was followed by facsimiles of catalog cards and a brief explanation of the catalog and decimal classification of the books in the children's room."

There is an interesting account of Mr. Hodges' attempt to arrange for receiving in exchange the French and German patent office publications, with a citation from a letter of the Commissioner of Patents to say that he does not think government exchange feasible.

The report of the Cincinnati Library Society for the Blind and of the Theological and Religious Library are appended, and the questions given in February, 1905, in an examination for substitutes.

Clyde, O. Carnegie L. The new building was opened to the public on Oct. 30 with appropriate ceremonies. Mr. W. H. Brett, of Cleveland, gave an address on modern libraries.

Colorado travelling libraries. The railroads of Colorado have notified the Colorado Travelling Library Commission that they can no longer carry books for the travelling libraries without charge. This will seriously increase the cost of the work of the commission.

Columbia University L. From Oct. 15 to Nov. 10 there was shown in room 307 of the library a collection of illuminated medieval manuscripts, from the library of Mr. J. Pierpont Morgan. It was the finest display of such material ever shown in this country, and was arranged most admirably for exhibition purposes. There were 63 manuscripts in the exhibition. Many of these were described in detail in the public press, which gave much attention to the exhibit.

Owing to the increased use of the library since the opening of the subway it has been found necessary to restrict its use by those not of the university community. The new regulations are not so stringent as to exclude those who really need to use the library, and officers of the New York University, the City College, the Metropolitan Museum of Art, and the Museum of Natural History, and other residents of the city of mature years who desire to engage in definite research that cannot be conducted in public

or other libraries are welcomed, but unless they are personally known to the librarian, strangers are obliged to file satisfactory applications for the privilege, suitably indorsed.

Grand Rapids (Mich.) P. L. An error was made in the October LIBRARY JOURNAL in noting the number of books issued for home use 1905-06, as stated in the 35th report. It should be 228,319 instead of 316,678. The latter number is that of the total recorded use of the library.

The Collier collection of original drawings and paintings by distinguished American painters and illustrators was shown at the library Sept. 7-21. There were over 18,000 visitors to the collection.

Haines Falls (N. Y.) F. L. At the meeting of the State Board of Regents in October the charter of the Haines Falls Library was made permanent.

Hartford (Ct.) P. L. (68th rpt.—year ending May 30, 1906.) Added 5225; total about 90,000. Issued, home use 204,617, of which 112,942 were novels, 30,895 children's stories and 11,359 other books for children. New registration 2054; total registration 7535.

The work of rewriting the library catalog on cards of standard size has been begun.

A full report is given of the detection and conviction of the young man who mutilated many library books (L. J. 31: 239).

Harvard University L. Ground was broken on Nov. 1 for an addition to Gore Hall, the library building of the university. It will be two stories high, and extends 29 feet from the north side of the main building. It is to be ready for use in October, 1907.

Jamaica, L. I. The Jamaica branch of the Queens Borough Library was opened Nov. 1. It occupies the ground floor of Fraternity Hall, on Herriman avenue.

Lawrence (Mass.) F. P. L. (34th rpt.—year ending Dec. 31, 1905.) Added 2199; total 57,172. Issued, home use 108,381; reference use 39,915. New registration 913. Receipts \$16,882.62; expenses \$16,882.62 (salaries \$7655.09, books \$2067.62, periodicals \$505.38, binding and rebinding \$1070.50, rent \$1600, lighting \$1069.56, fuel \$569.60).

There is a strong plea for a city appropriation of \$15,000, \$13,000 being the amount appropriated in 1905. The circulation and the reference use show an increase over 1905.

Lincoln (Neb.) City L. (Rpt.—year ending May 31, 1906.) Added 4224; total 19,409. Issued, home use 119,560, of which 38,763 were from the children's room. New registration 2139; total registration 7144.

A finding list was printed, the first since the library was burned in 1899, but it has had a very small sale, even at ten cents a copy. "The monthly bulletins and the card catalog are used much more than the finding list."

The reserving of fiction has been discontinued.

The library has adopted the "duplicate pay collection" system.

The Supreme Court has decided that the library may erect a building in Central Park. The library board is considering asking Mr. Carnegie for \$350,000 for the building.

Los Angeles (Cal.) P. L. The Los Angeles Public Library, to quote the local press, "is so far as known the first to introduce a library republic." This refers to the Senate recently established, whose constitution is as follows:

First—This organization shall be known as the Library Senate of the Los Angeles Public Library.

Second—Its object shall be to promote the efficiency of the Los Angeles Public Library by regular formal consultation of all heads of departments, and all permanent assistants therein, with the librarian. Consultation with the board of library directors, with members of the staff and with other persons may be arranged as need arises.

Third—This library senate shall be composed *ex officio*, of the librarian, the heads of all departments, the permanent assistants of all departments, and an elected representation from the general attendants to be elected by vote of that body, one each from the three classes into which these attendants are divided, in order of their seniority.

Fourth—This library senate is an advisory body. Its recommendations and actions shall be subject always to approval by the librarian and the board of library directors.

Fifth—The constitution and by-laws may be amended at any time upon two weeks' notice by vote of a two-thirds majority of this senate; provided, that said amendments shall be first approved by the members of the board of library directors.

By-laws are as follows:

First—The officers of the library senate shall be president and clerk and standing committees.

Second—The president and clerk shall be elected by two-thirds majority vote of the senate; the standing committees shall be appointed by the president.

Third—The library senate shall hold regular meetings the first and third Tuesdays of each month, between the hours of 2 and 3 p.m.

Fourth—Since the object of this fortnightly session is the betterment of the service of this library, all attendants are invited and expected to co-operate. Suggestions should be made to the heads of departments for reference to the library senate.

Fifth—This senate shall, in its discretion, call meetings of the entire staff; and, in its discretion, may request conferences with the library board.

Sixth—No meetings shall be held in the absence of the president, unless by special request of the board of library directors.

Seventh—Any person may be invited to attend a session of the senate by unanimous vote of senators present.

A new rule has been adopted as to lost books, by which the library charges only "the price it actually cost the library" (which seems to mean the amount paid the book dealer, without the expense of entering, cataloging, etc.), plus 10 per cent. for posting notices.

The difficulties as to civil service examinations are not yet entirely settled.

New York P. L. (Rpt.—year ending June 30, 1906.) Added 58,887 v., 121,332 pm. Total in reference department (exclusive of 265,461 pm.) 684,531 v.; in circulation department 565,482 v.; in both 1,249,994 v. Issued, home use, from the 35 branches forming the circulation department, 4,752,628 v. Visitors to reference department 216,428 v. In the reference libraries 173,223 desk applicants consulted 778,652 v.

Seven Carnegie branches have been opened (a total of 18), one is ready for opening, five more have buildings under way, and three new sites have been secured.

Again there is a marked increase in all departments of the library. The circulation has made the enormous advance of 1,061,128 v.; the number of visitors to the reference department has increased 16,190. The number of desk applicants has increased 13,528, or 8 per cent., and 7 per cent. of this increase is in the Astor evening service for the first six months of 1906.

On Jan. 1, 1906, this extension of the library hours began, the Astor Library being kept open until 9 p.m. on weekdays, six of the circulation branches having the hour of evening closing changed from 9 to 10, and 12 branch reading rooms being opened Sunday afternoon and evening. Dr. Billings states that it is too early yet to draw final conclusions as to the evening opening of the Astor Library. Observation shows that many of the evening users are those who come also in the daytime, and that many others are new to the library. The proportion and the value of the use may be shown later. The average number of volumes used by evening readers was 1.9, as against 4.9 for the day readers.

"The small number of volumes called for per reader in evening service seems to indicate that more reading as reading is done at night and less research work involving extensive investigation, a conclusion that agrees with the personal impressions of the desk attendants.

"Qualitatively night reading differs as much from day reading as it does quantitatively. In both day and night service the group of American and English literature holds first rank and geography last. American history is second during the day, but eighth at night. Foreign literature is second at night, but fourth in day time. Economics and sociology are third during the day, but fourth at night. Applied science, technology, useful arts, etc.,

is third at night, but only sixth during the day. Pure science is fifth in the day time, but ninth at night, its rank at night being taken by religion and philosophy, the latter group ranking seventh during the day. There is less demand at night for foreign history than during the day, its rank being eleventh at night and eighth in day time. But art and archaeology, which ranks ninth in day service, rises to seventh at night.

"Demand at the delivery desk for current periodicals differs strikingly from the demand for books recorded at the general desk. Readers of magazines demand first the technical journals, next turn their attention to the general periodicals, illustrated weeklies, and the like; English and American serials rank third in the day time and fourth at night, art journals, etc., ranking third at night and fourth in day service. Then follow economics and sociology, and foreign literature, as fifth and sixth. Science is seventh during the day, but drops to eighth at night, and religion and philosophy, eighth during the day, rises to seventh at night. Foreign history, American history, geography, and orientalia then follow in ninth to twelfth places."

Detailed reports are given of the activity of the many departments of the library, and full tables are appended.

Pictures and plans are given of six of the new Carnegie buildings, showing an interesting variety, arising chiefly from differing conditions of site, surroundings, and so forth.

The report on the new central building states that of the exterior marble work but about seven per cent. remains to be set. The lower portions of the building on Fifth avenue, 40th and 42d streets, are finished as to the exterior, except the electric lights. Stack work was started July 15, 1905, but was delayed by the housesmiths' strike. Contracts for the general interior finish work, for the plumbing work, for the electrical equipment, and for the approaches work are all under consideration.

New York P. L. The opening of a Carnegie building for the Webster branch, at 1465 Avenue A, which took place on Wednesday, Oct. 24, at 4 p.m., included some features of unusual interest. This library is in a Bohemian district, and the new building contains about 1600 volumes in this language, collected very largely through the interest of a representative advisory committee of Bohemians residing in the neighborhood. Owing to the interest taken by persons of this nationality in the library, this committee was given charge of the musical part of the opening exercises, and these exercises also included an address by the chairman of the committee, Mr. Thomas Capek, who spoke first in Bohemian and then in English. At the close of Mr. Capek's address he presented on behalf of the committee an illuminated

set of resolutions to Mr. E. W. Gaillard, for many years at the head of the Webster Library, testifying approval of his efforts on behalf of the Bohemian residents of the neighborhood. The building was turned over to the city in an address by Mr. John L. Cadwalader, of the library trustees, and was accepted by Vice-President Elias Goodman, of the board of aldermen. The presiding officer was Mr. Everett P. Wheeler, who also made an address on behalf of the East Side Settlement, under whose auspices the library was first opened on April 3, 1894. The settlement operated the library until its consolidation with the New York Public Library on Jan. 1, 1904, and has given it house room until its removal to the new building at this time. At the exercises two forms of printed program were used, one in English and one in Bohemian.

The building with its equipment cost about \$65,000, exclusive of the site, which was furnished by the city. The branch will have on its shelves 19,571 volumes.

About 10 more of the Carnegie library buildings are in various stages of construction.

On the principle that an exhibition is one of the best ways of bringing an important accession to the notice of the public, the print department of the New York Public Library has placed on view in the Lenox Library building a selection of prints from the A. A. Hopkins collection of photographs of Italian works of art, which was deposited in the print room last summer. The entire collection comprises over 3000 pieces, of which about 1200 are pictures of architecture and sculpture, while the rest, nearly 2000, are reproductions of Italian paintings. Of the latter, a number have been selected for exhibition. They include especially many portraits of notables, which add a personal interest to the artistic value.

Newark (N. J.) F. P. L. By the new valuations of the tax commissioners the library will receive an increase toward maintenance of \$24,000 a year. It receives one-third of a mill of the total valuation. The city has granted in addition \$10,000, so that if this grant is not renewed the increase to the library will be only \$14,000.

A geographical exhibition was opened in the library Oct. 27. It was primarily designed for the benefit of teachers and pupils of the public schools, but is of general interest.

Newport, R. I. Redwood L. and Athenaeum. (176th rpt. — year ending July, 1906.) Added 808; total 49,042. Issued, home use 14,257 (fict. 69.3 per cent.).

The librarian suggests the establishment of a "duplicate pay collection."

Norwalk (Ct.) P. L. The library has been losing books for some time, and Charles W.

Brewitz, a young German, was at last discovered as the thief, having left two books at a boarding house. Although he has carefully removed all library marks, the members of the household suspected that they were library property and reported the matter. A search of his new room in South Norwalk revealed more books and he was at once arrested. He pleaded guilty, and said that he loved books, was too poor to buy them, and could not resist the temptation to acquire them. He was sentenced to 30 days in the Bridgeport jail, with costs. Some of the books were taken from the South Norwalk Library.

Olneyville (R. I.) F. L. At the annual meeting Oct. 3 the librarian, Mrs. H. H. Richardson, presented a report showing a circulation for the year of 21,402. Volumes in library 9027. A children's room has been established during the year.

Philadelphia (Pa.) F. L. The new building of the Frankford branch of the Free Library of Philadelphia, at Frankford avenue and Overington street, was formally dedicated on Tuesday evening, Oct. 2. Exercises were held in the lecture room, which was filled to its full capacity.

William W. Foulkrod, candidate for Congress, spoke of the development of the library movement in Frankford, tracing it successively from its modest inception about the year 1820 to the establishment of the Frankford Library in conjunction with the Wright's Industrial and Beneficial Institute, and the later amalgamation with the Free Library in 1900.

Mr. T. Comly Hunter, who gave the library site, made an address which was a plea for increased interest in education. Henry R. Edmunds, Esq., president of the Board of Education, also spoke, and the final address was made by Mr. John Thomson, librarian of the Free Library.

The Frankford branch is the second completed of the Carnegie buildings. It stands on a lot 66 x 150. It is of brick, with light terra cotta trimmings, and cost \$60,000. The auditorium is on the first floor, back of the main building, and has a separate entrance. The library contains 15,000 volumes.

The West Philadelphia branch is already in use, and the Lehigh avenue branch will be dedicated shortly. The recent award of the contract for the Roxborough branch and the completion of the plans for one at Chestnut Hill and Wissahickon makes 10 in all, or one-third of the number ultimately contemplated by Mr. Carnegie's gift.

Quincy, Mass. Thomas Crane L. (35th rpt., 1905.) Added, by purchase, 528, replaced 231, gifts 117; total in library not given. Issued, home use 85,058. New registration 1057; total registration 8947.

"Nothing has happened to intermit the work of the library, which has gone steadily and quietly on."

Rensselaer (N. Y.) P. L. (Rpt.—year ending Aug. 31, 1906.) Added 1145; total 4298. Issued, home use 14,899. Total number of borrowers 615.

A lecture course was carried on during the year.

St. Paul (Minn.) P. L. (24th rpt.—year ending Dec. 31, 1905.) Added 9102; total 80,248. Issued, home use 263,051. Reference room attendance 22,445. New registration 10,890; total registration 18,296. Receipts \$97,794.25; expenses \$71,101.22 (salaries \$17,684.39, books and periodicals \$12,956.53, binding \$2,914.30, light and power \$2781.13, heat \$1848.14).

"In this, as in all libraries, it is impossible to supply the demand for new fiction. This has been somewhat obviated by a pay collection of the most popular novels, for which five cents a week is charged."

Sandusky, O. Carnegie L. For the second time within a few months vandals broke into the Carnegie Library Sept. 28, and completely ransacked the building, pulling down books and breaking open desks. They did not take money or stamps which they found. There is no clue to the miscreants.

San Francisco (Cal.) P. L. On Oct. 9 an injunction was issued, at the request of the Board of Library Trustees, to restrain the Board of Public Works from erecting on the library site on Van Ness avenue any building or buildings for use for any other purpose than as a public library and reading room. This action was called forth by the plan of the Board of Public Works to erect a temporary city hall on the library site. In issuing the injunction Judge James M. Seawell said:

"It could not by any reasonable interpretation of the charter have been intended by its framers that the proceeds of a bonded indebtedness could be applied to any other purpose than that for which such indebtedness was incurred. To hold otherwise would be to defeat the popular will, as expressed at the bond election, and frustrate the purpose for which the election was held and the indebtedness incurred. The bonds and their proceeds became a trust fund to be used only for library purposes, and the land purchased became impressed with a public trust which the Board of Supervisors has no power to change."

... If the Board of Supervisors may have the use of the land for a city hall, it has equal power to use the remaining proceeds of the library bonds for the erection of a city hall."

Superior (Wis.) P. L. (17th rpt.—year ending June 30, 1906.) Added 1782; total 15,966. Issued, home use, 62,307. New registration 1800; total registration 4749. Receipts \$9997.69; expenses \$5764.77 (salaries \$2581.92, books \$1003.86, periodicals \$212; binding \$344.45, heat \$228.88, light and water \$268.35).

The fiction percentage was 70.

"The books other than fiction read by the adults divide themselves easily into three classes: those read by the general reader; those read by the student and club worker, and those read by the mechanic and artisan. Of this last class of books those on railroad subjects have been the most read. Many new readers came for them after a list of such books was posted in the roundhouses, but all the technical books have been well used, even some trade catalogs that were put in by way of experiment."

There is a map of the city, showing the 16 distributing centers of the library.

University of California L., Berkeley. The regents of the University of California adopted on Sept. 20 the report of the commission on the future organization, maintenance and regulation of the Bancroft Library, recommending the establishment of an Academy of Pacific Coast History on the lines of the British Museum, under the supervision of the regents and with the Bancroft collection as a nucleus.

The new academy will eventually be installed in the new University Library, for which the late Charles F. Dole left \$750,000. The expenses of its maintenance are estimated at \$10,000 a year, which will be met by the formation of a council to consist of persons willing to subscribe \$500 a year each for a period not to exceed three years. It will be under the immediate care of a curator and staff of assistants.

Pending the formation of the council, the present commission, consisting of Rudolph Taussig, J. C. Rowell, H. Morse Stephens and Dr. Benjamin Ide Wheeler, president of the university, will remain in power.

University of Maine L., Orono. The new library building, the gift of Mr. Carnegie, was formally dedicated on Nov. 2. Mr. Carnegie's original gift was \$50,000, to which he later added \$5000 for furniture. The building is of Hallowell granite, of a modified Greek type of architecture. The main building is 30 x 96, and the stack room at the rear 42 x 32. The interior is finished in Flemish oak. The stack capacity is 73,000 volumes, the library now containing about 35,000. The building is placed on a very beautiful site at the south end of the campus. The main address at the dedicatory exercises was made by the librarian of the university, Ralph K. Jones, who spoke on "The relation of the university library to the state."

Valley Falls (N. Y.) F. L. A provisional charter was granted to the library at the meeting of the State Board of Regents in October.

Wauscon (O.) Carnegie L. The dedication of the \$10,000 Carnegie Library took place Nov. 1. The building is of the old Dutch architecture.

FOREIGN

British Museum L. (Return—year ending March 31, 1906.) There were 214,940 visits to the reading-room, 21,857 to the newspaper-room, 286 to the map-room, 10,623 to the department of manuscripts, 3552 to the department of Oriental printed books and manuscripts and 8614 to the print-room. There was a decrease of 11,383 from the number for 1904-1905.

31,752 volumes and pamphlets were added during the year, 64,069 parts of volumes (including periodical numbers), 1275 maps in 8508 sheets, and 8222 musical publications. 228,638 numbers of the newspapers of the United Kingdom were received; 35,525 numbers of colonial and foreign newspapers have been given and 15,263 bought. 3905 other articles (broad-sides, parliamentary papers, etc.) have been added. The total number of articles added, exclusive of newspapers, was 109,283.

Acquisitions of interest were 90 English and Scotch books printed before 1640, and 42 foreign incunabula. The department of manuscripts added 220 mss., 300 charters and rolls, 208 detached seals and casts. The Oriental department added 1379 books and 102 mss. That of prints added 3984 pieces.

Frankfort a. M. Freiherrlich Carl von Rothschilds'sche öffentliche Bibliothek. The library has issued a report for 1901-1905, summarizing the activities and results of five years' work.

A matter of special interest is the agreement between this library and the Stadtbibliothek (city library), of Frankfort, according to which the former relinquished its books on archaeology to the city library, while the latter in turn gave up its works on comparative philology and on the Romance and Germanic languages, each library binding itself to leave to the other the further cultivation of the field thus relinquished. This marks an extension of a plan of co-operation not unknown in our country. Special care is taken in the matter of safeguards against fire; also, the shelf-list is kept in a fire-proof case, in order to have a record for insurance companies in case of necessity. The library is open daily, on weekdays from 11-1 and 4-8, Sunday from 10-1. Books cannot be ordered in advance. The new rules of 1901-02 fix the age at which persons are admitted at 17. During 1905 the library was open on 349 days; daily average, 80 readers; total of readers for the year, 28,076. Volumes used in the library, 13,582; volumes issued for home use, 16,326; total, 29,908. The two classes most used were literature of various countries (7439 volumes) and art (4126 volumes). Incidentally, we are informed that according to section 6 of the rules, works in *belles-lettres* are issued only for scientific purposes. The record of interlibrary loans shows 225 volumes sent out and 197 volumes sent for.

It is to be noted also that this evidently well-regulated library is one of those which co-operate in the work of the bureau of information instituted in connection with the Prussian *Gesamtkatalog*. F. W.

Islington, England. The first of the five Carnegie libraries of Islington was opened on Sept. 21. It departs from the customary usage in Great Britain in being an open access library, and has also a children's room. No newspapers are to be taken except the *Times* and the local papers, but the "situations vacant" advertisements from the principal advertising papers are posted in the hall. There is a lecture room, with a capacity of 150. In the first three weeks of the library the number of borrowers reached almost 10,000, and registration was at one time closed in the children's room.

Wellington (New Zealand) P. L. A valuable collection of birds, fishes and animals has been given the library by Mr. E. W. Petherick, and is on inspection at the Newtown branch.

Gifts and Bequests

Bernardsville, N. J. The library has received from F. P. Olcott \$200 for the purchase of books.

Columbia University, N. Y. City. The library has received \$500 for the purchase of books, from Isaac N. Seligman, of the class of 1876.

Dartmouth College, Hanover, N. H. By the will of the late Rev. Edmund F. Slafter Dartmouth College receives \$1000 for a library fund. The Rev. Mr. Slafter was an Episcopal clergyman, who left a large part of his estate, directly or in trust, to various organizations for library purposes. The exact sums and their destination are noted separately in this column.

Ellsworth (Me.) City L. Ex-Mayor John De Laitre, of Minneapolis, has given his native city \$3000 worth of stock, paying 6 per cent., for the use of the library. He suggests that the income be used for new books.

Episcopal Theological School, Cambridge, Mass. The library of the school is to receive one-half of the net income of a trust fund to be created from the estate of the Rev. Edmund F. Slafter (amount not stated).

Foxboro, Mass. Boyden L. By the will of Mrs. S. Almira Alden, to become operative on the death of her son, Erastus C. Alden, the library receives \$500 for new books.

Genoa, Ill. Samuel Stiles has given \$1000 for a public library and reading room, for which rooms have been taken, on a 10-year lease, over the Farmers' State Bank.

Halifax (N. S.) City L. The will of the late Jairus Hart includes a bequest of \$10,000 for the purchase of books for the city library, on condition that the city authorities provide a suitable building for the library.

Hillsdale, Mich. The gift of the late C. T. Mitchell, noted in the October issue, includes his house for a building and \$10,000 as a fund for books and maintenance.

Massachusetts Diocesan L. By the will of the late Rev. Edmund F. Slafter one-half his estate, after payment of legacies, is left in trust for the diocesan library.

Massachusetts Historical Society, Boston, Mass. The society receives \$500 by the will of the Rev. Edmund F. Slafter.

Monmouth, Ill. Warren County L. Assoc. The executors of the estate of the late Dr. Henry Tibbs, of Kirkwood, have offered to build for the library a building to cost not less than \$40,000. The conditions are that the association shall raise \$10,000, to be used either in purchasing the site, in furnishing the building or in increasing the endowment fund, and that the building be placed on the Dr. Sherrick property, East Broadway.

Nashua (N. H.) P. L. In 1904 a bequest of \$50,000 was received from Daniel Hussey, \$40,000 to be used for a building and \$10,000 for a book fund. The will was made in 1871, and at the time it became effective Nashua already had a library building. A compromise has been effected with the heirs, and \$15,000 is now available, and has been made the Daniel Hussey fund for the purchase of books.

New England Historic Genealogical Soc., Boston, Mass. The society receives \$500 for library purposes by the will of the late Rev. Edmund F. Slafter.

New Haven (Ct.) P. L. Mrs. Mary B. Ives, widow of Hoadley B. Ives, has offered, "if the city will provide a suitable site, to provide a sum of money which in the opinion of her advisers is sufficient to construct a library building which shall be an ornament to the city and worthy of the site." Her attorney mentions \$300,000 as the probable cost of the building. Mrs. Ives had made provision for this purpose in her will, but the present need for a building is so great that she decided to make the gift at once. The library board has accepted the gift, as far as it has the power to do so, and there is no doubt that the board of aldermen will complete the acceptance.

Norfolk (Va.) P. L. The library receives \$1000 from the estate of the late Edward W. James.

Oakham, Mass. Mrs. Celia E. Fobes and her daughter, Mrs. Harriet F. Gifford, of Tarrytown, N. Y., have given \$6000 to Oakham for the erection of a public library. It

was voted to accept the gift at a town meeting held Nov. 7.

Santa Paula, Cal. Nathan W. Blanchard has offered \$10,000 to the city for a building for a public library, to be known as the Dean Hobbs Blanchard Memorial, on condition that \$5000 more be raised.

Shelby, O. Marvin Memorial L. \$2000 has been given the library by an unknown donor. It is to be used for the improvement of the library building and the erection of an addition to it.

Stoneham (Mass.) F. P. L. The town has accepted the bequest of Georgiana M. Dike for library purposes.

Thetford, Vt. Latham L. The library receives \$500 by the will of the late Rev. Edmund F. Slafter.

William and Mary College, Williamsburg, Va. The college library receives \$2000 by the will of the late Edward W. James.

Librarians

ALEXANDER, William H., of the New York State Library School, class of 1906, has been appointed assistant in the Library of the Association of the Bar, New York. For the past year Mr. Alexander has been assistant in the law section of the New York State Library.

BELL, Miss Marion C., Illinois, 1906, has been appointed assistant cataloger in the Bryn Mawr College Library.

BISCOE, Miss Ellen D., graduate of the New York State Library School, class of 1896, has resigned her position as assistant in the New York State Library to become instructor in the Drexel Institute Library School.

CROFTON, F. Blake, for nearly twenty-four years provincial librarian of Nova Scotia, retired from office Oct. 1. In 1897 Mr. Crofton was one of the vice-presidents of the International Library Conference, held in London.

CURTIS, Miss Florence R., New York State Library School, 1898, has resigned her position at Potsdam, N. Y., to become librarian of the Saratoga Athenæum Library.

DONOHUE, Miss Annie F., for some time assistant librarian, has been appointed by the government of Nova Scotia provincial librarian, to succeed Mr. F. B. Crofton.

DUREN, Miss Fanny, who was for some time an assistant in the Iowa Library Commission, has been appointed librarian of the two Carnegie libraries of Waterloo, Ia.

GARDNER, Miss Jane, Pratt Institute Library School, 1902, has been appointed head of the circulating department of the Seattle (Wash.) Public Library.

Goss, Miss Edna L., Illinois, 1902, has resigned her position as librarian of the Illi-

nois State Library of Natural History to accept a position in the cataloging department of the Bryn Mawr College Library, where she will help with the revision of the catalog.

GOULDING, Philip S., of the New York State Library School, 1898-99, has resigned his position as cataloger in the Library of Congress to become catalog librarian at the University of Illinois.

GROVES, Miss Charlotte E., B.L.S., New York State Library School, 1903, has resigned her position as assistant classifier in the New York State Library to become assistant in the catalog division of the Library of Congress.

HEMANS, Miss Ida M., of the New York State Library School, 1905-6, is organizing the Public School Library of Naples, N. Y.

HENRY, Miss Eugenia M., B.L.S., New York State Library School, class of 1906, has been appointed assistant in Clark University Library, Worcester, Mass.

HERRON, Miss Winifred A., of the New York State Library School, class of 1896, has been appointed assistant in the Public Library at Troy, N. Y.

HILLIS, Miss Julia E., of the New York State Library School, class of 1907, has been appointed general assistant in the New York State Library.

HISS, Miss Sophie K., B.L.S., New York State Library School, class of 1906, has been appointed assistant in the catalog department of the New York State Library.

HOWELL, Miss Elizabeth S., Pratt Institute Library School, 1904, has resigned her position with the Brooklyn Public Library to return to the Princeton University Library.

LAURIE, Charles F., curator of the Erie (Pa.) Public Library Museum, died on Oct. 24, after a lingering illness. He had held his position since 1899, and had made the work of importance.

LEONARD, Miss Mabel E., B.L.S., New York State Library School, class of 1906, has resigned her position as assistant in the New York State Library to become a cataloger in the Library of Congress.

MATHER, Isaac, of Cheltenham Hills, celebrated his 100th birthday on Oct. 27. Mr. Mather became a member of the Abington Library Association of Jenkintown seventy-nine years ago, and for fifty-three years was its president. On the occasion of his centenary he was presented with an engrossed set of resolutions by the Library Association, recounting his services to the library.

MONTGOMERY, Miss Florence P., of the New York State Library School, 1904-5, has resigned her position as assistant in the Forbes Library, Northampton, Mass., to become cataloger and general assistant in the Roswell

P. Flower Memorial Library at Watertown, N. Y.

RATHBONE, Miss Georgia, Pratt Institute Library School, 1906, has been engaged as assistant by the Utica Public Library.

RUPP, Miss Julia, Pratt Institute Library School, 1906, has been appointed librarian of the Carnegie Library, Oil City, Pa.

SAWYER, Miss Ethel, Pratt Institute Library School, 1906, has been appointed librarian of the Stevens Point (Wis.) Norman School.

SEVERANCE, H. O., assistant librarian of the University of Michigan, has been appointed to the librarianship. He has been connected with the library for nine years.

SHERWOOD, Miss Grace M., formerly connected with the Brown University Library, has been appointed assistant in the Rhode Island State Library.

SPENCER, Miss Irma M., of the New York State Library School, 1905-6, has been appointed assistant in Vassar College Library.

STEFFA, Miss Julia, of the New York State Library School, class of 1907, has been appointed assistant in the catalog department of the New York State Library.

THOMAS, Miss Helen M., of the New York State Library School, class of 1906, has been appointed reference assistant in the Library of the University of Michigan.

STEVENS, Edward F., Pratt Institute Library School, 1903, has resigned his position in the Yale University Library to accept the headship of the Applied Science Reference Room of the Pratt Institute Free Library, Brooklyn, N. Y.

THOMAS, Rev. Joseph C., librarian of the Methodist Historical Society, died recently at Clifton Springs, N. Y. During the Civil War Mr. Thomas was chaplain of the 88th Illinois Infantry, and he secured for his regiment, and afterward for the army hospitals, good reading matter in place of the poor and vicious matter available when he first undertook the work. In 1863 he was made "General Reading Agent for the Army of the Cumberland," and then organized the "Loan library system," to furnish libraries to all parts of the Federal armies. He prepared 215 libraries, each containing 125 volumes, and 70 additional libraries, containing 75 volumes each, a total of 285 distinct libraries, a total of 32,125 volumes, containing 3285 distinct works on different subjects, the most valuable being duplicated. He secured the placing of these in general hospitals, at the permanent posts, in large forts, with separate regiments, on war vessels, at the principal army stations of the Christian Commission, and at other available places. In the final breaking up of hospitals and camps resulting from the close of the war many of these collections were lost, but enough were saved to supply

more than fifty permanent posts and forts in different parts of the country and place 25 libraries on warships, and for a long period afterward these were in almost daily use. In 1892 Mr. Thomas became librarian of the Methodist Book Concern and of the Historical Society, two positions later merged into one. Mr. Thomas was for many years a member of the New York Library Club.

WRIGHT, Charles E., Pratt Institute Library School, 1897, has been appointed superintendent of the Carnegie Institute, Duquesne, Pa., where he has been assistant librarian for several years.

Cataloging and Classification

SUPPLEMENT TO THE LONDON LIBRARY CATALOGUE. Dr. Hagberg Wright's third supplement to the big catalogue of the London Library comprises the additions made from Jan. 1, 1905, to March 1 of the present year. There is no relaxing in the severely systematic method of cataloging. The chief feature of this part is the exhaustive manner in which the contents of certain works are dealt with.

In addition to the new supplement, Dr. Wright has just issued a list of periodicals, publications of academies and learned societies, annuals, and dictionaries on the shelves and tables of the reading room of the London Library.

AMERICAN JOURNAL OF EDUCATION. In C. W. Bardeen's catalog of Henry Barnard's books it is stated that volume 25 of the *American Journal of Education* consists of the report of the Commissioner of Education for 1879. The copy in the John Crerar Library consists of the report for 1876; those in the Chicago Public Library and the University of Chicago Library consist of the report for 1880. The copy in the Newberry Library does consist of the report for 1879. It would be interesting to know what sets of this journal in other libraries contain as volume 25.—*Note from the John Crerar Library.*

ARGENTINE REPUBLIC. *Ministerio de relaciones exteriores y culto.* Catálogo de la biblioteca, mapoteca y archivo del ministerio de relaciones exteriores y culto. Buenos Aires, Talleres gráficos de la penitenciaría nacional, 1905. 6+555 p. 26cm.

AUSTRALIA. *Parliament.* Catalogue of the library of the parliament from its commencement to May, 1906. Melbourne, J. Kemp, 1906. 7+227 p. 24½cm.

INSTITUTE OF ACCOUNTANTS AND ACTUARIES, Glasgow. Catalogue of the books in the library of the Institute of Accountants and Actuaries in Glasgow. Glasgow, printed

for the Institute by W. Hodge & Co., 1906. 8+334 p. 25½cm.

LUND UNIVERSITY, Sweden. Odmanska donationen till Universitets bibliotek. Lund, Gleerup, 1906. [41+104 p. O.

A catalog of the books on psychiatry and neurology included in the medical library given to the university by Professor Svante Odman in 1901, on the occasion of his retirement from the directorship of Lund Hospital and his professorship at the university.

Bibliography

BORDEAUX, HENRY. Britsch, Amédée. Henry Bordeaux; biographie critique. Paris, E. Sansot & Co., 1906. 67 p. 19cm. Bibliographie, p. [65]-67.

CLEMENCEAU, GEORGES. Le Blond, Maurice. Georges Clemenceau; biographie critique. Paris, E. Sansot & Co., 1906. 56 p. 18½cm. Bibliographie, signed Ad. B. (i.e., Ad. van Bever), p. [51]-56.

COLUMBIA RIVER INDIANS. Lewis, Albert Buell. Tribes of the Columbia Valley and the coast of Washington and Oregon. (*In* *Memoirs of the American Anthropological Association*, September, 1906. 1:147-209.)

This article is followed by a four-page annotated bibliography.

COPPÉE, FRANÇOIS. Gaubert, Ernest. François Coppée; biographie critique. Paris, E. Sansot & Co., 1906. 70 p. 18½cm. Bibliographie, signed Ad. van Bever. p. [57]-70.

FLORENTINE GUILDS. Staley, Edgumbe. The guilds of Florence; illustrated after miniatures in illuminated manuscripts and Florentine woodcuts. London, Methuen & Co., [1906.] 23+622 p. 26cm. Bibliography, p. 585-599.

FOLK-LORE. Thomas, N. W. Bibliography of folk-lore, 1905.

The Folk-Lore Society of London has recently published in pamphlet form a bibliography of the folk-lore for 1905. This is classified and annotated and is followed by an index of authors and subjects, together with a list of periodicals. The bibliography comprises 36 pages of the same size as the *Folk-Lore Journal*.

FRANCE. Hauser, Henri. Les sources de l'histoire de France. xvii^e siècle (1494-1610). Paris, A. Picard et Fils, 1906. v. 1. 23cm.

Contents: v. 1; Les premières guerres

d'Italie. Charles VIII. et Louis XII (1494-1515).

GEOGRAPHY. Verein für Erdkunde, *Leipzig-Bibliothek*. Katalog der bibliothek des Vereins für Erdkunde zu Leipzig hrsg. von Dr. Rudolf Reinhard. Leipzig, C. G. Naumann, 1905. 8+531 p. 23cm.

HUNGARIAN LITERATURE. Riedl, F.: A history of Hungarian literature. N. Y., Appleton, 1906. 7+293 p. D. Bibliography (1 p.).

INDUSTRIAL ARTS. Great Britain. *Patent Office. Library*. Class list and index of the periodical publications in the Patent Office Library. Ed. 2. London, H. M. Stationery Office, 1906. 291+7 p. 16cm.

NEGRO. Library of Congress. Select list of references on the negro question; comp. under the direction of A. P. C. Griffin. Second issue. Wash., D. C., Gov. print. Office, 1906. 61 p. 1. O.

PENFIELD, S. L. Pirsson, L. V. Samuel Lewis Penfield. (*In American Journal of Science*, November, 1906. 22:353-367.)

This article is followed by a chronological bibliography on the writings of S. L. Penfield from 1877 to 1906. Nearly all of these titles are on mineralogy.

PRINTING. Hatch, Lewis. A few books for the student of books and printing. (*In The Printing Art*, October, 1906. 8:97-100.)

A useful selected annotated list on the history and principles of typography. Very expensive books as a rule have been omitted, and nearly all are such as are in print. The list is a suggestive and valuable one for libraries that wish to strengthen this department.

UNITED STATES NAVY. Harbeck, C. T. Contribution to the bibliography of the history of the United States navy. Cambridge, Mass., privately printed at the Riverside Press, 1906. 8+247 p. 4°.

This admirably printed and arranged bibliography is most comprehensive in scope. Part 1 covers the history proper, under some twenty headings, chronologically arranged. Part 2 (one-half of the book) covers a variety of collateral subjects, such as Biography, Court martial, Cruises and exploring expeditions, Marine corps, Naval academy, Organization and administration of the navy, etc. These subjects are arranged alphabetically by the headings that Mr. Harbeck has chosen for his divisions. At the end are sections on The flag, Fiction and Poetry.

United States government documents through the year 1898 have been analyzed,

and the individual documents recorded under the proper subjects.

In a very few cases there are brief annotations. A satisfactory subject index is given, but there is no author index.

Notes and Queries

PAGING OF *System*.—Librarians who are binding their files of *System* may experience some difficulty with the pagination in volume 9, January-June, 1906. In our copy the correct pagination runs thus: pp. 1-516, 549-552, 483-658. I thought you might be interested in these facts, as some one else may have the same difficulty that we had in getting the parts together. H. O. SEVERANCE, *Library University of Michigan, Ann Arbor, Mich.*

DYNAMO TENDING.—In 1894 Frederick J. Drake & Company, of Chicago, published "Dynamo tending for engineers, or electricity for engineers," by Henry C. Horstmann and Victor H. Tousley. In 1905 the same firm published the "Twentieth century hand-book for steam engineers and electricians," by C. F. Swingle, with part 3 as an electrical division by Henry C. Horstmann and Victor H. Tousley. The electrical division of the latter work is the same as "Dynamo tending for engineers," printed from the same plates.

"GROLIER SOCIETY" PUBLICATIONS.—The following communication has been received from a librarian:

Recently our library acquired, through an agent of the "Grolier Society" a 12-volume edition of Maspero's "Egypt," though it is not our custom to buy subscription books.

When received it was discovered that the first nine volumes of it were identical with Maspero's "History of the ancient east," in three volumes, which we have cataloged under its several titles—"Dawn of civilization," "Struggle of the nations," and "Passing of the empires."

Is it generally known that these two works are the same? Is it possible to obtain redress? I think such a fraud should be widely condemned. * * *

MRS. HAMER.—A letter recently received from Mr. S. H. Hamer, of London, may be of interest to catalogers who have had difficulty in identifying Phillis Browne, A. G. Payne and Olive Patch:

Mr. Hamer writes that his mother, Mrs. Sarah Sharp Hamer, wrote under the pseudonym "Phillis Browne," and is the author of "Sunny Spain," "Dictionary of dainty breakfasts," etc. When writing "Sunny Spain" Mrs. Hamer used the pseudonym "Olive Patch," and the confusion of her name with that of A. G. Payne was occasioned by her collaboration with Mr. Payne.

MARGARET MANN,
Chief Cataloger, Carnegie Library, Pittsburgh.

MADISON (WIS.) FREE LIBRARY

THE LIBRARY JOURNAL

VOL. 31

DECEMBER, 1906

No. 12

It is customary within the library profession to contrast the "large" and "small" libraries as presenting distinct problems of library administration. The line drawn marks an actual difference in the problems of interior management, for in the one case there is an administrative executive with a large and specialized staff, and in the other case there is the single librarian doing all sorts of work or dividing the general work with one or more non-specialized assistants. But in the exterior relations of a library, the dealings with the public, the vital distinction is rather between urban and rural libraries than between large and small libraries. The urban library is called upon to deal with men both in masses and classes, for instance, to supply books on a special industry, or on trade union organizations, or on factory legislation, in the factory community of the manufacturing city or town or suburb. The rural library in a country place which boasts a few carpenters, a painter or two, and a score, at most, of other mechanics, needs on its shelves books on such topics only to the extent that they interest the general reader rather than the specialized worker. It is well, to be sure, to have even in a small rural library the best working book on each of the general practical subjects, as included in the representative list of the A. L. A. Catalog. From the same point of view it should also have books on the special subjects which the bright boys and girls of the community need as they look forward to college study or to practical life in the workaday world. Above all, it should keep in touch with the schools and have on its shelves the best books that supplement and extend their courses of study. But aside from such specialization as this, if it may be called such, the rural library must be a general library, a library for the general reader, a development of the private library, rather than that aggregate of professional and technical libraries, so to speak, combined with a general collection, which should constitute the scope of the urban library.

THIS means that above all the rural library should be a selection rather than a collection

of books. Mr. Charles Francis Adams has often and most usefully emphasized the view that a rural library should confine itself within the limit of 10,000 volumes—a view illustrated and confirmed in the A. L. A. Catalog of approximately 8000 books. The A. L. A. *Booklist* suggests usefully the new volumes required to keep such a collection up to date. The Carnegie gifts for new buildings are often utilized to provide stacks for 20,000 or more volumes, when open shelves about the rooms for 10,000 volumes would be really more serviceable to the community. Where a Carnegie or other gift provides for a new library the A. L. A. Catalog furnishes the best of all purchase lists. But existing rural libraries, as they reach the limit of their shelf room, must face the more difficult problem of weeding out. The faculty of weeding out is in fact the ultimate virtue of the "small librarian," who must be large-minded indeed to weed successfully. A library expert might perhaps find a new calling as a professional weeder-out.

AN important question to rural libraries is how to reach outlying parts of the town with library service. The electric trolley, to be sure, is partly solving the problem, bringing many users to the library; but this is not enough. A "library post," that is, a rate which would make it practicable to send books locally by mail, would of course be a great help. It is impracticable to expect that Congress will extend the one-cent-a-pound rate, to which the postal authorities are totally opposed, for any purpose, and endeavor in this direction is worse than wasted. If, however, a four-cent-a-pound rate for books and other printed matter could be obtained, and a half rate of two cents a pound established for books sent from any post-office center along a rural free delivery route from that center, this problem would in great measure be solved. The travelling library is so far the best solution of the problem. Branch libraries and reading-rooms should, however, be established wherever a village center can provide room and volunteer attendance. In Stockbridge, Mass., two methods have been em-

ployed, both with partial success. In one village in the township the branch library is in the country store and post-office, where the postmaster or a helper is willing to give out and receive books during certain hours; in another village, the experiment has progressed one step further, and the town has provided a good room in the second story of an engine house, where is a collection of a couple of hundred books and a dozen of the more popular periodicals, kept open Wednesday and Saturday afternoons and evenings by help of volunteers. It is not always easy to obtain volunteers, and the system makes library hours unfortunately irregular. But these several plans are all in the direction of finally effective result.

In classification, "standard" and "up-to-date" methods must always be to some extent in conflict, and it is difficult to secure the best compromise, as Mr. Bishop points out clearly in his review of the new Brown classification scheme. One of the most extraordinary triumphs in library development has been the decimal classification which Mr. Dewey worked out a generation ago, in his early days at Amherst College. Since that time the advance in knowledge, particularly in science, has developed great changes in nomenclature; but it is remarkable how well the decimal classification has on the whole stood the test of the time and change. The decimal plan permitted, as no other scheme could, sub-division and incidental rearrangement to the utmost degree compatible with a standard method. Mr. Cutter devised his expansive classification to meet modern scientific nomenclature and specialization, but his modification of the symbols at successive stages of expansion has proved a serious embarrassment to libraries which adopted his scheme in its less complete stages. The combination of letters and figures, in this as in the Brown system, has also serious disadvantages. On the whole we are disposed to think that the decimal classification is the one which will endure, and from the revision which has been so long in progress, it is to be hoped that the modifications there embodied will bring the scheme up to date without sacrificing its standard character. Perhaps this is a reconciling of impossibilities, but libraries must be

content with a compromise which cannot have all the advantages of either system. The great benefit was effected when relative location replaced fixed location on the shelves, a reform which was closely associated with the introduction of the decimal classification, which since its adoption by the Institut International de Bibliographie has become of world-wide vogue.

To statefy, so to speak, library examinations and confine library work to applicants passed by the state, would seem at least of doubtful expediency. The field is now fairly well supplied with trained workers through the courses and examinations of the library schools and the apprentice classes of the larger libraries, and to limit recruiting from outside by requiring state examination might raise a serious difficulty for many libraries. The analogy with the relations of the teacher is here not quite in parallel, for the schools have a graded system for which qualifications may be reasonably defined. The libraries are in large part volunteer institutions, and in the lesser ranks draw naturally from the body of the community, yet the discussion raised by Miss Baldwin's paper is not without interest.

We print elsewhere a communication from Mr. Wellman on copyright from the point of view of those who dissent from the position of the A. L. A. conferees and of the LIBRARY JOURNAL, including a quotation from the elaborate criticism by Mr. Charles Porterfield — of the Edward Thompson Company, publishers of law books — which the Library Copyright League has reprinted as a pamphlet. Mr. Porterfield emphasized his views at the recent Congressional hearing, where Messrs. Steiner, Wellman and Cutter presented the views of the protestants, while Mr. Bostwick supported the action of the A. L. A. delegates. The contention that libraries could not lend or dispose of books if the new bill became a law is a misapprehension. The existing law gives to the copyright proprietor the "sole liberty of vending," and any restriction of sale is a matter of the law of contract and not of copyright; and the Congressional Committee gave prompt and proper assurance that if any possible danger in this respect lurked in the phraseology of the bill the language would be made clear.

FORM OF LIBRARY ORGANIZATION FOR A SMALL TOWN MAKING A
LIBRARY BEGINNING*BY ALICE S. TYLER, *Secretary Iowa Library Commission*

THE awakening of one or two individuals to the possibilities for good afforded by a public collection of books marks the beginning of the library movement in that town. These men or women may have formerly lived in a town having a flourishing library, and recalling the pleasure and benefit derived from it begin to wonder why such privileges may not be provided in the new home. Or some one who has grown up in the community hears of the work being done by the library in a neighboring town and asks why Pleasanttown cannot do the same; or, as frequently happens, a woman's club has been organized in the town, a representative goes to the meeting of the State Federation, hears of the interest other club women have had in the founding of a local library, and, feeling the need of books for club study and knowing the dearth of good literature for her boys and girls who are growing up, joins with others in the effort to provide a collection of books for general use. Whatever may be the cause of the interest which marks the beginning, the little seed has been sown and begins to grow.

In considering the topic assigned me, "What form of library organization is most desirable for the small town," it is, of course, necessary first of all to agree upon the meaning of the words "small town." In Iowa a community having a population of two thousand inhabitants or less is termed a town, and for *small town* I will assume that we agree upon interpreting it to mean a population of one thousand or less. With this group of people, having the ordinary advantages of school and church, what is the best method by which both young and old may be provided with the books that may inspire and cheer, inform and uplift both individual and community life? It does not seem necessary in this company to discuss the important function this library should fulfill in the life of the people; the

mission of the book has been set forth so ably and so frequently in all library meetings that it would be indeed "carrying coals to Newcastle" to attempt it here. It is, however, well for us to remember that, while there is a surfeit of cheap literature that seems to have reached the smallest hamlets and villages, the need is as great as it ever was for the best books to be made accessible to those who do not yet know the "books of all time."

This group of people in the small town desiring to provide a public collection of books will probably follow the "line of least resistance" in making the beginning. Considering the prejudices, church affiliations, rivalries, etc., that exist in almost every town, what is likely to be the basis of the movement for a library? It will probably take one of the following forms:

1. Enlargement of the meager school library.
2. A church reading room.
3. Woman's club or town federation library.
4. Library association or subscription library.
5. Free public library, supported by taxation.
6. Travelling library center or station.

There may be and probably will be combinations of two or more of these into one plan, and if there is a state or county system of travelling libraries there would be, in any of the plans suggested, the probability of the use of the travelling libraries.

Considering the forms in the order mentioned: First, the enlargement of the meager school library—this has been occasionally resorted to because the few books serve as a nucleus, they in some instances having been found to be of little service in the school-room, while for the general public they might be of value. Poorly selected, ill adapted to the uses for which they were intended, with no one especially concerned as to their care and use, locked up and of no use to any one

*Read before the League of Library Commissions, Narragansett Pier, July 2, 1906.

during the three months' vacation, they are indeed serving a good purpose if some of these dusty, neglected books in the school collections are made the nucleus of a public collection for the entire town. This, however, is rarely done.

The second plan—a church reading room—is one which is usually suggested by some enthusiastic pastor who is genuinely concerned regarding the young people of his church and town, and is generous enough to open a room in his church for this purpose. My observation has been that this is an unwise and undesirable method, as it is likely to be immediately combatted either secretly or openly by denominational opposition or jealousy on the part of other churches, and will not be likely to attract into the circle of its influence those who may not be identified with orthodox churches, or the unformed boys and young men who might be reluctant to use freely a library thus located.

The third—a movement on the part of a woman's club or a federation of all the clubs in the town to found a library—is a method that has been tried in several towns in our state. The organizations being already in existence, active, and committed to altruistic and civic work, find in the public library a cause that appeals to its members strongly and to which they are willing to give enthusiastic labor. After close and sympathetic observation of this method of making a library beginning, I believe that it is not the best plan, because of the fact that it confines the movement to a limited group of workers. Sometimes, too, it encounters a spirit of jealousy and criticism on the part of those outside the club that is not conducive to the forwarding of a large public movement such as a library should be—to include all ranks and conditions, regardless of age, sex, or social standing.

The fourth plan—a library association or subscription library—is a popular method of making a beginning when properly understood. The few who see the need of a library and plan to accomplish its organization, believing that it should be for *all* the people, call a meeting for the express purpose of discussing ways and means of providing a public library for the town. Notices of this meeting are sent to all churches, schools, clubs, lodges, etc., where people congregate, and are printed

in the local newspaper so that all are given the opportunity of having a part in it. At this meeting, after addresses and discussion, it is voted that a library association shall be formed for establishing and maintaining a public library. Committees are appointed to recommend a basis of organization and on providing a book fund, and the movement takes form in a few weeks or months with a fund for the purchase of books and a specified annual membership fee which shall provide (probably very meagerly) for running expenses. With many variations, with discouragements and struggles, it is nevertheless an oft-tried and satisfactory method of making a beginning, the association affording an organization through which to work toward a tax-supported library.

But in each of the four plans mentioned by which a beginning may be made there is always and persistently and depressingly the question, "How are libraries begun in this manner to have sufficient funds even to barely exist, much more to grow?"

And this is the fundamental matter after all—money. Whence shall the funds come? The church plan, the club plan, the school plan, the association plan—all are dependent on the spasmodic and irregular support that results from the labors of a soliciting committee using persuasive arguments with business men and others. There are certain expenses that are absolutely essential—books first and most, a room for which, probably, rent must be paid (though some generous citizen may give the use of it), periodicals to be subscribed for, heat, light, table, chairs, etc., besides the most important feature of the whole scheme—the librarian.

Shall the use of the books be free? or, in this period of beginning, shall each person pay an annual fee or a rental for the use of the books? If an attempt is made to make the library absolutely free, on the basis of any one of the four plans suggested, there must be back of the movement a very active and probably much worried finance committee struggling with entertainments, suppers, lecture courses, subscription lists, etc., to provide the "ways and means."

The fifth form of organization is the tax-supported free public library. Is it desirable that the small town shall in its beginning in library matters attempt at once to secure a

municipal tax to found and maintain a free public library under the state law? There are those who believe this is the *only* way to make a beginning. I am confident that I voice the sentiment of commission workers when I say that we are all agreed that eventually, if not in the beginning, the free public library on a rate or tax-supported basis is our endeavor. The point whereon there may be a difference of opinion is whether the movement might first be started as an association and by means of this association public sentiment created which shall provide for the municipal support. There is no doubt but that the amount from the tax levy provided by law for the maintenance of the library in most states would be so small in a town of one thousand inhabitants or less, that it would be necessary for a movement to be inaugurated to provide a book fund by some other means—in other words, the plant must be installed, and this requires money. Afterward the running expenses may be met by the tax levy. It is certainly true that the life of a library is precarious and uncertain until an annual revenue is assured by a municipal tax, but it would seem to be simply a question of policy as to whether this shall be the *first* step or not. In studying this question at first hand it has been observed that the first impulse seems naturally to be to solicit subscriptions for a book fund, and this seems a necessity whether there is a maintenance tax or not. A library association standing back of this solicitation for a book fund and back of the entire movement seems very desirable and, though temporary, has usually proven to be successful.

Now, what, we may ask, is the relation of the state library commission to this community? What has it to do with this small town desiring to make a library beginning? First, its advisory relations with the community should be such that it will aid that town in avoiding the mistakes made elsewhere in the form of organization and in methods of work. Surely the observations and experience of commission workers, who are provided by the state, should be at the service of every community in the state if desired. One of the points, however, that is always perplexing to the earnest commission worker is, how to help effectively. The cry of paternalism is not heard so much as formerly, but it is

certainly a fine point as to how far the state shall go in aiding the local movement, and surely there must first be a desire on the part of the community.

But if it is the desire of but *one*, that is sufficient to bring the commission worker to the aid of that *one* in arousing interest. I would suggest that the effect of the commission worker's co-operation with the local movement is much greater if she comes on the invitation of the local leaders, and there is always a way to secure such an invitation. This puts the commission worker on a basis where she can serve much more effectively.

It may save the club and the library movement from much tribulation if we can tell them of the disaster that came to one town because of the zeal of the woman's club to have the honor of founding the library, or of another town where a certain secret organization aroused the opposition of all other societies in town by starting a library and collecting over one thousand volumes for public use, or of another town where a "generous citizen" gave a large sum for a new church building on condition that it should have a library room included for the use of the town (which the members of other churches in town seldom enter). On the other hand, they may be told of the enthusiastic organization of a library association, the raising of a book fund of \$2000, and the favorable sentiment immediately created for a municipal tax which resulted in a free public library upon that basis within one year. Such information and the details gained from experience as to just how the work may best be accomplished constitute a part of the preliminary work the commission may do.

Second, to aid in the selection of books. Certainly this function of the library commission does not need to be emphasized here. The utter helplessness with which a new library board or book committee undertakes the task of providing books for the new library makes it absolutely imperative that selected lists should be available that can be placed in their hands. The "Suggestive list of books" published by the League of Library Commissions is especially suited for this sort of work, also reliable lists of children's books, such as Miss Moore's "List of books for a children's library," published by the Iowa Library Commission; the Cleveland list, compiled by

Misses Power and Prentice; Miss Hewins' "List of books for boys and girls," and others. The *A. L. A. Booklist* is also supplying this definite need of the small library for a reliable list of the best recent books, and this is furnished free (monthly) by most library commissions.

Third, to install a simple loan system and such other records as are absolutely essential to the orderly conduct of the library. This includes classification and shelf list, but not necessarily a card catalog.

Fourth, to provide the travelling library that shall augment the very meager collection of books belonging to the local collection.

This method of "state aid" is especially suited to the wants of the small town in making a beginning, but it also has the entire state for its field of activity, sending books to the remotest corners—the country neighborhood, the rural schools, the clubs, also loaning books on special subjects of study to the larger libraries. This fresh supply of books coming from this state center at intervals throughout the year may enable the local library to use some of the funds for a reading room as a feature of the work as well as the lending of books. In fact, I am inclined to say that if a suitable person is available for the position of librarian, the reading room can be made a more powerful influence for good in the small town than the lending of books for home reading. The absolute lack of provision for wholesome diversion and entertainment for young people in the small town, the inclination of the boys to loaf and lounge about the post-office, the rail-

way station, the tobacco store, etc., because there is nowhere else to go; these conditions make it extremely important that a movement to establish a library in a small town should include the reading-room, where the open doors, bright lights, attractive periodicals and interesting books invite and attract those who would not otherwise come under the influence of the printed page.

But the problem of the reading-room in the small town is one of maintaining order, without repelling, of cheer, welcome, helpfulness; so that the librarian's personal qualities are put to the test in such a position out of all proportion to the apparent interests involved. Over and over again do we see unselfish, cultured, devoted women, fired with the altruistic spirit, giving themselves to such service "without money and without price," and so we have the volunteer librarian—without salary—as one of the most important factors in many of the small towns making a beginning, and but for whom probably there would be no beginning.

Certainly all the interests mentioned in the opening of this paper—the schools, the churches, the clubs—should be concerned in providing the public collection of books for the town, but these should rise above the particular organization or interest which chiefly concerns each. Obliterating all lines of separation they may unite in service for the public good, working unitedly either for the library association or the municipal library as the first step. Without the support of these interests the work would be well-nigh impossible.

STATE EXAMINATIONS AND STATE CERTIFICATES FOR LIBRARIANS*

By CLARA F. BALDWIN, *Secretary Minnesota Public Library Commission*

It is a familiar statement that the public library should be recognized as a part of our educational system, and that librarianship should be regarded as a profession on at least as high a plane as that of teaching. It then becomes the problem of the commission worker to uphold the highest possible standard of service in every part of the profession, coming

*Read before the League of Library Commissions, Narragansett Pier, July 3, 1906.

in contact as he does with libraries of all sizes, and of various functions.

The librarian is the most important factor in the development of any library, and it is apparent that he or she should be selected because of his or her fitness for the work, not because of social or political influence, or even because "she needs it, poor soul." Other professions have rigid requirements for entrance to their ranks, and it would

appear that our standards for admission should be equally high if we are to be worthy of our calling. Our public school systems have been brought to a high grade of efficiency through generous state aid and encouragement, and it is generally conceded that the state has acted wisely in assuming authority over public education. Why may not the state exercise supervision over libraries in a similar way? If no one may teach in our public schools without a license, why should the guidance of our public libraries, the handmaids of the public schools, be left in many cases to those who have been obliged to give up teaching because they could not obtain a certificate?

Granted that there is every reason why the state should examine candidates for library positions and issue certificates for those fitted for such positions, let us consider, first, what the practical working of the plan would be, and second whether, if practicable, it would accomplish the desired results. At the very beginning, we are confronted with a question that will prove a stumbling block and a "rock of offense" in many states, for on the face of it a system of state examinations and state certificates for librarians implies the condition of giving state aid to libraries. It is not the province of this paper to discuss this larger question. Direct aid is now given to libraries in nine different states, all of them except Michigan eastern states. So far this aid has only been given for the purchase of approved books, and on condition of the expenditure of an equal or proportionate amount by the library. A system that would enable the state to require certain standards from public libraries would involve very large appropriations, not only for distribution to the libraries, but for the administration of the system. In the older states, where communities are more uniform and stable, excellent results might be obtained by means of this plan, but in the West it would be difficult to adapt such a system to the widely varying conditions which exist.

Supposing, however, that a state has determined upon this plan, the next questions to be considered are the nature of the examination and the kind of certificate to be issued. The object of such an examination is to weed out the incompetent and to obtain the best possible material for librarians. It should

show not so much what the candidate knows as what he can do. Examinations for candidates for positions in large libraries having a civil service system usually include history, literature, general knowledge, and sometimes add practical library experience. It is obvious, however, that the same preparation could not be expected of an applicant for a position in a small library paying \$300 a year or less, and what could the state demand of a librarian receiving no compensation whatever? Public libraries would have to be graded, probably according to number of volumes, and the certificates graded also. The first grade certificate might entitle one to hold the position of librarian in a library of more than 10,000 volumes, and so on down to the lowest form of certificate, which might enable one to have charge of a library of less than 1000 volumes. Many problems present themselves in any logical development of such a scheme, and there would be danger of injustice in many instances.

If the librarian of a library of 10,000 volumes is required to possess a certain amount of knowledge, it does not necessarily follow that the librarian of the smaller library could fill her position satisfactorily with a smaller store of history, literature and general knowledge. On the contrary, the librarian who has limited resources in her library must often supplement them from her own mind. And what examination can measure the patience, tact, and courtesy, so essential in the ideal library, large or small, those qualifications of heart and soul which often make up for many deficiencies in other directions? On the other hand, it is frequently the case that one who can pass the best examinations is absolutely unfitted for library work.

The civil service systems employed in some of the larger libraries are often most unsatisfactory in results. The following notice recently appeared in a western newspaper: "Public notice is hereby given that a competitive examination under the rules of the Civil Service Commission, of applicants for the following positions: assistant librarian in the public library, pipemen, truckmen, drivers, stokers, and promotions to lieutenant in the fire department, police for the police department and clerks, will be held in the council chamber, City Hall, Tuesday morning, etc." There is no doubt that plenty of good pipe-

men, truckmen and stokers were obtained, but alas for the assistant librarian! After three examinations no one has yet been found capable of passing the examination for this position of responsibility at \$45 per month. The conclusion is obvious that until the scale of salaries is raised there will be little inducement for well equipped people to take examinations for library positions.

Just what then would be accomplished by issuing state certificates for librarians? It would eliminate to a certain extent the securing of positions through personal influence, and would be a protection to library trustees against the petitions of many applicants; it would also possibly tend to an increase in the scale of salaries paid, as the requirements were raised. On the other hand, state aid is impracticable in many states; it would be extremely difficult to establish a satisfactory

method of grading our libraries; examinations are not always a satisfactory test of fitness; and it is doubtful whether desirable candidates could be induced to take the examinations.

The library schools are solving the problem for the larger positions, and the commissions are using their influence to place trained librarians wherever it is possible. Trustees are coming more and more to realize that it is economy in administration to employ trained people. In the same way the summer schools are solving the problem of the small library. The standard is constantly being raised through the educational work of the commissions, and the desired results will be accomplished by arousing strong public sentiment in favor of good service at an earlier day than they could be by forcing arbitrary standards upon libraries before they are ready for them.

"WHAT'S THE USE" OF A PUBLIC LIBRARY?*

By ANNA G. ROCKWELL, *Librarian New Britain (Ct.) Institute*

"WHAT's the use?" is a question that reveals to us the power of words. How it takes the wind out of the sails of enthusiasm, pricks the bubble of pretense, and cauterizes the proud flesh of extravagance! It may be the germ of revolution. When a people asks: "What is the use of a government which does not secure decent comfort at home or respect abroad?" regiments of Cossacks cannot long maintain that government; nor will the library system find that its palatial buildings and splendid collections are of much value, if it loses public respect and confidence.

But where shall our inquiry begin? The use of existence is a question for philosophers and theologians; the use of civilization may be left to the sociologists; the use of education must be defended by statesmen and teachers. Although the value of each has been brilliantly controverted, the average man will be influenced more by a healthy instinct than by the subtleties of argument. If civilization is a disease and education a curse, we shall waste time defending the free public library; but for this occasion, at least, let us accept

the latter as the natural outgrowth of popular self-government and compulsory education; a flower which presupposes vital sap in root, stem and branch. Our question, although it may be destructive, is also tonic and puts the supporters of any institution wholesomely upon their mettle. Certainly, as librarians, we ought to be ready to give a reason for the faith that is in us and for the salaries we draw—or hope for.

Libraries, of course, must bear their share of loss in the "bankruptcy of science," if that convenient phrase may include the conviction that popular education has not entirely "made good." Faith in the all-sufficiency of knowledge, at least in the form of book learning, as a preparation for life, is not as robust as it was in the middle of the nineteenth century, when a popular writer affirms: "The more learning a people have, the more virtuous, powerful and happy will they become; and to ignorance alone must the contrary effects be imputed." After commenting upon the rapid increase in periodicals, societies, lecture courses and libraries, Dr. Dick prophesies that: "A new and happier era is about to dawn upon the world; when intellec-

*Read before the Connecticut Library Association.

tual light shall be diffused among all ranks; when Peace shall extend her empire over the world; when men of all nations shall be united by bonds of love, reason and intelligence." This delightful millennial vision is spoiled for us by various unpleasant facts, such as the union of the highest culture and the lowest vice in one individual, the increasing number of educated criminals, and those social spectres, the revolutionary anarchist with his bomb, and his counterpart, the monopolist who corrupts legislatures and judges, founds libraries, universities and art galleries from the same impartial pocket-book. We know that in books we have no panacea for the ills of society. Worse yet, we are forced to admit that our books, like everything else that we know about, may do harm as well as good. Yet admitting this, we may disregard the dyspeptic criticism of people who have lived too much upon books. They who are "surfeited of the dainties bred in a book" are fond of extolling an unlettered originality, which, when it exists, is barren of results.

The stock criticism of the individualist that the state has no right to tax one citizen to buy books for another is not very formidable just now. The state is ourselves and the economic advantages of the co-operative buying, housing, and caring for books is self-evident. The great majority still believe that they have a perfect right to tax themselves and an unwilling minority for many things more or less necessary than libraries, and we seem more likely to add to the number than to diminish it. If libraries have sailed in upon the swelling tide of the socialistic spirit, it is our part to moor them against the reactionary ebb.

Criticisms based upon the results of the public library's work touch us more nearly. There is one which we encounter continually: "What is the use of the public library when two-thirds of the books which it circulates are mere fiction?" But what is fiction? It is the form in which the literary spirit of our age has chiefly manifested itself. As well might an Elizabethan flout the drama. Like the drama, it is democratic, exuberant, sometimes coarse; for though it often catches the celestial music, it commonly keeps an ear to the ground. It is especially adapted to that great new public created by compulsory education and to an age whose energies are so largely engaged in a wonderful material

development. It is freighted not only with the universal love interest but with adventure and the life of other lands and social groups. Philosophy, religion, science, art and history are all tributary to it. It is not that facts are merely sugar coated, but the emotions are stirred and the interest roused to receive them, supplying in a measure the personal inspiration without which teaching loses so much. Fiction is the product of many of the best minds of the age; its part in the education of a people should not be ignored.

But admitting the value of the work of the great masters of fiction, are we circulating their books? Is not the library principally employed in giving out weak and ephemeral trash, hot from the press? Undoubtedly there is enough truth in the implication of this challenge to keep us chastened in spirit, yet in spite of their great private sale and the use of many as text-books, the classic novels attain a respectable circulation in most libraries. We should not wish to cultivate a Chinese reverence for the classics, or to foster an intellectual timidity which dares not enjoy a book until some one called a critic has pronounced it good.

We need not apologize for the sanatory use of books; the aged, the overworked, the convalescent, the neurasthenic, all call upon us for a story that shall amuse and cheer. An entire extinction of light novels might well be followed by a rise in the percentage of insanity. Mr. Jerome K. Jerome has recently censured what he terms the "narcotic use" of books; not a new use, for a seventeenth-century book lover finds, among other excellencies, that books are the "opiate of idle weariness." We must regret, with Mr. Jerome, the loss, if there is one, of respect for literature as an inspirer, yet in most lives—as in most libraries—there is room for both. Charles Darwin tells us that in his youth he delighted in poetry and drama; in later life he found relaxation in the books of the day, largely fiction, from the circulating library. Is not his change of taste a normal one, occurring in the lives of most persons as they advance in years? The Darwinian essentials of a good novel, "some one in it to love, preferably a pretty woman and a happy ending," would not satisfy some of our book committees. Had he been a patron of an American public library how hardly would he have escaped an attempt to elevate his

taste and awaken an interest in "solid books"!

Our supercilious attitude toward the literary taste of a portion of our library public has in it an element of snobbishness, and the intellectual snob is, of all snobs, the least admirable. A member of the New York bar, who has recently won the admiration and gratitude of the country, a scholar who enjoyed Greek at the age of eight and metaphysics at twelve, confesses: "I like a good blood-and-thunder, swash-buckling romance better than almost anything else you can give me printed in black and white. I don't care very much who wrote it, just as long as it has a rattling good story between its covers. And next to a good thriller of this sort I must say I lean pretty strongly to the old-fashioned detective story; for a weak brain and a tired back nothing like it in the world!" Substitute for the weariness due to the struggle for pre-eminence and the strife of tongues in the court room, the exhaustion due to the struggle for subsistence and the jangle of machinery in the factory, and an amiable weakness becomes a reason for abolishing the public library system!

Another serious charge is presented in a recent magazine article entitled "Have free libraries killed literature?" in which the present scarcity of works of genius and profound thought are evidence for the plaintiff. If we hold, with Lombroso, that genius is degeneracy, the library needs no defence; if we are old fashioned enough to call it "the high and peculiar gift of the creative spirit" we can only say: "The wind bloweth where it listeth, and thou hearest the sound thereof, but canst not tell whence it cometh and whither it goeth; so is every one that is born of the spirit." Profound thought, like profound political sagacity, does not seem to be subject to the law of supply and demand. If, as may be suspected, this charge is merely the plaint of one who feels that *he* could produce works of genius and profound thought if the market was only brisk, we may enjoy the unconscious humor.

Less startling in form, but the same in substance, is the accusation that public libraries are responsible for a general decline in public taste as evidenced by the success of the yellow journals and the intrusion of so many trivial books among the best sellers. But have these critics any right to compare the

few thousand "gentle readers" of old with the millions turned out by the public school at an age too early to have acquired much but the ability to read simple prose? Mr. John Cotton Dana, in a study of the American reading public in the *Outlook* says: "To-day most read a little, if only signs and posters; some read newspapers—probably ten to twenty millions of the forty millions who could read them if they would. A few read novels; if the most popular novel finds only a million buyers in a country where forty millions could read if they would, who can say that novel readers are more than a few? A very few, possibly two or three millions, read standard literature and serious contributions to thought and knowledge." The yellow journal which caters largely to the appetite for stories is a rival of the library, or perhaps its forerunner, but not its product.

A more serious question would be, "What is the use of so much gratulation over the public library when it reaches so few people?" Has not the idea of the library as a memorial or monument somewhat obscured the idea of the library as a living machine for combating ignorance, to be run at full pressure? A beautiful central building, the pride of the town, is worth while, perhaps; but plain, neat branches within easy walking distance of tired and busy people are better worth while if we cannot have both. The *Independent* last summer, in an editorial entitled "Libraries for men," questioned the value of the public library as ministering almost exclusively to women and children. We cannot deny that women and children are in the majority among library users, but the reasons for this seem not to lie, as intimated, in the management of the library. An observer as favorable to American institutions as Professor Münsterberg says, in "American traits": "American women are the real supporters of ideal endeavors. Theatre managers claim that 85 per cent. of their patrons are women. No one can doubt that the same percentage would hold for those who attend art exhibitions and even for those who read magazines and literary works in general. And we might as well continue with the same somewhat arbitrary figure; can we deny that there are about 85 per cent. of women among those who attend public lectures, or who go to concerts, among those who look after public charities and the work of the churches? I do not remember ever to have been in a

German art exhibition where at least half of those present were not men; but I do remember art exhibitions in Boston, New York and Chicago where, according to actual count, the men in the hall were less than 5 per cent. of those present." Again, in "The Americans": "It is indubitable that this undertaking of the burdens of intellectual culture by women has been necessary to the nation's progress—a kind of division of labor imperatively indicated by the tremendous economic and political duties which have pre-occupied men. No European country has ever had to accomplish economically, technically and politically in so short a time that which the United States has accomplished in the last fifty years in perfecting its civilization." The enormous number of men's societies, lodges and unions are also opposed to the reading habit. New Britain, for instance, has more than one hundred such bodies, exclusively for men, listed in its last directory. There seems no reason why a wide-awake library should not place appropriate collections of books in the club rooms of such organizations as could make use of them. The complete technical and reference library which the *Independent* considers best suited to the masculine mind is impossible in every small town because of its great initial expense and the cost of keeping it up to date.

Yet we should not omit, especially we who belong to the "mannerless sex," diligent searchings of heart lest pettiness, uppishness, over-conscientiousness, wrong emphasis, a graveyard atmosphere, a love of routine for its own sake, and a personal point of view in the selection of books, lessen the usefulness of our libraries. In many communities the free public library is of recent establishment and we may hope that the boys who now use it will preserve the habit in later life.

There are numerous questions that we may ask ourselves in regard to the internal workings of the library. In fact, a habit of asking each rule, custom, and pet scheme, sternly, "What is *your* use?" is worth acquiring, though the result might be fewer collections unrelated to the social life of the town, fewer bulletins, fewer and more elastic rules, simpler cataloging, a general elimination of fuss and frills, and, alas! less glory and much humility whenever we encountered an up-to-date librarian.

THE PROPOSED COPYRIGHT LAW— A PROTEST

EVERY librarian in the United States should read in the periodical *Law Notes*, for August and September, the articles by Mr. Charles Porterfield on the proposed copyright law. In the course of a temperate but searching examination of the bill he points out among many provisions seriously affecting the interests of the public one that is of supreme importance to the libraries.

"The new bill," he declares, "is very clear and precise in regard to the definition of copyright, and the nature of the protection which it is designed to secure, but at least one of its provisions is so vicious and unjust as to subject the entire bill to suspicious scrutiny. The provision referred to is clause (b) of section 1, which reads as follows: 'That the copyright secured by this act shall include the sole and exclusive right: . . . (b) To sell, distribute, exhibit or let for hire, or offer or keep for sale, distribution, exhibition, or hire, any copy of such work.' If this should become the law, the copyright proprietor would not be restricted to the mere right to make the copyrighted thing and put it on the market. He would be given in addition to that incorporeal right a special property in each and every copy or item of the subject of his copyright. The purchaser of a copyrighted book would not become the absolute owner of it. He would acquire by his purchase only the right to read it, and let it stand on the shelves of his library. He could not sell it, nor would it be an asset of his estate after his death. It would be a matter of doubt whether he would even have the right to dispose of it by his will. This clause would also make impossible the operation of any library, either general or professional, where persons pay for the right to read and use the books. The bookstores would have no right to sell copyrighted books, except by the permission of the publishers, and at such prices as the publishers might fix. All dealing in second-hand copies of copyrighted books would be made impossible. The whole point of this provision is that the publishers are not satisfied with the normal market. They wish Congress to enact a law that will produce this condition: whenever a reader may want a particular book, he will not be able to get the use of it from a circulating library, or to buy it at second hand, but he will be forced to buy from the publisher or the publisher's authorized agent, and at the price fixed by the publisher."

Referring to the bill as a whole, Mr. Porterfield sums up thus: "In conclusion it may be said that the policy of the copyright bill is bad, in that it is designed only for the benefit of copyright proprietors and wholly ignores the rights of the public."

May I inquire whether the American Library Association, which, I am told, was the only organization in the Copyright Confer-

ence that had no selfish interest, or that even remotely represented the rights of the public, proposes to uphold a bill embodying such policy? Each separate provision, I understand, was separately voted upon and the whole bill unanimously approved. Is it believable that the members of the American Library Association will ever approve such a provision as that referred to above, which would not only put out of business every circulating and proprietary library, but which might obviously be used by a publisher to prevent public libraries from obtaining and circulating any or all of his copyrighted books until he had thoroughly canvassed the field of private purchasers?

The likelihood of such action by a publisher may perhaps be indicated by a recent reply from a prominent New York house which, in response to an order from a public library, wrote that they were sorry they could not oblige in this matter, but the present edition was prepared for the use of certain reading circles only, and it would be some time, possibly a year, before this book would be placed on their trade list.

In view of the possibility of legislation so hostile to libraries—and no mention has been made here of the serious limitation of the right of importing—it is highly desirable for all librarians to send at once their adherence to the Library Copyright League, of which Mr. W. P. Cutter, Forbes Library, Northampton, Mass., is secretary. Two hundred and twenty persons, including, with few exceptions, those most prominent in library work have, I am told, already done so. There is no fee, and the only formality required is to send a letter to Mr. Cutter saying: "I desire to be enrolled as a member of the Library Copyright League, and to protest against any alteration in the existing law that will impose restrictions on the importation by libraries of any books except pirated editions."

Most important of all, librarians and trustees should at once write personal letters to their Senators and Representatives in Congress protesting against the proposed copyright law.

H. C. WELLMAN.

MADISON (WIS.) FREE LIBRARY BUILDING

In February, 1906, the Madison Free Library took possession of its new \$75,000 building, the gift of Mr. Andrew Carnegie.

As the building is unusual in style of architecture and general plan and fittings, it may be of interest to librarians to have a description of it and a short account of how the plan was worked out.

When the Board of Trustees began to formulate plans for a building suited to the needs of the city, they found themselves confronted by more problems than are ordinarily presented in such cases. It was one of the conditions of Mr. Carnegie's gift that rooms

should be provided for the maintenance of a library school. It was also desired to furnish quarters for the Madison Art Association by providing connected rooms, with large enough wall space and proper equipment in the way of lighting for the exhibits held by them each year. Other features of the plan were to be an auditorium, men's newspaper and club rooms, and rooms for the meetings of literary clubs, of which there are many in Madison. All these things complicated the drawing of the plans and made necessary a very careful consideration in the choice of an architect.

Another point which the Board of Trustees felt was very important was the style of architecture to be adopted. The feeling had been growing among them that the classic style of architecture generally used for public library buildings is not well suited to small libraries, as it is too cold and formal a type; and so they decided that Madison's building should not "ape the imposing buildings erected for the great collections of books, used mainly to protect them for generations of students engaged in scholarly research," but rather "be suggestive of a city home for the study and reading of books and their further use for the general purposes of recreation and culture." This idea is so well expressed in an editorial in the *Architectural Record* for August, 1902 (12:352-53), that it is worth while to quote it here:

"The interior arrangements of the modern American libraries are in most cases managed with great ingenuity, and are admirably adapted, as many of the earlier American libraries were not, to the convenient circulation and economical storing of a larger or smaller number of books. But, however successfully these buildings are being planned, little or no headway has been made toward the development of a design, or of a type of design, which is appropriate to a library and which will tend to make libraries familiar and inviting to the people who use them.

"The majority of the designs are merely frigid examples of neo-classic schoolpieces. They look as if the architects, emancipated from the restraints under which they usually suffer in designing commercial buildings and residences, were irresistibly impelled to draw façades such as they are frequently obliged to draw during their school training, and so they get up some commonplace arrangement of columns, a pediment varied by arched or square openings, and flatly monotonous and uninteresting. No more depressing exposure could be conceived of the imitative and academic character of American design, and its inability when dealing with a fresh and interesting problem to treat it in a fresh and interesting way.

"A library is a place in which books are stored, and to which men go to read them in quiet and leisurely surroundings, and this description applies as well to public as to private libraries. The former necessarily possess more spacious dimensions and more abundant

facilities for the circulation of people and books; but the condition remains that it is the reading room which, from the point of view of the public, gives the building its character and associations. But a reading room is much more closely related to domestic architecture than it is to that of the senate and court houses. It is used by private people for their own private purposes, and not by public officials, whose duty it is to exact, execute and expound the laws; and the design of a building in which such a reading room is situated should be domestic, familiar and inviting—the sort of a building in which a man would go to read, and not to deliver an oration or to hand down a judicial decision.

“What, then, could be less appropriate than these frigidly and meaninglessly classical buildings, which have no associations with books, and which are entirely lacking in the atmosphere of quiet and retirement which is essential to any kind of a library? It is, of course, difficult and even impossible to get in a building of very large dimensions the effect and atmosphere mentioned above. A more stately and important air is not incongruous with the public library of a large city. This stateliness and importance need not indeed afford an excuse for an academic formalism of treatment, but it inevitably subtracts from the domestic atmosphere appropriate to a smaller library building.

“The consequence is that the more expensive structures in the larger cities tend to be the best, not only because they are usually designed by more skillful architects, but also because the prevailing classic and renaissance treatment is better adapted to a building of ample dimensions and imposing situation. In the smaller buildings, however, the architects, under the influence of their academic training and imitative methods, have gone utterly astray. They have designed merely a collection of marble and granite cold-storage for books, under the erroneous idea that everything public must be classical and irrelevant, and one of the most discouraging aspects of the matter is that in cases of competitions it was frequently the most stiff and wintry design of all which was selected. Mr. Carnegie could not perform a better service for American architecture than by placing the supervision of the designs of all the libraries for which he is paying in the hands of a well-chosen group of architects, who would have it in their power to emancipate the designing of small libraries from the colorless and meaningless formula which now prevails.”

The Board of Trustees having determined to depart from the stereotyped form of library building, the question arose what style of architecture to adopt. To solve this problem they decided to employ the services of an architects' adviser, and selected Mr. Warren Powers Laird, head of the School of Architecture in the University of Pennsylvania. He advised the use of the collegiate Gothic style of architecture, as that would give an

entirely dignified and beautiful public building and yet would embody the home or residence idea; and also its grouping of windows in large window spaces made it especially adapted for a library building.

Three of the architectural firms who had done the best work in America in this particular style of architecture were invited to send in competitive plans, and the competition was also thrown open to all local architects who had been in practice over one year. The competition was won by the firm of Frank Miles Day & Brother, of Philadelphia, and the building as erected is substantially that of their original plan.

The residence idea was carried out, as far as possible, in all the interior furnishing of the building. In the main rooms, for instance, the Nernst lights were used in order to do away with table lights, which necessitate a formal arrangement of tables and chairs. In the reading room are found only two pieces of furniture of a distinctively formal library character—the periodical rack (which is built into the wall) and the attendant's desk. The other furniture is such as might be found in any private library—round tables, arm chairs and even rocking chairs. The deep window seats in the bay windows at each end of the room, and the mullioned windows with their little pots of primroses and cyclamen add to the home-like appearance.

One of the residents of Madison, making a tour of the building a day or two before it was formally opened to the public, said, as he stepped up to the entrance of the reading room, “Why, it looks just like a home library!” and this is the common impression made upon those who enter the room. One of the local press articles at the time of the library opening says: “All sorts and conditions of people are provided for, each in a manner to make the home-like feeling the first to possess the user of the library in any of its departments. No one who uses it can possibly avoid the sense of personal interest, almost individual ownership, in the books and papers within his reach, and the simple elegance of the new library building and its furnishings. The wide entrance has a look of freedom that is truly inviting. One would not look for a policeman there to tell him what he should not do, nor a whispering, tiptoeing librarian to tell him to be careful or to keep quiet. The sense of privilege pervades; the atmosphere carries a serious, studious tone.”

The Board of Trustees feel, therefore, that they have attained the end toward which they worked, and that their idea of what a small public library building should express has been worked out, if not in a perfect, at least in a very satisfactory manner.

The detailed description of the building is as follows:

The lot is a corner one, one block from the main business square of the city. It is 132 feet square. The building is 102 feet deep. The width in front is 98 feet, but 72 feet back

it narrows to a width of 64 feet. Thus a space of 20 feet is left in front and on either side, for future extension, and 10 feet in the rear for a service driveway. The building has a high basement and two stories, the total height being 48 feet.

The materials of construction are, for foundations and bearing walls, brick and stone, with slow burning construction for partitions and floors. As the building is isolated and on a residence street, fire-proof construction was not considered necessary. The external walls are constructed of what is known as "Harvard" brick, in two colors, rose and black, with Bedford stone trimmings. The roof is of green slate. The interior woodwork is of quarter-sawed oak with a dull "weathered" finish. All loose furniture was sent unstained, so that it might be stained by the same workmen who did the wood work in the building.

The main entrance leads through a small vestibule to a large landing, from either side of which a broad stairway, broken by a landing half way down, leads to the basement hall, which runs across the width of the building, 40 x 13. Under the stairway are a janitor's sink and public toilet rooms, thus accessible without passage through library rooms. At the left end of the hall, as one goes down, is the men's club room, 17 x 23, connected by sliding doors with the newspaper room, 24 x 23. Each of these rooms has a separate entrance into the main hall. At the opposite end of the hall a door leads into a small passage connecting in front with the magazine storage room, 12 x 15, and in the rear with the work room, 18 x 24. Both of these rooms are fitted with movable shelving. Connected with the work room are the fire-proof vault, disinfecting closet, book lift, and vestibule to the outside service entrance. On the opposite side of this vestibule is the janitor's room. From the rear of the work room goes up the service stairway, which connects with the catalog room on the main floor. Directly back of the main hall and opening from it by three large double doors is the auditorium, with a seating capacity of about 400, and an outside exit on each side through small rear vestibules. Back of the auditorium are rooms for the mechanical plant, fuel, etc., with entrance upon service driveway.

Going back to the main entrance one ascends from the landing by a short flight of stairs to the level of the first floor. Here at the left is a drinking fountain. Four swinging doors, with glass in the upper half, lead into the delivery room. Over these doors is a large brass plate, framed in oak, with the inscription, "This library building was given by Andrew Carnegie to the city of Madison A.D. 1905." The coloring of walls and ceilings on this floor is a light cream, and the entire floor is covered with the best quality of cork carpet of a dark brown shade that matches the wood work.

The delivery room is 40 x 18. Extending

from it directly in front is the broad corridor leading to the stack room, and at either end are the arches opening into the reading room and children's room. These arches are beautiful in curve and proportion, and as they are 13 feet in length, they make a splendid vista from side to side of the building. The delivery room is panelled with oak to the height of seven feet, and this panelling forms a rich background for the one or two fine bits of statuary, and the facsimile copies of the Magna Charta and the Declaration of Independence that are hung there. An umbrella rack on either side of the entrance doors, and a single bulletin board are the only pieces of furniture.

The reading room, which occupies the front left corner of the building, is 48 x 23. An alcove, 18 x 9, opens from it. This has a glass partition looking into the delivery room, so that the alcove may be commanded from the delivery desk. The reading room has a large window seat built into the bay window at each end of the room; it has movable shelving all around the room seven feet high, except under the windows, where it is four feet high. The files of bound periodicals are shelved here. The rack for current periodicals is built into the space between the two archways into the alcove and the delivery room, and is panelled above to bring it on a line with the shelving. The tables are round, five feet in diameter and 29 inches high. The table in the alcove is a long one, 8 x 3½ feet.

The children's room has the same general shape and dimensions as the reading room, and is located in the opposite front corner of the building. A coat and wash room occupies some of the space at the rear, and this end of the room has solid shelving instead of a bay window as in the reading room. The shelving runs five feet high, and above it is a frieze made of the pictures from the Walter Crane picture books, each story framed by itself with a panel between each picture. The effect of the beautiful coloring of the frieze above the dark wood work is highly decorative.

The alcove has a long table, 8 x 3½ feet, and 28 inches high. In the alcove are placed the children's catalog, picture file, dictionary stand, etc., thus making it a sort of reference room. In the room itself only round tables are used, these being four feet in diameter and 28 inches high. One round table, six feet in diameter and 22 inches high, is provided for the very little people.

The delivery corridor is 30 x 23. It occupies the center of the building and is lighted by means of a light well on the second floor, with a sky-light above. The large octagonal charging desk, 16 feet in diameter, is pushed well up toward the front, leaving the rear of the corridor for the card catalog, and tables and inclined cases for the display of books. All switches for lights on this floor are at the charging desk.

The reference room is at the left of the

corridor, just back of the reading room, and has doors into the delivery room and the delivery corridor. It is 28 x 18; has glass partitions above three feet of shelving for its inside walls. It has special roller shelving for atlases, etc., and is furnished with long tables, 8 x 3½, set at regular intervals.

To the right of the corridor are the librarian's office, 19 x 12, and in front of it the catalog room, 19 x 14. These rooms both have glass partitions above three feet of shelving for the inside walls. The catalog room, beside shelving, has cupboards for supplies and a small coat closet for the use of the staff. A door in the front of the room leads into the service stairway, which goes from here down to the work room in the basement and up to the staff room on the second floor. The book lift opens into this entry and there is also here a lavatory for the staff.

The stack room extends across the rear of the building. It is 61 x 22. There are nine double-faced steel stacks 15 feet long, leaving a five-foot aisle between, and a window at the end of each aisle. Wall shelving is also put in along the side walls and shelving is run under the glass partitions looking into the librarian's office and the reference room. Space for a three-story stack is provided, the one in present use, on the main floor, being the middle one of the three.

The stairway to the second floor goes up on either side of the hallway to a landing half way up. On this landing are a large storage closet, and a public telephone booth. From the landing a single broad flight of stairs carries the ascent to the second floor. On either side, at the head of the stairs, are a small supply closet and janitor's sink. From the stairway the entrance is immediately into the exhibition hall. This is 40 x 20, and is lighted by a large sky-light, and also wired for special trough lighting. At the right end is a club room, 39 x 23. This room connects in the rear with the staff room.

At the left end of the exhibition hall is another club room, 42 x 23, which, by a folding panel in the middle, can be made into two rooms. This arrangement was made in order that the rooms might be used as lecture rooms for the library school.

At either end of the exhibition hall the space, 19 x 9, which extends toward the front of the building, directly over the two alcoves on the floor below, is made into cloak rooms for the use of clubs and the students of the library school.

The space just back of the exhibition hall, over the delivery corridor, is occupied mostly by the light well. A corridor five feet in width surrounds the light well; and the wall space, lighted by the sky-light, makes another excellent hall for art exhibits. Wiring for special trough lighting has also been provided here.

The staff room occupies the space over the catalog room, with which it connects by means of the service stairway. The book lift

also comes up here, and the room is fitted up with cupboards, drawers, sink, and gas heater.

JULIA A. HOPKINS, *Librarian.*

CATALOG GAME PLAYED IN THE YOUNG PEOPLE'S ROOM, FREE PUBLIC LIBRARY, NEW HAVEN, CT.

DURING the long school vacation many young people discovered the use of the card catalog by means of a game which was worked rather than played.

Attention was called to this game by means of a bulletin made up of illustrations from publishers' catalogs of the books whose titles were given, and the authors and call numbers of which were to be found. A note posted on this bulletin stated that paper and pencils would be furnished at the desk, questions would be answered and puzzles explained; also that the names of the young people whose papers were correct would be posted in the library, and at the end of vacation printed in a school paper and the New Haven newspapers.

Upon applying at the desk the child received a typewritten list of the 12 titles and then went directly to the catalog. A considerable amount of time and labor had been saved in preparing this list, for instead of printing one for each player, the same list was used for all by simply cutting the sheet so that the column of titles could be fastened on the top sheet of the pad at the left, thereby leaving room for the author and number on the corresponding line at the right. Some titles had been selected beginning with The and A. (No illustrations of books beginning with St., Mr., etc., happened to be found.) This was the first part of the game, and it was frequently tried, the children seeming to enjoy the search.

Part two, being harder, was tried by the older children only. Eight catalog cards, each with subject heading and author given, were handed to the child, and he was to find the title and call number of the book written by that author on that subject, the title and number to be written in the correct places. This helped to familiarize the searcher with subject headings and form of cards. Of course this game was entirely optional, and considering that it really was study during vacation we think the results were very satisfactory. Although the juvenile catalog was the one used, the children who tried the game now feel well acquainted with a dictionary catalog and could make intelligent use of the one in the main department.

As this form of card catalog instruction has been given during three summer vacations, the game has long since ceased to be an experiment, and we regard it as a permanent feature of our work with young people—at least as long as school children remain unacquainted with the alphabetical arrangement.

GERTRUDE FITCH WHITE,
Children's Librarian.

CHILDREN AND THE PUBLIC LIBRARIES

Montrose J. Moses, in *New York Evening Post*,
Dec. 8, 1906

WHAT turned my attention first to a consideration of children's reading in the public libraries was standing close to a little urchin, several years ago, and watching him select his own book. What matter the title, or the author, or the story, there were the pictures, an indisputable fact of Indian and tomahawk. It was then I came to the conclusion that the publisher was wise who used an exciting frontispiece.

But that boy epitomized an evil—one which involved all children in relation to the public libraries. If there is truth in what Plato wrote about the beginning in every work being the most important part, "especially in dealing with anything young and tender," then there should have been some one nearby to have directed the hand of that child. In those years, New York City was doing practically nothing toward superintending the reading of young folks in the public libraries, except in so far as the books were selected and placed upon the open shelves. But by degrees, throughout the entire library field in this country, the importance of this one particular phase has assumed large proportions, and, to-day, it stands as one of the most difficult problems confronting librarians. . . .

Now, what does all this library activity betoken? We have given so much attention to the literary deluge as it has affected adult books, that many of us have failed to recognize the flood gates open as well in the children's world. I have watched this stream for four years. Every season it has repeated itself, and every year certain principles have stood out above the appalling fact of the volumes themselves. . . . Have you watched the breathlessness of a messenger boy, with his "Ragged Dick Series;" the intent, eager faces in the gallery during a melodrama? Nine times out of ten, morals are not being perverted, crime is not being glorified. But the good is winning its just deserts in a large way, and the boy *glows*. Not that I would have our libraries circulate "Ragged Dick," but there is more to remember in such stimulation, there is more *effect* than will ever be drawn from the conventional tale that has its customary noble and ignoble hero. The amount of inane literature concocted for children is pernicious.

There is an earnest effort on the part of librarians to weed out from the shelves an overabundance of the Alger and Stratemeyer and Dinsmore imitations. A certain responsibility should attach itself to the author of juvenile books; a responsibility which that author, in the face of a commercial proposition, generally fails to recognize.

BOOKS SUITABLE FOR CHRISTMAS GIFTS

ONE of the exhibits being regularly made by a number of libraries is one of books suitable for Christmas gifts, to assist in the choice of such both for children and for grown people. Among the libraries that are doing this are the Buffalo (N. Y.) Public Library, the Washington (D. C.) Public Library, the Pratt Institute Free Library, Brooklyn, N. Y., the East Orange (N. J.) Public Library, the Cleveland (O.) Public Library, the Carnegie Library, Atlanta, Ga. (these two for children only), the Utica (N. Y.) Public Library, and the City Library, Springfield, Mass. Of these at least the Washington, Atlanta, Pratt, East Orange and Utica libraries print lists, the last three printing this year the same list, which gives only the new books for adults. These libraries all show copies of the books themselves, such exhibits being much visited. The *A. L. A. Booklist* (November) contributes to this same end a list of "Some children's books suitable for gifts," covering six pages.

POOLE'S INDEX SUPPLEMENT

THIS year closes another five-year period for Poole's Index, and it is understood that Mr. Fletcher and Miss Poole have the material well in hand for the fifth five-year Supplement, to be issued as early as possible in 1907.

This Supplement will include all periodicals covered by the last Supplement that have continued in publication, with several important additions, besides the newer periodicals that have been covered by the Annual Indexes. Among other additions are the leading university periodicals, beyond the *Harvard Graduates' Magazine*, the *Technology Review*, and others formerly included. Among those listed for inclusion are the *Columbia University Quarterly*, the *University of Chicago Record*, the *University of Cincinnati Studies*, etc. The purpose of this note is to ask for suggestions of titles to be added to this list. Scientific and technical series cannot, of course, be included, and in indexing those serials that are included note will be taken only of the articles of general interest, the mass of material relating to domestic affairs of the individual institution being passed over.

It is believed that the inclusion of this line of periodicals will make the index increasingly useful in the larger libraries, especially in those of the colleges and universities, and will at the same time bring into deserved recognition and use much valuable material hitherto hidden away.

Suggestions as above are earnestly invited, and should be addressed to W. I. Fletcher, librarian of Amherst College, Amherst, Mass.

A CONGLOMERATE IN PERIODICALS: THE METHODIST REVIEW *

"A Conglomerate in periodicals," by C. H. Gillett, in the *LIBRARY JOURNAL* for April, 1886, furnishes a striking instance of the difficulties which the author of Poole's Periodical Index had to encounter in the preparation of that great work. It is not surprising that in a few cases he made mistakes. His numbering on the *Methodist Review* is an instance. A statement concerning it may help librarians in perfecting their sets.

The periodical, now known as the *Methodist Review*, is in its 68th volume and fifth series. Its place of publication has always been New York. From January, 1818, to December, 1828 (11 years), it was called the *Methodist Magazine*, and was published monthly (except that during 1827 no November and December numbers were issued, but previous numbers were thickened to make a full complement of pages). No numbers were issued during 1839. The new series, 1830-40 (11 years), was called the *Methodist Magazine and Quarterly Review*, and was published quarterly. The third series, during 1841-48 (eight years), was called *Methodist Quarterly Review*, and was published quarterly. The fourth series, 1849-84 (36 years), was called *Methodist Quarterly Review*, and was published quarterly. The fifth series, since January, 1885, has been called simply *Methodist Review*, and has been published bi-monthly. From the beginning of the periodical to the present time each volume has been numbered on the title-page consecutively, and from the beginning of the new series both consecutively and serially, as, for example, "volume 67—fifth series, vol. 1." In the new series (the second), the publishers put both the consecutive and the serial numbers on the back of each bound volume; but in the third and fourth series they unfortunately put there only the serial number. On the outside some bound volumes showed the consecutive number and some the serial. The numbering on the outside should conform to the title-page, at least as to the consecutive number. This fact the publishers have again recognized by putting the consecutive number "67" on the outside of bound volumes of 1885. Their index to the first 63 volumes refers by consecutive number and by years.

Librarians, in binding, should follow the consecutive number, and then by an extra number, corresponding to the mistake in Poole's Index, render that work easily useful. The first Poole's Periodical Index Supplement should refer by the consecutive number, and so avoid trouble for the years later than 1881. Librarians should know that the volumes 1818-24 have each but one plate; that the volumes 1825-48 have each two plates; 1849,

January and October, plates; 1850, January, plate; 1853, January, plate; 1858, January, plate; 1859, January, plate; 1874, January, plate; 1879, January and October, plates; 1882, four plates; 1883, four plates; 1884, January, April and July, plates; 1885, six plates. The index for 1849 was not published until the January number for 1850.

J. C. THOMAS,

Librarian Methodist Library.

SOCIAL EDUCATION CONGRESS, BOSTON, MASS., NOV. 30-DEC. 2, 1906.

THE Social Education Congress was called in order to bring together all the existing forces of the community, the home, the church, the schools, the libraries, business and industry, to consider the adjustment of all social relations in accordance with the spirit of brotherhood and mutual helpfulness. A similar conference is planned for next year.

This Congress was held on the initiative of the Social Education Club, of Boston, and with the co-operation of twenty-six societies, of which the American Library Association was one. The committee to represent the A. L. A., appointed by President Andrews, was Dr. H. G. Wadlin, Boston Public Library, chairman; S. W. Foss, Somerville (Mass.) Public Library, and C. K. Bolton, Boston Athenæum Library, with Miss N. E. Browne, A. L. A. Publishing Board, as secretary to the committee. The different section meetings were on "Social training in infancy and early childhood," "Commercial education," "Health education," "Industrial education," "Self organized group work," "Special school classes for troublesome children," and "The relation of the library to social education." There were mass meetings on "Education for citizenship," "The school as a social organism," "The school and the family," "Industrial education," and "Education of the conscience." The Massachusetts State Teachers' Association held two meetings during the Congress. Many of the men and women eminent in education and in the investigation of social problems read papers at the Congress, and it is to be hoped that full Proceedings will be published. This is assured if there is sufficient interest in them, and this may be expressed, and all inquiries may be directed to the corresponding secretary, Frank Waldo, Room 37, Rogers Building, Massachusetts Institute of Technology, Boston.

Dr. Horace G. Wadlin presided at the section session on "The relation of the library to social education," and in his address spoke of "The social ideal to-day: can the public library assist its advancement?" He said, in part: "The central problem in education at present has to do with the training for effective vocational service. The public

* This note was found among the Rev. Mr. Thomas's papers after his death.

school system is being modified with reference to this problem. But the library supplements the work of the school by providing for its pupils, as well as for large numbers of young artisans or mechanics who, on account of age or restricted opportunity, have had no school training, books in all departments of the arts and sciences which would otherwise be beyond their reach.

"There is also the social need of a clearer comprehension of our civic duties. The public library is the one available source from which the young voter, or the untrained voter of any age, may obtain the books that contain the record of past political action, or which enforce the principles that are moving men to-day towards a better citizenship.

"Finally, under the inspiration of the present social ideal, we hold that the higher ranges of literature shall not be forever unknown to the people at large, but that gradually they may be brought to feel the influence of books which are neither handbooks of technical knowledge nor manuals of civic duty. In this field also, the public library has opportunities and responsibilities beyond those of any other educational institution. It freely supplies books that are literature purely, and provides intelligent direction in their use; books which 'humanize their readers and make them more humane.'

"There is nothing impracticable or vague in the present effort towards social betterment, and those who administer the public library may greatly assist the movement. But to achieve the highest results the librarian must have not only intellectual culture, but spiritual insight and sympathy, and an appreciation of the world outside of books, beyond the library walls."

Dr. Wadlin was followed by Mr. John Cotton Dana, of the Newark Free Public Library, who spoke on "Many-sidedness of interest: how a library promotes it." After an introduction on the use of the library for research, for pleasure and for the broadening of life by interest, and pointing out that social efficiency is brought about by voluntary co-operation, Mr. Dana said:

"The public library, like the public school, is the product of mutual aid, of a co-operation primarily voluntary. It is, in turn, itself a factor, and as such adds to social efficiency, not by teaching directly how effectively to organize and co-operate, but by promoting sympathy. It exposes to many the similarities between manners, ideals and aims which seem at first quite dissimilar. Government, diplomacy, war—these are on the surface in our relations with other nations, for example, the Orientals. These superficial international relations point to a substratum of individual ignorance, narrowness and selfishness. We first ignore, then despise, then fear, then hate the alien. But contact opens our eyes. We soon find that though his manners are strange, they are harmless; that

though his ideals are curiously expressed, they are high; that though his aims are not what we inherit, they are worthy. Then we applaud, we sympathize, we co-operate—and peace is here."

He then dealt with the methods of inducing interest, the one on which he dwelt being the "making known of its powers." After detailing various ways of giving publicity to the library and its contents, Mr. Dana ended his address as follows:

"The library, then, should be accumulative of books, hospitable to students, a sedative for quietists, and provocative of interests, and the last is not least. To be stimulating it must be known, easily reached, and by post and telephone easily bespoken.

"Through all this paper I have assumed, what librarians know quite well, that in a library's books are found all the interests of life; I point my story once more by saying that it is one of the library's duties to make known to its people that this is true; and that in their books are all the thoughts and deeds and dreams of all men, and that through these, their books, they may get the broad and wholesome view of things."

Discussion on this paper was led by Mr. Sam Walter Foss, of Somerville.

The next paper was by Miss Grace Blanchard, librarian of the Concord (N. H.) Public Library, on "The public library as a quarry." She said, in part:

"Statues and paving-stones, the beautiful and useful, are latent in the public library as in a quarry. It includes potentially all other means of social amelioration, as it may inspire to nobler deeds of every kind. Alike from Poole sets and from this month's magazines pours a flood of testimony that the public library is a leading factor in social education; the burden of proof rests with those who hold a contrary opinion."

The discussion on Miss Blanchard's paper was led by Mr. George H. Tripp, New Bedford (Mass.) Public Library.

The last address of the session was by Mr. Arthur E. Bostwick, of the New York Public Library, on "The library as a conservative force." Mr. Bostwick's theme was the value of books as an inert force, enabling the world to keep in touch with the past.

"Books enable us to keep in touch with everything of value that has been done in the past, and especially with everything that is in the line of racial progress, so that we may go on in a direct course without retracing our steps. A collection of books is a conservative force in much the same sense as inertia in mechanics: it makes for steady collective progress along the lines of previous endeavor, and discourages erratic spurts and excursions, which use up valuable energy. In particular, it is a conservator of our written language, which has now earned the right to be considered by itself and not merely as a representative of the spoken tongue."

LIBRARY RECEIPTS AND EXPENDITURES

IN Bulletin 50, of the United States Bureau of the Census, "Statistics of cities having a population of over 30,000, 1904," one apparently finds information regarding the receipts and expenditures of libraries in cities of over 30,000. The information is really misinformation, and librarians may save themselves trouble if they make no attempt to learn facts from the tables given—with this exception, that very probably the amounts paid for salaries are correctly given. This is not to say that the figures given by the Census Bureau are not those given by city officials, but the fact is that the city books do not show the facts as the library would report them.

The significance of the figures is wholly lost, for example, when the city books show orders presented during the year, while the library reports orders drawn. In this way in New Haven the city accounts might show practically 11 months, 12 months or 13 months in different years, while the 12 months is the period understood. Table 5 of Census Bulletin shows payments of libraries for (a) "Salaries and wages," (b) "All other." In point of fact, payments for books appear sometimes to be deducted without any statement of this procedure. Why not also, then, payments for periodicals, many of which become books by binding? This table is fairly complete, and does probably give the amounts paid for salaries correctly.

Table 3 gives "payments, receipts and cash balances, by independent divisions and funds."

This table is very incomplete as regards libraries. Group 11 omits libraries of Washington, Minneapolis, Providence, St. Paul, Rochester, Kansas City, Mo., Toledo, Denver, Allegheny, Columbus, Worcester, Los Angeles, Omaha, Syracuse, Scranton, Fall River, Portland, Ore., that is the large majority—17 out of 25—of the cities with populations of 100,000 to 300,000.

The following statement exhibits the variations between the library report, which shows the facts for the actual 12 months, and the census figures taken from the city books, which show orders presented during the same period, though not all drawn during that period—for New Haven.

Payments to public, Library \$21,966, Census, \$24,476.

Payments to departments, offices, etc., Library \$1111.73, Census nothing.

Cash on hand at end of year, Library .27, Census \$1150.

Aggregate of all payments, and cash on hand at end of year, Library, \$21,966, Census \$25,426.

Cash on hand at beginning of year, Library \$3.90, Census \$2313.

Receipts from the public, Library \$1111.73, Census \$1150.

Receipts from departments, offices, industries and funds, Library \$21,963, Census same.

One unfortunate result of these last two columns classifying sources of income is that what is really the same thing may be in either column, and one cannot tell why without special knowledge. A city appropriation appears to belong in the last column, while the proceeds of a library tax go in the other column. This is confusion, and deprives us of information which we would like, namely, what money comes from taxes, directly or indirectly, and what from gift and endowment. It appears that the Census is technically correct while really wrong. What we want is the truth (as far as possible), rather than what we have.

Another point in which most *library* reports are deficient. They do not enumerate expense borne by other departments. For example, in New Haven the library does not pay for its stationery, for water, or for insurance. Neither does it pay interest on bonds issued for the cost of the building. A faithful account of the money expended by the city on account of the library ought to include these items.

WILLIS K. STETSON,
New Haven (Ct.) Public Library.

THE PUBLIC LIBRARY FOR SCHOLARS

ANY collection of books, public or private, ought to have as its highest function the assistance of those who wish to learn something. The grace of sane entertainment is not despised by any tolerant person, but the highest human privilege is to learn. Novels are the cheapest books in any library, by class, and the easiest to obtain. They are sold at 49 cents by department stores, and circulated for almost nothing by bookstores. Text books are expensive.

In almost any normal city there are more people who have to make a living than there are people who have time to kill. People who have to make a living could make a better living if they knew more about their own business and what others have done in it.

The public library ought first of all to be for scholars; and it ought first of all to remember that the painter's apprentice, or carpenter, or boiler-maker, or messenger boy who wishes to *study something* is quite as important a scholar as a Greek professor. This is no heresy. Every important library in the world has adopted this point of view. In other words, even in public libraries everywhere, the reaction is to see the department of books that costs money and is worth money (because it gives information), as properly the backbone of the whole.

Charles F. Lummis, in *Out West*, September.

State Library Commissions

NEBRASKA LIBRARY COMMISSION:

Chancellor Andrews having resigned the presidency of the commission, Mr. F. L. Halter, of Omaha, was elected president at the regular quarterly meeting, Nov. 1. Mr. Halter held the office before Chancellor Andrews's term.

NEW YORK STATE EDUCATION DEPARTMENT:
Educational Extension Division. W. R. Eastman, chief, State Library, Albany.

The annual report of the Public Libraries Division (which became on Jan. 1, 1906, the Educational Extension Division) for the year ending Sept. 30, 1905, is made by Mr. Dewey, director during that period. The statistics of 1243 New York state libraries take 122 pages of the report. The additions to these libraries for the year number 458,573, the total now being 8,158,940. Almost one-half this number are in New York City. The total circulation from free libraries was 12,075,662, a daily average of 33,084.

The new buildings completed and occupied during the year number 30, of which 19 are in Greater New York, and 25 are the gift of Andrew Carnegie. Vassar College Library was given by Mrs. Frederick Ferris Thompson, the Utica building was built by the city, and that at Watertown is the gift of Mrs. Emma Flower Taylor. At Solvay the Solvay Process Company shared the gift with Mr. Carnegie. Eight libraries have better accommodations in new buildings or rooms, and 14 new branch libraries have been opened. Thirteen new buildings are in process of construction.

During the year two absolute and eight provisional charters were granted to libraries, eight provisional charters previously granted were made absolute, three charters were amended, eight library transfers were approved, and as a consequence of one transfer and consolidation one charter was surrendered. There are now 244 independent libraries registered, besides two chartered institutes and one museum maintaining libraries.

The inspector, sub-inspector and one assistant visited 209 libraries in 45 counties. Of these 19 had not been reached before. Allotments of public money were made to 271 libraries, including branches, the sum total being \$24,239.91. Applications to the amount of \$10,772 more were approved, but the appropriation was limited to the first named sum. Twenty-three certificates of approved circulation were issued to 17 libraries and branches that are free for public use, though controlled by private corporations. Their applications for local aid by public taxation were based on statements and figures thus certified.

In Greater New York three libraries are supported by city taxation—the New York Public, the Brooklyn Public, and the Queens-

borough libraries. There are 20 other free public libraries in the five boroughs. The total number of volumes in all free public libraries in the city was 1,305,698, and the circulation was 6,717,107.

Greater New York paid to her libraries \$627,951.78; Buffalo, \$77,332.62; Syracuse, \$55,000; Utica, \$18,000; Albany, \$11,900; Poughkeepsie, \$9800; New Rochelle, \$9000, and Niagara Falls, \$8200.

The summary of library legislation, the records of gifts to New York libraries, and the record of library meetings are given as usual. An outline of the essentials in cataloging small libraries takes two pages.

There is included a table of Andrew Carnegie's gifts to libraries, 1881-1904, by states. The total is \$39,325,240.

VERMONT BOARD OF LIBRARY COMMISSIONERS:

Edward M. Goddard, chairman, Montpelier.

The sixth biennial report of the board, for the two years ending June 30, 1906, reports the founding of free public libraries in seven towns, to each of which \$100 worth of books have been furnished by the commissioners. Another town has voted to maintain a library, and will receive state aid.

In 1905 the publication of a quarterly bulletin was begun, to furnish information to the libraries of the state, and to supply a means of communication between librarians and the commission. Every public library in the state is given the *A. L. A. Booklist*, and 40 copies of *Public Libraries* are sent to as many libraries. Gifts to libraries are recorded in a tabular statement, as is the use of travelling libraries (by counties). There is a chronological list of over a hundred libraries established since 1895 by the aid of the commission, and a library map of the state is given. There are plates showing exteriors, interiors and floor plans of Vermont libraries, and an interesting lot of "Library notes." The pamphlet closes with "The laws of Vermont relating to the establishment of public libraries."

State Library Associations

DISTRICT OF COLUMBIA LIBRARY ASSOCIATION

President: George F. Bowerman, Public Library.

Secretary: Earl G. Swem, Library of Congress.

Treasurer: Henry S. Parsons, Office of Documents.

The 94th regular meeting of the association was held in the lecture room of the Public Library, Wednesday evening, Oct. 17, 1906. There had been no meeting of the association since April 25, 1906.

The papers presented were short. Miss Eunice R. Oberly, of the Library of the Bureau of Plant Industry, described her visit to the Library School of Simmons College, Bos-

ton, calling attention to the advantages of the course in library science at that institution. She also gave in more detail an account of the bibliographic index of North American fungi in the Library of Harvard University. Miss Grace B. Finney, of the Public Library, presented observations while on a recent trip to New York City upon the libraries of the city, but especially upon those branches of the Public Library established on the East Side, which have exclusively the patronage of the foreign population. Mr. Torstein Jahr, of the Library of Congress, recently returned from a three months' visit to Norway, spoke of the growth of libraries in that country. Reference was made especially to the libraries of Christianity. Some of the leading librarians had received their training in library work in America. The influence of American ideas upon the management of libraries was very noticeable. Mr. George F. Bowerman, librarian of the Public Library, described his recent trip to the Pacific coast and Alaska, referring in detail to several libraries, especially those at Victoria, Vancouver and Dawson. The most interesting, perhaps, was the library in Dawson, on account of its situation so far north. The library is housed in a building given by Mr. Carnegie, and is supported by the territorial government. No book is lent unless the full value is deposited. The reading room is also a smoking room. The earliest papers received are those from Seattle, which are then two weeks old.

After the regular program, the members of the association and their friends adjourned to the new children's room, where refreshments were served.

The 95th regular meeting was held in the children's room of the Public Library, Wednesday evening, Nov. 21, 1906.

Mr. Henry R. Evans, of the Bureau of Education, had for the subject of his paper the library of the Bureau of Education. Mr. Evans reviewed the history of the bureau, showing how, from its establishment in 1867, the library had been one of the important departments. At the outset the attempt was made to collect complete sets of catalogs of state and city school systems, colleges and universities, both in this country and abroad. Special care is taken at the present time to keep the sets of catalogs complete to date. The real nucleus of the library was Commissioner Barnard's library of 900 selected books on pedagogy, which were purchased from him at the time he resigned as commissioner. The library now has 82,000 volumes. It remained unclassified until 10 years ago, when the books were arranged according to the Dewey decimal system. It is mainly a working library, intended for the use of the specialists of the bureau. One of the problems facing the bureau is more room for the library. Mr. Evans closed with a tribute to Dr. W. T. Harris, Commissioner of Education for so many years. Under Dr. Harris the policy of the bureau had

been strongly emphasized to aid in every way the public libraries of the country.

Mr. Claude B. Guittard, now of the Library of Congress, but formerly librarian of the Coast and Geodetic Survey, read a paper upon the Library of the Coast and Geodetic Survey. When the survey was authorized in 1807 President Jefferson commissioned Mr. F. R. Hassler to obtain the necessary equipment in Europe. Mr. Hassler considered certain books as essential to the success of the undertaking as instruments, and accordingly purchased fundamental reference books in mathematics, astronomy and surveying. These books form the basis for the present library. The library proper comprises some 30,000 volumes, confined to mathematics and physical geography, astronomy, physics, terrestrial magnetism, physical hydrography and geophysics. It has been the policy in recent years to weed out all dead and out-of-date material. The collection as shelved is classified by a combination of the expansive and decimal systems. The expansive system is used for geographical literature, and the decimal system for the remainder of the library. The survey exchanges publications with practically all the bureaus of the world issuing maritime charts. Material thus received forms the larger part of the 38,000 maps and charts in the collection. The survey has a force of men in the field all the time collecting geodetic, hydrographic and magnetic data necessary for the compilation of accurate charts. The results of this field work, with the subsequent computations, are contained in some 60,000 volumes of records, 6000 hydrographic and plane table sheets, and 5000 photographic negatives.

EARL G. SWEM, *Secretary*.

INDIANA LIBRARY ASSOCIATION

President: Miss Virginia Tutt, Public Library, South Bend.

Secretary: Miss Sue Beck, Public Library, Crawfordsville.

Treasurer: Demarchus C. Brown, State Library, Indianapolis.

The annual meeting of the Indiana Library Association, held at Kokomo, Oct. 18 and 19, was marked by good attendance, keen interest and valuable addresses. Informal discussions enlivened all sessions, and more association business was transacted than has been usual at the annual meetings. Of unusual interest were the amendments to the constitution by which the effectiveness of the association is expected to be increased, and the consideration of librarians' salaries in Indiana.

Following the welcome extended by Miss Edith Trimble, librarian of the Kokomo Public Library, Miss Lillian B. Arnold, president of the association, gave the annual address and reviewed the history and work of the Indiana Library Association. The sessions which followed were in the nature of library institutes, with Miss Mary W. Plummer, di-

rector of the Pratt Institute School for Library Training, as the leader. Her three addresses were "The librarian's duty to himself," "Management of a small library" and "Work for children in the library." The speaker's experience and wisdom were shown in her treatment of these subjects, and general discussions followed each address. Valuable suggestions were given by many librarians who were carrying on unique features of the work in their libraries. Two good contributions were given by Miss Ethel McCullough, of the Elwood Public Library, on the use of newspaper and magazine clippings in a library, and on the Citizenship League of girls and boys in Elwood.

The reception at the Kokomo Library on the evening of Oct. 18 followed an interesting address by Demarchus C. Brown, on the duties and privileges of a librarian.

Miss Artna Chapin, of the Muncie Public Library, introduced the question of librarians' salaries in Indiana. She believed that these salaries were too low for the qualifications and equipment demanded, and suggested that a committee be appointed to investigate the question. Miss Chapin was made chairman, and W. M. Hepburn, of the Purdue University Library, and Miss Virginia Tutt, of the South Bend Library, were put on the committee to report at the next annual meeting of the association. The Public Library Commission of Indiana has been collecting library statistics, including the salaries of library workers and their training, and will co-operate with the committee in its work. Tables showing the tax levy, cost of maintaining the library, amount expended for books, training demanded of the librarian, and other information relating to the salary question will be secured.

Important changes in the constitution were made. Individual voting by members of the association was substituted for unit voting by libraries. The eligibility requirements for admission to the association were broadened to allow membership to any person interested in the objects of the association. Persons not actively identified with library work must be received through vote of the executive board.

Officers for the ensuing year were elected as follows: president, Miss Virginia Tutt, South Bend; vice-president, Miss Ethel McCullough, Elwood; secretary, Miss Sue Beck, Crawfordsville; treasurer, Demarchus C. Brown, Indianapolis. CHALMERS HADLEY.

KANSAS LIBRARY ASSOCIATION

President: Miss Lida Romig, Public Library, Abilene.

Secretary: Mrs. Nellie G. Beatty, Public Library, Lawrence.

Treasurer: Miss Lula M. Knight, Public Library, Newton.

The sixth annual meeting of the Kansas Library Association was held at Lawrence, Oct. 25-26, with the largest attendance in the

history of the organization. An encouraging representation from small libraries in distant localities was made possible by the generous response of library boards to the recommendation that they pay the expenses of their librarians attending. Another gratifying feature was the sending of a delegate by the second district Federation of Woman's Clubs, and the expressed desire of other district federations that the invitation to do so had been received early enough to appoint delegates.

The first session convened Thursday afternoon at 2.30 o'clock, President J. N. Wilkinson presiding. The meetings were all held in the assembly room of the Lawrence Public Library, and guests availed themselves of many opportunities to inspect the beautiful building.

In the absence of Chancellor Strong, of the Kansas University, Vice-Chancellor Carruth welcomed the visitors. He made the encouraging statement that most western libraries are better in quality than eastern, have less rubbish and fewer duplicates. He further stated that Lawrence has probably more books than any other town in the state, the university alone containing 52,000 volumes, nearly all good books. After earnestly commending to librarians the value of newspapers, diaries, etc., he urged that each library be made a collecting station for the State Historical Society, and that no bit of historical information be allowed to escape.

Mr. J. R. Griggs, president of the Board of Directors of the Lawrence Public Library, extended cordial greetings in behalf of the city. Mr. Griggs deplored the lack of influence and effort on the part of officials and librarians in getting various classes of people to become patrons of libraries and readers of free books. He laid stress upon the importance of a home-like library, a smiling welcome, and tactful guidance of readers to better books, and especially urged librarians to find means to induce mechanics and workers in various trades, those who have not the means to purchase books, to read such as would aid and advance them in their chosen profession.

President Wilkinson thanked the welcomers for greetings and advice, and then spoke appreciatively of library work.

In presenting the subject of cataloging and the using of Library of Congress cards, Mrs. Rosa M. Hibbard, of the State Library, offered many helpful suggestions. She advised the gathering of all tools available in the way of reference books. She called attention to the many valuable simple tools that can be obtained at little cost, such as bulletins, printed catalogs, lists, etc., and asserted that a few dollars invested in the dictionary catalogs of our larger libraries would reap more harvest to the busy librarian than would the more pretentious works. Especial attention was called to Miss Hitchler's

paper on "Cataloging for small libraries," which appeared in the LIBRARY JOURNAL for January, 1904, and to Miss Van Valkenburgh's paper on "Common sense in cataloging small libraries," read at the Narragansett Conference. The speaker strongly advised the use of Library of Congress cards. For a fuller discussion of this subject the hearers were referred to the LIBRARY JOURNAL for June, 1906, which contains a paper by Mr. Hicks on "Library of Congress classification and its printed catalog cards," supplemented by reports from various librarians as to the use of these cards in their respective libraries.

Mrs. Hibbard closed with the hope that the Library of Congress and the A. L. A. Publishing Board would continue to simplify the work of the busy librarian.

At the evening session a large audience gathered to hear Miss Faith E. Smith, librarian of the Public Library of Sedalia, Mo. Miss Smith has given much attention to library work for children, and offered from her experience and study much that should profit her hearers. She limited her consideration of the subject to work in small libraries with meager incomes. Granting that better work can be done for children in a separate room and with a special librarian, she pointed out the advantages to children of association with older people, of acquaintance with the head librarian, and of earlier knowledge of the general library.

In considering ways and means of attracting children to the building and the books, prominence was given to the story hour, the picture bulletin, and to special exhibits. "Make the story hour count for something," urged the speaker. "It is my theory that it is not necessary, neither is it worth while, to tell stories from books that children will read of their own accord. The story hour is such an excellent opportunity to open the eyes of the children to the fact that the real things and the true are at the same time interesting. One of our most successful stories was about bees. It was conducted by a kindergartner who illustrated her work with her own drawings of various parts of the bee."

The remainder of the evening the visitors and their friends were delightfully entertained by ex-Senator and Mrs. Henley.

Friday morning at 8 o'clock the librarians were conveyed in automobiles to the State University, which possesses one of the choicest college sites in this country. Miss Watson and her able assistants received the visitors and introduced them to the secrets of the well systematized library. After visiting many of the fine buildings on the campus, the guests assembled in the chapel to listen to an impressive address by Rev. Cyrus Flint Stimpson, pastor of the Congregational Church, of Kansas City, Mo.

Again the guests were met by automobiles and taken to Haskell Institute to inspect the work of the Indian students, and marvellous

work it is, especially the artistic and imitative work. Suddenly the music of a band, an Indian band, called the guests to the campus to watch the erstwhile children of the wild march in disciplined ranks to their mess hall. Superintendent and Mrs. Pearse then conducted the visitors to a private dining room, where luncheon was served by Indian girls.

At 2.30 o'clock the closing session of the meeting opened. The following officers were elected for the coming year: president, Miss Lida Romig, Public Library, Abilene; first vice-president, Mr. J. N. Wilkinson, Emporia; second vice-president, Miss Clara Francis, assistant, State Historical Society, Topeka; third vice-president, Mrs. Rosa M. Hibbard, assistant, State Library, Topeka; secretary, Mrs. Nellie G. Beatty, Public Library, Lawrence; treasurer, Miss Lula M. Knight, Public Library, Newton; additional member of executive board, Miss Dora Renn, assistant, State University Library, Lawrence.

The advisory committee made the following report:

1. The committee recommends that the constitution of the K. L. A. be so amended as to provide for a permanent advisory board, said board to be constituted as per constitutional amendment herewith submitted, members to be elected at this meeting for terms of one, two and three years, respectively.

Amendment. There shall be an advisory board of one member elected each year for a term of three years. The member serving the last year of a term shall during that year be chairman of that board.

2. Realizing the great need in Kansas of a state library organizer, the committee recommends that such an organizer be provided and that the executive committee of K. L. A. be *ex-officio*, a committee of this association to work with the Kansas Travelling Libraries Commission to secure such legislation at the coming session of the legislature as will make possible the appointment of a library organizer.

3. That our advisory board be instructed to investigate the matter of a magazine clearing house for the state, and advise establishing one at once under the direction of the Kansas Travelling Libraries Commission.

Report accepted and amendment adopted.

Advisory board appointed for 1907: Mr. James L. King, State Library, Topeka, one year term; Mrs. Sara Judd Greenman, Public Library, Kansas City, two years term; Miss Carrie M. Watson, University Library, Lawrence, three years term.

The following resolutions were presented and adopted:

Resolved, That the Kansas Library Association regards the method formerly in use by the Superintendent of Documents as more satisfactory than the present method, and therefore respectfully recommends that he issue duplicate cards for public documents in sufficient numbers to cover all added entries.

Resolved, That in the death of Mr. Edward Wilder, the Kansas Library Association has lost a

friend whose place will never be filled; that we wish to bear testimony to the help Mr. Wilder has given to this association and to the library interests of the state by his ever-ready encouragement, his genial personality, and his practical knowledge of library needs.

Newton renewed the invitation of the previous year, and was chosen as the place of the 1907 meeting.

Miss Clara Francis, of the State Historical Society, Topeka, gave a pleasing account of the Narragansett Pier Conference. She said, in part: "I regret that Kansas had not a larger representation. There were only two from this state. There was much to interest a western librarian at this meeting. It was a thoroughly eastern one, and for that reason was to the searcher after local color full of possibilities; the environment, everything, was typical and correspondingly enjoyable."

Miss Elva E. Clarke, librarian of the State Normal School, Emporia, gave a brief account of the same meeting.

Informal two-minute reports from librarians present showed everywhere increased facilities and growing circulation. The most unusual feature reported was reference work with country schools by telephone. This is carried on extensively at Downs. The reports brought the librarians into closer touch, and caused them to disperse with a feeling of satisfaction in the rapid and successful development of library work in Kansas.

In every way and by every one the 1906 meeting was pronounced both a benefit and a delight, and much gratitude was expressed to the Lawrence librarians and friends for their untiring efforts to make it both.

LIDA ROMIG, *President*.

MAINE LIBRARY ASSOCIATION

President: Arthur J. Roberts, Colby College, Waterville.

Secretary: Gerald G. Wilder, Bowdoin College Library, Brunswick.

Treasurer: Miss Alice C. Furbish, Public Library, Portland.

The 13th meeting of the Maine Library Association was held at Waterville, Nov. 14, with President Roberts in the chair. The morning session opened with an attendance of about 75, in the Public Library, at 10.30 o'clock, when Rev. Edwin C. Whittemore, D.D., welcomed the association to the city of Waterville. Mr. Whittemore spoke briefly of the history of the Waterville libraries. Mrs. Kate C. Estabrooke, of the Maine Library Commission, responded for the association. The principal speaker of the morning was Miss Mary E. Robbins, assistant professor of library science at Simmons College, who spoke on "Some library aids." Among other aids Miss Robbins discussed from the practical side the A. L. A. publications, periodical circulation, substitutes for the accession book and aids for the children's room. Miss Florence E. Dunn, of Waterville (B. L.

S., N. Y., 1902), read a paper on "Our friend, the catalog." State Librarian Ernest W. Emery read a letter from Charles F. Lummis, librarian Los Angeles Public Library, on "Popularizing a public library." The afternoon session opened with an attendance of about 100, the largest number yet recorded at a technical session of the association. Last April one trustee was present. At this session 16 were counted. The session was opened by an account of the "Beginnings of the library movement at Freeport," by Miss Annette H. Aldrich, librarian of the B. H. Bartol Library, of Freeport. Miss Annie Prescott, librarian, Auburn Public Library, spoke on the "Need of optimism in public library work." Sixteen people from Maine were present at the A. L. A. Conference at Narragansett Pier, and five of these, Prof. Hartshorn, Prof. Little, Mr. Emery, Miss Furbish and Miss Dunmore spoke of their impressions of that meeting. This was followed by a paper on "People and the library," by Miss Louise H. Coburn, trustee, Coburn Library of Skowhegan, and an address by Chaplain C. A. Plumer, librarian at the state prison, on "The use of the prison library." The session was concluded by the question box, which was conducted by George T. Little, librarian of Bowdoin College.

Throughout the program discussion was freely engaged in on many points that were brought out in the papers. All the papers of the meeting will be collected and printed as the proceedings of the association in the *Bangor Commercial* for Dec. 1 or 8, 1906. They will also be printed one a week in the Tuesday edition of the *Lewiston Journal*.

The evening session was held in the Colby College Chapel, where practically every seat was filled. A brief musical and literary program preceded the evening address, which was given by Melvil Dewey, LL.D.

GERALD G. WILDER, *Secretary*.

MISSOURI LIBRARY ASSOCIATION

President: W. L. Gifford, Mercantile Library, St. Louis.

Secretary-Treasurer: Miss Flora B. Roberts, Normal School, Warrensburg.

The seventh annual meeting of the Missouri Library Association, held at Joplin, Nov. 8, was called to order by the president, Miss Sula Wagner, of the St. Louis Public Library.

Senator Hugh McIndoe, vice-president of the Joplin Board of Trustees, welcomed the association to Joplin, and spoke of the great mining and stone industries in the vicinity of the city. Senator McIndoe also talked on "The trustee as legislator." He presented the idea that the librarian should have power to employ and discharge assistants, and also in the general management of the library. Mr. Purd B. Wright responded with a paper on "The librarian as executive." He said in part that nothing will so appeal to a board of

trustees as a practical demonstration on the part of the librarian that she is competent to fill the position, that the trustees will concede that the librarian knows about books, but that they have little respect for the librarian's business ability until it has been fully demonstrated. He said the librarian should attend all board meetings and should be as familiar with the business side of the administration as with the more intellectual side of selecting books. The librarian should know the sources from which library revenue is derived. Mr. Wright made further suggestions along purely business lines in the management of a library.

Mr. Wright begged permission to move that in view of Mr. Crunden's illness the secretary be instructed to send a telegram to Mrs. Crunden expressing the sympathy of the association, with a hope for Mr. Crunden's speedy recovery. The motion was carried unanimously.

By courtesy of the Commercial Club of Joplin the members of the Missouri Library Association enjoyed an automobile ride Wednesday p.m. until 3.30. The second session was opened by Miss M. L. Dalton, librarian of the Missouri Historical Society, St. Louis, with a paper on "The preservation of historical material in public libraries." The difficulty in procuring valuable historical material was a strong point. Few people realize the importance of original documents and therefore they are not brought to light. She said all the western states look to the Missouri Historical Society for material. The history of the West is incorporated in the early history of Missouri. Mr. F. A. Sampson, of the State Historical Society of Missouri, in discussing the matter said that books published one hundred years ago are more easily obtainable than the paper-bound pamphlets of to-day, which are looked upon as worthless and are destroyed.

Miss Marguerite McDaniel, Sedalia Public Library, in her paper on "Comparative study of things that libraries have done to rouse public interest," said the first efforts are to come from the inside, with plenty of good books, properly cataloged, and efficient service. She then gave a tabulated list of means to be used in advertising a library. Discussion was led by Miss Flora Roberts, librarian Normal School Library, Warrensburg, and Miss Ella Buchanan, librarian Public Library, Pittsburg, Kansas.

The feature of the evening was an address by Dr. L. M. McAfee, president of Park College, Parkville, on "The highest value of a library to a community," delivered to an attentive audience.

On Thursday, Nov. 8, the members of the association went to Carthage on the electric car, and were there welcomed by Col. W. K. Caffee, president of the Carthage Board of Directors. Mr. Willis Kerr, librarian of Westminster College, Fulton, roused an animated discussion in his presentation of the

subject "Developing a college library." Fiction reading in college libraries was taken up, and it was shown that the tasks assigned students left little time or inclination for reading in a lighter vein. That the college librarian should be a member of the faculty was strongly indorsed. Superintendent White, of Carthage, said the librarian should be classed with other professors; he is the "professor of books."

The question box was a unique device arranged by Miss Elizabeth Wales, librarian of Carthage. The association was divided into groups of four by means of checks designated A, B, C, and D. The president appointed a leader for each group and the questions were divided. The sections discussed answers to the questions for 15 minutes, then the leader gave the decision to each question submitted to his section. This arrangement aroused individual interest. The lunch provided by the citizens of Carthage was thoroughly appreciated, and due thanks were expressed by a motion passed.

On return to Carthage the members were entertained by Mr. Paul Blackwelder, assistant librarian of the St. Louis Public Library. His broad treatment of the subject "The child's use of library books and its influence upon his career as a college student" was helpful to the librarians. Mr. Blackwelder spoke of the sacredness and majesty of his subject, that of guiding the reading of children. He advocated having the little ones read anything they please, provided it is good. Superintendent L. J. Hall, of Joplin, started the discussion by remarking that the best use to be made of the library by children is to form the reading habit. Mr. W. K. Stone, University of Missouri, Columbia, followed Prof. Hall in the discussion.

The following resolutions were passed:

Resolved, That the members of the Missouri Library Association express to the Committee on the Missouri Library Association Handbook — Mrs. Carrie Westlake Whitney, librarian Kansas City Public Library, chairman; Miss Helen Tutt, St. Louis, and Miss Flora Roberts, Warrensburg — their thanks and appreciation for the publication of the handbook.

Resolved, By the Missouri Library Association in convention assembled at Joplin, Missouri, Nov. 8, 1906:

That most earnest reentrance is made against the sections of the "Bill to amend and consolidate the acts respecting copyrights," introduced 59th Congress, 1st session, May 31, 1906, which seek to amend and curtail existing importing privileges of educational institutions, including public libraries; and that the Senators and Representatives from this state are requested to oppose such sections or provisions of the bill, as introduced, as levying a most unjust and unnecessary tax on education.

ii. The secretary of this association is hereby directed to forward copies of this resolution to W. P. Cutter, secretary of the Library Copyright League, Northampton, Mass., and to each Senator and Representative in Congress from Missouri.

iii. That each library representative be requested and urged to make the matter a personal one with their Congressmen.

iv. That the attention of the college presidents of Missouri be directed to this matter, that such action may be taken as may be by them deemed proper.

The association left the appointment of a

new committee on the library commission bill to the incoming president. A motion was made by Mr. Purd B. Wright, of St. Joseph, and carried, that a committee on publicity be added to other committees to be appointed by the incoming president. The incoming executive committee was given power to act in deciding the place of the next meeting and the time of meeting. The auditing committee, Mr. W. H. Kerr, Miss Parrish and Miss Martin, approved the treasurer's report.

The nominating committee, Miss K. T. Moody, St. Louis, Miss Faith E. Smith, Sedalia, and Professor Wolf, of Parkville, submitted the names for officers of the ensuing year:

President: Mr. W. L. Gifford, librarian Mercantile Library, St. Louis.

First vice-president: Mr. W. H. Kerr, librarian Westminster College, Fulton.

Second vice-president: Miss Elizabeth Wales, librarian Carthage Library.

Secretary and treasurer: Miss Flora B. Roberts, librarian Normal School, Warrensburg.

These names were confirmed by vote. Adjourned. FRANCIS A. BISHOP, *Secretary*.

NEW HAMPSHIRE LIBRARY ASSOCIATION

President: Olin S. Davis, Public Library, Laconia.

Secretary: Miss Clara F. Brown, Public Library, Concord.

Treasurer: Miss Lillian E. Parshley, Public Library, Rochester.

The adjourned annual meeting of the association was held Nov. 22, at the State Library in Concord, Arthur H. Chase, state librarian, presiding in the morning in the absence of the president, M. D. Bisbee. Dr. F. L. Hills, of the city, in behalf of the Association for the Prevention of Tuberculosis, offered free of expense to any library desiring it, a travelling library on the prevention and treatment of the disease.

Miss Robbins, director of the library department of Simmons College, Boston, occupied most of the morning session in an informal talk on "Some library aids," which was full of practical suggestions. A few of these were: in place of the accession book, the use of shelf list and title-page on which to write accession items abbreviated, merely keeping a classed record of the number of books purchased and amount paid for same; the circulation, without cards or time limit, of inexpensive picture books among those too young to read, thus saving the wear and tear on older children's books; the use of heavy manila envelope to enclose the books in stormy weather. There was shown an inexpensive magazine cover of red rope manila folded over several outside advertising pages, secured by fasteners.

In the afternoon H. C. Morrison, state superintendent of public instruction, asked the co-operation of the library in preparing a list of the best books for reading in connection

with school work, and a committee for this purpose was chosen, with Mr. Morrison as chairman. Miss Robbins followed with a talk on the departmental work of Simmons College, dwelling especially on the library school and its six weeks' summer course for library workers. A committee was appointed, with Arthur H. Chase, of Concord, chairman, to act as a bureau of information on library matters.

The officers for the ensuing year are as follows: president, Olin S. Davis, Laconia; first vice-president, Mary B. Harris, Warner; second vice-president, Harriet Crombie, Nashua; secretary, Clara F. Brown, Concord; treasurer, Lillian E. Parshley, Rochester.

MARY W. DENNETT, *Secretary pro tem*.

NEW JERSEY LIBRARY ASSOCIATION

President: William Warner Bishop, Princeton University Library, Princeton.

Secretary: Marie L. Prevost, Public Library, Elizabeth.

Treasurer: Adam J. Strohm, Free Public Library, Trenton.

The annual meeting of the association was held Oct. 17, in the Free Public Library at New Brunswick.

The statistical report showed 169 members, and there was a large attendance at the meeting.

Mr. J. C. Dana, president, called the meeting to order at 10 a.m., and after the usual preliminary minutes spoke on the library situation in New Jersey. He considered that the state was not as advanced in library matters as it should be, and suggested, as a good method of quickening public interest in the development of library work and library use, a series of meetings in north and south Jersey, under the auspices of the state association. The papers of the morning were: "The library situation in New Jersey, and how the New Jersey Library Association can help the commission in its work," by Miss Sarah B. Askew, library organizer; "The Library Summer School at Asbury Park, and its value to those who attended it," by Miss Adeline L. Jackson, of the East Orange Public Library; "A good charging system for a small library, and the advantages of a good system," by Miss Cornelia A. See, of the New Brunswick Public Library; "Printed catalog cards for the small library," by William Warner Bishop, reference librarian of Princeton University.

At the afternoon session Miss Esther E. Burdick, of the Jersey City Free Public Library, spoke on "School reference work in the Jersey City Public Library."

A discussion of the following questions, presented by Miss Elizabeth H. Wesson, librarian Orange Free Library, followed:

a. How far should a library go in its purchase of books for school work?

b. How far can a public library act as a

library for all schools and do away with small libraries owned by schools?

c. Can the public library take the place of the Sunday-school library?

d. What simple methods are in actual use in supplying books for public schools and Sunday-schools?

The officers elected for the coming year were: president, W. W. Bishop, reference librarian of Princeton University; vice-presidents, W. C. Kimball, of Passaic, and Esther E. Burdick, librarian, Jersey City; secretary, Miss Marie L. Prevost, Elizabeth; treasurer, A. J. Strohm, Trenton.

NEW YORK LIBRARY ASSOCIATION

President: Walter L. Brown, Public Library, Buffalo.

Secretary: Miss Theresa Hitchler, Public Library, Brooklyn.

Treasurer: Edwin W. Gaillard, Public Library, New York.

The report of the committee on library institutes, made at the Twilight Park meeting, Sept. 24, 1906, has been printed in pamphlet form. It contains a detailed account of the work of the committee for the year, and the resolutions recommended by the committee and unanimously adopted by the association. These were printed in the *LIBRARY JOURNAL* for October, p. 722.

OHIO LIBRARY ASSOCIATION

President: Burton E. Stevenson, Public Library, Chillicothe.

Secretary: Mrs. Mary C. Parker, Public Library, Elyria.

Treasurer: Miss Grace Prince, Wittenberg College Library, Springfield.

The 12th annual meeting of the association was held Oct. 23-26, at Portsmouth.

The meeting opened with a reception in the parlors of the Hotel Washington, on Tuesday evening at 8.30 o'clock, and was attended by all of the delegates as well as a large number of the citizens of Portsmouth.

The registration showed an attendance of 87 members, the largest on record with the exception of last year at Bass Lake, near Cleveland, when the attendance of the large staff of the Cleveland Public Library and the students of Western Reserve University Library School added greatly to the usual number. Invitations had been sent to West Virginia and Kentucky librarians in response to which Mr. George D. Heaton, of Parkersburg, W. Va., and Mr. William F. Yust, of Louisville, Ky., were present.

In the absence, on account of ill health, of the president, Miss Electra C. Doren, the first vice-president, Mr. Burton E. Stevenson, presided. The first session was held on Wednesday morning, Oct. 24. After a few words of welcome by Judge A. T. Holcomb, of the local library board, and a response by Mr.

Stevenson, the following reports were read, accepted and placed on file without discussion:

Report of the secretary, Miss Light; report of the treasurer, Miss Prince; report of the library extension committee, Miss Boardman; report of the legislation committee, Mr. Wicoff; report of the auditing committee, Mr. Hopkins; report of the committee on necrology, Miss Wales.

The report of the library extension committee shows the library activities of the state to be greater than ever before. Many new buildings, Carnegie gifts and others, have been erected; old libraries have been remodelled and enlarged, opening up new departments and extending their fields of usefulness. With the co-operation of the library extension committee the committee on legislation was instrumental in bringing about the passage of the McGinnis bill, embodying two provisions which the association has sought for several years to have enacted into law.

1. The amendment empowers county commissioners to accept gifts for library purposes and enter into an agreement on behalf of the county for maintaining a county library by a special tax levy of one-half mill, and under its new clauses authorizes the trustees of any public library to enter into an agreement with such county commissioners for the use of their library as a county library. By virtue of this section it is possible for any county in Ohio to have a county library system through one or another of the means thus opened up and provided for.

2. This same law authorizes the appointment of the long-wanted library organizer, but it passed the senate too late to permit of an appropriation being secured, and therefore until the next session of the legislature the library organizer as an official will not be possible. It is possible, however, under the appropriation bills passed for the library commission, to do quite a considerable amount of work which will ultimately and appropriately fall within the sphere of the organizer.

Another law was enacted authorizing library trustees to appropriate ground for a library site, and to issue bonds for library buildings. These statutes were needed to round out the library law of the state, and their enactment has placed Ohio in the front rank, so far as legislation is concerned. In the absence of Mr. Root, chairman of the committee on inter-relation of libraries, the report was read by Mr. Hensel, a member of the committee. As a means of increasing the possibilities of inter-library loans, the committee proposed the preparation of bibliographical lists on various subjects giving representative books in the English language, with statement of the libraries in which they could be found. As a beginning, a list of all periodicals indexed in Poole, the *Reader's Guide* and *Library Index* was begun by the

committee with the purpose of having it printed in a preliminary form and sending copies to every Ohio library containing at least 5000 volumes. Each library is to indicate what sets are in that library and the degree of completeness of each set, to make possible the preparation of a union list of all periodicals in Ohio libraries that are indexed in Poole's and other similar indexes. The committee asked the approval of the association for the publication of such lists, and the solution of the problem of meeting the expenses of printing and postage on the periodical list begun. After some discussion Mr. Wicoff moved that the state library carry forward the work started by Mr. Root on the periodical list; the motion was carried. The report of the committee on library training was read by Miss Smith, the chairman. After giving an account of the profitable "Open day" at Youngstown, enjoyed by 11 neighboring libraries, and the successful institute held at Cincinnati, with an attendance of 40 persons from nine neighboring libraries and representatives from Indiana, Iowa and Kentucky, and a survey of the work done in library training classes for assistants and in the Western Reserve Library School, the following recommendations were made and after interesting discussions were voted upon and carried:

1. That the state commission distribute to all libraries of the state the report of the National Educational Association on "Instruction in library administration."

2. That the committee for the ensuing year collect a well-selected library of books, periodicals, pamphlets and library reports dealing with the problems of the small library; that this collection be duplicated and circulated from centers, the libraries chosen as centers to assume the responsibility of reaching the small libraries in their districts wishing to borrow the collection. This will serve to bring to their attention the best methods employed in modern libraries. The shortest and simplest road to successful librarianship leads through the library school, but if this privilege is denied there are other ways through which the ambitious and industrious assistant may gain much desired knowledge, thereby bettering her professional condition.

3. That a resolution from the Ohio Library Association be sent to the governing boards or officers of each library in Ohio, that the librarian be sent at library expense to the meetings of the Ohio Library Association, for these reasons: 1. The financial sacrifice to librarians personally involved by attendance on such meetings; 2. The many advantages derived from the opportunity afforded for consultation and mutual exchange of ideas and for general discussion of work, methods and aims; 3. These advantages accrue mainly, if not wholly, to the library rather than to the representative; 4. Because the librarian is stimulated to better effort and gives to the library the benefits of new knowledge, experience and inspiration.

4. That the real solution of the work of this committee lies in the appointment of an enthusiastic, energetic, tactful, attractive, trained librarian as the library organizer of the state commission. She can visit the individual libraries and make the rough places smooth.

Following the recommendation of Miss Doren, the president, a committee on publicity was appointed, with Miss Clatworthy as chairman. The duties of this committee are to select from the papers and discussions

of the annual meeting such matter as may be used in furthering the library development of the state by publication in the press, *i.e.*, paragraphs or quotations to be duplicated and placed in the hands of librarians to be sent to their local papers. Also to aid by advice in the preparation of programs for the use of such women's clubs as may desire to include in their annual calendars the observance of a library day.

Miss Hortense Foglesong, of Marietta College Library, read a very interesting paper on "Library work viewed from the by-way." The afternoon session was devoted to the consideration of the "Value of the free library to the small town and rural communities, and state aid through library commissions." This was discussed in the form of three symposiums. The first, led by Mr. Hodges, was "The county library in Ohio: methods, results, possibilities." Miss Brotherton, librarian of the Brumback Library, of Van Wert County, which has been in operation under the first clause of the county library law since 1901, described its work and problems. This library endeavors to reach out to the very outskirts of the county and make the feeling of library ownership, with its attendant privileges, as prevalent among its farmer friends as among those who are able to visit the central library daily. The problem has been to serve 35,000 people, scattered over an area of 411 square miles, with an income varying from \$6000 to \$7000. The central library is located at Van Wert, population 8000. There is one town of 2500 in the county, all other residents live on farms or in small villages of less than 1000 residents. So the library practically serves a farming community. The following methods of county extension have been pursued: Branch libraries, corresponding to deposit stations, are located in the most central place to be obtained, usually being the country store at the cross-roads. A resident of the village or district acts as librarian. Special collections are loaned to clubs, church societies or similar organizations and to schools. Teachers, whose schools are located outside of the corporation of Van Wert, make a selection from the school collection, kept at the central library, and from the regular shelves, and the same is sent to the school house, where the teacher distributes them to the pupils. All persons in charge of these collections receive an annual fee of \$30. The next step will be the establishment of reading rooms in incorporated villages or in smaller centers where the library interest justifies the expense.

In describing the work of the Cincinnati Library, Mr. Hodges stated that by a special law for Cincinnati the privileges of the Public Library were extended to all residents of Hamilton County, soon after the passage of the law in 1898. For six years and more every corner of the county has been reached

through six branch libraries, outside the city limits, many delivery stations and a system of travelling libraries, 20 in number, located for the most part in cross-road schools.

Miss Graham spoke of the Sidney Public Library. While this is not yet a county library, efforts are being made to that end. At present small collections of books are sent to the country schools on payment of a nominal fee. Through this medium it is hoped to arouse an interest and create a realization of the value of the public library to every community.

In Holmes County, Judge Stillwell has been very active in his efforts to establish a county library to be located at Millersburg. Miss Morse, of Youngstown, who is much interested in this work, in the absence of Judge Stillwell gave an account of their efforts.

In the second symposium, "State aid through library commissions: resources, methods, results," Mr. Yust, of Louisville, Ky., gave a very full and comprehensive account of the commission work in Georgia, Maryland, New Jersey and New York. Miss Hubbard, of Cleveland, outlined the work of the Iowa, Wisconsin, Indiana, California, Oregon and Colorado Commissions. Mr. Galbreath spoke of the work of the Ohio Library Commission, and described the aims and purposes of the League of Library Commissions.

The third symposium, led by Mr. Porter and contributed to by Mr. Wicoff and Mr. Galbreath, was "Library possibilities and needs in Ohio, based upon a review of the present law."

It may truthfully be said that library possibilities in Ohio under the present laws are practically without limit. The need now is the library organizer who will help in organizing new libraries and assist in introducing new methods into old libraries.

The Wednesday evening session opened with a short address of welcome by Mr. G. O. Newman, president of the Portsmouth Library Board. Mr. Stevenson responded, and a message of greeting from Miss Doren was read by the secretary. This was followed by a paper on the "Value of the free library to the workingman," by Rev. Mr. F. S. Arnold, of Portsmouth. Dr. W. J. Conklin, president of the Dayton Library Board, then gave an address, entitled "Flotsam and jetsam from a modern library," which closed the evening's session.

Thursday morning's session was in the hands of the Small Library Section, Miss Morse, of Youngstown, chairman; Miss Cotton, of Marietta, secretary.

Miss Clatworthy spoke "Concerning library reports," emphasizing the importance of summarizing the year's work in a narrative form in addition to statistical tables, which should be printed as appendixes. Reprints of the report of the 1906 A. L. A. Committee

on Library administration and copies of model statistical forms were distributed. Mr. Stevenson told of his "Adventures in quest of a bookbinder." Much valuable information was gleaned from the discussion which followed. The chairman spoke briefly on "What the small library can do for children," and introduced Miss Price, librarian in charge of the children's room of the Carnegie Library at Pittsburgh. Miss Price spoke of various phases of the work of the children's librarian.

The officers of this section for the ensuing year are: Miss Nana A. Newton, of Portsmouth, chairman; and Miss Nellie Pratt, of Delaware, secretary.

A special feature of the convention was the Institute so generously furnished by the Board of trustees of the Portsmouth Library. This consisted of two lectures on "Stories and story-telling" and a recital by Mrs. Gudrun Thorne-Thomsen, of Chicago University. An invitation to the Institute was extended to the Portsmouth teachers, and a good representation attended. Mrs. Thomsen's first lecture, "Poetry for children," followed the Small Library Section.

A very pleasant feature of the afternoon, provided for by the local committee, was a two hours' boat ride on the Ohio river.

The subject of the afternoon meeting was, "Value of the free library to the school." By invitation Portsmouth teachers were in attendance. Miss Hoskins, chairman of the Committee on the relation of libraries and schools, read her report. The purpose of the Committee was to get a school view of the relations, and accordingly they sent out a circular of questions to 150 superintendents of schools, and to 18 principals of normal schools and training classes. Invitations to attend the meeting at Portsmouth were also sent. The object of the questions was to ascertain just how much knowledge of children's literature was required of the teacher, and what means for furnishing such knowledge were used in normal schools or in teachers' associations, clubs, or in libraries. If any, how could they be made more helpful? and, if none, would some instruction be desired? Should there be exchange of representation at teachers' and librarians' meetings? Based upon the replies received, the committee made the following recommendations:

1. That, in place of the committee on relation of schools and libraries, there be formed a section to be called "The teachers' and children's librarians' section." This is urged in the hope and the belief that such a section would offer an opportunity to develop personal contact and joint discussion, bringing about more effective co-operation in the study of children's reading and in the co-ordination of ideals and standards in the selection of children's literature.

2. That, to make this more truly mutual in spirit and common in effort, the Ohio Library Association seek for children's librarians some recognized representation in the meetings of the Ohio Educational Association, and in the Allied Educational Association.

tions of Ohio, and more especially in county and city institutes.

In the discussion which followed the main obstacle to a section seemed to be the improbability of teachers attending in any considerable numbers, because of the many teachers' meetings throughout the year which they would consider their first duty to attend. The recommendations were finally left to the consideration of the incoming Executive Board.

Miss Straus then read a very helpful paper upon "Aids to the work of the children's librarian." Copies of a carefully prepared list of aids to the selection of children's books were distributed.

On Thursday evening an appreciative audience again greeted Mrs. Thomsen, who gave her second lecture, "Folk-lore and fairy tales." This was followed by a general question box, conducted by Mr. Wicoff.

Friday morning's session was in charge of the College Library and Trustees' Sections. After the transaction of the usual business (Mr. Porter, in the absence of the chairman of the former, presiding over both sections), Mr. Perrin, librarian of Case Library, Cleveland, read a scholarly paper on "Benjamin Franklin as a man of letters."

The officers of the College Section for the next year are: Miss Ella G. McSurely, of Miami University Library, Oxford, chairman; and Miss Maude Jeffrey, Ohio State University Library, Columbus, secretary.

None of the participants on the program of the Trustees' Section being present, Mr. Porter very ably led in the discussion of the following subjects: "Qualifications of a good trustee; what he should know and what he should do;" "Duty of the trustee in connection with the administration of the library: what should he know as to its inner workings?" "The full duty of the trustee: where does it begin? where does it end?" The section was reorganized, with Mr. W. T. Porter, of Cincinnati, chairman, and Mr. S. L. Wicoff, of Sidney, secretary, for the ensuing year.

Miss Clatworthy, chairman of the special committee on cataloging, then read her report, summarizing the work of the committee since its appointment in 1903. For lack of proper financial backing the committee was not able to carry on the original plan of a co-operative system of printed cards. They recommend the use of the book selection aids now issued by the A. L. A. Publishing Board, Library of Congress and League of Library Commissions, and that these various aids be made harmonious, more perfect, and constructed with special reference to their use by the popular library. Mr. Brett then presented the following resolutions, which were passed by the association:

Resolved, That the Ohio Library Association accepts and approves the report of the special committee on cataloging and heartily concurs in the opinion

expressed as to the desirability of harmonizing and perfecting these various aids to book selection and cataloging; that the association congratulates the librarians of the country upon the progress indicated by the report, and also upon the steps just taken by the A. L. A. Publishing Board, as described in a letter from a member of the board, of which a summary has just been read as a supplement to the report.

Resolved further, That the association extends its most hearty thanks to the Librarian of Congress for the great work which is being done under his direction for the benefit of American libraries; and to the Publishing Board of the American Library Association for their cordial interest in the problems of the popular libraries and for the well-considered and effective steps they are taking towards the solution of some of the most difficult ones; and that the association pledges itself to the most hearty co-operation in this work.

The final business session was called to order Friday afternoon. The following officers were elected for the coming year: president, Mr. Burton E. Stevenson, Public Library, Chillicothe; first vice-president, Mr. John J. Pugh, Public Library, Columbus; second vice-president, Miss Laura Smith, Public Library, Cincinnati; third vice-president, Dr. W. J. Conklin, Trustee Public Library, Dayton; secretary, Miss Mary Parker, Public Library, Elyria; treasurer, Miss Grace Prince, Wittenberg College Library, Springfield. Columbus was chosen as the place of meeting in 1907.

The committee on resolutions, of which Mr. Hensel was chairman, recorded the following:

That a vote of thanks be tendered to the trustees, the librarian and the library staff of Portsmouth Public Library for the many conveniences offered; for the opportunity to see the beautiful Ohio river by a boat ride, and for their generosity in affording the Association the opportunity to hear the delightful and instructive talks by Mrs. Thomsen.

That we deeply regret the enforced absence of our president, Miss Doren, to whose labors—in a great measure—the program for the present session is due; and that we hope for her speedy and complete recovery.

That we greatly appreciate the able and efficient manner in which Mr. Stevenson assumed the president's duties and conducted the various meetings.

At the request of Mr. Galbreath, state librarian, the association passed the following resolution:

Whereas, The Ohio State Library has outgrown the rooms assigned to it in the State Capitol, and its present crowded condition demands the relief that can be afforded only by more commodious and accessible quarters, and as provision for this urgent need is made in Senate Bill No. 195, which authorizes the erection of a building for the use of the State Library and the State Archaeological and Historical Society, we heartily favor this bill, or any other that will accomplish its purpose, and earnestly request its adoption at the coming session of the general assembly.

As there was no further business the association then adjourned to Assembly Hall to listen to the story-recital given by Mrs. Thomsen. The Portsmouth school children of the lower grades were invited to attend the recital, and a large gathering of them were present. This hour of story-telling and music brought the twelfth annual meeting to a close.

MATILDA M. LIGHT, *Secretary*.

Library Clubs

BAY PATH LIBRARY CLUB

President: Miss M. Anna Tarbell, Free Public Library, Brimfield.

Secretary: Miss May E. Robinson, Young Men's Library Association, Palmer.

Treasurer: Miss Clara A. Fuller, Oxford.

A meeting of the club was held in the Worcester (Mass.) Public Library, Oct. 30. It was unusually well attended by librarians and trustees.

The morning session opened with a welcome by Mr. S. S. Green, librarian of the Worcester Public Library, who gave a description of the aims and methods of that library. After Mr. Green's talk all departments of the library were visited.

At the afternoon session the Rev. Reuben Kidner, of Boston, opened a discussion on "The larger use of library buildings in country towns." A discussion followed, and then a "round table" on practical questions.

CHICAGO LIBRARY CLUB

President: C. B. Roden, Public Library.

Secretary: Miss E. G. Smith, John Crerar Library.

Treasurer: H. L. Leupp, University of Chicago Press.

The November meeting of the Chicago Library Club was held on the evening of the 8th at the Chicago Public Library. The president, Mr. Roden, waived all business and introduced Mr. Richard Henry Little, of the *Chicago Tribune*, who gave an interesting stereopticon lecture on "The making of a great newspaper."

Mr. Little said at the beginning of his lecture that he would not touch upon the business side, but would illustrate with lantern slides the mechanical part of the modern newspaper. One of the first pictures thrown on the screen was the library room, where there is a collection of books of reference, geography and biography, to be used "in case there is something the editors do not know." The next picture was the "graveyard," a small room, very much like a safe, where the biographies of great men, the "will-be-great" and the "would-be-great" are filed away; also items about cities are kept here. In fact any information which may be useful at some future time is put on file and can be brought out at a moment's notice. Mr. Little went on to show each department of the newspaper in a most interesting way, incidentally outlining the policy of a great newspaper.

The moving picture of the linotype machine was wonderfully interesting. The next pictures illustrated the development of the printing press, beginning with the very simply constructed hand press, printing 240 papers an hour, the drum cylinder printing 1700 an hour, and the six-feeding cylinder press, and finally the modern press printing 96,000 an hour.

This was followed by a moving picture of the printing press, showing the papers coming out folded and counted, ready for distribution. The mailing room was shown next, and a moving picture of loading the wagons as it is done at two o'clock every morning.

The lecture closed with a number of Mr. McCutcheon's cartoons — Bird Centre, Boy in Summer-Time, and the famous one on the Death of Pope Leo. Mr. Roden expressed to Mr. Little the club's appreciation of his generosity in giving them a lecture at once so interesting and instructive.

Attendance about 200.

ELLEN GARFIELD SMITH, *Secretary*.

An attractive four-page "Circular of information" has been issued by the club, and was distributed at this meeting.

FOX RIVER VALLEY LIBRARY ASSOCIATION

President: Miss Elizabeth Smith, Public Library, De Pere.

Secretary: Miss Blanche Thompson, Public Library, Ripon.

Treasurer: Miss Agnes J. Peterson, Public Library, Manitowoc.

The ninth annual meeting was held at Kaukauna, Wis., Nov. 20-21. Besides the papers and discussions, the reports and the question box, there were three addresses. One was on "The university extension and the library," by Frank A. Hutchins, Madison; one the president's address, by J. R. Bloom, Neenah; and one on "Business methods in a library," by H. E. Legler, secretary of the Wisconsin Free Library Commission. There were papers on "The duty of the trustee to the library," by T. B. Blair, Neenah; on "Co-operation in the Fox River Valley Library Association," by Miss C. I. Lansing, Neenah, Miss Agnes J. Peterson, Manitowoc, and Miss Deborah B. Martin, Green Bay.

Officers for the ensuing year were elected as follows: president, Miss Elizabeth Smith, De Pere; vice-president, H. J. Mulholland, Kaukauna; secretary, Miss Blanche Thompson, Ripon; treasurer, Miss Agnes J. Peterson, Manitowoc.

MOHAWK VALLEY LIBRARY CLUB

President: Miss Anna H. Perkins, Free Public Library, Ilion.

Secretary: Miss Mary France, Johnstown Library, Johnstown.

Treasurer: Miss Eugenia Stevens, Jervis Library, Rome.

The Mohawk Valley Library Club held its third annual meeting and institute at Canastota, N. Y., in Public Library Hall, Nov. 20-21. The register shows 33 persons present, representing 14 different libraries.

The program was carried out as planned, and the discussions proved practical and profitable. Considerable interest was manifested in the discussion of the different syllabuses

prepared by the Education Department of the State of New York. There are four of these syllabuses published, one for elementary schools, one for secondary schools, one for college graduates, and one for the guidance of nurse training schools. Each of these syllabuses contains a list of books recommended. Naturally, the smaller libraries will only attempt the work as planned for elementary and high schools.

An interesting paper written by Miss Katherine Malloy, of the Ilion High School, explained the use of the elementary syllabus.

The election of officers resulted as follows: president, Miss Anna H. Perkins, of Ilion; vice-president, Mrs. Norman Stafford, of Canastota; secretary, Miss Mary France, of Johnstown; treasurer, Miss Eugenia Stevens, of Rome; executive committee, A. L. Peck, of Gloversville, F. J. Proctor, of Utica.

PENNSYLVANIA LIBRARY CLUB

President: John J. Macfarlane, Commercial Museum, Philadelphia.

Secretary: Miss Edith Brinkmann, H. Josephine Widener Branch, Free Library of Philadelphia.

Treasurer: Miss Bertha S. Wetzell, Library Company of Philadelphia.

The season of 1906-1907 was opened on Monday evening, Nov. 12, 1906, by a meeting held at the H. Josephine Widener Branch of the Free Library of Philadelphia. Owing to the unavoidable absence of the president, Mr. Macfarlane, Mr. Thomson presided. Upon motion, the reading of the minutes of the last meeting was omitted. Mr. Thomson then introduced the speaker of the evening, Miss Louise Connolly, General Supervisor of Public Schools of Summit, New Jersey, who gave a talk on the "Relation of the public school to the library."

Miss Connolly defined the differences between the positions of the teacher in the public school and of the children's librarian, who are both engaged in the "Battle between the boy and the book." The ranks of the pupils, as in all armies, are made up of conscripts and of volunteers. The position of the teacher is more difficult because she must hold the interest of a class of children for five hours daily, with short intervals for rest and recreation, while the librarian deals with children who come to the library individually and voluntarily, for short periods and in small numbers. The full curriculum, which has been decried in favor of a more thorough training in the three R's, is of the greatest value to the teacher, as its varying character appeals to the different interests of the several children, while the teaching of a few fundamentals does not interest them. The boy who has no interest in reading is the problem of the teacher—the librarian gets the boy with a natural interest as he comes with the purpose of reading to begin with.

Miss Connolly then gave a *résumé* of the

different methods of teaching reading, illustrated by selections read from a number of readers compiled on widely varying plans. The compilers of these readers are hampered by the fact that they are compelled to limit the vocabulary of a lesson to not more than four new words, with constant repetition of those already learned. It is difficult to write good literature under such restrictions. The modern tendency, however, is in the direction of using literature in readers.

After the children have learned to read, the next step is to teach them to read for information. In the course pursued under the speaker's direction, the children of the third and fourth school-year are taught to analyze a paragraph which has been read. One set of children writes a series of questions suggested by the paragraph, which are answered by another set in writing also. Pupils of the fifth year are taught to analyze a chapter for topics, making a diagram and using brackets; those of the sixth year are taught to find a subject in a book by careful reading of the table of contents with its summaries of chapters; those of the seventh year learn how to use an index, and also to make an outline of the contents of a book. In the eighth school year the pupils are taken to the library and taught the use of the catalog and the method of finding books on the shelves. The use of cross-references and of Poole's Index may be left until the student enters the high school. This preparatory work is pre-eminently that of the teacher until its very last stages, and should not be left for the librarian to perform.

In the matter of reading for pleasure there are two classes whose demands must be met. The first consists of those whose duties in life are a pleasure to them; the second of those whose duties are drudgery. If there be a class of persons who have no duties in life, these should not read at all. Persons of the first class, such as artists, musicians, etc., read literature and poetry voluntarily and as a rest. Those of the second class, whose work is a treadmill, and who do not know what to do when the day's task is done, should be induced to read solid, good literature.

Miss Connolly advocated carefully graded lines of reading, the one realistic, the other fanciful, to be given to children during their school life, in order to lead up to reading for their own pleasure in later life. She gave a list of works in illustration. The two lines were chosen to awaken and hold the interest of all the children; for example, in the fourth year, "Alice in Wonderland" and the "Boy on a farm" are suggested; those who do not care for the imaginative story are pretty sure to like the practical one. Children should also be taught to read aloud from one to two pages at a time, while the rest of the class listens carefully, in order to be able to answer questions on what they have heard. They are fond of reiteration also, which is the foundation of a love for poetry.

In conclusion, Miss Connolly offered the suggestion that libraries have as a feature of their work readings for children, given by an assistant with a clear, plain voice, as children thoroughly enjoy having an older person read aloud to them, and it is not often possible for their teachers to do this, as they can find an occasional half hour only in the routine of regular work for such a purpose.

At the conclusion of Miss Connolly's talk Mr. Thomson thanked Miss Connolly very sincerely on behalf of the club for her bright and entertaining talk. The meeting was then adjourned. A reception and tea in the upper rooms of the library followed.

EDITH BRINKMANN, *Secretary*.

Library Schools and Training Classes

CARNEGIE LIBRARY OF PITTSBURGH TRAINING SCHOOL FOR CHILDREN'S LIBRARIANS

The training school opened for its sixth year on Oct. 8, 1906, with an enrollment of 19 students, 13 juniors and 6 special students, representing 10 states and Canada. As the members of last year's class preferred to accept positions after completing the first year's course, there is no senior class.

The students have had during the past month the pleasure of hearing the following lecturers: on Nov. 3, Miss Effie Power, instructor in library use and juvenile literature, Cleveland, Ohio; on Nov. 7, Miss Mary L. Titcomb, of the Washington Free Library, Hagerstown, Md., who gave an account of the work of the travelling book-wagon, illustrated with lantern slides; on Nov. 21 and 22, Miss Caroline Burnite, supervisor children's work, Cleveland, Ohio, whose talk on "Work with little children" was especially helpful to those interested in this work.

ENROLLMENT OF STUDENTS — JUNIOR CLASS

Lilian Isabel Baldwin, Brooklyn, N. Y. Woman's College of Baltimore, 1904-1905; New York Public Library, July-August, 1906.

Bessie Burnham, Erie, Pa. Allegheny College, 1901-1903; Woman's College of Baltimore, A.B. 1905.

Helen Georgia Elizabeth Eames, Knoxville, Pa.

Mary Alice Forbes, Hartford, Wis. Milwaukee State Normal School, 1898-1899; Wisconsin Free Library Commission Summer School, 1902; University of Wisconsin Summer School, 1903; apprentice, Public Library, Neenah, Wis., September, 1902-January, 1903; general assistant, Wisconsin Free Library Commission, September, 1903-January, 1904; children's librarian, Public Library, Racine, Wis., January-July, 1904; children's librarian, Public Library, La Crosse, Wis., January, 1905-September, 1906.

Marie Hamilton Law, Pittsburgh, Pa. Wellesley College, 1902-1903; Washington College, Washington, D. C., A.B. 1905.

Helen Margaret Middleton, Ripon, Wis. General assistant, Apprentice's Library, Philadelphia, Pa., 1905-1906.

Elizabeth Elinor Munn, Pittsburgh, Pa. Grove City College, June-August, 1904; Teachers' Normal College, 1904-1905.

Gertrude Eleanor Phipps, Dorchester, Mass. Wellesley College, A.B. 1906.

Elizabeth V. Polk, Poughkeepsie, N. Y. Vassar College, A.B. 1906; assistant, Vassar College Library, 1904-1906.

Marguerite Davis Sodon, Willoughby, O. Lake Erie College for Women, 1903-1906.

Jessie Edna Tompkins, Lansing, Mich. General assistant, Public Library, Detroit, Mich., 1904-1905; substitute, Public School Library, Lansing, Mich., 1905-1906.

Elizabeth Ward, Chicago, Ill. Assistant, Chicago Normal School Library, January-July, 1903; children's librarian, Public Library, Salt Lake City, Utah, 1904-1906.

Ruth A. Weldon, Pittsburgh, Pa.

SPECIAL STUDENTS

Augusta Anderson, Saint Paul, Neb. University of Nebraska, 1902-1905; University of Illinois Library School, A.B. in Library Science, 1906; assistant in children's department, Carnegie Library of Pittsburgh, August, 1906-date.

Jane Blakely, Bloomington, Ind. Indiana University, 1902-1905; University of Illinois Library School, 1905-1906; assistant in children's department, Carnegie Library of Pittsburgh, September, 1906-date.

Mary Margaret Douglas, Chatham, Ontario, Canada. Chatham Collegiate Institute, 1896-1901; apprentice, Free Public Library, Cedar Rapids, Ia., 1903-1904; graduate, Pratt Institute Library School, 1905; general assistant, Pratt Institute Free Library, 1905-1906; assistant in children's department, Carnegie Library of Pittsburgh, September, 1906-date.

Helen Lathrop, Palo Alto, Cal. Stanford University, A.B. 1902; assistant, Stanford University Library, January-May, September-November, 1902; New York State Library School, 1905-1906; assistant in Training School for Children's Librarians, September, 1906-date.

Carrie Emma Scott, Mooresville, Ind. De Pauw University, 1893-1894; Indiana State University, A.B. 1898; general assistant, Indiana State Library, June, 1903-March, 1904; New York State Library School, 1905-1906; assistant, Carnegie Library of Pittsburgh, July, 1906-date.

RECENT APPOINTMENTS OF STUDENTS TO POSITIONS

Alice Arabella Blanchard, appointed head of children's department, Public Library, Seat-

tle, Wash. New York State Library School, 1904-1905; Training School for Children's Librarians, 1905-1906.

Frances Eunice Bowman, appointed children's librarian, Cleveland Public Library, Cleveland, O. Training School for Children's Librarians, 1905-1906.

Beatrice Medill Kelly, appointed librarian, Public Library, Steubenville, O. Training School for Children's Librarians, 1904-1906; children's librarian, Carnegie Library of Pittsburgh, 1905-1906.

Mabel Ethelind Scripps, appointed children's librarian, Montague Branch, Brooklyn Public Library, Brooklyn, N. Y. Training School for Children's Librarians, 1904-1906.

Bolette Sontum, appointed librarian of the Kampen Branch of Det Deichmanske Bibliothek, Christiania, Norway. Training School for Children's Librarians, 1904-1906.

Adah Frances Whitcomb, appointed children's librarian, Public Library, Oak Park, Ill. Training School for Children's Librarians, 1905-1906.

FRANCES JENKINS OLCOTT,
Chief of Children's Department.

NEW YORK STATE LIBRARY SCHOOL

The following schedule has been arranged of lectures to be delivered during the year 1906-07 by non-resident librarians not connected with the faculty of the school:

<i>Lecturer</i>	<i>Subject</i>	<i>No.</i>	<i>Date</i>
Sarah P. Askew.....	The work of a library commission.....	3	April 23-26
J. C. Dana.....	The library and the community.....	1	} Dec. 11-13
".....	The Newark (N. J.) public library.....	2	
".....	Library binding.....	1	
Marilla W. Freeman.....	Library organization.....	5	June 17-22
W. D. Johnston.....	European libraries and librarians.....	5	Feb. 1-6
William C. Lane.....	College library administration.....	2	Jan. 29-30
H. M. Leipziger.....	Free lectures in N. Y. City.....	1	Oct. 26
Isabel Ely Lord.....	Book-buying.....	4	March 20-22
Frances J. Olcott.....	Library work with children.....	6	Jan. 21-26
W. Dana Orcutt.....	The art of printing (the Alumni lectures).....	3	May, 1907
Francis L. Rathbone.....	Administration of small public libraries.....	15	May 1-31
R. G. Thwaites.....	Local history collections in libraries.....	1	To be arranged
Frank Weitenkampf.....	Care of prints.....	1	April 4
Jessie Welles.....	Loan department in a large public library.....	3	} March 4-7
".....	Apprentice classes.....	1	
H. C. Wellman.....	Book illustration.....	2	Jan. 14-15

Miss Jean Hawkins, '02, who has just been appointed to the staff of the New York State Library as sub-librarian in charge of classification, will supervise the student practice work in elementary classification. For this purpose use will be made of the current accessions to the State Library proper and to the travelling libraries department, all of which will go first to the library school students for classification. The work will then be revised in personal interviews with Miss Hawkins, whose public library experience both East and West will enable her to emphasize the different points of view, and to bring out the modifications and simpler methods desirable in public library work.

The State Library accessions fairly represent those of the average college or reference

library, and will be classified as for such a library, while the books bought by the travelling libraries department, being of exactly the sort which go into the best public libraries, will be classified with the hypothetical public library constantly in mind. The practice work of each student will be so arranged as to divide the time equally between each of these two kinds of books.

J. I. WYER, JR., *Vice-director.*

PRATT INSTITUTE LIBRARY SCHOOL

Since our last report two students of last year's class have been engaged by the New York Public Library as assistants, viz.: Miss Katharine Grasty and Miss Nathalie Maurice. Miss Helen Forbes, of the class of 1904, is working at the Chatham Square branch, and Miss Dalphin, of the same class, leaves the Mt. Vernon (N. Y.) Library also for the New York Public Library. Miss Julia Heath, of 1906, has gone to the Hampton Institute Library for the winter.

The list of lecturers for the second term, so far as engaged, is as follows: Jan. 4, Mrs. S. C. Fairchild on "The presidents of the American Library Association;" Jan. 11, Dr. J. H. Canfield on "The public library from the point of view of the educator;" Jan. 16, 17, and 18, Miss L. E. Stearns on "Some western phases of library work," "The library spirit," and "The child and his book;" Jan. 25, Mr. J. C.

Dana on "Printing;" Feb. 1, Mrs. F. C. Bursch on "The making of a book;" Feb. 8, Miss F. L. Rathbone on "Library accounts;" Feb. 21, Miss Sarah B. Askew on "The work of the organizer;" Mar. 1 and 8, Miss Annie C. Moore on "Library work with children."

The course in book selection, as at present outlined, will consist of five lectures on "Trade bibliography," four on "Standard editions," one on "Publishers," three preliminary lectures on "The principles of book selection," and seven seminars, each with a brief introductory talk by the instructor.

The lessons in accession work, shelf-listing and statistics during the coming term will be given by Miss Emily Turner, the secretary of the school.

The class attended the meeting of the Li-

library Chapter of the Neighborhood Association on the evening of Nov. 24 and listened to an address by Miss Keyser, secretary of the Church Association for the Advancement of the Interests of Labor. Several members of the class have become visitors of the home libraries conducted by the chapter, while five others are giving their services to the little library of Willow Place Chapel, finishing the cataloging of the books and going at certain hours to give them out to the children who use the library.

The school had the pleasure of a visit on Nov. 22 from Miss Anne Wallace, of the Southern Library School, who spoke to the class on the "Library movement in Georgia."

As usual the class has been divided into sections for an evening visit to the departments of the Institute on those evenings when classes are in session. They are conducted by the registrar, who explains the workings of the different departments, making the visit much more profitable than the ordinary sight-seeing trip through the buildings.

MARY W. PLUMMER, *Director.*

SIMMONS COLLEGE LIBRARY SCHOOL

The library school of Simmons College opened Sept. 21, with a registration of 14 seniors, 23 juniors, 24 sophomores and 35 freshmen. Nine college graduates are taking the one-year course, while six special students are doing part of the work.

The following supplementary lectures have already been given: "Publications of the A. L. A. Publishing Board," by Miss N. E. Browne, of the Board; "Book mending," by Miss Rose Murray, of the Springfield Public Library; "A specialized library," by Mr. G. W. Lee, of the Stone and Webster Library; "Library housekeeping," by Dr. G. E. Wire, of the Worcester County Law Library; "Book-selling from the dealer's point of view," by Mr. W. B. Clarke; "Library administration," by Miss Louisa M. Hooper, of the Brookline Public Library. Two lectures have also been given on the "Bibliography of German literature," by Fräulein Mitzlaff, one of the instructors in the college.

On Oct. 20 the senior class and the college graduates visited the Worcester County Law Library, the Worcester Public Library and the libraries of the American Antiquarian Society and Clark University. Thanks to the courteous welcome extended by the various officials, a very profitable and enjoyable visit resulted.

The corporation has just adopted a new measure of great interest. Hereafter degrees may be granted to the college graduates who have taken the one-year course, upon the completion of six months' approved work in a library and the presentation of a thesis on a technical subject. These requirements are necessary because the same amount of library economy, practice work and reference

work cannot be obtained in the one year as in the regular four-year course. The degrees will be given only at the regular June commencement.

ALICE AMELIA WOOD,
Simmons, 1907.

WESTERN RESERVE LIBRARY SCHOOL

In addition to the half day's work each week in the Cleveland libraries, the class is doing practical work in ordering, receiving and making the records for 1500 books which are being prepared for the prospective East branch of the Public Library.

On Nov. 17 the classes of '05 and '06 gave a book party, a "Social circulating library," to the class of '07 and the faculty at the school. The animated books "were received, accessioned, plated and collated" in a most satisfactory manner, if with startling variations from library school rules.

The majority of the students are spending one evening a week together as an Italian club, with Mr. Williams as leader.

W. H. BRETT, *Dean.*

WISCONSIN LIBRARY SCHOOL NOTES

During November, besides the lectures of the regular curriculum, the school had the pleasure of hearing Dr. Reuben G. Thwaites, who spoke on "How history is written" and "Local history collections." Parliamentary drill has been introduced as a regular course, under the direction of Mr. Legler. Current events are a daily feature, two students being appointed each week to post the leading events for the day as clipped from the newspapers, the same students summing up the news in a weekly seminary. Bulletins on the Panama Canal, Farthest North, the Jamestown Exposition, Ireland, Japan, Autumn and Hallowe'en have been made and exhibited as part of the required course in picture bulletins.

The study of publishing houses was completed by an exhibition, held in the school room, of the representative works of the houses studied, each student finding material for her own exhibit from the books in the libraries of Madison. Many new books used for examination in preparing the *A. L. A. Booklist* were loaned for the occasion, through the courtesy of the editor. The exhibition, though a review, was in the nature of a reception to the friends of the school, and proved most interesting and attractive to the many visitors. The course on publishers is followed by one on periodicals, conducted by the seminary method.

The class has completed its organization and elected officers as follows: president, Helen D. Gorton; vice-president, Harriet W. Sewall; secretary, Ada J. McCarthy; treasurer, Harriet L. Allen.

The school was given a Thanksgiving recess from Wednesday noon until Monday noon.

MARY EMOGENE HAZELTINE, *Preceptor.*

Reviews

BROWN, James Duff. Subject classification, with tables, indexes, etc., for the subdivision of subjects. London, The Library Supply Co., 1906. 423 p. 8°.

A new scheme of classification, complete and furnished with an adequate index, cannot fail to attract instant attention from librarians everywhere. This country at present knows in actual practice but two schemes that have drawn numerous followers to themselves, and of these Mr. Cutter's Expansive classification is badly handicapped by its incomplete state and its want of a general index to the whole of the seventh expansion. It is not unfair to say that the Decimal classification owes its general popularity far more to the extremely practical consideration that it can be easily taught and easily applied than to its intrinsic merits. Its mnemonic features and its admirable index, joined to its flexible notation, have given the Decimal classification its present position of eminence. In fact many a librarian who thoroughly condemns not a few of its schedules has adopted this classification for his library because of its practical value. It is indexed, and it can be learned; therefore it is the cheapest scheme to adopt, no matter how much it offends one's sense of the fitness of things. There are far better classifications in print, but they lack these all-important essentials, flexibility and ease of application.

These facts have evidently impressed themselves on Mr. Brown in issuing his volume on "Subject classification." The work is an elaboration of his previously published "Adjustable classification." He has made a classification with a reasonably flexible notation; one which can be applied without too great strain on the memory, and which should prove fairly expansive in practice. In short, he has made a bid for the sort of support that the Decimal classification now receives, and as his scheme is made with British interests in mind, it is probable that he will win many adherents in Great Britain and perhaps elsewhere. So far as its merits as a classification are concerned, it can hardly be said to be the equal of the Expansive classification, although it avoids the deadlier pitfalls of the Decimal classification, while as a scientific product it falls far short of several of the other well-known schemes.

Leaving for the moment the matter of the classification *per se*, let us glance at Mr. Brown's notation. Following the natural bent of every one who has failed to reconcile himself to Mr. Dewey's division of the field of knowledge into ten parts on the analogy of the metric system, he employs the letters of the alphabet for his main series, following these with as many Arabic numerals as he wishes, though three is the ordinary number.

These are to be read "decimally" in the familiar fashion whereby A51835 comes before A52. It is a pity that the natural perversity of the school-trained mind tends to read numbers arithmetically; but all makers of notations ignore that small fact. Mr. Brown does not make use of the decimal point and added digits to break up large topics or insert additional heads. Instead he employs the decimal point and figures after it only for subdivisions of topics by the use of certain "Categorical tables." These are decidedly extensive, running from .00 to .975, and are constant, *i.e.*, always the same in signification, no matter what the class number preceding them. Thus .1 after any number means Bibliography, .65 equals Education, of the topic indicated by the first number. For example, D300.65 signifies the subhead Education under the main topic Geology. There is a special index to these "Categorical tables" which greatly enhances their value. Thus in Mr. Brown's scheme anything coming after a decimal point means a subdivision of the topic indicated by the number before the decimal point. As he has not limited himself to the ordinary subdivisions of main topics, such as the familiar .01 to .09 of the D. C., but has practically repeated the most important heads in the classification itself, it will be seen that Mr. Brown has thus most ingeniously made it possible to subdivide at either place almost any topic permitting double treatment. For instance, to use our former illustration, D300 means Geology, and may be subdivided *ad infinitum*; but any region or country may have the decimal fraction .317 after it to provide a place for works on the geology of the region. Further, .789 signifies Local Administration, and may be added to all sorts of numbers indicating laws, policies, and governmental machinery; .871 Consonants may be applied after all language or dialect numbers, and so on.

Instead of using a numerical "local list" or special table of places, the author uses the country number of the main classification directly after the topic number. Thus I760 = Boot and Shoe-Making; I760W216 = Boot and Shoe-Making in Boston, Mass.; I760W-216.10 signifies History of Boot and Shoe-Making in Boston. There are also given numerous ways, mostly familiar, of recording author numbers, dates, etc. A book on the Boston shoe trade's history by Douglas and published in 1905 would have the following class mark, following Mr. Brown's notation

I760W216.10

out to its fullest extent: $\frac{I760W216.10}{3926rn}$

Close classification with this notation will result in long and intricate numbers; but exactly that result will probably be found under any system. It may be questioned whether Mr. Brown has gained so much as

he has lost by confining the use of the decimal point and added digits to the "Categorical tables." In a library of moderate size where close classification is not demanded, the gain will be considerable. In a large library the necessity for intercalating long numbers to be read "decimally" and for the very frequent use of the long "national number" will prove a decided drawback. (But after all the length of the class number for libraries of any size is a boggy pure and simple. It does not seem to hinder the efficient use of continental libraries where most antiquated and intricate systems of fixed location are employed.) A system of notation which will permit the librarian of a small library to use few figures, and his colleague in a large library to use as many as he wishes is the desideratum. Mr. Brown has furnished just such a notation. For the users of an open-access small library it is decidedly less intelligible than the ordinary three figure D. C. number, which is seldom very intelligible to them at best. Finally it seems an open question whether any combination of figures and letters that have to be read decimally and alphabetically equals a straight decimal notation. It is wiser to use a four figure system, if the three figure one proves too limited, rather than a combination of letters and figures. The users of a library can understand numbers as the equivalent of subjects, and decimal fractions as denoting subdivisions of those subjects, but it is very doubtful whether they can go beyond that.

The system of arrangement of subjects which underlies the order of the classification is as follows:

A—Generalia.	
B, C, D—Physical Science.	} Matter and Force.
E, F—Biological Science.	
G, H—Ethnology and Medicine.	} Life.
I—Economic Biology.	
J, K—Philosophy and Religion.	} Mind.
L—Social and Political Science	
M—Language and Literature.	} Record.
N—Literary Forms.	
O, W—History, Geography.	
X—Biography.	

Mr. Brown believes that this order is "logical." That there is at least the appearance of orderly sequence in this grouping of the main divisions of knowledge may be admitted without committing ourselves to the fundamental proposition that a classification must be wholly "logical," or to an acceptance of this arrangement as truly a proper sequence of grouping for either books or ideas. The author has adopted another principle that he applies rigidly, if not altogether sensibly. This is that there shall be no separation between a science and its application in the arts or trades. "The old

distinction between theoretical and applied science," he says, "is gradually disappearing from all modern text-books, and it is obvious that, as the systematization of science and its teaching improve the separation between the physical basis and the practical application, hitherto maintained, will no longer be insisted on. In this scheme of "Subject classification" every class is arranged in a systematic order of scientific progression, as far as it seemed possible to maintain it; while applications directly derived from a science or other theoretical base have been placed with that science or base." Now this sounds very well, and there is in this idea the germ of a large and most important truth, one which we have only dimly begun to perceive in its relations to classification in general; but how does it work out in Mr. Brown's tables? A glance at the schedules under B-C-D shows. There we find Dynamics closely followed by Mechanical Engineering, Machinery, Engineers, Civil Engineering, Sanitary and Municipal Engineering (including Sewage, Street cleaning, Public works), Architecture (including Building Materials and the whole history of architecture), Railway Engineering, Vehicular Engineering, Transport and Communication, Shipbuilding, Seamanship and Navigation, Naval and Military Science, before we come to Electricity and Magnetism (including, of course, Electrical Engineering), Optics, Heat (including Steam engines, etc.), Acoustics, and then the whole literature of Music (most admirably worked out) before we have Astronomy and Physiography. Under the last head we have Hydrostatics and Hydraulic Engineering as well as Meteorology and Storms, including Pneumatic Engines and Blowing Machinery, and so on. Now this is all "logical" enough, but what of the effect on the physicist who must wander from pillar to post, passing by the hosts of scores of operas and symphonies, the long reports and papers of observatories, to get from his books on Heat to those on Hydrostatics or the Atmosphere? This same sort of thing is found throughout the classification, and the idea, which is a good one if not overworked, has been so developed as to render the classification impractical for libraries in which the books are grouped with some regard to the convenience and needs of readers. Any sort of a classification, preferably one by height of the volumes to save much needed space, will serve a library where readers merely hand in call-slips with the proper number written down. If we do not classify for the readers, why classify at all? And if we classify for persons interested in subjects, why separate allied topics generally of interest to the same group of persons by such wide digressions and intrusions as those we have noted? To be sure a theoretically useful place is thereby found for some of the professions and industrial arts—most of which Mr. Brown has placed under Economic Biology—but why place

both Architecture and Military Science as applications or developments of Dynamics, and Music with all its history and literature as a mere appanage of Acoustics? So to do is to ignore utterly the history of those arts and their place in human development. Painting and Sculpture, by the way, have to go in Generalia. Why not on this principle after Pigments or Perspective in the case of Painting, and after Economic Geology in the case of Sculpture?

Logic and Mathematics are also grouped in Generalia, on the ground, presumably, that they are "rules, methods and factors of general application." The handling of Mathematics takes very little account of the developments of the last twenty years in that science, and most of the modern topics of absorbing interest to mathematicians seem to find no place. In Generalia also are Education, General Science, Scientific Expeditions and Surveys.

There is one departure from ordinary manuals of classification that is distinctly novel, and which will, it is to be feared, militate against the adoption of the whole of this scheme by libraries in which the various important literatures of the world find a prominent place. The class M, Languages and Literary History, has been well worked out. But works of so-called pure literature are apparently intended to be thrown into N, Literary Forms and Texts. This class is divided into four main groups, Fiction, Poetry, Drama, Essays and Miscellanea. Under each the individual authors of all languages are to be "arranged alphabetically under real names. . . . Original texts with translations. . . ." Here we have the sort of thing which makes the adoption of the D. C. so difficult in university and large reference libraries. Mr. Dewey separates "Philology" from Literary History and Criticism and from Literature. But his classification at least allows the grouping by itself of, say, Greek Literature. Mr. Brown has joined his Philology and Literary History and has placed them next to the works of the various authors in the several languages, which is a gain over the D. C. But he groups all these various literatures under form. Doubtless this is done for the sake of such public libraries as contain mostly English books, though there may be some cosmopolitan view of "world literature" at the basis of the arrangement. Both classifications ignore the fact that scholars want to find together the works on a language, its literary history and its literary masterpieces. If a library is overwhelmingly English, then Mr. Brown's scheme is justifiable, though hardly commendable. It would have been equally well to have made one alphabet of his individual authors, and indeed better, for thus the poetical and prose works of a given author are not separated. Mr. Brown has, to be sure, provided a place in his first division, A, Generalia, to meet this difficulty. "A300 is a place for uniformly

edited and bound editions of the collected works of authors like Goethe, Scott, Carlyle, De Quincey, Hugo, Voltaire and other miscellaneous writers, whose works it may be undesirable to distribute." Every one who has tried to classify these or other "miscellaneous" writers on the basis of form will understand why this place in Generalia is provided. But a more excellent way is to abandon the form classification, save for collections. There is supposed to be adequate reason in public libraries for shelving all fiction by itself. Why not all English literature? And why separate works on the history of French Literature from that literature?

We cannot take time to examine in detail the remaining portions of this classification. The working out of the various topics is in the main excellent and worthy of praise. The peculiarly British portions will be of great convenience to all classifiers for reference. The chief faults of the scheme are in its grouping of large divisions. The index is adequate, and by all odds the most valuable feature of the work. The introduction is full, giving much information about applying the classification, and many variant forms for indicating authors, dates, etc. It is to be regretted that this introduction is rather difficult reading even for one somewhat well versed in the technical jargon of libraries. Everybody knows that the most marked divergences between British and American usage have occurred in the technical phraseology of crafts and occupations that have developed since the eighteenth century. The introduction to this book and many phrases in its schedules give point to this well-known fact in linguistic history. The book will be a welcome addition to the literature of classification, but it will scarcely prove a dangerous rival, in this country at least, to well-established systems. It is to be regretted that it will not. There is need for a popular, clear, modern, scientific classification, one made on the basis of books and modern science, as opposed to theory and former conditions.

This review must not close without mention of a remarkably detailed scheme of classification of "Library economy" which is contributed by L. S. Jast, of the Croydon Public Libraries. Librarians' offices, like the proverbial shoemakers' children, have not infrequently been suffered to remain in gross neglect of numbering and order. This scheme of Mr. Jast's will enable anything pertaining to a library, from furniture to labels and from trustees to accession books, to be properly ticketed. The classification appears rather a *tour de force* than the result of practical use, but it has very great possibilities of good service and is to be heartily commended to the attention of librarians.

WILLIAM WARNER BISHOP.
Princeton University.

NEW YORK STATE LIBRARY. Library building plans; collected by William R. Eastman. (Bulletin 107: Library School 22.) Albany, New York State Education Department, 1906. p. 83-137.

A valuable supplement to the A. L. A. tract "Library rooms and buildings." "It includes plans of 22 actual buildings whose cost is known and which can be visited."

Mr. Eastman's long study of the subject, and the experience he has had in teaching it, are here made available for general use, in the admirable selection of plans and the careful descriptions. In each case the exterior is given, as well as floor plans.

SCHWENKE, P. and HORTZSCHANSKY, A., ed. Berliner bibliothekenführer. Berlin, Weidmannsche Buchhandlung, 1906. 4+163 p. 12°.

The editor of the *Zentralblatt für Bibliothekswesen* and his collaborator have shown the usual German thoroughness in the preparation of this detailed guide to the libraries of Berlin, covering the libraries of high schools, learned societies, secondary schools, churches, corporations and associations, private, parliamentary and general public libraries. They furnish also a brief chapter on the Union catalog of Prussian reference libraries and the Bureau of Information through which one can find out in what libraries a given book may be found.

Under each library particulars are given as to the building, collection and administration, and under the royal library the classification is supplied. At the end of each description references are mentioned to other sources of information, making, when taken together, a very complete bibliography of Berlin libraries. The book has two indexes, one to the libraries by title and one to the chief subjects represented in their collections, and will be most useful for reference in this country as well as in Germany. M. W. P.

Library Economy and History

GENERAL

The May-June issue of *La Bibliofilia* has an interesting article by Leonardo Olschki, son of the editor, on Lorenzo Da Ponte, bookseller and booklover, which is of interest to American and New York libraries, because of Da Ponte's early attempts at introducing Italian literature into this country. After an attempt, about 1801, to start an Italian bookshop in London, he came to New York for the same purpose, but neither the political nor the commercial atmosphere at the time was favorable to his attempt, and he was forced to return to Italy. When he came over he brought 140 volumes of Italian literature. When he left he gave 80 to friends in the

city and 60 he gave to a library which Mr. Olschki identifies as "probably the present New York Public Library," but which was what is now known as the Society Library. Da Ponte goes on to say that this library had a good store of Greek and Latin authors, but up to that time had never housed their Italian successors. As an evidence of his good will he also deposited 14 volumes printed by Bodoni, the works of Parini, of Massa, of Cesarotti, of Foscolo, of Monti, of Pendimonte, as well as a life of Bodoni.

The *Bulletin of Bibliography* for October contains "Index to library reference lists, Jan. to Oct., 1906 cumulation," by Elizabeth Cranston. Hereafter the list will be published monthly in the *A. L. A. Booklist* and cumulated quarterly in the *Bulletin of Bibliography*.

Foss, Sam Walter. The song of the library staff. New York, John R. Anderson, 1906. 14 p. D.

Mr. Foss's admirable library poem, read at the Narragansett Pier conference, is reprinted, with most amusing illustrations by Merle Johnson.

HAMMOND, Otis G. Genealogy in the library. Manchester, N. H., John B. Clarke Co., 1906. 18 p. 12°.

A paper read before the New Hampshire Library Association, December, 1905. The account of work in a subject usually regarded as dry is made very entertaining by the anecdotes Mr. Hamond tells.

The *Library Association Record* for October contains the full text of Sir William H. Bailey's "Presidential address" at the Bradford meeting of the L. A. U. K., and gives a portrait of Sir William as a frontispiece. The Proceedings of the meeting are given, and the Report of the Council. An account of the meeting was printed in the October *LIBRARY JOURNAL* (31:720-22.)

The *Library World and Book Selector* for November contains an interesting article by James Duff Brown on "The limitation of newspapers in public libraries."

Public Libraries for December contains "The library school problem," by Irene Warren; "The library in its relation to the elementary schools," by E. L. Power; "The essentials of a good book for children," by Elizabeth L. Morrissey; "The bull in the (library) china shop," by W. I. Fletcher; "Simple library simplification," by E. W. Gaillard, and a number of brief articles.

The *Wisconsin Library Bulletin* for September-October contains "What you can get out of a Henty book," by Miss C. M. Hewins, and "Library work in our normal schools," by Miss G. E. Salisbury, Whitewater, Wis.

WOODRUFF, Clinton Rogers. Rebuilding of Philadelphia: work of civic improvement

progressing quietly but steadily. (In *Craftsman*, 1906. 11:187-201.)

In this article illustrations are given of six of the Carnegie branch libraries which are being erected in that city. The outside views of some of these buildings are exceedingly attractive.

The *Zentralblatt für Bibliothekswesen* for November opens with an article by H. Schnorr v. Carolsfeld, "Zum bibliotheksbetrieb," and contains also the first part of a "Verzeichnis der griechischen handschriften der Bibliotheca Rossiana," by C. Van der Vorst. There is also a full and valuable review by Johannes Luther of William Warner Bishop's "German reformation pamphlets in the Princeton University Library," printed in the *Princeton University Bulletin* in 1904 and published in Germany by Harrassowitz.

LOCAL

Alliance (O.) P. L. (3d rpt. — year ending Sept. 30, 1906.) Added 633; total 5299. Issued, home use 33,050. New cards issued 1076. Visitors to reading rooms 12,936; to reference room 3866.

Belfast (Me.) F. L. The *Bangor Commercial* for Nov. 3 contains a history of the library, with a cut showing the building and another showing the Albert Boyd Otis memorial book-plate.

Bemidji, Minn. The Crookston Lumber Company has rented the first floor of the Masonic Block, and will use it as a library and club room for their men employees.

Bristol (Ct.) P. L. The cornerstone of the new building was laid Oct. 27. A copper box with local papers, library material, etc., was sunk in it.

Brockton (Mass.) P. L. The first of the reading circles for blind persons was held on Oct. 17 in the library. These readings have been arranged by the library trustees and the Woman's Club. There are about 40 blind persons in the city.

Brooklyn, Ct. A meeting in the interest of public libraries was held in the Town Hall Oct. 10, opening at 10 a.m. and continuing until 4 p.m.

Charles D. Hine presided and gave interesting accounts of the work done by the State Library Committee, of which he is chairman. Reports were presented from the libraries in Brooklyn, Killingly, Chaplin, Thompson and Putnam.

Miss Ellen D. Larned gave an interesting account of the formation of a public library by five towns in Windham county in 1739. Mrs. Belle H. Johnson read a paper on "The possibilities of a small library," and Jonathan Trumbull spoke on "The library as an educational institution." President Luther, of Trinity College, spoke on "The country library."

Brooklyn (N. Y.) P. L. The East branch was opened formally on Nov. 10. It is estimated that 2000 people crowded into the building. David A. Boody, on behalf of the board of trustees, presented the building to the city, and it was accepted by Commissioner of Charities Robert W. Hebbard, delegated by Mayor McClellan, who turned it over to the trustees of the Brooklyn Public Library. It was accepted on their behalf by Frank L. Babbott. An address was made by Lyman A. Best, principal of Public School no. 108, and the Rev. Warren H. Wilson also spoke.

Cleveland (O.) P. L. (37th rpt., 1905.) Added 31,349; total 267,487. Issued, home use 1,371,670 (fict. 57.2 per cent.); visitors to reading rooms 887,563. New cards issued 22,602; total cards in force 82,328. Expenses \$311,114.29 (maintenance \$46,444.16; service \$60,257.70; growth, including \$76,807.89 for Carnegie building, \$170,704.49; bonded indebtedness \$33,707.95.)

Mr. Brett's report sets forth again the pressing need for the new building, summarizes the work for the year, and states the place of the library. The St. Clair branch was opened April 14, as noted in these columns. A sub-branch at Lorain street and Clark avenue was opened April 4.

Then follows the detail report of Miss Eastman, vice-librarian, including summaries or extracts from the reports of the heads of departments. The number of readers and reference workers has increased 15 per cent. over 1904, the issue of books for home use 14 per cent., the total number of users 12.8 per cent.

The issue of books to children passed the half million mark. "The story-hour has had much to do with the standard of reading we have been able to maintain, and in drawing new people to the library." The great demand for Christmas poetry, and the difficulty of finding good selections, led to the compiling and printing of the first number of *The Children's Leaf*. Seven thousand copies were given to children. It is planned to publish the leaflet four or five times a year.

There are some interesting deductions as to work with children in certain communities, as seen in some of the branches. "The probable proportion of juvenile work. In new city neighborhoods with a large foreign population, the juvenile circulation is at first about three-fourths of the total circulation. The proportion of juvenile to adult use of the library of a community indicates strongly the education and intelligence of the adult population. The high rate of juvenile use in a foreign district is one of the most hopeful signs of the possibility of the assimilation of the foreigner, for it shows how quickly the foreign child responds to the influences of our national life and our schools; indeed, the imagination of the foreign child, which is

enriched through his national folk-lore and legend, enables him to project himself to a surprising degree into our life, its customs and its history. In the St. Clair branch, which has been open about nine months, the juvenile circulation was at first three-fourths and it has remained about one-half of the total. There is every indication that Broadway will pass through a similar experience. The increase at St. Clair in the percentage of adult circulation has not shown a corresponding decrease in the juvenile circulation. A supervisor of home libraries was appointed in September. There are twenty of these, dealing in all with 242 children.

In making his plea for a new building Mr. Brett says:

"The colleges, universities and technical schools of our country are largely supported by endowments, gifts of those interested in education. The library may very reasonably make the same appeal to those who wish to aid higher studies, research and technical education. Within the last two decades many generous gifts have been made for library purposes, millions of dollars each year, as reported to the American Library Association. These have been largely for buildings; during the last two years, however, there has been a notable increase in the amount given for the purchase of books either directly or as an endowment. This is a hopeful indication, and suggests the greatest need of our own library.

"If an endowment could be secured which would furnish annually a reasonable amount for the purchase of books, it would provide for satisfactory growth and increased usefulness. This might be in one fund or in special funds devoted to specific subjects, as sociology, technical subjects, or the fine arts. With the completion of an adequate and secure building the library may also hope for valuable additions by the gift of collections; there are in Cleveland a considerable number of valuable collections, and the natural destination of these is the library rather than the auction-room."

Detroit (Mich.) P. L. The formal opening of the new branch library building, at Field and Agnes avenues, took place Nov. 22, under the direction of the Detroit library commissioners. The opening remarks were made by George Osius, president of the library commission. Addresses were made also by William E. Henze, Henry M. Utley, librarian, and John Harpfer, acting mayor.

The library has been opened since last June. It is the first branch library to have its own building.

East Orange (N. J.) F. P. L. (3d rpt.—year ending Dec. 31, 1905.) Added 2879; total 17,953. Issued, home use 117,294. New registration 1517; total registration 8744. Receipts \$7788.39; expenses \$7548.44 (salaries \$3485.66, books \$1552.47, light \$248.87).

A brief report of excellent work. The new

activities for the year include the establishment of the "vacation privilege" of six books at a time from any stated period in the summer up to Oct. 1, the opening of a men's reading room, the placing of a bulletin board in the railway station, and an exhibit of books suitable for Christmas gifts.

Englewood (N. J.) F. P. L. The new wing 22 x 27, added to the library for a children's room, is now open. It is the gift of Mayor Mackay.

Evanston (Ill.) F. P. L. (33d rpt.—year ending May 31, 1906.) Added 2500; total 38,811. Issued, home use 113,715, and through schools 2662. New registration 2681; cards in force 5662. Receipts \$20,716.81; expenses \$10,831.81 (salaries \$4656.62, books \$3692.56, rebinding \$447.40, heat and light \$621.14).

The frontispiece shows a sketch of the new building, toward the cost of which one-fourth of the library income must be reserved.

The report of the president of the board of directors contains a brief history of the library.

Fall River (Mass.) P. L. (46th rpt.—year ending Feb. 28, 1906.) Added 1719; total 70,391. Issued, home use 204,127. New registration 1110; total registration 17,539. Receipts \$23,402.90; expenses \$23,402.90 (salaries \$7373.67, books, periodicals and newspapers, \$3589.93, binding \$880.15, light and fuel \$3323.90, work on new card catalog \$1736.08).

Six sections of stack and 424 steel shelves have been added to the stack room.

The need for more money is forcibly stated by the trustees.

Frankfort, Ind. Carnegie L. The cornerstone of the building to be built with the \$22,500 given by Mr. Carnegie was laid on Nov. 28. The ceremonies were in charge of the Grand Lodge of Masons of Indiana. The address was made by Professor Robert J. Ale, of the State University.

Georgia School of Technology, Atlanta. The cornerstone of the library to be built with the \$20,000 given by Mr. Carnegie was laid on Nov. 21, with appropriate exercises. The speakers were Chancellor Barrow and Governor Terrell. There were a thousand people present, among whom were the members of the Southern Library School.

Hartford, Ct. State L. A plan has been selected for the new Connecticut State Library and Supreme Court Building, which is to stand facing the capitol at the corner of Capitol avenue and Washington street, Hartford. The length of the building is to be 350 feet, 65 feet longer than the capitol. The library will have the first floor, and a stack extending two stories.

Helena (Mont.) P. L. (20th rpt.—year ending Dec. 31, 1905.) Added 1955; total 37,255. Issued, home use 78,608. New registration 830; total registration 6695. Re-

ceipts \$8839.74; expenses \$8382.43 (salaries \$3810, books, binding and periodicals \$2792.68, heating, lighting, etc., \$779.64).

The trustees point out the necessity for more room, and suggest an addition to the present building.

The report is Bulletin 30, and includes a classed list of new books (selected).

Hoosick Falls (N. Y.) P. L. In compliance with the law relating to the establishment of a free public library, the Board of Education has taken definite action regarding the transfer of the school library to a free library, located in the new public building, and has delegated the necessary powers to act as custodians. The room assigned for library purposes is capacious and pleasant. Prof. M. J. Dillon has been chosen for the position of librarian, his salary and term of office to be fixed later.

Houston, (Tex.) Carnegie L. (Rpt. — year ending April 30, 1906; in local press.) Added 2378; total 17,228. Issued, home use 59,008. New registration 2006; total registration 5092. Receipts \$5749.20; expenses \$5595.59 (salaries \$2363.20, books \$1173.76, binding \$243.77, electric light \$224.13).

The increase of circulation for this second year of the library averages over 600 volumes a month. The fiction percentage was 85 per cent.

A Saturday morning story hour has been held in the children's room, with an attendance ranging from 50 to 250.

Howell (Mich.) Carnegie L. The \$18,000 building, toward which Mr. Carnegie gave \$15,000, was opened on Nov. 26. The site is the gift of McPherson Bros., of Howell.

Joliet (Ill.) P. L. (31st rpt. — year ending May 31, 1906; in local press.) Added 2469; total 25,772. Issued, home use 130,973. New registration 1164; total registration 8588.

"The new plan of issuing a non-fiction card to each patron of the library has met with great favor, and many have availed themselves of the privilege."

Kearny (N. J.) Carnegie L. The cornerstone of the Carnegie building was laid on Oct. 27, with the usual exercises. The main address was by John Cotton Dana, of the Newark Free Public Library. Mr. Carnegie's gift was \$27,000.

Kilbourne, Ill. Sixty citizens have organized the Kilbourne Independent Library Association, and will open a public reading room.

Lansing (Mich.) P. S. L. (mss. rpt. — year ending August 30, 1906.) Added 2112; total 15,399 (fict. 17.5 per cent.) Issued, home use, through two branches 1827. Books used for study 33,550. New registration 1154; cards in force 7036. Expenses \$4578.95; receipts \$4468.60. Amount spent *per capita* (29,000 population) .15½.

Two new branches are asked for.

A number of the pastors of the city

churches spoke of the needs of the library on a recent Sunday, supporting its request for larger appropriations.

Lawrence University L., Appleton, Wis. The new Carnegie building was dedicated on the afternoon of Oct. 19. The building is a simple and very attractive one. It cost \$50,000. There were addresses by President A. W. Harris, of Northwestern University, President Charles R. Van Hise, of the University of Wisconsin, and others.

Marietta College, Marietta, O. The new Carnegie library building was dedicated on Oct. 17. It cost \$40,000.

Marinette, Wis. Stephenson P. L. (Rpt. — year ending June 30, 1906.) Added 1033; total 11,533. Issued, home use 46,949; reading room attendance 26,987. New cards issued 1071; cards in force 4237. Receipts \$4283.82; expenses \$4197.48 (salaries \$1483, books \$1124.80, periodicals \$163.58, binding \$161.20, light \$223.60, heat \$251.25).

"The library has not been able to purchase as many books of fiction as the Bodley Club has furnished for the last two years.

"Any rapid increase in circulation dependent upon light fiction can hardly be looked upon as a healthy growth, so even though the circulation shows a decrease we are satisfied that the change is for the best."

The library now has the use of two traveling libraries from the Wisconsin Free Library Commission — one of German books and one Norwegian library added this year.

Marysville (Cal.) City L. The library was formally reopened Oct. 12, in its new building, the gift of John Q. Packard, of Marysville. There were no formal exercises, but 1500 persons visited the library.

Mills College, Oakland, Cal. The Margaret Carnegie Library of Mills College was dedicated on Nov. 17. Mr. Carnegie's gift was \$20,000, to which was added \$8000 collected by the college. The building is named for Mr. Carnegie's daughter, because it belongs to a woman's college. The main address was made by Professor Warring Wilkinson, of Berkeley.

Minneapolis (Minn.) P. L. (16th rpt., 1905.) Added 11,600; total 153,441. Issued, home use 560,002 (juvenile 126,000). New registration 11,372; total registration 44,218.

A beginning of a collection of musical scores for circulation has been made.

"The reading rooms of the library are so attractive and convenient, and access to the books so easy, that a large proportion of the serious reading is done upon the premises; this makes the outside circulation show a larger percentage of light reading, so that if the circulation figures alone were considered, they would indicate a condition of things which is not true. It is estimated that at least a half million of books are read or consulted in the reading rooms, aside from

the magazines and newspapers, and this almost entirely of a serious nature. The only place where an actual account has been kept is in the art room, the attendance there amounting to 8067 readers, beside the numerous sightseers."

A new station was established in October at Linden Hills. There are now fifteen branches and stations, not including the schools, settlements and factories from which books are circulated.

One of Miss Countryman's recommendations is of general interest: "On New Year's evening, 1905, the library building was opened throughout for a public reception. The city was invited to inspect the building and the changes that had been made. It was estimated that nearly 2000 people visited the building during the evening. This year the experiment was repeated, and music was furnished to increase the pleasure of visitors. Invitation placards were posted in many lodging houses and Washington avenue restaurants, factories and in various portions of the city. A good attendance resulted, of which at least 75 per cent. were people who had never been in the building before. It seems fitting that at least once a year a public building of this sort should be opened to the public, and that they should receive an especial invitation to inspect the entire building and contents. It is one of the best methods of advertising the library."

Moorhead (Minn.) Carnegie L. The new building, the gift of Mr. Carnegie, was dedicated with formal exercises on Oct. 15. The building is of stone and pressed brick, in the Roman style, and cost \$14,500.

Morristown (N. J.) L. The library was opened Oct. 22 as a free circulating library, in accordance with the will of the late William B. Skidmore, which contained a provision granting the library a bequest of \$20,000 if it should be made free.

The circulation increased 300 per cent. the first week.

Nashua (N. H.) P. L. The library has been giving an exhibit on the brown-tail and gypsy moths that have wrought such havoc with trees. The exhibition consists of 47 views of the work done by these pests in New Hampshire and neighboring states, pictures depicting the methods employed in fighting them, and the insects themselves in all stages of development. The pictures, etc., are loaned to the library by the entomological department of New Hampshire College, which is making an effort to set before the people of its vicinity the full import of this menace to foliage.

New Orleans (La.) F. P. L. The library board has unanimously recommended to the council the acceptance of the bid of the Jefferson Construction Company for the new library building. The bid was \$194,200. One of the other bidders filed a protest

against the acceptance, on the ground that the Jefferson bid was informal, because a sample of the stone to be used in construction was not furnished. The board decided that the alleged informality was not sufficient to set aside the bid.

Notice having been given by the mayor that the buildings occupying the site of the new United States post-office must be cleared from the ground by Dec. 15, the trustees of the library, which occupies part of St. Patrick's Hall, on this site, have rented the house at 1115 Prytania street for the interval before the new building is completed. This is the old Loche home, and was used as General Butler's headquarters when he occupied the city with the federal troops. The library opened in its new quarters Nov. 26. The old building was sold at public auction Nov. 28, and brought only \$575. The buyer must clear the ground.

New York City. Institute of Musical Art. A circulating music library was opened by the Institute in October. Each subscriber is entitled to draw six pieces at a time and to exchange them once a week, or to keep them for two weeks. The library was founded and circulated for more than thirty years by the firm of G. Schirmer, and contains over 6000 pieces of four-hand music for one piano and nearly 2500 pieces for players of two pianos. It is housed in the building where the Lenox Library came into being, 53 Fifth avenue.

New York P. L. In the lower hall of the Lenox Library building there have been placed on exhibition a number of etchings by Adolphe Lalauze, recently deceased. Lalauze, who was born in 1838, was an etcher of extreme facility. Like Boilvin and Hedouin, he was one of the illustrators of the *Petite Bibliothèque Artistique* of Jouaust. Of his etchings in the New York Public Library (most of them forming part of the S. P. Avery collection); many are reproductions of paintings by old and modern masters: Rembrandt, Bronzino, Van Dyck, Burne-Jones, Seymour, Casanova, Baudry, Huet, Gonzales. He thus translated into black-and-white painters of widely different styles and personality. The little exhibit is interesting from more than one point of view.

The photographs of Italian paintings, selected from the A. A. Hopkins collection, will be on exhibition in the print galleries, on the floor above, for some time to come. They are attracting many visitors.

On Dec. 1 fire broke out on the roof of the new building in Bryant Park, as a result of the overturning of a tinsmith's furnace. It was soon extinguished, and the damage was only \$500.

Newark (N. J.) F. P. L. (17th rpt., 1905.) Added 9720; total 106,190. Issued, home use 511,294 (fict. 65.3 per cent., duplicate collection, 5.1 per cent.). Receipts \$62,720.21; expenses \$61,525.39 (salaries \$23,203.19, books

\$7792.56, binding \$4235.39, periodicals \$1336.62.)

After a brief summary by Mr. Dana, the information of the report is arranged under dictionary headings, such as "Accessions," "Books lent," "Catalogs, Manufacturers," "New Jersey poems," "Vertical file," "Young People's Department." There are plates giving exterior of the library and floor plans, new statuary and busts, bookplates in use in the library, etc.

Among the interesting devices of the library may be noted "the sending of monthly bulletins to people who may be interested in recent books or magazine articles on specific subjects. These bulletins are uniform in style. They are mimeographed on 8 x 11 sheets and are distributed by mail or otherwise to individuals or firms to whom they specially appeal." A sample copy is reproduced among the cuts in the report.

During the year 74 organizations have held 653 meetings in the library building, with a total attendance of 18,609.

Following the work started in 1904 of placing deposit libraries in department stores for the use of employees, an effort was made this year to establish similar deposit libraries in factories where girls are employed. Ten factories were visited and two accepted the offer. In July a case of 50 books was sent to one and in August another 50 books were added. Visits are made monthly to these libraries and the books are changed as requested. In November back numbers of several magazines especially interesting to women were sent and have proved popular. A case of 50 books was sent to the other plant in November, the selection being for men and women. The employees are interested and the scheme seems to find favor.

The record of work with schools and for teachers is the usual valuable one.

As to publications: "In May, 1904, the library published a little pamphlet by Mr. F. J. Urquhart, called 'Newark, the story of its early days.' This was sold at 5c. per copy. Many copies were lent. It was used by teachers for reading and in the study of Newark history. In December, 1905, the library published a second similar pamphlet, also by Mr. Urquhart, called 'Newark, the story of its awakening.' This has been sold, lent and used in the same manner as the first. Both have supplied the library with many books to lend, especially to young people. Both have helped to increase the interest of young Newarkers in their own city. A third story is to follow.

"Several years ago the library began to get together stories and poems descriptive of historic people, places and events in New Jersey. Out of the material collected 40 poems have been selected to make up an anthology of New Jersey verse suitable for school children. The Sons of the American Revolution intend to publish this work."

The list of a "Thousand of the best novels," compiled in 1904, is under revision. 12,900 copies have been printed altogether, of which 9150 were for other libraries or purchasers.

Norwich, Ct. Otis L. (Rpt.—year ending Aug. 31, 1906.) Added 2536; total 34,740. Issued, home use 99,060 (fict. 60.41 per cent.; juv. fict. 19.63 per cent.). New registration 959; total registration 16,095. Receipts \$8451.77; expenditures \$8341.69 (salaries \$4051.85, books \$1526.73; periodicals \$250.95, binding \$142.10, light \$268.88, fuel \$243.75).

A very slight decrease in issues for home use is shown, almost all of which is in the children's department. A brief review of the history of the library is given, showing its constant advance.

It is planned to begin storing the older government documents, in order to get shelf room for the new books.

Oregon City, Ore. A public library association was formed at a meeting held Nov. 16. The sum of \$165 was subscribed at the meeting, and the city council is to be asked to aid in the project. The movement for a free library was started by the Oregon City Woman's Club.

Peoria (Ill.) P. L. (26th rpt.—year ending May 31, 1906.) Added 5000; total 100,029. Issued, home use 195,920. New registration 480; total 8485. Receipts \$19,749.72; expenses \$19,726 (salaries \$6829.12, books \$4657.11, periodicals \$815.06, binding \$1950.01, light \$1095.50, fuel \$471.27).

The circulation shows the largest gain of any year in the history of the library—21,000.

Philadelphia F. L. The Lehigh avenue branch, Lehigh avenue and Sixth street, was formally opened on the evening of Nov. 20. This is the third of the branches built from the Carnegie gift. It is built of terra cotta with a granite base. The main room is 119 x 53. There is a lecture room, in which the formal exercises were held. The speakers were Henry R. Edmunds, president of the Board of Education; Dr. Martin G. Brumbaugh, superintendent of schools; Rev. Edgar Cope, rector of St. Simeon's Protestant Episcopal Church; W. D. Hewitt, architect of the building; Select Councilman Samuel Lamond and Representative James Clarency. The present equipment of the branch is 10,000 volumes.

The fourth Carnegie building, the Tacony branch, Torresdale avenue and Knorr street, was opened on the evening of Nov. 27. It is built of brick and terra cotta, the main room being 68 x 44. A lecture room 44 x 35 opens directly into the main room. The site is the gift of Jacob S. Disston. The chief address was made by the Rev. Robert A. Edwards. John Thomson, librarian, Free Library; William Smith, president of the Disston Library; Prof. Burd Worrill, principal of the public school in Bridesburg; Henry R.

Edmunds, president of the Board of Education; the Rev. Maris Graves, the Rev. Edward Reeves and George Clark, of Holmsburg, also spoke.

Pittsburgh, Pa. Carnegie L. In the notice of the 10th annual report, in the October LIBRARY JOURNAL, the "reading room use of books and magazines, 157,096," gives the figures for the central library only. The total reading room use, including the branches, was 727,069.

The reference room at the central library was reopened Nov. 25. In the remodelling of the building the capacity of this room has been almost doubled.

Portland (Ore.) L. Assoc. (42d rpt.—year ending Dec. 27, 1905.) Added 5326; total 50,906. Issued, home use 177,076, of which 40,650 was from the children's room. Visitors to reference department 27,324. Receipts \$19,795.84, expenses \$20,928.68 (salaries \$13,080, binding \$2286, light and heat \$966.81). Book fund receipts \$6871.95, expenses \$6084.35.

During the year the library has extended its space by using the second floor, long occupied by the Art Association. This necessitated readjustment everywhere, of which the detail is given.

The visit of the A. L. A. to Portland receives its share of attention, and Miss Ison expresses warm appreciation of the advantages accruing to the library interests of the Northwest from the conference.

Despite the distractions of the Lewis and Clark exposition, the library more than held its own as to use.

"With no special incentive from the library, and in fact almost neglected during the busy summer months, the county stations have continued to multiply and to read more books and better books. The librarians in charge whose services are voluntary have almost without exception shown a delightful interest in their small collections and have taken pains to bring to the library for exchange packages of books little read or of books thoroughly read, thereby keeping their collections alive and interesting."

An innovation was tried in closing the library one day and a half for inventory purposes, and the new plan is said to have worked admirably.

Providence (R. I.) P. L. (28th rpt., 1905.) Added 5036; total 119,079. Issued, home use 129,707. New registration 6932; total registration (1903-05) 18,347. Receipts \$39,832.26; disbursements \$40,496.73 (expenses \$32,928.94, books \$5203.53, binding \$2364.26).

"The most serious incident of the past year has been the disappearance of books from the shelves in large numbers. In the report one year ago the statement was made that 'In no previous year has the library suffered more from the annoyance of books perma-

nently missing, and therefore, very reluctantly, set down to theft.' Through the year 1904 close watch was kept upon the shelves, by the shelf inspector, with the result that in the open-shelf portion of the library, books would be repeatedly missing for weeks in succession, and would then be found on the next inspection returned to their places. In some cases also such books would be found smuggled in behind a row of other books. This peculiarly baffling experience made it necessary to delay for a time the final conclusion. At the close of the annual inspection of 1905, however, a record was made of all those books which had been missing from Jan. 1, 1904, to Dec. 31, 1905, and the total amounted to 1796. Out of this number 434 had been entered as "missing" in the annual inspections of both years. Since Oct. 1, 1905, when this report was made, one precaution after another has been adopted, with a view to checking the loss of books, some of which have already been enumerated in this report. Not only has it thus far been impossible to discover the thief in any one of these instances, but it has also been impossible to check the thieving. From Oct. 1, 1905, to the end of the year, about 40 volumes disappeared from the Industrial Library alone. From every point of view this is lamentable—from that of the library, which is thus losing so much of its valuable property, and from that of the offending readers, who have been willing to commit this crime against property. Not the least of the occasions for regret is to be found in the modifications thus rendered necessary in the attitude of the library towards the public. Heretofore its position has been that of throwing every room wide open, and trusting the public to the fullest extent. Now, from sad experience, it is found necessary to open no room unless it can be adequately manned with an attendant in charge of it and observing the use which is made of the books. It would be a thousand pities if a result of this change of practice were to be, in any degree, a change of attitude towards the reader, on the part of the library, and its attendants. Hitherto, such attitude has always been emphatically cordial and open; and it is to be hoped that it will always continue to be so."

A strong statement is made of the need for branches.

Stratford (Ct.) L. Assoc. A portion of the very elaborate geographical library of E. E. Beecher, of Oronoque, has been on exhibition in the library, and has attracted much attention from visitors. The collection is of interest to the general public, as well as to persons with an inclination towards geographical study.

University of California L., Berkeley. Serious losses of books have been recently discovered, and it is feared that they are due to thefts by students. Mutilation of library books has also been going on, and Mr. Rowell

has offered \$20 reward for information sufficient to convict the person mutilating a volume of college songs that was posted for reference near the main desk.

University of Michigan L. A number of fine stained glass windows have found their way into the General Library of the University of Michigan, through the generosity of the librarian, Mr. Theodore W. Koch. Eight of these pieces will be placed in the windows above the apse of the reading room, two on either side, while the center of the apse will contain half windows with the printers' marks of Aldus, Robert Copeland, John Siberch and Erhard Oglin. The windows are all the work of Nicola D'Ascenzo, of Philadelphia, an Italian artist who has been working in this country for several years. They were originally the property of the Booklovers' Library of Philadelphia.

University of Vermont L., Burlington. (Mss. rpt.—year ending May 31, 1906.) Added 2081 v. and 324 pm.; total 73,035 v. and 32,480 pm. Issued, home use 7492. 416 serials were currently received. The card catalog received 1852 new cards, of which only 298 were printed cards from the Library of Congress, etc. 820 cards received additions or changes.

The library was open every day in the year with the exception, during vacation, of Sundays and holidays, and of Memorial day of 1906.

The work has been carried on by the librarian with only one regular assistant, together with three student helpers and a capable janitor. The collection itself and the work of the library have far outgrown the accommodations of the present building, erected in 1885, so that shelf room, catalog room, work room, and accommodations and conveniences for readers are all inadequate. The urgent need of more shelving is represented by the librarian in her report. This appeal has since been met by steps to provide extra stacks, which will afford relief till the necessary enlargement of the building.

Washington, D. C. District of Columbia P. L. (Rpt.—year ending June 30, 1906.) Added 16,031; total 84,668. Issued, home use 433,096 (fict. 68 per cent.). Reference room use 114,428. New registration 12,885; total registration 39,800.

An increase of use of almost every department is shown in this record. The gain in issue of books for home use was 22 per cent., that in the children's room being 19 per cent. of this. The increase in reading and reference use was 54 per cent., making an advance of 261 per cent. in the last two years.

The decrease in the percentage of fiction circulated is again noteworthy, being one from 71.8 (1904-05) to 68.

"The means taken to bring about this reduction have simply been so to arrange, display, and advertise the resources of the li-

brary that books other than fiction will be made approximately as conspicuous as fiction. In publishers' advertisements, so-called book reviews, etc., the novel is put forward so much more clamorously than other literature that the library should do something to readjust the balance in order to prevent the unreflecting person from thinking that the novel is the only class of literature worth his attention. This library, therefore, although continuing to display an abundance of new and standard fiction on open shelves, has also continued the plan of placing in rotation on open shelves the various other classes of the collection. During the year all classes of non-fiction works except history and a few foreign books have at some time been available for free access during a considerable period. New non-fiction accessions, regularly listed in Saturday editions of the local newspapers, are likewise displayed on open shelves. . . .

"It must not be thought from the foregoing statement that the library seeks in any way to apologize for its fiction circulation or regards it an unworthy part of its work. On the contrary, if out of the increase in circulation of 155,000 in the last two years the proportion of fiction had been smaller than it has been, there would almost be ground for thinking that there is something abnormal about this community. The normal individual, whether adult or child, requires imaginative literature either in the form of poetry, drama or tale. Just now the dominant form of literary expression is the novel, and practically all the great tragedies and comedies of life (as well as the smaller ones) have been or are being embodied in fiction."

The work of the young people's department and that with schools have been constantly growing. A teacher's reference library, open daily, including Sundays, has been opened. It includes reference books and other books selected by a committee of teachers and 1500 volumes of school text books sent by publishers. Twenty current educational periodicals are on file. A monthly education bulletin has also been issued and sent to the principals of all public and private schools for posting.

Books have been issued through six settlement stations.

Fifty-one public meetings were held in the lecture hall, by 12 associations or clubs. The attendance at the 26 free lectures given under the board of education was 8079. During the past year the experiment has been tried, with considerable success, of assigning one of the study rooms to groups of individuals as a place for study and for the better use of the resources of the library. Fourteen organizations held 88 meetings in this room.

The following annotated reference lists have been issued: "Books on gardening," second edition; "Interesting biographies," "Periodicals on file," and "Fine arts."

An apprentice class was conducted during the year. Seventeen passed the examinations,

14 completed the course. The major portion of the course consists of practical work under the close supervision of heads of departments. A certain amount of theoretical instruction has also been given. The importance in library work of a knowledge of current affairs has been emphasized by a series of round tables at which designated members of the class have reported on recent events.

In response to repeated demands through the press, an appropriation was secured enabling the library to be kept open last year on Sundays for reference use and on holidays for reference use and home circulation. The library is therefore open on every day in the year except July 4 and Dec. 25. On Sundays all of the public parts of the library are open with the exception of the circulation department. An assistant is in attendance at the registration desk, and many persons who visit the library only on Sunday have taken out cards on which members of their families draw books for them on week days.

The needs of the library are forcibly set forth—need of larger staff, in order to use more than the first floor of the library, importance of beginning the Carnegie branch buildings at once, and the formation of duplicate collections for circulation through schools, Sunday-schools, police and fire stations, institutions, department stores, etc. Specific recommendations for all salaries are made.

"Although in this report it has often seemed necessary to dwell on some of the discouraging features of the local public library situation, it must not be inferred that there is any other expectation but that the final outcome will be satisfactory. The Public Library was late in being established as compared with other municipal public libraries, and has always had a hard fight for existence, due to the fact that statistics have shown that the District of Columbia was better supplied with libraries than any similar area in the United States, and therefore—so reasoned the legislators—could not have any great needs in this direction. Gradually, however, Congress is realizing that unless and until this library has adequate support the mass of the people, including the Federal Government employees, will be without helpful library facilities. Inasmuch as this is not a theory, but an actual condition, the justice of the library's contention is sure to prevail and adequate library development cannot be long postponed."

Detailed reports of departments follow Mr. Bowerman's full general statement. The report is illustrated by 10 plates, and is printed in simplified spelling.

Wilmington (N. C.) P. L. On Nov. 3 the North Carolina Sorosis turned over to the city the public library they have been conducting. The ceremonies took place in the new library rooms on the second floor of the city hall. Miss Margaret Gibson, president

of Sorosis, made the presentation, and the library was accepted for the city by Mayor A. M. Waddell. Sorosis has been working for this library, and to have it made a municipally supported library, since 1901, and is to be congratulated on having brought about this desirable result.

Youngstown, O. Reuben McMillan F. L. (Rpt. — year ending April 30, 1906.) Added 3805; total 28,260. Issued, home use 82,726. New borrowers 2089. Reading room attendance 34,609. In February the Haselton Library was taken by the trustees and opened as the Haselton branch. The Steelton school house is also being used as a distributing center.

Ten clubs submitted their programs to the library, and references were looked up on 238 subjects.

The story hour has been very successful, a series of Robin Hood stories having been told on Saturday mornings.

Six home libraries have been carried on during the year, the total number of children in the groups being 87.

FOREIGN

Baroda, India. Shrimant Sampatrao Gaikwad, of Baroda, brother of His Royal Highness, the Maharajah Gaekwar, of Baroda, has been visiting this county, to study library methods and library buildings. The Gaikwad has for years thrown open for public use his own library of some 12,000 English books, and about the same number in Sanskrit, and some of the modern Indian languages. A building, to cost about \$75,000, is now to be put up. Baroda is probably the most advanced of the Indian states. Compulsory education has been established. The city of Baroda has a population of about 100,000, and the state one of about 3,000,000.

The Gaikwad is deeply interested in the public library movement, and determined that the Baroda Library shall be of the best type in every detail.

Bradford (Eng.) P. Ls. (36th rpt. — year ending Aug. 12, 1906.) Added 7649; total 141,470. Issued, home use and ref. 756,311. New registration 15,580. Important alterations have been made during the year. The former art gallery is now given to the reference department, the lending library is transferred to the old reference room, and the former lending library space is now a news room. The Bowling branch library was opened on Jan. 22.

Bristol (Eng.) P. Ls. (Rpt. — year ending March 31, 1906.) Added 5201; total 124,143. Issued, home use 460,504; reference and reading 134,691; specifications of patents 15,693. "This year out of an issue of 610,888 volumes there has to be recorded the loss of two volumes only by default of borrower and guarantor." The branch library at Westbury-on-Trym was opened March 13, 1906.

Glasgow, Scotl. Baillie's Institution F. P. L. (Rpt.—year ending May 15, 1906.) Added 426; total 19,723 v., 1835 pm. Issued 41,148, a daily average of 135. This is again, as last year, a record of diminished use, attributed by the librarian to the numerous additions being made to the public collections of the city. The number of books issued to women was 3819, as against 2657 last year. The total attendance is given as 50,325.

Kimberley P. L., South Africa. (23d rpt.—year ending June 30, 1906.) Added 889, total 31,835. Issued, home use 48,209. Total registration 494. This is a subscription library, and there has been a fall in the number of subscribers. A reading room for women has been opened. The proceedings of the 23d annual meeting are given, including "In defence of fiction," by Dr. Watkins, chairman of the library.

Lcds (Eng.) F. P. Ls. (36th rpt.—year ending March 31, 1906.) Added 12,044; total 260,903 (ref. lib. 76,273, central lending lib. 48,906, branch lib. 135,724). Issued, home use from central lending lib. 333,597, from branch lib. 1,074,451. The total use of books in all the libraries was 1,536,930, an increase over 1904-1905 of 113,377. The increase in circulation from the branch libraries was 110,817. A branch was established in July in the Brownhill council school, and a distributing branch in April in the Wesleyan schoolroom, Meanwood. It has been decided to accept candidates for the minor positions on the staff only on competitive examination.

Liverpool (Eng.) P. Ls. (53d rpt.—year ending Dec. 31, 1905.) Total, ref lib. 133,953, branch libraries 128,716. Issued (in reading rooms and for home use) 2,418,729, periodicals 1,326,928. Newspaper readers 1,350,851. Attendance at 164 free lectures 76,481. Total registration 35,859. The books of a "wholly technical character" issued during the year numbered 256,675. The books issued to the blind were 1767, the volumes of vocal and instrumental music lent 33,315. "This library has the honor of being the first among public libraries to circulate books for the blind and music, the former in 1857, the latter in 1859."

The Brown reading room has this year been equipped with an open access collection of 500 volumes. The abolishment of the necessity for written application for all books has been attended by most gratifying results. During the year two branch libraries were opened. The first, at West Derby, was the gift of Andrew Carnegie. The second is the Kirkdale branch. The number of branch lending libraries and reading rooms is now eleven. Six of the free lectures this year were given to audiences wholly of children. The report has exterior and interior views of the new branches.

Victoria P. L., Museums and National Gallery, Melbourne. (Rpt., 1905.) Added, ref.

lib. 5624 v., 771 pm.; total 161,955. Added, lending library 1797; total 22,542. The lending library had 8440 active borrowers, a slight decrease from the previous year, which is attributed at least in part to the fact that several of the municipalities have opened free lending libraries. From the travelling libraries loans were made to 63 libraries, the total number of books lent being 8176.

The library has just issued "The book of the Public Library, Museums and National Gallery of Victoria, 1856-1906," by Edmund La Touche Armstrong, chief librarian. This attractive book of 135 pages "makes no claim to be a complete history of the institution. It is but a chronological record of the main facts connected with its progress during the first half century of its existence, and some notes on those who have served it well in the past." The record is an interesting one of steady advance. There are many illustrations, chiefly portraits: the plates showing the library (exterior) in 1856 and again in 1906, are a striking comment on the advance of the library. There is a full index that adds much to the ease of use of the volume, and so to its value.

Gifts and Bequests

Bridgeton (N. J.) L. Assoc. By the will of the late Percival Nichols the library receives \$500.

Brown University L. The late Mr. George W. Harris, of Boston, has given Brown University a splendid collection of books in memory of his father, Luther M. Harris, who graduated from Brown in 1861. Mr. George Harris has been well known as a connoisseur and collector of works of art and its literature. The gift includes over 3000 volumes. In addition he has given a fine lot of paintings, pieces of sculpture and exquisite designs in pottery, glass and bronze. Among the paintings are a Rembrandt, a Tintoretto, a Velasquez, an Andrea Del Sarto and a Murillo.

Miss Hortense Webster, formerly cataloger of the library, has presented to the Harris Collection 106 autograph letters of George Henry Calvert. The author was a great-grandson of Lord Baltimore, and on his mother's side was a direct descendant of the painter Rubens. He was a resident of Newport, and at one time mayor of that city, but he is better known as a poet, dramatist and prose writer.

Cambridge City, Ind. The Rev. Mr. Caldwell, of Dublin, has offered to furnish funds to support a library and reading room in Cambridge for the benefit of young men, if the Helen Hunt Club will agree to manage the same. A committee has been appointed to consider the matter in detail.

Canal Dover, O. The American Sheet Steel Company has presented to the city the books and fixtures in its reading room and library here, which have been maintained by the com-

pany for three years. The value of the gift is \$2500.

Chicago University L. The fund for a library building in memory of Dr. Harper has now reached over \$125,000.

Genesco, N. Y. Wadsworth L. By the will of the late Martin Brimmer, of Boston, the library receives his collection of 5000 volumes, which is said to be worth \$50,000. It includes many expensive bindings. There is also a case of Arundel prints and a Barye bronze. Mr. Brimmer was a distant relative of the Wadsworths.

Geneva, Neb. Dr. H. L. Smith has given the city a twenty-one years' lease on the old post-office room, to be used for the H. L. Smith Library, now the property of the city.

Johns Hopkins University L. The medical library has been enriched by two collections. One is the old Warrington Dispensary Library, of Liverpool, consisting chiefly of old books valuable in the study of the history of medicine, and containing 944 volumes. It is the gift of Mr. William A. Marburg, who bought it for Johns Hopkins on the recommendation of Dr. William Osler. The other collection is the library of Friedrich Ahlfeld, of Marburg University, Germany, a collection of 936 volumes, given by Mr. Francis M. Jercks.

Lee, Mass. Curtis Judd, of Dwight, Ill., has given \$500 toward the new library building. Mr. Judd spent his boyhood in Lee.

Millersburg, O. Dr. S. P. Wise, of Millersburg, has tendered the commissioners of Holmes county a site and \$15,000 for a county public library. The matter was submitted to the voters of the county at the regular November election.

Monmouth, Ill. Warren County L. The library receives \$2,086.73 by the terms of the will of William P. Pressly.

Poughkeepsie, N. Y. Adriance Memorial L. The library has received from Miss Elizabeth M. Weeks and Miss Caroline B. Weeks the private library of their father, the late James M. Weeks. It is a general library of about 3000 volumes. A special book-plate will be added as part of the gift.

Providence, R. I. Brown University L. The library has received from Professor Lester F. Ward between 800 and 900 volumes, many of them valuable government documents.

North Stonington, R. I. The offering of the will of Henry Dwight Wheeler, of New York, for probate has made public the fact that \$100,000 is left for the Wheeler High School, at North Stonington, to be used in part for library purposes.

Seneca Falls (N. Y.) L. Assoc. The library receives \$5000 by the will of Wilhelmus Myndersee, who died Nov. 13. The library also receives \$500 by the will of Miss Eliza A. Pollard.

Washington and Lee University L. The library receives \$5000 from the Rockefeller fund of the General Education Board.

Waterville (Me.) F. L. The library has received from the estate of Miss Alice Getchell, Cambridge, Mass., a large number of books, and her will includes a bequest to the library of \$500.

Yale University L. The Yale Art School receives the valuable library of the late Professor James M. Hoppin by his will.

York, Pa. The library of the late Rev. Charles James Wood, rector of St. John's Protestant Episcopal Church, consisting of about 9000 volumes, will be converted into a city library, thus carrying out the wish of the rector. In case of failure to observe this provision of the will, the books were to be given in trust to the General Theological Seminary, N. Y.

Carnegie library gifts

Aberdeen, Wash. Nov., \$15,000.

Abilene, Tex. Nov., \$25,000.

Arkansas City, Kan. July 6, \$16,000. Competitive designs are invited from architects.

Atlanta, Ga. Nov. 28, \$15,000, for two branches.

Baltimore, Md. Enoch Pratt F. L. Nov. 24, \$500,000 for twenty branch libraries. Sites for four of these have been offered by Francis A. White, Mortimer W. West, the Forest Park Improvement Association and Robert S. Carswell.

Fort Smith, Ark. \$25,000.

Frankfort, Ind. Nov., \$5000 in addition to previous gift of \$12,500.

Great Bend, Kan. Nov. 14, \$12,500.

Grove City College, Grove City, Pa. Nov., \$2000 in addition to previous gift of \$30,000.

High Point, N. C. Dec., \$15,000.

Howell, Mich. \$15,000.

Iowa Falls, Ia. Ellsworth College. \$10,000.

Lawrence University, Appleton, Wis. Nov. \$4000 in addition to previous gift of \$50,000.

Little Rock, Ark. Nov., \$50,000.

McPherson College, Kan. Nov., \$2000 in addition to previous gift of \$10,000.

Olean, N. Y. Nov. 30, \$25,000.

Pittsburg, Pa. Nov., \$150,000 for a branch library at Homewood.

Riverhead, L. I. \$5000.

St. Andrew's University, Scotl. Oct., \$50,000 additional, for library.

Stoughton, Wis. \$3000 in addition to previous \$10,000.

Stuart, Ia. Nov., \$6,000.

Tecumseh, Neb. Nov., \$6,000.

Zumbrota, Minn. Nov., \$5000.

Librarians.

BAKER, Miss Gertrude, has resigned the librarianship of the Carnegie Library, East Liverpool, O., to accept that of the government library at Honolulu, H. I.

BATES, Mrs. Helen Page, assistant in sociology in the New York State Library, has been appointed librarian of the Charity Organization Society at 105 East 22d street, New York City.

CARR, Miss Georgina E., of the New York State Library School, 1905-6, has been appointed assistant in the circulating department of the Worcester Public Library.

GAILLARD-SACKETT, Edwin White Gaillard, supervisor of work with schools, New York Public Library, and Miss Clara Smith Sackett, recently first assistant in the Webster branch of the New York Public Library, were married on Nov. 1.

Goss, Miss Harriet, has resigned the headship of the Public Library, Alliance, O., to take that of the Carnegie Public Library, East Liverpool, O. Miss Goss has been at Alliance about a year, having gone there from the Cleveland Public Library.

GROESBECK, Mrs. Henrietta, has been appointed librarian at Newton, Ia. Mrs. Groesbeck was formerly assistant librarian in the Bloomington (Ill.) Public Library, and recently has been an assistant in the Iowa Library Commission.

JUDSON, Miss Katharine B., of the New York State Library School, 1904-05, has resigned her position as librarian of the Carnegie Public Library at Kalispell, Mont., to take charge of the periodical department of the Public Library at Seattle, Wash.

MALTBY, Mrs. Adelaide B., Pratt Institute Library School, 1900, has been appointed special children's librarian of the Chatham Square branch of the New York Public Library.

MASDEN, Miss Jessie, of Marion, O., has assumed her work as librarian at Piqua, Ohio.

NUNN, Miss Janet H., New York State Library School, 1905-06, has been appointed librarian of the Carnegie Public Library, Kalispell, Mont.

RUPP, Miss Julia, Pratt Institute Library School, 1906, has been appointed librarian of the Public Library at Oil City, Pa.

SEVERANCE, H. O. An error was made in the November number in announcing the appointment of Mr. Severance to the librarianship of the University of Michigan. It is the University of Missouri that has secured Mr. Severance's services as librarian. He has been on the staff of the University of Michigan for nine years.

SIMPSON, Miss Elizabeth F., has resigned her position as librarian of the Normal School, Stevens Point, Wis., to become librarian in charge of the circulating and reference department of the Michigan Normal College, Ypsilanti, Mich.

STEWART, John L., has been elected director of the Lehigh University Library. Mr. Stewart was for 10 years a teacher in the Northeast Manual Training School.

THAYER, Miss Mary S., died Nov. 16 at St. Margaret's Hospital, Cambridge, Mass., at the age of 71. Miss Thayer was born in Cambridge and had always lived there. For the past forty years she had been an assistant in the Cambridge Public Library.

WILSON, Miss Florence O., who has for some time been assistant librarian of the Springfield (Mo.) Public Library, has been appointed librarian, to succeed her sister, Miss Dera Wilson.

Cataloging and Classification.

CARNEGIE L. OF PITTSBURGH. Story hour courses for children from Greek myths, the Iliad and the Odyssey, as conducted by the children's department, 1906-1907. 29 p. O.

This carefully prepared list of definite references, similar to the one previously published on Norse mythology and the Nibelung-enlied, will be valuable to library workers everywhere. It is in two divisions, the course on The siege of Troy being for older children and that on Greek myths for the younger. The list is, of course, most useful as a reference list on the subject, whether the material is to be used for story telling or for other purposes.

DEICHMANSKE BIBLIOTHEK, Christiania, Norway. Bøger for barn og ungdom, 1906. 75 p. O. (Bogfortegnelse 15.)

A classified list, with an occasional annotation. The last division is *belles lettres* for young people (over 15), and includes as "old" reading as Ibsen, Björnson, Ebers, and all of Dickens. The list is attractively printed.

ENGLISH CATALOGUE OF BOOKS . . . giving in one alphabet, under author and title, the size, price, month and year of publication and publisher of books issued in the United Kingdom of Great Britain and Ireland. Vol. VII., January, 1901, to December, 1905. London, The Publishers' Circular, Ltd., 1906. [3]+1328 p. O.

GLASGOW (Scott.) P. L. S. INDEX CATALOGUE of the Dennistoun District Library, 1906. 52+433 p. D.

A dictionary catalog, with brief titles, date

and call number. There are occasional brief annotations.

A "List of publications in American Braille" has been reprinted from the 73d annual report of the Pennsylvania Institution for the Instruction of the Blind. It is a pamphlet of 29 octavo pages, giving a list of the books stereotyped at various schools in the 12 years ending May 1, 1906, and a description of the American Braille writing, music notation and mathematical notation. The list will be of great service to the libraries issuing books to the blind.

The WILMINGTON (Del.) INSTITUTE F. L. has issued a list of "Books on women and the home," eight pages, without annotations.

Bibliography

BRADDOCK'S EXPEDITION. List of references on Braddock's expedition. (*In* Carnegie Library of Pittsburgh *Monthly Bulletin*, November, p. 497-507.)
With full annotations.

CHRISTMAS. Reading list for Christmas. (*In* *News Notes of California Libraries*, November, p. 355-59.)

Compiled by the reference and loan department of the California State Library.

—Milton P. L. Christmas list, 1906. Milton, Mass. 12 p. 12°.

Books suitable for boys and girls.

CREDIT. Prendergast, W: A. Credit and its uses. N. Y., Appleton, 1906. 12+306 p. D. Bibliography (2 p.).

DOMESTIC ECONOMY. Chicago P. L. Books on domestic economy. Chicago, Ill., 1906. 30 p. S.

FLOODS. Murphy, E: C., and others. Index to flood literature. (*In* U. S. Geological Survey. Water-supply and irrigation paper no. 162. Washington, Gov. Print. Office, 1906. p. 88-101.)

FRENCH ARMY. Hirsch, Paul. Bibliographie der französischen truppengeschichten. Berlin, E. S. Mittler und sohn, 1906. 4+140 p., 20cm.

JAMES, HENRY. Phillips, Le Roy. A bibliography of the writings of Henry James. Boston, Houghton, 1906. 1x, 187 p. O.

A full bibliography, with exact indications and descriptions, including Original works, Contributions to books and a translation, and Contributions to periodicals. The bibliography of Mr. James's work, compiled by Mr. Frederick Allen King and published in Miss

E. L. Cary's "Novels of Mr. Henry James" (Putnam, 1905), is an excellent check list, but is much less inclusive than Mr. Phillips's book, and does not give exact bibliographical descriptions.

MUNICIPAL IMPROVEMENT. Special list: municipal improvement. (*In* Springfield (Mass.) City Library *Bulletin*, December, p. 399-406.)

With annotations.

NAPOLEON. Cambridge modern history, by the late Lord Acton, ed. by A. W. Ward, G. W. Prothero, Stanley Leathes. volume ix, Napoleon. New York, Macmillan, 1906. 28+946 p. Q.

"General bibliography: a selected list of such works as will be found generally useful with regard to the subject matter of two or more chapters in this volume," p. 773-893.

OCEAN CURRENTS. Rühl, Alfred. Beiträge zur kenntnis der morphologischen wirk-samkeit der meeresströmungen. pt. 1. [Berlin, E. S. Mittler und sohn, 1905.] 20 p., 25½ cm.

Bibliographical footnotes.

PERSIA. Reference list: Persia. (*In* Rockford (Ill.) Public Library *Bulletin*, October, p. 58-60.)

PHILIPPINES. Library of Congress. List of works relating to the American occupation of the Philippine Islands, 1898-1903, by A. P. C. Griffin. Washington, Gov. Print. Office, 1905. 100 p. Q.

Reprinted from the "List of books . . . on the Philippine Islands, 1903, with some additions to 1905."

STEAM AND GAS ENGINES. Brooklyn P. L. List of books on steam and gas engines. Brooklyn, N. Y., 1906. 23 p. S.

—Thanksgiving: reference list. (*In* Kansas City (Mo.) Public Library *Quarterly*, October, p. 172-73.)

The *Quarterly* also contains eight pages of information about the holiday, its customs and celebration.

Anonyms and Pseudonyms

The following are supplied by Catalog Division Library of Congress:

Davis, Morgan Lewis, 1862-, is author of *The gas offis, by the Offis Boy*.

Kalisch, Burnham, 1867-, is author of *Odd types: a character comedy*, by B. K.

Worthen, George Bedell, 1877-, is author of *Argument, brief, and decisions*. The law of contracts and its application to our transactions.

Notes and Queries

CYCLOPEDIA OF ELECTRICITY.—Librarians contemplating purchasing the "Cyclopedia of electricity," 5 vols., the "Cyclopedia of engineering," 5 vols., or the "Cyclopedia of modern shop practice," 4 vols., all published by the American Technical Society, American School of Correspondence, Chicago, 1906, should compare the contents of these three sets with "Modern engineering practice," 10 vols., published by the Armour Institute of Technology, Chicago, 1903. Nearly all the subjects in "Modern engineering practice" are duplicated, word for word, in these three sets, illustrations are the same with the exception of the occasional insertion of a new plate. A few of the subjects have been rewritten, and a little of the matter is new, notably the subject of "Steam turbines;" but there is not enough new matter in the sets to warrant the purchase of any if "Modern engineering practice" is already on the shelves. Another queer feature is that many of the subjects in the "Cyclopedia of electricity" are repeated in the "Cyclopedia of engineering," and in some instances the same subject appears in all three.

CHARLES A. LARSON,
Chicago Public Library.

INFORMATION ON BOOKBINDING LEATHERS.—The Library Association of the United Kingdom, through its committee on leather for libraries, has issued circulars asking data regarding the use of "standard" leather in English libraries. It is proposed to present the information in a "Standard leather dictionary."

"NOTE ON BOOKBINDING."—So many persons are writing me about copies of Douglas Cockerell's "Note on bookbinding," which the committee on bookbinding of the A. L. A. promised to send to members, that I wish to explain the matter in your columns. Mr. Cockerell writes that he is preparing a new edition of the "Note," and that as soon as it is out he will send on the stock. Requests for copies should of course be sent to Mr. Arthur L. Bailey, librarian, Wilmington Institute Free Library, Wilmington, Del., who succeeded me as chairman of that committee.

GEORGE F. BOWERMAN,
Public Library, Washington, D. C.

Humors and Blunders

It is stated that at a recent competitive examination of applicants for a position in the force of a large city library one candidate, doubtless soon convinced of his inability to pass, relieved his mind by submitting the following answers to some of the questions scheduled:

Q. How may the races of mankind be chiefly divided? A. Into losers and winners.

Q. What does the Indo-Germanic family include? A. Indians and Germans; but in Kansas the combination is not an entire success.

Q. Name in chronological order the various people that have inhabited England. A. England has been inhabited by English only. Various foreign people arrived, but immediately became English.

Q. What does the present British Empire include? A. Everything it has been able to grab, except the United States, Ireland and a few of the surrounding planets.

Q. What, in a few words, are transcendentalism, epicurianism and utilitarianism? A. The first means thinking on the roof while living in the basement; the second means living high on \$10 a week; the third is the study of how to do so.

Q. Describe a feasible course for the circumnavigation of the globe, mentioning all bodies of water which would be passed through. A. In a balloon. No waters would be passed through.

Q. Why is piracy now practically extinct? A. Through change of name. Except in the book business, it is now called "diplomacy," "trusteeship," etc.

ON the notice board of an English public library appeared recently the following appeal: "Will the gentleman who took a horn handled umbrella from the stand on Wednesday, kindly return it to the librarian?"

Underneath, some one had pencilled: "Certainly not; weather still unsettled."

ONE of our readers complains that he went into one of the Manhattan public libraries to read a book on the manufacture of limburger cheese (it was lunch time), and made out a call slip for a book on "cheeses and cheese-making." The library attendant, an old Scot, replied with the greatest gravity that the book was unavailable, having been "seriously grawed by mice."—*Coal Trade Journal*.

ONE of the recent puzzles of the circulating department was a lady who desired "The happy home." She insisted that it was not a work classed in domestic economy, but a recent novel, highly recommended. An attendant with intuition finally discovered that she wished Mrs. Wharton's "House of mirth."
